Since 1952 the E.O.T.C. has received pastoral requests from people from the West Indies, British Guyana, then from the United States (in 1959 a church was established in New York), England and South Africa. Branches of the E.O.T.C. have been established there and in other countries. In 1952 an Ethiopian priest was sent to Trinidad. In 1972 an Archdiocese of the E.O.T.C. was established in Trinidad; the seat was moved to New York in 1979. In 1992 the archdiocese was divided into four dioceses: West Indies and Latin America, North America (USA), Canada and Europe. In 2001, in Europe, there were 14 parishes in eight countries (United Kingdom, with a resident priest since 1974, Germany, the Netherlands, Sweden, Italy, Greece, Austria and Switzerland). In 1990 an Ethiopian bishop was asked to visit the people of Protestant origin in South Africa; in 2001, 33 of their parishes became members of the E.O.T.C. In Africa, other parishes of the E.O.T.C. have been established in the Sudan (Khartoum since 1940), in Kenya and in Djibouti; in the Middle East (Lebanon) and in Australia (in Melbourne since 1991).

Attitudes to other confessions and western missionaries; external relations

The E.O.T.C., which, as is stated in a number of official documents, prefers to be called "non-Chalcedonian", refuses to be designated as "monophysite" and keeps contacts with her sister Oriental Orthodox churches (Coptic, Armenian, Syrian Orthodox and Malankara from India). In 1965 Ḫayle Śəllase organized in Addis Abäba a Conference of the Oriental Orthodox churches for re-empowering their ancestral unity.

The E.O.T.C. has ecumenical contacts with the Eastern Orthodox Churches and with the Catholic and Protestant Churches. Prelates of these Churches pay official visits to the E.O.T.C. and all the Ethiopian patriarchs also make ecumenical visits abroad. The E.O.T.C. is a member of the WCC and, since 1963, of the All Africa Conference of Churches (AACC). The WCC has given substantial assistance to E.O.T.C. relief, rehabilitation and development programmes through the Round Table programme of DICAC.

Observers and representatives of the E.O.T.C. were present in the Second Vatican Council (1962–65) and in the Catholic Pro-Oriente Foundation (Vienna) meetings (1971–99). Relations with the Eastern Orthodox Chalcedonian churches are friendly (participation at Rhodes Conference 1961, Unofficial Dialogue since 1964, Official Dialogue since 1985).

From 1944 the activities of foreign missionaries were regulated by a decree to ensure complete co-operation between the government and the missions and to check that missionaries were working with non-Christian populations, and not towards converting the Ethiopian Orthodox. During periods of famine or war, the collaboration between the Orthodox, ecumenical Christian agencies (who provide a big part of the help) and Muslims intensified.

After the Revolution of 1974, the relationship with the WCC and with the AACC has remained positive, as long as it is based on the understanding that the E.O.T.C. position concerning theology, ecclesiology and liturgy would be respected.

When the 1994 Constitution of Ethiopia (art. 27) proclaimed freedom of religion, ecumenical relations worsened whe the missionaries began to pursue open proselytism. As in the past, the E.O.T.C. blames the missionaries for taking the Orthodox faithful away from their Church; it argues that they should not attempt to convert and re-baptize followers of the Orthodox faith.

The HIV/AIDS Campaign Centre was established in 2001, but, in fact, its work had begun a decade before. All religious denominations monitor this programme.

The Foreign Relations Department of the E.O.T.C. is in charge of foreign affairs in general; it is in contact with the ecumenical movement, Ethiopian churches, congregations and missionary activities abroad. Before the *Därg* period the relations between the E.O.T.C. and Muslims were seemingly good. Since 1974, and even more since the new Constitution of 1987, Muslims began to assert their religious rights. For the coming years one of the important tasks of the E.O.T.C. appears tobe to keep a constant dialogue between Christians and Muslims, to avoid problems and tensions between the two communities.

Emergence of the Eritrean Orthodox Church

Following the political independence of Eritrea in 1991, an Eritrean Orthodox Patriarchate was installed in Asmära in 1998 with the consecration of Patriarch Filəppos (d. 2002), replaced by Patriarch Yaᶜəqob (d. 2003). In 2000 there were ten departments (following the E.O.T.C. model), plans for a library, a museum and a theological school. In 2003 the Eritrean Church was accepted as a new member of the WCC. The E.O.T.C. and the Eritrean Orthodox Church keep in contact.

Christine Chaillot

Ethiopian Patriotic Association ↗Hagär Fəqər Tiyatər

Ethiopian Peoples Revolutionary Party

The E.P.R.P. (የኢትዮጵያ፡ ሕዝባዊ፡ አብዮታዊ፡ ፓርቲ, *Yäʾityopya ḥəzbawi abyotawi parti*) was one of several Marxist-Leninist parties to grow out of the radical Ethiopian Students Movement of the late 1960s. Leadership originally came from a group of nine students who hijacked a plane to Algeria in August 1969. They played a leading role in creating a Provisional Organising Committee for a working-class vanguard party in 1971. The first congress of the party, using the name of the Ethiopian Peoples Liberation Organization (E.P.L.O.), was held in April 1972. ↗Bərhanä Mäsqäl Rädda was elected secretary-general. The party adopted Mao's theory of "New Democracy", supporting a people's war and a united front led by a vanguard party, and backed the "national" struggle in Eritrea. Others in the European and North American student unions supported a more gradual approach, arguing that Ethiopia was not ready for a revolution and condemning "leftist adventurism", such as hijacking.

The February 1974 revolution came as much a surprise to the E.P.L.O. as to all the student proto-parties. With only a few militants in the Confederation of Ethiopian Labour Unions (C.E.L.U.) and the armed forces and only a few members, mostly students, the E.P.L.O. was unable to take even a vanguard leadership role. It was not until July 1974 that the paper *Democracia* – ዲሞክራሲያ began to articulate the future E.P.R.P.'s policies, specifically calling for a provisional popular government and rejecting any alliance with the military council, the *Därg* (↗Provisional Military Administrative Council), which had appeared in June. In August, the appearance of *Democracia* was followed by its rival የሰፊው፡ ሕዝብ፡ ድምጽ (*Yäsäffiw ḥəzb dəmṣ*, 'The Voice of the Masses'). This was a publication from the future All-Ethiopia Socialist Movement (better known under its Amharic acronym *mäʾison*, in Latin letters spelt "MEISON"), prepared to give qualified support to the take-over of the revolution by the military.

During 1974, *Democracia* acquired significant support within the labour movement and among students and membership of the party grew sharply. Other intellectual Marxist groups from the University joined, including the authors of the paper አብዮት (*Abyot*, 'Revolution'). Between them, *Democracia* and *Abyot* played a significant role in defining the revolution in 1974–75, though they were less successful in solving their own internal disputes on tactics and strategy. Central to these was a debate over whether to concentrate on a protracted rural armed conflict, which the E.P.R.P. launched in 1975, or on an urban armed struggle to overthrow the military government and set up a popular government led by a vanguard party. This proved a critical element in the party split in 1976. The party finally took the name the E.P.R.P. in August 1975 when it went public with its programme following a party conference in July. Other changes included the appointment of Täsfaye Däbässay as party secretary.

The question of which group would form a vanguard party dominated the intellectual debate in 1975/76; the claims of the E.P.R.P. and MEISON were challenged by other groups which later created the *Därg*'s Workers Party of Ethiopia (*Yäʾityop̣ya śärratäññočč parti*). The E.P.R.P.'s chance of success came in late 1976 shortly after it launched its armed urban struggle. A reorganization limited the power of the *Därg*'s first Vice-chairman, Mängəśtu Ḫaylä Maryam and strengthened the position of the E.P.R.P. supporters in the *Därg*; but they proved insufficiently ruthless and two months later, in February 1977, Mängəśtu carried out his own putsch, executing his opponents. He followed this up by launching the "Red Terror", first using MEISON against the E.P.R.P. and then turning it against MEISON.

The E.P.R.P. was virtually annihilated in urban areas. At the same time it was also forced out of Təgray by the ↗Tigray Peoples Liberation Front (T.P.L.F.). A number of leading figures did manage to escape abroad and, although the EPRP was left with minimal political capacity and suffered from a number of damaging splits, it retained a potent name and reputation both in and out of Ethiopia. Internally, some survivors from the rural armed struggle set up the Ethiopian Peoples Democratic Movement, E.P.D.M. (*Yäʾityop̣ya ḥəzbočč demokrasiyawi nəqənnaqe*), later the Amhara National Democratic Movement, A.N.D.M. (*Yäbəḥerä Amhara demokrasiyawi nəqənnaqe*), to join with the T.P.L.F. in the Ethiopian Peoples Revolutionary Democratic Front, E.P.R.D.F. (*Yäʾityop̣ya ḥəzbočč abyotawi demokrasiyawi gənbar*). Another organization, Forum 84, appeared in 1991 to participate in the post-1991 political dispensation in Addis Abäba.

Externally, the E.P.R.P. has been involved in a number of attempts to set up a unified oppostion to the E.P.R.D.F., even allying itself with its old rival *mäʾison* in 1991 to create the Coalition of Ethiopian Democratic Forces, C.O.E.D.F. (*Yäʾityop̣ya dämokrasiyawi hayločč qənəǧǧət*). Prominent figures in the E.P.R.P. today include Märša Yosef, the first chairman of C.O.E.D.F., and, in Europe, Iyasu ᶜAlämayyähu. In 2003 the E.P.R.P. participated in the Washington conference which set up the United Ethiopian Democratic Forces, U.E.D.F., a grouping of 15 opposition parties.

Patrick Gilkes

Ethiopian studies

E.s. is a term used to characterize the field of scholarly and academic community involved in specific research on the ↗Orbis Aethiopicus. One can roughly distinguish a "classical" and a "wider" understanding of E.s. "Classical" E.s. comprise the disciplines of philology/linguistics, history and ethnography, as well as (history of) theology and history of arts, represented by scholars who developed in European universities a particular research interest in the Horn of Africa and the Ethiopian highlands in particular. Still today, there exists a certain emphasis on the study of written sources, resulting in a central role of philology (text editions, criticism and interpretation). Vital also are such aid-disciplines as epigraphy, manuscript studies, and diplomatics.

The "wider" concept of E.s. is characterized by a stronger interest in contemporary issues. It developed as a hybrid of early academic efforts of Ethiopian intellectuals with a Western education who strove to understand better their society, and of European scholars who increasingly engaged multidisciplinary approaches in their attempts to study Ethiopian society in more systematic ways.

Since the 1980s, the role of such younger subareas of E.s. as, e.g., the social sciences, including political science, has been increasing. The range of issues presented at international conferences has become very broad: beside the social sciences and the "classical" issues it extended to environmental and development studies as well as to education and medical care.

E.s. is a mainly geographically-defined field of the humanities. Its object of research may be generally understood as being the culture(s), the history (histories) and the languages of Ethiopia, Eritrea and the Horn of Africa in general. Scholarly fields "akin" to E.s., such as, e.g., Somali studies, Islamic studies, and, to a certain degree, Nubian and Sudan studies, contribute to the understanding of that area.

The latest political developments led to the introduction of Eritrean studies, which inherited its sub-areas, objects and methods of research from the E.s. but define their geographical scope with the borders of the Eritrean state and concentrates on the socio-political developments of the latter after its independence (cf. Taddia 2002: 135ff.).

The development of Ethiopian studies in Europe

The cultural region of the Orbis Aethiopicus has long attracted extraordinary interest from Europeans (↗Europe, relations with). Early mentions and reports (e.g., Homer, ↗Herodotus, Philo; ↗Greek literature) date back to classical times and continue during Aksumite and post-Aksumite times (cf. ↗*Periplus of the Erythraean Sea*; ↗Cosmas Indicopleustes). The ↗Prester John legend, which finally placed the mysterious king in this area, is yet another evidence of the latter's strong appeal throughout the centuries.

There are, likewise, a few interesting biblical references to the area. The land of Cush (↗Kush) is mentioned over 20 times in the Old Testament. In the Septuagint, the word was translated into Greek as ↗Aithiopía, which was in turn often associated with Ethiopia but also with the whole or parts of Africa (for the different geographical conceptions s. also ↗Cartography, ↗Abyssinia). In the Bible, the Paradise itself is placed in the Nubian-Ethiopian area (s. Gen 2:13; ↗Gihon). Two of the biblical passages (the narration of the Queen of Sheba and Solomon in 1 King 10:1–13 and of the "Ethiopian" eunuch in Acts 8:26–40) became traditionally associated with the Ethio-Eritrean area. All this added a religious motif to the profane interest, thus increasing the force of attraction of this region.

The historic horizon opened wide in the second half of the 15th cent. when Europeans began to perform long sea voyages looking for a maritime way to ↗India – first from ↗Italy (↗Bartoli; ↗Rombulo), later from ↗Portugal. The travellers reported about great richness of the newly discovered lands, as well as of Christians surrounded by Muslims. The documents of the time bear witness to the western powers' aspiration to extend the papal sphere of influence (cp. the letter exchange between Ethiopian rulers and the Pope, e.g., in Uhlig – Bühring 1994:93–106) and to the Christianity vs. Islam controversies, with the blockade of Vienna by the Turks as their peak (s. Ludolf's letter to the Ethiopian nation written on behalf of Emperor Leopold I in 1683, the year of the Turkish blockade, in van Donzel 1974:226–38; Uhlig 1983:284–93).

The first encounters to have lasting effects were those between European and Ethiopian Christians in Jerusalem (↗Dayr as-Sulṭān). Ethiopian clerics were officially present for the first time at the Council of ↗Florence in the 15th cent.; and, soon after, established themselfes at the Roman monastery of ↗Santo Stefano dei Mori. This marked the beginning of a scholarly discussion.

Reports on Ethiopia enjoyed great interest in Europe. Printed travel itineraries and accounts of expeditions during the 16th cent. (s. ↗Almeida; ↗Alvares; da ↗Gama, de ↗Gois) enjoyed widespread diffusion, with several re-editions along with translations into the most important European languages (cp. Uhlig – Bühring 1994:34).

In the 16th–17th cent., mutual intellectual interest between Ethiopians and Europeans found their expression in active letter exchange. The letters sent to Ethiopia bear evidence of Eurocentrism. Ethiopian rulers are in the first place interested in cultural and intellectual exchange, in technological innovations; however, what they get are mostly clerics in search of new bases on their way to India, new missionary domains to ensure the extension of the Roman Catholic control and area of its influence as well as of new colonies.

The 17th cent. witnessed the first large-scale intensive intellectual exchange focused on the history, geography and languages of the area (↗Jesuits). Such a cultural contact ended up in the eviction of the Catholic emissaries and, for the Ethiopians, in their century-long renunciation of Catholic Europe. Nevertheless, it was enough to inspire scholarly discourse which resulted in Hiob ↗Ludolf's research activity.

Ludolf was the first Orientalist to write scholarly on Ethiopia. Basing mostly on the data he could obtain through his informant ↗Gorgoryos he completed works dealing with natural sciences, geographical and anthropological topics, languages, culture and religion. Ludolf thus lay the foundation stone for the "classical" E.s. and with his broad interest he also anticipated the wider range of modern E.s.

The late 18th and early 19th cent. was a time of expansion for Oriental and, especially, Semitic studies. Thus, ↗Gəʿəz and (later) ↗Amharic became important objects of research. Soon thereafter, ↗Oromiffa and, in the 20th cent., other languages of the region came under the spotlight. Along with dictionaries, grammars and language descriptions, manuscript catalogues and text editions formed the base of E.s. Beside other motivations, language studies were supported by missionary interests. Consequently the growing language proficiency allowed ↗Bible translations into many Ethiopian languages.

Starting from the late 18th cent., ↗travellers and explorers played, alongside with scholars, a significant role in the shaping of E.s. The popular travel accounts by James ↗Bruce and Henry ↗Salt as well as the exploratory and scholarly contributions by the d'↗Abbadie brothers and Werner ↗Munzinger deserve a special mention here. The pioneering philological works by such scholars as August ↗Dillmann, Ignazio ↗Guidi, Carlo ↗Conti Rossini and Enrico ↗Cerulli oriented by large the further development of the discipline, and so did the Aksum- and North Ethiopia-related archaeological and historical contributions by Enno ↗Littmann and the ↗Deutsche Aksum Expedition.

From the beginning of the 20th cent. onward, the Ethiopian rulers have been sending considerable numbers of students to European universities. Upon their return, not only did these students initiate research and educational activities in natural sciences or applied technologies, but also founded institutions for research in Ethiopian languages, literatures, culture, history and theology. Diplomatic and scholarly contacts called attention over such youngest fields within E.s. as, e.g., human anthropology, environmental geography, political and social sciences.

Early Ethiopian scholarly attempts were mostly motivated by religious interest in making the Gospel more understandable to a population of farmers, or by rulers who wanted to strengthen their power by propagating their successes in securing social and economic progress, law and justice – or victory and peace in foreign relations. Later, scholarly cooperation often became an extension of existing diplomatic and political contacts with Europe, in the service of the emperors' ambitions to claim a position as peers to European rulers.

Ethiopian studies as established discipline

Already at the Paris international congress of orientalists in 1891 René ↗Basset presented an account on the progresses E.s. had made (Conti Rossini 1946:1); the new long account by Conti Rossini (1897) for the years 1894–97 at a later congress was emblematic of the rapidly increasing progress of the research. At the turn of the century and in the decades before and after the first world war, "classical" E.s. reached one of their highest point, both within the framework of related studies on the Christian Orient as a whole (fostered by the discovery and publication of a huge number of new texts), and in that of comparative and historical linguistics, Semitic and non-Semitic, as well as of history, ethnography and anthropology. Moreover, it is in the first half of the 20th cent. that E.s. emerged *de facto* as a field of its own through the works of some of the most outstanding scholars (Littmann, Conti Rossini, Cerulli). We may argue whether the theoretical premise about the existence of a cultural and historical unity of the field was clear or not in their mind, and whether political circumstances had some influence on that: it remains true, however, that these scholars were determined to study the Orbis Aethiopicus as a whole and therefore, in all possible perspectives. The term E.s. probably became fully established with the first ↗International Conference of Ethiopian Studies in Rome in 1959, a meeting of almost exclusively European scholars of ancient and medieval history, Christian religious texts, and Semitic languages. The Italian initiators understood it as an intellectual peace move, 18 years after the end of the Italian occupation of Ethiopia, a hand stretched out from Europe to Ethiopia. Essentially it was devoted to Ethiopia as seen from a European academic perspective, largely confined to the "classical" disciplines of E.s.

The creation of the ↗Institute of Ethiopian Studies in 1963, the early days of Haile Selassie I

University (↗Addis Ababa University), offered such efforts a meeting point, both physically, in the former palace of the Emperor, and academically, with its publications and lectures and seminars, its library, its museum and its research efforts. With practice in the Institute, the focus gradually shifted towards adding more contemporary and more Ethiopian perspectives to the original emphasis on historical and linguistic studies. Impatience with the slow pace of such shifts may be one of the roots for creating the Institute of Development Research as a competing forum within the University for cross-disciplinary research on contemporary issues in the social sciences, including economics, history and geography. The Conferences of E.s., held since 1978 bi-annually, since 1991 tri-annually (every third in Addis Abäba), bring together scholars from different disciplines engaged in research in a wide range of topics, with a shared interest in life in Ethiopia in the present and past. Increasingly, E.s. moves towards fitting a definition of inter-disciplinary research on topics of relevance for the Horn of Africa in contemporary and historical context.

Research institutions

Institutionally, E.s. appear on the scene only at the turn of the 20th cent. An important impulse came at that time from colonial interests.

In the beginning of the 20th cent., Italian colonial officials had to be prepared to be sent to the Ethio-Eritrean region. Political and scholarly interests met to produce the ↗Istituto Coloniale Italiano. A centre of research on the Orient in general and Ethiopia in particular is the ↗Istituto Universitario Orientale in Naples (today Università degli Studi di Napoli "L'Orientale"). The Institute offer covers regional history and archaeology, languages and literature(s), anthropology and theology. The Istituto Italiano per l'Africa e l'Oriente in Rome (heir of two former institutions: Istituto Italo-Africano and the Istituto per il Medio ed Estremo Oriente) and several Italian universities offer possibilities of inquiry into E.s. Among the pontificial institutions in Rome, the Pontifical Biblical Institute and the Pontifical Oriental Institute must be mentioned for having hosted in their series (the *Analecta Orientalia* and *Orientalia Christiana Analecta)* and journals (*Orientalia* and *Orientalia Christiana Periodica*) a number of contributions concerned with E.s.

In France, E.s. (*études éthiopiennes*) are in the first place cultivated at the ↗Institut National des Langues et Civilisations Orientales (INALCO) in Paris, where courses in Ethiopian languages and, occasionally, literature and culture, have been offered since 1898. The University of Paris-I La Sorbonne, the Centre des Recherches Africaines and the research institutes of the Centre Nationale de la Recherche Scientifique enhance and complete the offer in E.s. in France.

In the United Kingdom, E.s. resources have been concentrated at the ↗School of Oriental and African Studies (SOAS) of London University since its formation in 1916. The SOAS staff and students work in the field of Ethiopian linguistics and philology but also history and culture of the Horn of Africa.

The Oriental Faculty of the St. Petersburg State University has offered courses in E.s. (*Efiopistka*) since late 19th cent. (s. also Boris ↗Turaiev). Its library resources are enhanced by the manuscript and document collections of the Museum of Anthropology and of the Oriental Institute of the Russian Academy of Sciences.

The Institute of Oriental Studies at Warsaw University has been offering courses in various aspects of E.s. since the 1950s (s. also ↗Strelcyn).

The resources agglomerated by the Institute of Ethiopian Studies in Addis Abäba include a library, large manuscript and microfilm collections as well as numerous photographs and anthropological items.

In Germany, the ↗Frobenius-Institut in Frankfurt am Main, whose origins go back to 1898, has contributed much to anthropological research into the region. The University of Mainz deals mainly with research into languages (Semitic Studies Department) and anthropology (Department of Anthropology and African Studies). E.s. (*Äthiopistik*) have been institutionalized at Hamburg University since 1968 (Department of African and Ethiopian Studies), with history, philology and religion as the core areas of research.

Established in 1960, the African Studies Center at Michigan State University is one important *Éthiopisant* institution in the USA. The focus of research is formed by early modern and modern history as well as social and political studies. Quest into the languages and ethnography of the Ethio-Eritrean region is carried out at the University of California.

More recently, E.s. have become home in

several universities in Japan, in particular Kyoto University with its Centre for African Area Studies; the main fields of inquiry are linguistics and anthropology.

Research media

Besides standard research tools such as dictionaries, grammars and manuscript-collection catalogues, the following regular publications form the base material of E.s.:

1. Periodicals

The French journals ↗*Aethiopica – Revue Philologique* (1933–36) and ↗*Aethiops* (1922–38) concentrated on topics from Ethiopian literature, manuscript studies and Gəᶜəz grammar.

Since its foundation in 1941, the Italian ↗*Rassegna di Studi Etiopici* (*RSE*) has been covering all classical themes of E.s. including archaeology, history, linguistics, religion and philology. It also features book reviews. The Centro di Studi Etiopici (today's Library of the Pavoni Social Centre), Asmära, was publishing the *Quaderni di Studi Etiopici*, under the direction of Fr. Ezio Tonini (vols. 1–7, 1980–86).

The French ↗*Annales d'Éthiopie* (*AE*) deal with topics from palaeontology and archaeology to philology and history. Book reviews are a typical section. The journal has appeared regularly since 1955 (with a break from 1990 till 2000).

Topics in classical E.s., namely history, language, literature, religion and culture, have been the programme of the Ethiopian ↗*Journal of Ethiopian Studies* (*JES*) since its first issue in 1963. Lately, the periodical has included an increasing number of research papers in the "new" disciplines within E.s., such as social, environmental, political and educational studies. In 2004 the *International Journal of Ethiopian Studies*, founded in the USA, has started to publish articles on scholarly and modern issues.

Starting from 1978, the American ↗*Northeast African Studies* (*NeASt*) has included inquiries into modern history, the social sciences and linguistics available to the Ethiopisant community.

The German annual journal *Aethiopica. International Journal of Ethiopian and Eritrean Studies* was founded in 1998. The articles deal with linguistics, philology, history, religion(s), traditional art and culture, as well as anthropology. In the 1990s the *Review of Eritrean Studies* (USA) mainly contributed works relevant for modern history; in 2004 the *Journal of Eritrean Studies*, published at Asmära University, was started. Also the irregular periodical *Nubica* (later: *Nubica et Aethiopica*) contributed articles to E.s.

2. Publication series

Few scholarly monographic series specialize in E.s. Since 1903, text-editions (rarely with critical apparatus) with translations have been appearing in the sub-series *Scriptores Aethiopici* of the ↗*Corpus Scriptorum Christianorum Orientalium*. The over-100 volumes published so far form a fundamental corpus of Ethiopian hagiography and theology. Several important chronicles have also appeared in the series. Since the same year the series *Patrologia orientalis* (editions of patristic and related texts) has greatly contributed with 36 volumes of text editions with translations (the critical edition of the *Sənkəssar* is published there).

The ↗*Aethiopistische Forschungen* have been published since 1977. The series focuses on investigations in history and philology. It also includes works on linguistics, anthropology, culture and the arts.

In 1992 the monographic series *Studi africanistici. Serie etiopica* was called into existence. Its scholarly focus lies in but is not limited to philological research. Other themes covered include archaeology and linguistics.

Occasionally, works on E.s. appear in the series ↗*Studien zur Kulturkunde* (anthropology and modern history). The series *Mare Erythraeum* (Germany), *Nubica et Aethiopica* (Poland, Germany) and *Meroitica. Schriften zur altsudanesischen Geschichte und Archäologie* (Germany) all have published works relevant for E.s.

3. Proceedings of the Conferences

The Proceedings of the triennial International Conferences of E.s. are an important documentation for recent activities in E.s. Apart from offering a large number of individual research results, they also indicate new trends within the discipline and document developments in methodology. Additionally, the Proceedings of the International Conferences on the History of Ethiopian Art have established themselves in the field since the first conference in 1999.

Siegbert Uhlig

Ethiopianism

The term "E." refers to Ethiopia as a symbol of early African Christianity and civilization, as well as to Africa's political and cultural independence from colonial hegemony. It implies a mixture of religious, political and cultural objectives and ideals claimed by Africans and Afro-Americans. However, none of the movements connected to E., either in Africa or America, had much connection to Ethiopia. Instead the country was often referred to as representing all of Africa.

1. In America, especially in the USA and Jamaica, Ethiopian movements were founded by descendants of the victims of the transatlantic slave trade (↗Slavery). These movements were a response to the oppression and racial segregation they suffered in white-dominated societies, giving expression to the appreciation of Ethiopia's ancient civilization, the longing of the "Black Diaspora" for their "ancestral home" and an appeal to "black brotherhood". E. was a continuation of earlier repatriation movements such as the Back-to-Africa emigration of Afro-Americans to Sierra Leone (1787) or Liberia (1821). Politically, E. gained fresh impetus after Ethiopia defeated the Italian colonizers in 1896 at ↗ᶜAdwa: the Christian African kingship under the "Lion of Judah", "King of Kings" became a symbol of Africa's emancipation. These dimensions were stressed by Marcus Garvey (Garveyism) and ↗Rastafarianism in the 20th cent. after ↗Ḫaylä Śəllase I was crowned in 1930. E. in America, with its emphasis on political and cultural aspects, had much in common with Pan-Africanism and Afro-centrism.

2. In (South) Africa the term "E." was coined by religious groups from about 1880 onwards, although the phenomenon it describes may be older; some claim precursors in the Congo-region as early as the 17th cent. It refers to African Christians who split from European and American mission societies or churches. The separations rejected European theological paternalism, as well as political discrimination.

The Old Testament contains prophecies about the faithfulness of ↗Kush, the ancient name for the Nile Valley south of Egypt, identified in Greek translations with Ethiopia (↗Aithiopia; cp. Ps 68:32: "Ethiopia shall soon stretch out her hands unto God ..."). In the New Testament, Ethiopia is mentioned in Acts 8:27, where the story of the conversion of the Ethiopian eunuch is meant to explain the founding of the Church in Africa. Most African Churches which incorporated the term "Ethiopian" in their name, explicitly claimed to be successors to this early African evangelization.

The first "Ethiopian Churches" in southern Africa were local initiatives restricted by their ethnic and linguistic background. They spread, however, as labourers migrated. The refusal of European missionaries to ordain African evangelists was a main reason for secession. Africans remained second-class pastors under the paternalistic auspices of the missionaries. Despite their declared aim of creating autonomous indigenous churches, the missionaries considered it to be too soon and presumed their black colleagues would "fall back into heathenism" if they were given independence. The Ethiopian movements also had political aims, such as equal access to land and education or the right to vote. After 1912 these political concerns were assimilated into the African National Congress (ANC; Krüger 1989:13).

The first South African Ethiopian Church was founded in the Transkei by Nehemia Tile. His Thembu Church seceded from the Wesleyan Methodist Church in 1883. At the same time Mbiyana Ngidi broke away from the American Zulu Mission; Martin Sebushane and others left the Berlin Mission Society, setting up the Bapedi Lutheran Church in 1890. The first who explicitly used the name "Ethiopian Church of South Africa" was Mangena Mokone, who founded a church with that name in 1892 later to be led by James Mata Dwane. Many of the new leaders had been educated in the elite schools of mission societies and churches in South Africa and/or abroad: Pambani Jeremiah Mzimba, for instance, studied at the Free Church of Scotland Institute in Lovedale, was ordained in 1875, studied in Glasgow, broke away from the church in 1898 and founded the Presbyterian Church of Africa.

The Ethiopian churches in South Africa came in contact with Afro-American churches at an early stage. For many years, Mokone and Dwane were close to the African Methodist Episcopal (AME) Church, which had broken away from the Methodist church in 1816 in protest at the worsening situation of slaves in the USA. The AME had a strong missionary impetus, sending missionaries to Liberia as early as 1821. In 1896 the link between the two churches led to the Ethiopian Church of South Africa uniting with the AME. Renamed the "AME Church in Africa", their pastors were ordained by the American bishop Turner, who travelled through South Africa in 1898. This close co-operation gave more than 1,000 South Africans the opportunity to study in the USA. Dwane later seceded again from the AME and founded the *Ibandla Lase Tiyopia* ('Order of Ethiopia'), which united with the Anglican Church in 1900. Despite the name, with its symbolic reference to Ethiopia, the only connection Dwane's initiative had to the country Ethiopia was his plans to visit ↗Mənilək II and to expand his church via Rhodesia as far as ↗"Abyssinia". None of these plans came to fruition, however.

Political Ethiopianism in the USA: Afro-Americans demonstrating for union between Eritrea, Somalia and Ethiopia, identifying it with self-determination; United Nations' Headquarter at Lake Success; from Pankhurst – Pankhurst 1953:232, pl. XXV

Ethiopian-style Churches emerged elsewhere in Africa, such as the United Native African Church in Nigeria, founded in 1891 by African Christians who had separated from the Anglican Church.

3. The phenomenon of the Ethiopian Churches was succeeded by the emergence of African Independent Churches (AIC), which separated from the mission churches for similar reasons at the beginning of the 20th cent. It is impossible to distinguish clearly between the two types of African Churches. Sundkler in 1948 made the first attempt to differentiate between Ethiopian and Zionist types of Independent Churches; in 1961 he added a third type of Messianic/Charismatic churches. Turner followed with his approach in 1967. Differences are defined politically or in terms of the role of the founder. All classifications are to some extent controversial, however, because in reality the phenotypes blend into one another. At any rate, Ethiopian Churches are – apart from the ↗Ethiopian Orthodox Täwaḥədo Church – the oldest type of churches founded by African Christians. Nowadays E. is therefore rather used as a historical term, whereas AIC is the general term used to refer to the current most dynamic phenomena in African Christianity.

The term "African Independent Churches" is contentious. It stresses the secession of African Christians from missionaries and tends to reduce AICs to a reaction against European mission work instead of respecting them as expressions of genuine autonomous African spirituality (Irving – Poewe 1997:53). Today the terms "African Instituted Churches" or "African Initiated Churches" are preferred. The AICs comprise a wide range of religious movements and organizations with similar characteristics, such as emancipation from white discrimination, colonialism and paternalism, as well as theological indigenization or "inculturation" (liturgy, dress, the use of African names etc.). They differ in the importance of their founders, visions, dreams, healing and purification rites, missionary zeal, tongues, various taboos and pilgrimage. They overlap, too, with different types of Pentecostal churches, most of the latter having similar characteristics, but being imported from North America at a later stage.

The AICs are growing rapidly in Africa today. Women play a crucial role in most of their activities. Among the biggest AICs are the South African churches *Isonto lama Nazaretha*, founded by Isaiah Shembe in 1911, the Zion Christian Church (ZCC) by Edward Lekganyane, as well as the Nigerian Church of the Lord/Aladura or l'Église de Jesus Christ sur la terre, founded in Congo in 1921 by the prophet Simon Kimbangu. The latter is one of a probably growing number of AICs to become members of the World Council of Churches and thus be recognised by and integrated into the ecumenical community. AICs have increasingly become active in Europe, too, building congregations among African immigrants. In 1978 the AICs formed an association of their own, the "Organization of African Independent Churches". It should also be mentioned that fast-growing independent churches are not unique to Africa: they are also characteristic of Christianity in Latin America and Asia.

Andrea Schultze

Ethio-Semitic

Introduction

E.-S. (or Ethiosemitic, also Ethiopian Semitic) is a group of around 20 languages or dialects spoken in Ethiopia and Eritrea which go back to the language(s) of immigrants from South ↗ Arabia who settled first in northern Ethiopia (partly now Eritrea) in the 1st millennium B.C.

These settlers brought with them their own South Arabian dialects and a knowledge of Sabaic, one of the closely related ↗ Epigraphic South Arabian literary languages. The centre of immigration was the harbour of ↗ Adulis with easy access to the highlands. This route from Adulis via ↗ Coloë to ↗ Aksum was described in the anonymous ↗ *Periplus of the Erythraean Sea* (1st cent. A.D.).

The immigrants' knowledge of Sabaic manifests itself in numerous inscriptions that closely follow the pattern found in the Sabaic inscriptions from South Arabia. But the dialects spoken there were different from this literary language. The most important linguistic feature that separates both groups is the verbal present form (of the Akkadian type *iparrVs* in the basic stem), which does not appear to exist in Epigraphic South Arabian, but is found in all E.-S. languages as well as in Modern South Arabian (cp. Mehri). Thus, the classification of E.-S., together with Modern South Arabians constitutes the South Semitic branch with the exclusion of Epigraphic South Arabian, which is to be connected with the more northern (Central) Semitic languages (Voigt 1987:15). However, other scholars continue to group E.-S. together with Epigraphic as well as Modern South Arabian. Relying on lexicostatistics, Rodgers (1991) maintains the sub-grouping of South Semitic into an Eastern group (Modern South Arabian) and a Western group (Ancient South Arabian and E.-S.). For a discussion of the genetic inter-relatedness between these groups of languages see Voigt (1994) and Appleyard (1996).

The dialects spoken by the immigrants, spread mainly along the northern plain of East Africa, must have been in close contact with the indigenous Cushitic languages, such as Beḍauye (↗Beğa) and ↗Agäw. Among the closely related E.-S. dialects that developed approximately a thousand years before the use of a script, the Aksum dialect was chosen as the basis for the creation of Classical Ethiopic or ↗Gəᶜəz (traditionally pronounced [*gəʾəz*]) in the 4th cent., preserved in initially unvocalized inscriptions. With the invention of a vocalization system that was inspired by the Indian script, and the translation of the Bible and other Christian texts, this language became a literary language and a unifying factor for the Aksumite (and later on the Ethiopian) empire.

The languages nowadays spoken in the highlands (and adjacent lower areas, then occupied by the Aksumites) are ↗Təgre and ↗Təgrəñña. Both languages are roughly speaking descendants of Gəᶜəz. More strictly speaking they are the descendants of closely related daughter languages (or dialects) of Gəᶜəz, since there are some modern linguistic features that cannot be traced back to Gəᶜəz. Thus Tgr. *hətu* 'he' cannot go back to Gəᶜəz *wəʾətu* (cf. Tgn. *ʾətu* masc. sg. demonstrative), but to a proto-form **huʾV-tu*. Another example is the negative particle *ʾal-*, that did not exist in this form in Gəᶜəz (instead *ʾi-*, *ʾay-*), but does in modern E.-S. languages.

With the expansion of the Aksumite empire to the south and the resulting cultural dominance, Gəᶜəz (and later on Təgrəñña) dialects spread to the south of the plateau and emerged as new E.-S. languages. In contrast to the so-called North E.-S. languages (Gəᶜəz, Təgre and Təgrəñña), these are called South E.-S. languages. One can assume that great parts of ↗Šäwa and contiguous areas in the west, south (up to Gurageland) and east (up to ↗Harär) have been Semiticized. Some of these E.-S. languages became extinct during the conquering raids of the ↗Oromo in the 16th cent. into the then Semitic-speaking areas now inhabited by the Oromo and other Cushitic peoples.

Characteristics of Ethio-Semitic

The characteristics of E.-S. as derived from innovations first encountered in Gəᶜəz are centralization of the short Proto-Semitic vowels **a*, **u* / **i* into *ä* (after laryngeals realized as *a*) and *ə*; retention of the long vowels **ā*, **ī*, **ū* as *a* (transcribed also as *ā*), *i*, *u*; monophthongization of Proto-Semitic **aw*, **ay* as *ō*, *ē* (or *o*, *e*); merger of the interdentals (**ṯ*, **ṯ̣*, **ḏ*) with the corresponding sibilants (Gəᶜəz *s*, *ṣ*, *z*); use of *yqtVl* (e.g., Amh. *yəsbär*) as a jussive form; *as*-causatives (not yet fully developed in Gəᶜəz); compound verbs with the verb 'to say' (e.g., Gəᶜəz *baḥ*(*a*) *bəhəlä*, 'greet', Amh. *qʷəč̣č̣* / *quč̣č̣ alä*, 'sit down', ↗Ǝnnämor *koo barä*, 'he shouted'); the verb of existence (Gəᶜəz *halläwä*/*hallo*, Tgn. *allo*/*allä*, Amh. *allä*, (related?) Ǝnnämor *anä*); use of this verb in periphrastic constructions; introduction of a palatal element in the B-stem (*intensive stem) formation of the present form (Gəᶜəz 0_2 *yəsebbər* < **i̯usai̯abbir*); and development of a gerund (converb) from an infinitive in the acc. (Gəᶜəz **sämiᶜ-a-hu* '(with) his hearing (acc.)' > *sämiᶜ-o* 'when / after he heard', Tgn. *sämiᶜ-u*, Amh. *säm-t-o*, ↗Argobba *säm-d-o*, to the gerund in West ↗Gurage s. below).

Classification of the Ethio-Semitic languages

The standard classification is that expressed by Leslau (e.g., PICES 3, vol. 2):

- (1) North Ethiopic:
  Gəᶜəz (extinct), Təgre, Təgrəñña
- (2) South Ethiopic:
  - a) Amharic, Argobba,
  - b) ↗Harari, East Gurage (↗Səlṭi, ↗Wälläne, ↗Zay),
  - c) ↗Gafat (extinct), ↗Soddo (North Gurage),
  - d) West Gurage.

This classification was revised by Hetzron (1972) by strictly using the method of shared morphological innovations as the classificatory criterion. He divided South Ethiopic into a "Transversal" and an "Outer" group of languages. Transversal South Ethiopic consists of Amharic, the most important living E.-S. language, Argobba, and ↗Harari – East Gurage. Outer South Ethiopic comprises the rest, i.e. Gafat and Gunnän-Gurage (= North and West Gurage):

- (1) North Ethiopic: Gəᶜəz (extinct), Təgre – Təgrəñña,
- (2) South Ethiopic:
  - (a) Transversal South Ethiopic:
    - (I) [Central:] Amharic – Argobba,
    - (II) [Eastern:] Harari – East Gurage (Z[ʷ]ay, Səlṭi – Wälläne – Ǝnnäqor),
  - (b) Outer South Ethiopic:
    - (I) n-group:
      - (1) Gafat (extinct),
      - (2) Soddo, Gogot (Northern Gurage),
    - (II) tt-group:
      - (1) Muḫər (Northern Gurage),
      - (2) Western Gurage:

- (a) [2-tense group:] Mäsqan,
- (b) [3-tense group:] Central/Peripheral Western Gurage:
  - (I) Central Western Gurage,
    Əža, Čaha – Gumär – Gura,
  - (II) Peripheral Western Gurage:
    Geto, Ənnämor – Əndägäñ – Enär.

Hetzron offered a terminologically slightly modified second version of his classification in 1977. His term "3-tense group" refers to the fact that these languages have developed future tenses. The definite future is composed of the imperfect form and *-k*$^{(w)}$*V/-tV/-dV* suffixes, with *k* directly after a consonant which is part of the verbal root, *t* after a long vowel or a diphthong and *d* after a short vowel or a consonant which is part of a suffix, e.g. Ənnämor *yəsäßər-kʷe* 'he will break', *yəsäwrua-te* 'they (masc.) will break', *yəsäßər-ku-de* 'he will break it'. Some of Hetzron's arguments and results were criticised by Goldenberg (1977; s. also Hudson 2000).

Gəʿəz versus the rest of Ethio-Semitic

Whereas Gəʿəz had preserved the old Semitic syntax (i.e. verbal forms come sentence-initial, genitive and relative clause follow their determinants), the modern languages have reversed this order of elements. The verb stands sentence-final and qualifiers (like adjective, genitive and relative clause) now precede the qualified element. Təgrəñña, however, is an exception to this rule, letting article, adjective and relative clause precede the noun, but the genitival attribute must follow (e.g. *əti z-əʿəddäl wärḥawi mäqʷənnän sərnay* 'the monthly rations of wheat [*sərnay*] that are distributed').

Typical of all living E.-S. languages (but less so in Təgre) is the "breaking up" of the sentence in a theme (topic) part and a rheme (comment) part, whereby the theme is manifested in a relative verbal form. Both sentence parts are combined through the copula. In these constructions the theme can precede or follow in both languages cited here: Tgn. with the theme following *səlä-zi ḵäʾa əyyä ... zə-bälkuḵum*, 'therefore I said unto you ... (< therefore [*səlä-zi*, rheme] it is [*əyyä*] that I said unto you [theme] ...)', but Amh. with the theme preceding *y(ä)-alhʷaččäw səlä-zzih näw* '(< that I said unto you [theme], therefore [*səlä-zzih*, rheme] it is [*näw*])' (Joh 8, 24). The use of relative verbal forms in focus constructions is one of the more prominent (areal) features of the Ethiopian "Sprachbund", i.e. linguistic area (s. Appleyard 1989; s. ↗Ethiopian Language Area).

Phonologically, palatalizations occur not only in the south but are also frequent in the north, e.g. Tgn. *šåwʿattä* 'seven', cf. Gəʿəz *säbʿattu*, Amh. *säbat*.

North versus South Ethio-Semitic

The most significant difference between both major groups of E.-S. is the loss of most laryngeals in the south. In Amharic and nearly all other South Ethiopic languages, the Gəʿəz sounds *ḫ*, *ḥ* [*ħ*], ʿ, *h*, ʾ have been given up, but the morphological structure of the verbal forms was maintained, e.g., Gəʿəz *halläwä* (*hallo*) *yəśəḥəq* > Amh. *yəsəq-all*, Səlṭi *isiïq-aan*, 'he laughs', Gəʿəz *sämaʿ-ku* > Amh. *sämma-ʷx*, Čaha *säma-xʷ-əm*, 'I heard'. In Harari *ḥ* is retained, it corresponds to Gəʿəz *ḥ*, *ḫ* and *h*. Amharic has developed a new *h* (from *k*).

More relevant for a classification are morphological features:

– the length of the penultimate consonant of type B (< *intensive) verbs has been generalized to all other types, e.g., Gəʿəz type A *säbärä* > Amh. *säbbärä*, 'he broke'; Gəʿəz type B *ḥaddäsä* > Amh. *addäsä*, 'he renewed'; Gəʿəz type C *baräkä* > Amh. *barräkä*, 'he blessed';

– the perfect form of type B was morphologically strengthened by inserting a palatal element, Gəʿəz *fäṣṣämä*, 'he accomplished, finished' > _*fäi̯äṣṣämä_ > Argobba *feṭṭämä*, Gafat, Soddo *fiṭṭämä*. In some Gurage idioms and in Amharic the long vowel was centralized to *ä* (*fäṭṭämä*). The first radical became palatalized, if possible, as in (Gəʿəz *zäwwärä* > ?) _*zäi̯äbbärä_ > Soddo *zibbärä*, Əža, Muḫər, Mäsqan, Goggot *žäbbärä*, Čaha, Əndägäñ, Geto *žäpärä* 'he returned (tr.), answered'.

An isogloss dividing north and south is the numeral "nine". The north maintained the Semitic root _*ts_^{1c} (cp. Tgr. *səʿ*, Tgn. *təšʿattä*), while the south has adopted the root _*zḫṭñ_ of unknown origin: Harari *ziḫṭäñ*, Amharic *zäṭäññ*, Čaha *žäṭä*, Əndägäñ *žiʾä*. Besides there is a large number of Cushitic words that are either already attested in Gəʿəz (like: *śəga*, 'flesh, meat', cf. ↗Bilin *sixa*, and *dorho*, 'chicken, hen', cf. Bilin *dirwa*) or entered the E.-S. languages in question at a later date (like: Səlṭi *dähano*, Əndägäñ *žähonä*, Amh. *zähon*, 'elephant', cf. ↗Kambaata *zanō*, ↗Saho *dakāno*). For a discussion of Cushitic loans in the Amharic lexicon see Appleyard 1979.

Transversal versus Outer South Ethiopic

Outer South Ethiopic as opposed to Transversal South Ethiopic is characterized by elements added to verbal forms to mark them as main verbs as opposed to subordinate (sub.) forms, e.g., ↗Soddo 3rd pers. sg. masc. *yibädr-u*, sub. *yibädər*; fem. *təbädr-i*, sub. *təbädər*; 3rd pers. pl. masc. *yibädrəmu-n*, sub. *yibädrəm*. Instead of *-i* and *-n* Muxər has *-t*: 3rd pers. sg. fem. *təbädr-ət*, 3rd pers. pl. masc. *yibädrəmu-t*. The main verb markers are totally dropped in Western Gurage. Leslau (1967) and Hetzron (1968) compared the *-u/-n* elements directly with the Arabic personal affixes of the imperfect 3rd pers. sg. masc. *yaktub-u*, 3rd pers. pl. masc. *yaktubū-na* 'he, they write' and maintained the proto-Semitic origin of these elements. But this was criticised by Goldenberg (1977:479), having already been discussed and rejected by Rundgren (1959:242).

In Transversal South Ethiopic the perfect form of the auxiliary verb *hlw is used instead of main-verb markers, e.g. Amharic *əsäbr-allä*^{w}*x*, Harari *isäbr-aax*, Səlṭi *əsäbr-aaw/-aahu* 'I am breaking'.

Outer South Ethiopic

The elements Hetzron (1972) has used as criteria for classifying Outer South Ethiopic are those that function as the main-verb marker. He distinguishes between an *n*-group (Gafat, Soddo, Gogot) and a *tt*-group (comprising the rest, i.e. Muḫər and Western Gurage) according to the form of the main verb marker. Both are derived from a Proto-Outer South Ethiopic form *nt. Doubts can be raised against this argumentation since such changes as *nt > *n* resp. *tt* are phonetic processes probably too general to be used for genetic classification.

In Western Gurage, apart from a *m*-converb, a gerund is found that seems to consist of a jussive base + *-yt-ä* which is inflected like a perfect. Hetzron (1972:101) has tied this formation directly with the gerund of Gə^{c}əz, Təgrəñña, Amharic, Argobba (s. above), but cf. Goldenberg's critical remarks 1977:466f.

Origin of Ethio-Semitic

There are some doubts (according to Hudson 1977) about the generally accepted theory that the E.-S. languages go back to one single wave of immigration in one (northern) area in the 1st millenium B.C. Presumably even during the 1st millennium A.D. groups of people from South Arabia will have found their way (refuge) into north Ethiopia (cf. the etymology of the term Gə^{c}əz, which is derived from a root *g*ʿ*z* 'become free'). But there are no indications that other South Semitic groups ever entered East Africa at a more southern location or at an earlier date. Although it cannot be dismissed a priori, there is no concrete evidence for assuming that the main division of E.-S. into a northern and a southern branch already occurred in South Arabia. It seems to follow that the generally accepted division between North and South Ethiopic languages is given too much emphasis, since it was mainly the result of a migration to the south of peoples whose original home was in the north. The relatedness between all E.-S. languages is indeed so close that only inner-Ethiopian developments can reasonably be assumed. In connection with the view sometimes expressed of an alleged inexplicably high diversity or great heterogeneity within the E.-S. languages, some scholars (s. Hudson 1977) make Ethiopia the original home of the Semitic- (or even the Semito-Hamitic-) speaking peoples. Only with this assumption, it is maintained, can the (alleged) Proto-Semitic features in Gurage (like the *-u/-n* endings of the imperfect) be explained. However, this strange idea of a migration by the early Semites from East Africa to South Arabia and from there on to the Fertile Crescent is not supported by the historical facts of the development of the Semitic peoples.

Ethnicity

E. refers to aspects of social behaviour that relate to the historical origins and cultural repertoire or style of a group. Emerging in scholarly discourse in the late 1960s, the term was used as both an analytical and also explanatory concept about the role of complex, multidimensional notions of cultural difference that were made socially relevant. The concept, thus going back to a sense of an "original" popular culture and a shared historical idea of group descent and belonging, has in recent years moved from being an analytical concept (s., e.g., Cohen 1978) to a political one, appropriated and used by elites of groups often defined as ethnic for strategic or ideological ends (Eriksen 1991). Due to its connection to politics, E., as a cultural repertoire of group belonging or identification, has become one of the most popular subjects studied in social science (cf. Banks 1996; Jenkins 1999 for overviews).

When looking at empirical realities, also in Ethiopia, there is no denying the existence of important cultural differences between human groups. Historically, and especially in the precolonial period, these had a social and cognitive basis and were explicitly used in self-definition vis-à-vis other groups. Often language was taken as a key criterion, but also shared rituals, key customs and a sense of historical identity. However, the context of the colonial and postcolonial states has brought out explicitly political concerns focused on "ethnic identity", usually as a response to challenges of material inequality, political marginalization or differential social ranking of groups within an authoritarian state hierarchy. Indeed, state action in itself – by its bureaucratic and homogenizing procedures of administration and surveillance of its subjects – "produces" group identities.

In Africa, including Ethiopia, this process of state construction and response singled out the ethnic, or rather ethno-regional, elements because of their salience as "markers" of apparent difference and of inequality in prestige and power. The process was enhanced by the often imposed and conflict-generating nature of colonial territorial borders since the late 19th cent.

E. in Ethiopia and Eritrea has its own historical complexity, due to the countries' long indigenous traditions of state formation and inter-group relations. There is a great and, indeed, fascinating ethno-cultural diversity, rooted in the emergence of specific local adaptations of human populations and a corresponding subjective identification in contacts with others. This relative autonomy of ethno-cultural formations in the historical sense did not preclude multiple, but often limited and unequal relations between them, emerging from an early age onwards. Furthermore, as Ethiopia was (apart from its coastal areas, later to become Eritrea) never pervasively colonized, the local political culture produced an, in several ways, unique pattern of power and prestige relations between ethno-regional groups. The imperial state model, based on notions of personalized power and tributary loyalty and not on territorial conceptions of control and borders, gave rise to an hierarchical structure of power based on a Christian tradition of authority that had appeal among different ethnic groups, some of them formed in the process of state expansion itself (e.g., the "Amhara" since the 11th cent., incorporating Təgrəñña-speaking, Gəʿəz and Agäw-speaking highland groups, and in the late 18th cent. also Oromo-speakers). Processes of assimilation went on along with those of differentiation and dissociation, the key being access to power and cultural tolerance. While ethnic identity as we now know it cannot be assumed to have existed in ancient or "medieval" Ethiopia, there are indications that feelings or consciousness of cultural group difference and opposition nevertheless existed, as is evident in the mention of the "Beǧa" in an inscription of the Aksumite king ʿEzana and in the religious polemics in post-1270 Christian texts on the "usurping" Zagʷe kings, who were of Agäw origin.

In the coastal areas of Ethiopia, Islamic states and sultanates emerged from the 10th cent. onwards, leading to a particular blend of the Islamic faith and indigenous or "ethnic" beliefs that continued to (co-)exist. This is evident among the ʿAfar, the eastern Oromo groups, the Somali (ʿIssa, Gadabuursi, Isaaq, Ogaden) and the Argobba, where indigenous, "pre-Islamic", notions of ritual, supernatural forces and customary law were often maintained. The "ethnic identity" of such states (e.g., ʿAdal) is hard to pin down. Ethiopia was also marked by quite unique processes of conversion, from traditional religion to Islam or Christianity, from Christianity to Islam and vice versa (↗Conversions). Indigenous state formation on an ethnic basis also occurred in western Oromo areas (↗Gibe states) and in smaller regions like Käfa and Wälaytta, but in such cases conquered groups usually assimilated to the culture of the victors.

Nowadays dozens of ethnic groups are distinguished in Ethiopia. The criterion to distinguish a group is often language or dialect and some "spectacular" cultural features in dance and song, ritual combat, bodily decorations and clothing styles and material culture. In this respect Ethiopia has a still relatively rich heritage compared to many other African countries; i.e. there is a broad range of cultural "authenticity" expressed both in ideational and material cultures and its bearers often show pride in them. The common view is that Ethiopia has around 80 ethnic groups or "nationalities" and Eritrea nine. While in some academic publications, lists of these people were given (see, for instance, the Appendix of ethnic groups in Levine 2001), the criteria to distinguish them differ. Since 1991 the Ethiopian government has listed about 80 groups officially as a "people", "nation" or "nationality", with the Oromo, the Amhara, the Tǝgrǝñña and the Somali as the largest. In the last Ethiopian census of 1994, some interesting new, previously not distinguished, group names appeared, such as "Melon" and "Libido". The nine officially recognized Eritrean groups are: Tǝgrǝñña-speakers, Sāho, Hadaareb, Rašāyida, Tǝgre, Bilin, Nara, Kunama and ʿAfar. All these groups in both countries are assumed to have their own territories, recognizable customs etc. In reality, the borders and customs are flexible and show intermingling, so that maintaining or "policing" them is hardly feasible.

In the imperial era in Ethiopia, open references to E. and to language diversity was strongly discouraged in the context of a forced project of nation-building. The *Därg* regime after 1974 recognized E. (cf. the literacy programmes, the founding of the Institute for the Study of Ethiopian Nationalities), but severely restricted its expression and followed a Soviet-style formula of politically containing it. Anti-state insurgent movements in Ethiopia were largely mobilized along ethnic lines, with the exception of the Eritrean People's Liberation Front.

Since the 1960s, anthropological studies of Ethiopia have contributed to the growing interest in E., as monographs and papers were often focused on a holistic study of one particular group and its cultural traditions. Work on the smaller groups in the south and west predominated. This trend continued among the new generation of Ethiopian anthropologists, who also mostly took one people as the focus of their study (s. M.A. theses and monographs produced by students in anthropology since 1992 at Addis Ababa University; cf. Pankhurst 2002). Theoretically these studies insisted, especially since the mid-1980s, on the dynamic nature of "ethnic groups", to be seen as a particular formation in time and space and conditioned by wider politico-economic processes, and not only by (shifting) self-ascription. In line with wider disciplinary developments in social science, E. in Ethiopia is now rarely seen as the defining framework of study, but only as one important aspect of social life to be studied in conjunction with other themes. A more recent trend among Ethiopian scholars is the renewed attention to folklore and oral traditions of ethnic groups (e.g., Sahlu Kidane 2002). An interesting and related phenomenon in Ethiopia, common also elsewhere, is the presence of a non-official, everyday discourse on presumed characteristics of the various ethnic groups in the cultural, social and economic sense, condensed in "prototypes" about "the Gurage", "the Somali", "the Kambaata", or "the Amhara". One encounters these characteristics often in the form of stories and jokes, but there is a tendency towards stereotyping (cf. Habtamu Wondimu et al. 2001).

In post-1991 Ethiopia, where the new government instituted a novel political structure and discourse of E. in the public sphere, there is a significant upsurge in things ethnic. Not only was the country's administration controversially restructured along ethnic lines, but also the emerging elites of the country's ethnic populations – both the larger ones like Oromo, Amhara, Somali and Tǝgrǝñña-speakers, and the smaller ones, from Benç to Ḍiraašša and from Wälaytta to Sidama – show a new interest in "their own" history and traditions and are recording them. However, this tends to happen in a quite descriptive, uncritical manner. In the political sense, E. also became a vehicle for claims on resources and funds.

There is now also a voluminous literature on E. and politics in Ethiopia, mostly concerned with "ethnic federalism" and the new local politics after 1991. Quite a number of studies, including Ph.D. theses, both by foreigners and Ethiopians, were and still are being produced (examples s. Abbink 1997; Assefaw Bariagaber 1998; Merera Gudina 2002; Jacquin-Berdal 2002; Vaughan – Tronvoll 2003). It is difficult to say whether the Western academic discourse on E. has captured the local realities and representations. In Ethiopia and Africa in general there was no a-priori thinking in terms of "ethnic" group traditions, as political formations were more important in shaping local differences and cultural divergences. Although people often have great attachment to cultural/ethnic tradition, it is quite situational, and they show great pragmatism in local identifications and allegiances (as Markakis [1998] shows in the case of the Gurage). There is an epistemological problem here. It would indeed deserve separate study to inquire how Western frames of mind and educational-intellectual traditions have influenced, if not shaped, local perceptions of regional/cultural/religious differences into "ethnic" categories (cf. Campbell 1997; Lema 1993). Interestingly, but not unexpectedly, aspects of "ethnic thinking" have now permeated local academic discourse and, of course, politics in Ethiopia and (less so) in Eritrea, thus pre-empting a natural development towards new forms of identity relating to the wider concerns of local people.

However, E. in Ethiopia and Eritrea is a reality of life and is best recognized as such. There is demonstrable diversity in customs, dress-codes, ritual, values, kinship systems and worldview. In the new political dispensations, ethnic consciousness or identity often serves as a source of pride in people's own group tradition and a valuable "cultural resource", even though social life is not entirely structured by it and people pursue their own choices and allegiances. A globalizing world with multiple contacts, migrations and exchanges favouring hybridity makes the presumed purity or boundedness of any ethnic identity an unlikely fiction, but despite this, the study of E. and ethnic group (re)formation in Ethiopia and Eritrea remains a task of scholarly importance and practical relevance.

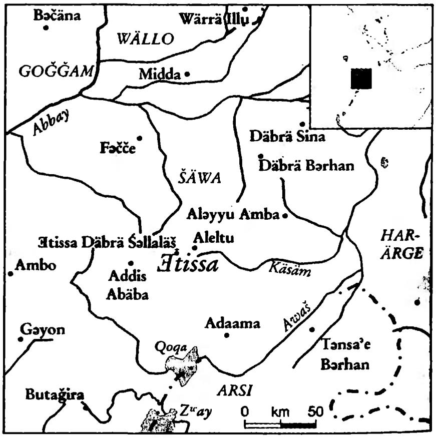
Ǝtissa

Ǝ. (**እቲሳ**, also Itissa) is an area situated in ↗Bulga, Šäwa, which is known due to the monastery Ǝtissa Däbrä Ṣəllaləš. It is located 13 km south of Aleltu, on the road to Däbrä Bərhan and encompasses also the sister monastery of Qay Däbrä Maryam 2 km to the south.

Local tradition points to Ǝ. as the place where (in 1215) Ǝgzi᾽ Haräya gave birth to Fəśśəḥa



Ṣəyon, who grew up to become the great saint *abunä* ↗Täklä Haymanot, thus identifying with Ǝ. the locality of Zorare in Ṣəlaləš, Šäwa, mentioned in the Vita of Täklä Haymanot as the birthplace of the Saint. Correlating with the Vita, oral tradition recounts that in the last days of the Aksumite empire, a group of monks under *abba* Yədla (a contemporary of ↗Dəgnažan) founded a monastery here, which became Šäwa's first centre of Evangelization. Also it states that during the 10th cent. the ↗Ark of the Covenant from the church Aksum Ṣəyon was hidden at Ṣəlaləš for twelve years.

The early history of the monastery is not known, yet the existence of the old sanctuary of Täklä Haymanot at Ǝ. cannot be excluded. It is said that the local church of St. Michael at Zorare was reconsecrated in the name of Täklä Haymanot under *aṣe* ↗Zärʾa Yaʿəqob, but destroyed by ↗Aḥmad b. Ibrāhīm al-Ġāzī in the 16th cent. In the 19th cent., *nəguś* ↗Śahlä Śəllase of Šäwa paid homage to Täklä Haymanot by rebuilding the monastery at the Saint's birthplace. Little known, yet well cared for, the church of Täklä Haymanot was reconstructed by *ətege* Ṭaytu between 1899 and 1907 as a large refined, well built edifice. A number of dignitaries patronized the monastery and Empress Zäwditu reroofed and repainted the church and donated gifts to the treasury.

In 1937, during the Italian occupation, Ǝ. was a scene of force fighting between the patriots of *ras* ↗abbäbä Arägay and the Italians. A rich and relatively well-preserved array of buildings and artefacts are of artistic, historical and cultural interest, though dating from the 19th cent. rather than to its early origins.

Joachim Persoon

Eucalyptus

The E., a fast-growing tree of the *Myrtaceae* family, which originated in Australia, was introduced into Ethiopia, as to many other parts of Africa as well as the Mediterranean area, Asia and North America, toward the end of the 19th cent. (Noad — Birnie 1989:193; Fichtl — Admasu Adi 1994:364). Of the 140 existing varieties of E. in the world, the most widely diffused type in Ethiopia was the *Eucalyptus globulis*, or Tasmanian Blue Gum, known in Amharic as the **ነጭ፡ ባሕር፡ ዛፍ** (*näčč̣ baḥər zaf*, lit. 'white tree [from] overseas'). Several other varieties were, however, at one time or another also imported. These included the *Eucalyptus grandis*, or Rose Gum, the *Eucalyptus camaldulensis*, or Red River Gum, and the *Eucalyptus virminalis*, or Ribbon Gum, all three known in Amharic as the **ቀይ፡ ባሕር፡ ዛፍ** (*qäyy baḥər zaf*, or 'red tree [from] overseas'); the *Eucalyptus saligna*, or Sydney Blue Gum, also called the **ሳሊኛ፡ ባሕር፡ ዛፍ** (*saliñña baḥər zaf*), and the *Eucalyptus citriodoro*, or Lemon Gum, called the **ሽቶ፡ ባሕር፡ ዛፍ** (*šətto baḥər zaf*, or 'smelly tree [from] overseas'; Azene Bekele-Tesemma 1993:222–33). In documents of the introductory period of E. the terms *əkalibtos*, *kaliptus*, *kaleptus* and *kaleptos* were used (cp. Tubiana 1990:331f.).

Eucalyptus trees in Addis Abäba, 1950/52; photo by Eike Haberland, courtesy of the Frobenius Institut, Frankfurt am Main (23–Ha016–01 M–ON)

The E. was first imported into ↗Addis Abäba in the mid-1890s, during the reign of *aṣe* Mənilək II. Opinion differs as to who actually introduced the tree. The Georgian pharmacist Mérab, who took an informed interest in the city's history, believed that "four or five varieties" were "imported from Australia and Europe in 1895", and that the first trees were planted by two Frenchmen: the trader Léon ↗Chefneux and Mənilək's adviser Casimir ↗Mondon-Vidailhet (Mérab 1921, vol. 2, 178). This latter statement was endorsed by the subsequent French geographer Berlan (1951:572). Chojnacki (1963:36f.) on the other hand quotes evidence to suggest that the tree may have been introduced by Captain O'Brien, an Englishman connected with the construction of the Addis Abäba–Djibouti railway. The first trees, according to other evidence cited by Chojnacki, were planted around St. George's cathedral and the surrounding area. Many seedings were "either distributed by Mənilək, or in some cases sold" – at a price of 40 young plants for one Maria Theresia thaler.

The E. proved easy to cultivate. Harvested every ten years or so it grew again from its roots, without any need of replanting. Its slender trunks yielded valuable timber for traditional house and fence building, whilst its leaves when burnt provided a rapid heat ideal for baking *ənǧära*-bread.

Planting in the early 20th cent. was rapidly expanded. The British envoy Hohler (1942:124) reported in 1906: "Of late years [...] many gum trees have been planted in the town, especially near the [British] Legation, and I sent for seeds to India, Ceylon, England etc. and planted several thousand more". Ethiopians owning several hectares, according to Mérab (1921, vol. 2, 178), were at around this time covering the whole of their land with E. trees in the hope of selling their wood for hundreds of thousands of thalers, while several Europeans of his acquaintance had planted as many as two, three or four thousand seedlings.

The coming of the E. thus entirely transformed the physical appearance of the capital. The British traveller Wylde (1901:416) had described its environs in 1901 as "nearly treeless", but Mérab (1921, vol. 2, 178) only a generation later described Addis Abäba as an "Eucalyptopolis". The trees were so numerous, and fast-growing, that the country's hitherto severe shortage of timber and fire-wood was rapidly overcome. Fears widespread around the turn of the century that Addis Abäba would have to be abandoned, in favour of ↗Addis ᶜAläm or some such-like town, proved unfounded, and the capital survived. E. trees were soon also planted in most of the principal Ethiopian towns, among them ᶜAdwa, Däbrä Tabor, Däbrä Marqos, and Leqemt (Neqemte), with the result that the presence of E. trees served to mark major settlements (PankHist 243, 329f., 347).

Though a much needed source of timber and fire-wood, as well as highly profitable to their owners, the E. tree is not an unmixed blessing. Its rapid growth, its deep roots and its high demand of water significantly dries up the soil in which it grows, while its acidity hampers the growth of grass, and hence leads to enhanced soil-erosion (↗Environment).

Some people are said to have objected to the tree's strong and unaccustomed smell. Opposition to the tree was at one point so great that the Ethiopian Ministry of Agriculture issued an edict in March 1913 ordering owners of E. plantations to dig up 2/3 of their trees – and replace them with mulberry trees, which, it was apparently thought, might be used for silk-worm production (Eadie 1924:177–80). The E. was, however, by then so well-established that it became, as to this time, a permanent feature of virtually all Ethiopian urban settlements.

E. is not only the most important fuel for Ethiopia but its wood is frequently used in building construction of any kind. The essential oil of the plant is used in herbal medicine, e.g., for the treatment of cough and cold it is released by heat and then inhaled.

Richard Pankhurst

Eucharist

The Greek word εὐχαριστία is usually rendered by Gəᶜəz **አኰቴት** (*akkʷätet* lit. 'thanksgiving, gift'). Other words referring to the E. are **ጵርስፎራ** (*p̣ərəsfora*, Gr.: προσφορά, 'offering, oblation'), **ቍርባን** (*qʷərban*, Syr.: *qurbānā* 'gift', i.e. 'sacrifice' and 'benefit received from the sacrifice') and **ቅዳሴ** (*qəddase*, 'sanctification, hallowing'). *Akkʷätetä qʷərban* stands for the eucharistic prayers usually designated as ↗Anaphoras.

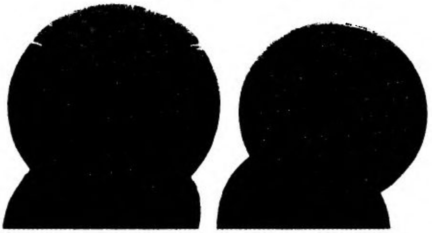
According to the *Mäṣḥafä ↗senodos*, which is also quoted in the *Mäṣḥafä ↗qəddase* and the present rite, essential elements for the celebration of the E. are only bread from wheat-flour (four Presfora [loaf] for Sundays and three Presfora for other days are offered) and 'new ↗wine'

(**ወይን፡ ሐዲስ**, *wäyn ḥaddis*, i.e. not fermented wine) from dried grapes (s. *Andəmta mäṣḥafä qəddase* 1994/95:39f.; cp. Guidi 1899:149). They are prepared by a deacon, immediately before the divine liturgy. 'Old wine' (**ወይን፡ ብሉይ**, *wäyn bəluy*, or **ወይን፡ ከራሚ**, *wäyn kärami*, 'fermented wine') cannot be used because Christ said that he would not drink from it (Mt 26:29). During the verification rite (at the offertory), there is an admonition to the deacon who pours the wine in the chalice to exercise extreme care and make sure that the wine is newly made and add the exact amount of water requested (s. *Andəmta mäṣḥafä qəddase* 39f.). During the Middle Ages there was a debate with the metropolitans sent from Egypt on the type of "wine" used at liturgy, but the Ethiopian clergy justified their practice with the excuse that the fermented wine would become sour because of the climate (Cerulli 1950:440, 452). Only a few monasteries, in accordance with the Egyptian use, celebrate with fermented wine.

During the liturgy (↗*Qəddase*), after the *epiklesis*, the eucharistic elements become the real Body and Blood of Christ (*Haymanotä abäw* 28:22, p. 96). In the time of *aṣe* Zärʾa Yaʿəqob (1434–68) there was a controversy over the doctrine of Millenniarism. The views of those "heretics" who denied it are sometimes interpreted as a refusal of the transubstantiation (s. ↗*Täʾammərä Maryam*, ed. CerMaria 112f.), although it was most probably only a millennarian eschatological question (Beylot 1974:34ff.) that created debates. The dogma of transubstantiation seems to have never been questioned.

According to the order of the ↗Ethiopian Orthodox Täwaḥədo Church, the Eucharistic bread may not be preserved, because, as the Church scholars explain, the Israelites were not allowed to collect manna for the following day (Ex 16: 19–20) and the body of Christ did not stay on the cross the whole day (Jn 19:31–42, cp. Mäbrahtu Mobaʿ 1999/2000:56). Besides, the E. was instituted to be eaten and not to be preserved.

The unique Ethiopian devotion to the ↗*tabot* comes from the fact that the E. is celebrated on it (Agostino da Hebo 1994:131–57). The E. is considered a sacrifice (**መሥዋዕት**, *mäśwaʿət*) because it is the sacrament of Jesus's sacrifice on the cross and the sign of his permanent presence among those who renew what he did at the Last Supper, who repeat his command (Lk 22:19) and believe that the flesh and the blood are offered on the altar by the same sacrifice that was given up on the cross. Their reward is the same as that of the "good thief" (from Lk 23; s. Cerulli 1960:225f.). The E. is an *akkʷätet* offered only to God.



Wooden stamps for eucharistic bread; treasury of the Gundä Gunde monastery; photo 2002, courtesy of Michael Gervers

It is difficult to speak of daily E. everywhere, although the liturgical books provide readings and ↗anaphoras throughout the liturgical year. Frequent eucharistic liturgy, though, is encouraged by some monasteries and ↗*däbr*-churches (e.g., in Aksum). Daily mass is celebrated in lent. Normally celebration of the eucharistic liturgy requires two priests and three deacons. In some larger churches with some three *mäqdäs* and the relative altars, masses can be synchronized from the three places. Those who intend to receive the E. must be free from sin, have to take a bath, be on a fast for the duration of time that allows the stomach to be empty and feel bitter in the mouth. The mystery of the E. is sung with the ↗*Zəmmare* at the mass and with *Mälkəʾa qʷərban* ('Eucharist effigy') at communion by the ↗*däbtäras*.

Euphorbia

The E. grows in the highlands of Ethiopia, Eritrea and the Sudan; its most-widespread species, the E. *candelabra* (also called E. *abyssinica* [or *acrurensis* after ↗ Ak̲rur]), is characterized by the branches developed like candelabra. Baeteman also calls it "figue de barbarie" (probably using this as a general term for several cactus plants, like ↗ *bäläs*). E. has small red fruits, its liquid is milky and poisonous. It is generally said to cause blindness, but is also used to cure skin diseases (Andree 1869:56). Etymologically the Tgn. term (**ቆልቋል**, *qolqʷal*) is said to derive from the Amh./Tgn. word **ቍልቍለት** (*qʷəlqʷəlät*, 'slope'), as the E. is mainly found on the slopes of the highlands. It mainly grows at heights from ca. 1,400 m to 1,500 m A.S.L., but even up to 3,300 A.S.L.

E. wood is traditionally used for building purposes, supporting the roof, but also for firewood. All over Eritrea and Ethiopia the E. is present in proverbs (cp. AWTarik 112). The presence of E. groves often indicates a sacred place (as observed in Təgray and Eritrea); it may be an ancient burial place or the site of a (former) church (DAE I:5). E. are often used to indicate a grave (e.g., among the Arsi). E. may also be used as fences around an *ənsät* grove (e.g., Sidaama), gardens, houses or roads (e.g., Benč). Among the Konso the E. liquid is used as a basis for mixing colours for their statues (Photographic Archive, Frobenius-Institut, vol. 16, Konso II, 171). The poisonous juice of E. is also used for fishing, e.g., in Təgray. River-water is accumulated with small dams where fish are then rendered unconsciousby a liquid extracted from E. leaves (Portal 1892:121). In Təgrəñña tradition the E. is symbolically used to celebrate the New Year: a E. branch is carried by children as a torch in the evenings before New Year or before *Mäsqäl*, going from house to house. Adults then raise it three times, expressing the wish 'May we live from year to year'. On this occasion the E. branch is called **ሽግ** (*šəg*), which inspired the independence song *šəgäy habənni*, 'give me [back] my *šəg* [here meaning Eritrea]'.

When the first black powder was produced in Ethiopia, E. coal was used for it (Andree 1869: 56). During the Egyptian period in the coastal territories, a Frenchman founded an E. factory in Sämhar, using the liquid to produce rubber (Simon 1885:26). Later under Italian rule, E.-wood was used to make matches (Doma 1966).

Formerly the Təgrayan–Eritrean mountains especially were widely covered by E., which have, however, during the last decades often been replaced by *bäläs*.

Meaza Haile Revol-Tissot – Wolbert Smidt

Euringer, Sebastian

E. (b. 1865, Augsburg, d. 1943, Dillingen) was a German Catholic theologian and Orientalist. E. studied Theology and several Oriental languages. In the beginning, his main focus of interest was biblical studies. He visited the lands of the Bible in 1893 and held a professorship for Old Testament Studies at the College for Theology in Dillingen from 1900 on. But his most significant publications were in the field of Christian Oriental studies, where he specialized in ↗Ethiopian studies. He treated the liturgy of the Ethiopian Church, biblical exegesis in Ethiopia and Ethiopian history and folklore, but also worked on related topics of the other Christian communities of the East. E.'s lasting fame rests on his annotated editions and translations of a number of the Ethiopian anaphoras (Lockot I, nos. 6379 ff.).

Europe, relations with

The first European country, or area, to establish contacts with Ethiopia was ↗Greece. The relations, that might already date back to the first millennium B.C., became prominent during the Aksumite period. In the 1st cent. A.D., King Zoskales of ↗Aksum, is said, in the ↗*Periplus of the Erythraean Sea*, to have been "skilled in Greek letters" (Huntingford 1980). A score of Aksumite kings, beginning with ↗Endubis in the 4th cent., made use of Greek on their coins (↗Coinage). This language, together with Sabaean and Gəʿəz, was also employed on several Aksumite ↗inscriptions.

Within a few decades of Aksum's conversion to Christianity, around 330 A.D., Ethiopians began to make their way to ↗Jerusalem, where they met European pilgrims from many lands. European awareness of the existence of a Christian country in the distant mountains of Africa gave rise to the hope that Ethiopia might be a valuable ally in the European Crusades against Islam. One of the first to propose this was the French ↗Dominican monk Guillaume Adam, who urged the King of France in 1317 to set contacts with Ethiopians. The idea of a Christian alliance against the Saracenes was reinforced by the legend of the ↗Prester John, in circulation at least since the 13th cent, and holding that "the Prester" was a powerful Eastern monarch whose great ambition was to help European Christendom overcome Islam. At first thought to reign somewhere in India, the fabulous monarch was later identified with the Christian ruler of Ethiopia.

Contacts between Ethiopia and E. grew closer in the late 14th and early 15th cent. A Florentine trader, Antonio ↗Bartoli, entered Ethiopia in the 1390's, and a Sicilian, Pietro ↗Rombulo, in 1407. He subsequently returned to Europe with an Ethiopian embassy despatched by *aṣe* Zärʾa Yaʿəqob. In 1400, King Henry IV of England had meanwhile addressed a letter to the "King of Abyssinia, Prester John". European interests in the country were subsequently heightened when, in 1441, two Ethiopian monks from Jerusalem attended the ecclesiastical Council held at ↗Florence and told people about their country. Considerable European geographical knowledge of it is apparent in the map of 1454 ↗*Egyptus Novelo* by the Florentine painter Pietro del Massajo and in ↗Fra Mauro's *Mappamondo* of 1460.

European knowledge of Ethiopia and of its customs expanded greatly as a result of the first Portuguese diplomatic embassy of 1520–26 (↗Portugal). Its journey is described with remarkable detail by the chaplain of the embassy Francisco ↗Alvares. His account *Verdadera Infomaçam* was published in Lisbon, in 1540 (BeckHuntAlvar). The report of the Ethiopian emissary ↗Ṣägga Zäʾab published the same year by Damião de ↗Góis underlines the interest towards Ethiopia in Europe (Uhlig – Bühring 1994). In the following year, Portuguese troops intervened in support of the Ethiopian Christian state in its struggle with ↗Aḥmad b. Ibrāhīm al-Ġāzī, the Muslim ruler of ʿAdal (who was killed, most probably by a Portuguese musketeer, in 1543).

Ethiopian conceptions of E. meanwhile were changing. Once regarded by the Ethiopian Christians as a region inhabited by fellow members of their faith, it was increasingly viewed as a potentially important source of ↗firearms and warriors.

Awareness of Ethiopia on the part of Ignatius of ↗Loyola, founder of the Society of Jesus, led him to conceive the idea of travelling to the far-off Orthodox country to convert its inhabitants to Roman ↗Catholicism. Though he failed to go, several successive groups of ↗Jesuits made their way to Ethiopia in the late 16th and early 17th cent., and succeeded in converting two Ethiopian emperors, *aṣe* ↗Zädǝngǝl and *aṣe* ↗Susǝnyos. Both foresaw the advantages of a military alliance with well-armed Roman Catholic Europe. Jesuit activity in Ethiopia was, however, short-lived. In the 1630s, the missionaries (whose writings contributed immensely to E.'s knowledge of the country) were expelled by *aṣe* Susǝnyos' Orthodox son, *aṣe* ↗Fasilädäs. Ethiopia then entered a period of isolation from the Roman Catholic West – but not from either the Protestant or Eastern worlds. Though Catholic priests were rigidly denied entry, the German Protestant missionary Peter ↗Heyling was welcomed at Fasilädäs's court, and an envoy was sent from Gondär to Batavia in the Dutch East Indies. King Louis XIV of France, at the end of the century, however, tried in vain to re-open Western relations with the Gondarine realm. This period nevertheless witnessed important scholarly interest in Ethiopia, on the part of the illustrious German linguist and historian Hiob ↗Ludolf, aptly termed the founder of ↗Ethiopian studies in Europe. His works included a *Grammatica Aethiopica* (1986), *Lexicon Aethiopico-Latinum* (1661), and his *Historia Aethiopica* (1681).

18th cent. European consciousness of Ethiopia was reinforced by Samuel ↗Johnson's imaginary novel *Rasselas, Prince of Abyssinia* (1810), later better known as *The History of Rasselas*. First published in 1759, it was extensively reprinted, and translated into many languages. Foreign knowledge of the country also owed much to James ↗Bruce, the Scottish "explorer". His five-volumes *Travels to Discover the Source of the Nile* (BruNile) was published in 1790.

The early 19th cent. witnessed the arrival in Ethiopia of numerous travellers from Western E., who contributed immensely to ever expanding European information on the country. Visitors from Britain included Henry ↗Salt, Nathaniel ↗Pearce, Mansfield ↗Parkyns, Charles Tilstone ↗Beke, Charles Johnston, William Cornwallis ↗Harris, and Richard ↗Burton; those from France, Edmond ↗Combes and Maurice ↗Tamisier, the brothers Antoine and Arnauld ↗d'Abbadie, Pierre ↗Ferret and Joseph Germain ↗Galinier, Rochet d'Héricourt, and Théophile Lefebvre and his associates; from Germany, Edouard ↗Rüppell, Wilhelm ↗Schimper, Johannes Martin ↗Flad and C. Eichinger; from Switzerland, Samuel ↗Gobat, Theophil ↗Waldmeier, and later Werner ↗Munzinger; and from Italy, Giuseppe ↗Sapeto, and, later, Guglielmo ↗Massaja. Several of the above Europeans, and others, entered the service of Ethiopian rulers as craftsmen or envoys. They included the Englishmen William ↗Coffin, John ↗Bell, and subsequently, after the re-establishment of a more unified Ethiopian state, *aṣe* ↗Tewodros II's missionary artisans, among them Johannes Martin Flad and Theophil Waldmeier; and *aṣe* ↗Yoḥannǝs IV's British military aide and envoy, John ↗Kirkham, and Greek physician Nicholas Parisis.

Individual European travellers were meanwhile followed by larger expeditions. After Lefebvre's French scientific mission in the 1840s, in 1876 was sent a mission from the Italian Geographical Society, whose work at ↗Lǝṭ Marāfiya, in Šäwa and in other regions was described *inter alia* by Antonio ↗Cecchi. No less important was the German ↗Deutsche Aksum-Expedition, whose report by Enno ↗Littmann and others was published in Berlin in 1912. Several other scientific missions, mainly French (↗France, relations with), took place in the late 19th and early 20th cent. The 19th cent. also saw the signing of a series of ↗treaties with a number of European countries. Moreover, relations got on a more solid base when European powers started to open consulates and legations in Ethiopia: France opened a consulate in Massawa in 1840 (Malécot 1972:44), Great Britain chose Däbrä Tabor for their representation in 1847; ↗Plowden was appointed as first consul (RubInd 121).

Considerable research on Ethiopia, during this period, and after, was also conducted within E. itself, largely by scholars versed in the Semitic languages, or, in the Italian case, interested in expansion in Africa. Prominent among such European scholars were the Germans, August ↗Dillmann, Franz ↗Praetorius, Theodor ↗Nöldeke, Enno Littmann, and Eugen ↗Mittwoch; the Italians, Ignazio ↗Guidi, Carlo ↗Conti Rossini, and later Martino Mario ↗Moreno; the Frenchmen, Joseph ↗Halévy, Henri ↗Zotenberg, René ↗Basset, Jules ↗Perruchon, and later Marcel ↗Griaule and Marcel ↗Cohen; the Britons, William ↗Wright, Ernest Wallis ↗Budge, and later Charles ↗Armbruster; the Russian, Boris ↗Turaiev; the Austrian, Leo ↗Reinisch; and the Portuguese, Francisco Maria ↗Esteves Pereira.

The latter part of the 19th cent. also witnessed extensive European military operations in the Ethiopian region. The British expedition to ↗Mäqdäla was followed by the Italian seizure of ↗Massawa, in 1885; the victory of *ras* Alula Ǝngəda over the Italians, at ↗Dogᶜali; the establishment of the Italian colony of Eritrea, in 1890; and *aṣe* Menilek II's resounding victory over Italy at the battle of ↗ᶜAdwa. The coming of the Italians spread European influence, including clothing, into Eritrea and to some extent northern Ethiopia, south of the Märäb river. The Ethiopian victory at ᶜAdwa, however, prevented the envisaged large-scale European settlement in the colony. Ethiopia was nonetheless by then entirely surrounded by territories under European control: those of the Italians, British and French at the coast, and of the British in the West and South: Sudan and British East Africa, later Kenya.

The founding of ↗Addis Abäba in 1886, the rise of the modernising *aṣe* Mənilək II, and the establishment of the first modern roads, schools, hospitals, railway, bank, printing press, etc., was followed by the coming of many Europeans, businessmen, artisans, diplomats and missionaries, as well as experts, advisers, teachers, and other specialists. Advisers in *aṣe* Mənilək's service included his Swiss technician-cum-diplomatic aide, Alfred ↗Ilg; his subsequent French counsellor, Casimir ↗Mondon-Vidailhet; and his Russian military assistant Nikolaj ↗Leontiev. Europeans in the Ethiopian capital in 1910 were estimated at over 500, including some 330 Greeks, 60 French, 40 Italians, 20 Germans, and a few English and others. The principal European legations in Addis Abäba, established at the turn of the 20th cent. were those of Italy, France, Britain, Russia, Germany and Belgium. *Aṣe* Mənilək's policy was as far as possible to diversify dependence on the European powers and to play off one against another.

Ethiopia's entry into the League of Nations in 1923 and the ensuing modernising period of Täfäri Mäkʷännən (later *aṣe* ↗Ḥaylä Śəllase I), led to increasing European contacts and influences. The monarch's foreign advisers included a Swede, Eric Virgin, in the Ministry of Foreign Affairs; a Swiss, Jacques Auberson, in the Ministry of Justice; and an Englishman, Frank de Halpert, on anti-slavery matters. The return of students from Europe, mainly France, contributed towards making French a limited *lingua franca*. Ethiopia, immediately prior to the Italian invasion, had an estimated European population of well over 4,000, three-quarters of whom were Greek; the French and Italians each numbered about 350 – as against 4,000 Arabs, 3,000 Indians, and well over 2,000 ↗Armenians.

The subsequent Italian invasion (↗Italian war 1935–36), and occupation, led to a considerable decline in the number of non-Italian Europeans, coupled with a vast increase in that of Italians, who consisted mainly of administrators, soldiers and workers. No less than 60,000 Italian labourers were working on the roads in 1936–37, but this figure later fell substantially. Plans for large-scale Italian settlement failed to materialise. Many Ethiopians, however, learnt Italian. The Liberation, in 1941, witnessed a significant diversification of the European population, as well as the rapidly increasing Ethiopian adoption of European dress and habits; also the growing use of English, and the publication in the capital of English language periodicals.

Richard Pankhurst

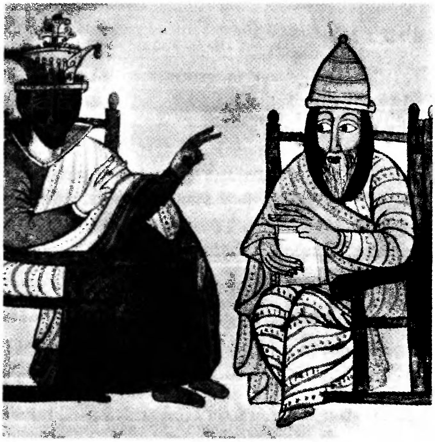
Eusebios of Caesarea

E. (Εὐσέβιος, Gəʿəz አውሳብዮስ, *Awsabyos*, also *Awsebes*, *Awsəbyos*; b. before 264/65, Palestine, d. 30 May 339 or 340) was from 313 until his death the Bishop of Caesarea, Palestine. Here he had been a student of Pamphilus, the most learned disciple of ↗Origen, in the dark ages of the anti-Christian persecutions, to which the "Milan" edict of toleration issued in 311 put a final end. A great favourite and the official historiographer of Emperor Constantine I, E. owed to Pamphilus, whom he held in high esteem (hence his surname "of Pamphilus"), both an excellent scholarly education and the respect for Origen's tradition that prompted him to play an important role in the contemporary theological discussions. As a champion of Arianism (↗Arius), though not an extremist (he viewed the *homooúsios*, i.e. the consubstantiality, of the Father and the Son as a dangerous form of Sabellianism or Monarchianism), he was anathematized at the Synod of Antioch in 325 but immediately rehabilitated at the Council of ↗Nicaea, where he subscribed to the condemnation of Arius. Yet, he was then active in helping to bring about the depositions of the Orthodox Eustathius of Antioch in 330, ↗Athanasius of Alexandria in 335 and Marcellus of Ancyra in 336 – following a synod held in Constantinople that witnessed E.'s participation. Here he successfully rebuked, with counteraccusations of Sabellianism, Marcellus's previous attack on the Arian Asterios the Sophist, which implied severe accusations against E. himself. As a theologian, however, the latter was never to recover from a faithful pro-Arian stance, which accounts for his posthumous reputation, i.e. for the negative attitude of generations of Byzantine readers (also disturbed by his rejections of the cult of icons) toward him and his writings, apart from the historical ones.

E.'s remarkable literary production in Gr. is the achievement of an intensive systematizer who assembled an enormous amount of data and information. In spite of several shortcomings, it sheds a fundamental light on the early centuries of Christianity, ranging from apologetics (I) and church history (II) to biblical exegesis and philology (III), dogmatics and theology (IV). Among his most famous works in these fields are: (I) the voluminous treatise(s) *Preparation* and *Demonstration of the Gospels*, dedicated to the Arian bishop Theodotus of Laodicea and dealing respectively with the position of Judaism vs. Graeco-Roman paganism and Christianity (and soon to be a textbook for antipagan and anti-Jewish polemics); (II) the teleologically-oriented *Chronicle*, *Ecclesiastical History* and *Life of Constantine*, all primarily responsible for his fame (the *Chronicle* was also translated into Armenian); (III) the *Onomasticon* (a book on the place-names mentioned in the Bible) and the *Canons of the Gospels*, dedicated to a certain Carpianus, that offers in ten tables a synoptic view of the canonical ↗Gospels; (IV) the book *Against Marcellus* (of Ancyra), the *Ecclesiastical Theology* (in form of a letter to his diocese) and the *Epistle to Carpianus*, i.e. an introductory explanation to the *Canons of the Gospels*.

The Gəʿəz legend *bz msql mwʾ* ('By this cross you [shall be] conquerer') found with variants on the coins of King ↗MḤDYS (Types 67–70 in Munro-Hay – Juel-Jensen 1995:160–65), far from translating the Latin words 'hoc signo vinces' or 'hoc (signo) victor eris', which shows on coins from the reign of Vetranio, 350 A.D. (Pedroni

1997:49), might rather indicate that the passage of the Greek *Life of Constantine* on the latter's vision prior to the battle at the Milvian Bridge, 312 A.D. (I, 28f.: τούτῳ νίκα, 'by this you shall conquer') was indirectly known in ↗Aksum since at least the second quarter of the 5th cent. (s. also Travaini 2002:112 and n. 6, 114f. and n. 23). In any case, the Ethiopian tradition seems to mirror, or to agree with, the Byzantine criticism of E., who was always more or less openly considered a staunch supporter of Arianism, a denomination which found almost no audience in the kingdom of Aksum, despite the mission of the Arian bishop ↗Theophilus the Indian, sent there on purpose by Emperor Constantius II (possibly between 341 and 346). In Ethiopia, significant traces of cursing and exorcizing the name and doctrines of Arius and his later (Anomoian) followers like Aetius and Eunomius – the bishop of Cyzicus condemned at the council of Constantinople in 381 – can indeed be detected since the Aksumite age (Fiaccadori 1992:9f., n. 19, and 2003:251f., 255 and n. 44). This may well explain E.'s absence from ↗Gəᶜəz literature, where only the system of concordance of the Gospels devised by him is known, both the *Canons* and the *Epistle to Carpianus* having been translated into Gəᶜəz from Greek (CPG 3465) along with the Gospels. In this system, numbered sections of the text are accompanied by a red figure referring to one of the ten tables (at the beginning of the volume) where similar passages in other Gospels are listed. A large series of medieval and early-modern Ethiopic Gospel books, headed by those kept in the Təgrayan monastery of ↗Ǝnda Abba Gärima (mss. I, II and III), includes E.'s *Canons*, traditionally framed in elaborated "arches" (Gəᶜəz: **ቀመር**, *qämär*, pl. *aqmar*(*at*), from Gr. καμάρα) and preceded by the *Epistle to Carpianus* (↗Canon tables). Such books actually preserve E.'s original design, distributing the ten tables over seven pages (with a few seeming exceptions), not ten as in the extended sequence by the middle-Byzantine illuminators (since the 10th cent.). Like the illustrated Ethiopic Octateuchs or the so-called short cycle of miniatures in the Gospel books themselves, they are the results of subsequent copies harking back to Aksumite originals and, ultimately, to pre-iconoclastic Byzantine prototypes belonging in turn to a Palestinian milieu that is all the more congenial to E. and his works (↗Byzantine Empire).



Eusebios and Emperor Constantine the Great at the Council of Nicaea (detail); miniature from a 17th-cent. ms. of the *Haymanotä abäw* ms., Çäläqot, Ǝnda Śəllase church; photo 1993, courtesy of Michael Gervers

Eusebios, Canons of ↗Canon tables

Eusebios of Herakleia

E. (Gr. Εὐσέβιος, Gəʿəz **ኤውሴብዮስ**, *Ewsebyos*) is known from both the Acts of the first Council of ↗Ephesus, 431 A.D., where he is mentioned twice as bishop "of Herakleia in the (ecclesiastical) Province of Honorias", corresponding to ancient Bithynia (*Gesta Ephesena*, §§ 33 and 73, no. 107), and a short "[Homily] of Eusebius, bishop of Herakleia in Pontus", which survives in an Ethiopic translation from Greek that entered the much-diffused anti-Nestorian collection bearing the name of ↗*Qerəllos* (CPG 6143). The homily belongs to a series of discourses delivered by partisans of ↗Cyril of Alexandria "in the church dedicated to Mary in Ephesus, on Sunday, the 11th day of *Ḥamle* [= 5 July]" in 431 – i.e., thirteen days after the condemnation and deposition of ↗Nestorius. As confirmed by its flattering allusion to Cyril's leading theological role (§ 1), the text was therefore written at the beginning of the Council of Ephesus (opened by Cyril on 22 June), possibly between 28 June and 5 July of the same year (Weischer 1979:39f.). This provides no better clues for the tenure of Bishop E. in the prestigious see of Pontic Herakleia (modern Ereğli) on the Black Sea coast of Anatolia, but lends some evidence to this otherwise elusive historical figure.

Gianfranco Fiaccadori

Eutychius

E. (in Gəʿəz **አውጣኪዮስ** Awṭakiyos, or Awṭake/Awṭaki) was the first proponent of ↗Monophysitism, whose theological claims were endorsed at the Council of ↗Ephesus (449) by Dioscorus, Patriarch of Alexandria. E. as a person seems to have not been influential at all after the Council of ↗Chalcedon (451) and the group of his followers disappeared not later than in the 6th cent. Among the anti-Chalcedonians, E. was condemned by the first anti-Chalcedonian patriarch of Alexandria, Timothy Aeluros (457-77), and by the *Henotikon* (a document which provided the common ground to all the anti-Nestorian fractions, issued as an alternative to both Councils of Ephesos and Chalcedon) of Emperor Zeno (482) for having rejected the principle of "consubstantiality to us according to the flesh", fundamental for both Chalcedonian and all the (non-Eutychianist) anti-Chalcedonian parties.

The Chalcedonians equated any teaching of their opponents with Eutychianism. Anti-Chalcedonians' usage of the same name was much more sophisticated. The radical Monophysite factions (especially the adherents of Julianism) were usually labelled "Eutychianist" by the moderate ones, forcing the former to explain their attitude towards Eutychianism.

In Ethiopia the most detailed account on E. is available from a source with a Julianist tendency, the *Mäṣḥafä* ↗*məsṭir* by Giyorgis of Sägla, homilies no. 14 (against Awṭaki "who denies that the flesh of Christ was experiencing, like our flesh, the weakness and the passion") and no. 17 (against Aftikis, who teaches that the body of Christ was descended from heaven). Both heresiarchs' names are different renderings of E. and the doctrines ascribed to them represent two usual charges against E. made by the anti-Chalcedonian theologians.

In the 19th cent. the representatives of the ↗*Karra* movement were labelled "children of E." So, in an Amharic document issued by the ↗*Yäṣägga ləǧ* school (written by *mämhər* ↗Kəflä Giyorgis), there is a "historical" account of the events of the middle of the 5th cent. aiming to demonstrate that the *Karra* (and even the ↗*Qəbat*) have their roots in Eutychianism (Yaqob Beyene 1977:13f.).

Basil Lourié

Evagrius

E. (Evagrius Ponticus; **አግዋሪስ** *Agwaris*, also **አውጋርዮስ** *Awgaryos*, **ወግሪስ** *Wägris* or **ወቅሪስ** *Wäqris*, Greek Εὐάγριος Ποντικός, b. ca. 325, Ibora, Pontus, d. ca. 399, Egypt) was an important early monastic theologian and ascetic writer. According to his disciple Palladius (*Historia Lausiaca* 38; Palladio 1974:192ff.), he was ordained lector (*anagnostēs*) by ↗Basil the Great and deacon by his master ↗Gregory of Nazianzus, who attached him to bishop Nectarius, on the occasion of the Council of 380 in Constantinople. Here he earned great fame for his antiheretical speeches. Involved in a love-affair with a married upper-class woman, he left for Jerusalem, where Melania of Rome (the Elder) received him. In 383 he gave himself over to monastic life; after two years in the desert of Nitria, he spent the rest of his life in the Kellia, associating with anchorites and monks of the region and working as a sought-after copyist.

E. wrote most of his numerous works during his stay in the Egyptian desert. A follower of the doctrines of ↗Origen, he is one of the most outstanding personalities in the development of theoretical thought on ascetic life. Combining the psychological doctrine of the pre-existence of the soul with the need of the ascetic anchoritic practice for the salvation of man, he exerted a lasting influence on most of the subsequent monastic writers. Probably due to the condemnation of Origen's doctrines, definitely confirmed by the Council of Constantinople in 553, not many of his original Greek writings have survived: sometimes, mostly the ascetical works, under the name of Nilus of Ankyra (cf. Sinkewicz 2004); several other works by E. are only known from Latin and Oriental versions – esp. Syriac and Armenian (full list of E.'s works in CPG II, nos. 2430–82). However, the traditional view of E.'s condemnation has been recently questioned by Dysinger (2003).

E.'s biography is summarized in the reading of the *Sənkəssar* for 11 *Ṭərr* (cf. BudSaint 481ff.; ColSyn IX, 82–85), where also his fabulous meeting with *abba* Bula is recorded. He is also mentioned in the readings for 19 *Ṭərr* of some manuscripts of the ↗*Dərsanä Gäbrəʾel* (e.g., ms. VatLib, Aeth. 149, fols. 19v–20v).

Works of E. have been translated into Gəʿəz, where at least two of the names under which he is known, *Agwaris* and *Wägris*, have eventually given birth to the tradition of the existence of distinct personalities, listed, e.g., under different entries (nos. 198–99) in the inventory of Ethiopic works in ms. EMML 1601, fols. 1v–16r, a compilation of a 20th-cent. *däbtära* (probably *liqä ṭäbbäbt* Aklilä Bərhan Wäldä Qirqos). Unlike what happened for other traditions, esp. the Syriac and the Armenian (cf. Guillaumont 1985), but also the Arabic and Coptic ones (cf. GrafLit vol. 1, 397ff.; Samir 1992), no systematic study of the Gəʿəz manuscript tradition has been undertaken. Apart from the identifications listed below, it is more than likely that E. left other writings or passages that have not yet been identified.

The treatise *On the Eight Thoughts* (or: *Spirits*, Greek λογισμοί) *of Evilness* (CPG II, no. 2451) – i.e. the eight sinful desires (gluttony, fornication, avarice, grief, wrath, torpor, vainglory and arrogance), a topic E. thoroughly developed – was first published by Bachmann (1893:26–33 from mss. Tübingen, Universitätsbibliothek, Aeth. 3, fols. 14vff., and Aeth. 20, fols. 82r ff.), later independently and partially edited and translated by Grébaut (1913–14, from ms. Delorme 3), and finally collated, translated and commented upon (but not re-edited) by Spies (1932), with perusal of other mss. (BritLib Orient. 754, fols. 178r–80v, and Orient. 757, fols. 140r–142v; Wien, Österreichische Nationalbibliothek, Aeth. 16, fols. 7rb–10rb; Staatsbibliothek zu Berlin, Preußischer Kulturbesitz, Orient. oct. 1307, fols. 3ra–15ra). This recension is characterized by a colophon giving the date of the translation from Arabic as 1553, in the 13th year of the reign of *aṣe* Gälawdewos (r. 1540–59). As observed by Spies (1932:204), ms. BN d'Abbadie 75, fols. 172ff. could preserve, among other writings of E., the same treatise in turn, as well as others, but we lack a careful description of this manuscript. Further mss. of the same recension are Uppsala, University Library, O Etiop. 50, fol. 156v (incomplete); Stadt- und Universitätsbibliothek Frankfurt, Ms. or. 7, fols. 338r–45r; Staatsbibliothek zu Berlin, Preußischer Kulturbesitz, Orient. 2283, fols. 129vb–32rb; EMML 1387, fols. 81r–84v; 1648, fols. 56r–60v and 67r–69v; 3641, fols. 159v–64r; and 4550, fols. 45r–49v.

Four of the eight sections of the treatise (on the desires of gluttony, avarice, torpor and vainglory), certainly originating from an independent translation (the *Vorlage* of which and its relationship with the other recension have not yet been ascertained), are also found in the so-called *Monastic Collection*, edited and translated from mss. BritLib Orient. 764 and VatLib, Cerulli et. 220 (to which Ṭānāsee 28 = Kebrān 28 and EMML 4447 are now to be added), by Arras (1963:51ff., 168f., 170f., 239f. [text] = 37ff., 123f., 124f., 175f. [tr.]). In the same *Monastic Collection* the *Sentences to Monks* (CPG II, no. 2435) are found (cf. Arras 1963:145–52 [text] = 106–12 [tr.]). Moreover, some of the anonymous sayings are certainly to be attributed to E. (e.g., *ibid.*: 132, ll. 18–22 [text] = 97, ll. 22–27 [tr.], to be compared with E.'s saying in *Historia Lausiaca* 38:13 [Palladio 1974:202f.] and in the *Sənkəssar*, cf. BudSaint 483; ColSyn IX, 84f.).

Other *Sentences*, probably spurious (CPG II, no. 2481), are attributed to E.: first edited and translated by Grébaut (1915–17 and 1919–20, from ms. Delorme 3), they often follow the *Treatise on the Eight Thoughts* (e.g., mss. BritLib Orient. 754, fols. 180vff., and Orient. 757, fols. 142vff.; Stadt- und Universitätsbibliothek Frankfurt, ms. or. 7, fols. 280va–281va; Staatsbibliothek zu Berlin, Preußischer Kulturbesitz, ms. orient. oct. 1307, fols. 15ra–21va, and Or. 2283, fols. 132rb–33va; EMML 1387, fols. 84v–86v; 1442, fols. 70v–71r; and 2084, fols. 164r–66v). In ms. BritLib Orient. 754, fols. 182rf., the *Sentences* are further followed by three letters from the correspondence between Lucius (*Lukyos*) and E., whose second letter is divided into 21 sections; the identification of Lucius with the addressee of E.'s *Treatise to Eulogius* (CPG II, no. 2447) is, however, doubtful (cf. Hausherr 1940).

Besides short references in other collections (e.g., in the *Patericon*, cf. the tr. by Arras 1967: 180 [under "E."]; cf. also ms. EMML 19), passages of the *Geronticon* have also been identified as belonging to E.'s works: from the treatise *On Prayer* (CPG II, no. 2452, §5, cf. Arras 1986:166f. [text] = 112f. [tr.], and §§1–16, 17–49, 50–59, 62, 66–128; cf. *ibid.*, 346–52 [text] = 235–39 [tr.], from mss. BritLib Orient. 763 and BN d'Abbadie 85; but also in ms. EMML 7469); from the *Practicus* (CPG II, no. 2430, §4, cf. Arras 1986:104 and 307 [text] = 69f., 209 [tr.], and §§6–14; cf. *ibid.*, 342–46 [text] = 233ff. [tr.]); and again from the *Sentences to Monks* (cf. Arras 1986: 197 and 259 [text] = 134 and 176 [tr.]). The attribution to E. of other Ethiopic writings (e.g., the "Exhortations aux anachorètes" and the "Sentences ascétiques" ed. and tr. by Grébaut 1913ff. from ms. Delorme 3, as in GuiSLett 82, n. 1) is not supported by their clear identification. An obscure short text, found in at least three mss. (Ṭānāsee 39 = Kebrān 39, fols. 165va–68va; Ṭānāsee 94 = Rēmā 5, fol. 175r-v; EMML 2218, fols. 165v–66r), seems to witness to the existence of Gəᶜəz commentaries on the ascetic writings of E.

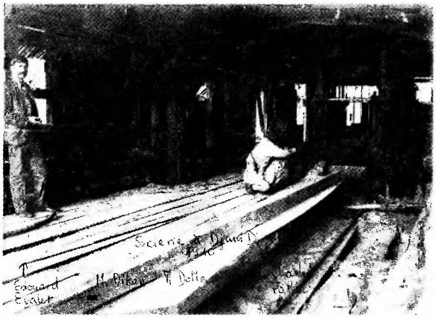
Alessandro Bausi

Evalet, Edouard

E. (b. 2 December 1876, La Heutte, Jura, Switzerland, d. 21 October 1942, Addis Abäba) was the first industrialist in Ethiopia. Invited to Ethiopia by his compatriot Alfred ↗Ilg, in 1898 he first became *aṣe* ↗Mənilək II's imperial clockmaker at the court and then a merchant importing clocks. In 1907, as a reward for his services, he received a concession for a saw-mill, together with the Swiss architect Carl Faller. The "Scierie Evalet-Faller", employing foreigners and locals, was opened in 1908 next the Ǧam Ǧam river (Oromo territory near ↗Addis ʿAläm), amidst rich forests, and remained without competitors until 1936/37. It followed E.'s ideas of respect for the environment and enjoyed good relations with the region's Oromo chief, Abbaa Doyo (d. ca. 1940). The saw-mill delivered wood specially for internal use, but also for export (British Palestine). Until the 1930s, Addis Abäba was, to a large extent, built with its products (*Le Courrier d'Ethiopie* 1929, 1; Evalet 1999:64). After Faller's death in 1927 it was renamed Scierie Edouard Evalet, with the administration in Addis Abäba. Starting from 1936, E.'s son, André (1908–2002), was associated with the company (cp. ErDizBio 120). Later, called Maison J. Evalet-Roth in 1942, it was continued by his widow and his son until the de-facto expropriation of the family business in 1952 by *aṣe* Ḫaylä Śəllase I, who, however, in 1961 honoured Jeanne Evalet-Roth (1887–1973) with the Order of the Queen of Sheba.



Sawmill of Edouard Evalet in Ǧamǧam; photo from the collection of André Evalet

E. was in good terms with Mənilək's notables. When asked by the French general Famin to act as a go-between with the Ethiopian government in order to help the continuation of the work on the Chemin de fer Franco-Éthiopien – stopped in Awaš following Ethiopian doubts – his contact with the Minister of War ↗Habtä Giyorgis was of crucial help (Evalet 1999:37). E.'s wife later was a confidant of Empress Zäwditu, for whom she was a source of information on Europe, especially during World War I. On a journey to Jerusalem, Constantinople and Paris in 1921, E. acted as an unofficial envoy of Zäwditu to enforce – though unsuccessfully – Ethiopian claims on the territories of the Ethiopian monastery ↗Dayr as-Sulṭān. Two of E.'s three children and a number of his grandchildren were born and raised in Ethiopia.

Wolbert Smidt

Evangelical Church(es) ↗Protestantism

Evangeliska Fosterlands Stiftelsen

The first Protestant missionary organizations to work in Ethiopia were the ↗Church Missionary

Society of London since 1839 and the ↗St. Chrischona-Pilgermission from Basle since 1856. Both waited for an opportunity to enter ↗Oromo territory but failed to do so. It was for two Lutheran missionary societies, the German ↗Hermannsburger Mission (founded in 1849) and the E.F.S. (founded in 1856) to bring the Gospel to the non-Christian Oromo.

The E.F.S., known in Ethiopia as the Swedish Evangelical Mission (SEM), had sprung from the spiritual awakening movements in Sweden of the early 19th cent. It was working first of all among the Christian population of Sweden, but soon it also began missionary work abroad.

On 15 March 1866 the first three Swedish missionaries, Carl Johan Carlsson (1836–67), Per Erik Kjellberg and Lars Johan Lange, landed at Massawa. The governor of ↗Adyabo, *ato* Wäldä Ṣadəq Märač, allowed them to set up a mission station at Tandere in ↗Kunama territory, where they arrived on 4 June 1866. In July, Carlsson went to Uzama, where he learned the Kunama language, while Lange fell seriously ill and had to return to Sweden and Kjellberg struggled on in Tandere. In May 1867 reinforcements arrived from Sweden in the form of three more missionaries.

In the bloody fighting among the various villages and factions the Swedes soon became trusted peacemakers. In January 1869 they received nine more colleagues from Sweden, seven men and two women. Among the newcomers were Bengt Peter Lundahl (1840–85) and his fiancée Gustava von Platen, whom he married in Ethiopia. However, fighting among the local population and illness obliged them to return to Massawa. It was there that the mission managed finally to establish roots and henceforth was able to carry out its work of evangelizing the Oromo and of rendering various services, such as medical care and education. In the latter field the work of missionary women became of particular importance, because they took upon themselves the schooling of Ethiopian women. The first Oromo baptized by the Swedes was a young former slave, Näsib, to whom the Swedes gave the name ↗Onesimos.

The distribution of Bibles in Amharic and Gəʿəz by earlier Protestant missionaries in the ↗Ḥamasen had led to eager scriptural studies among the Orthodox Christians. The Swedish missionaries soon began to work in two different fields: Lundahl saw as his primary task the need to train indigenous missionaries from among the Oromo freedmen, while P.E. Lager (1837–76, arrived in Ethiopia in 1867) took more interest in reform work within the ↗Ethiopian Orthodox Täwaḥədo Church. After the killing of Lager by Gubsa (var. of Gugsa) Wäldä Gäbrəʾel in the battle of Wäkki Dubba, near the St. Michael Church of ʿAddi Qʷänṣi, the method of Lundahl became the prevailing one.

The Protestant activity in Ethiopia led to the formation of an indigenous Evangelical Church in 1944. However, theological differences pushed the Lutherans to form a Lutheran Church of their own, a project which succeeded in 1959 with the foundation of the ↗Ethiopian Evangelical Church Mekane Iyesus. Since 1974 the E.F.S., as well as the other Lutheran missions present in Ethiopia have been part of this last Church.

Evangelists in art

A set of full-page portraits of the four E. is the most common form of illumination in the decorated Gospel books. The four E. (Matthew, Mark, Luke, John) are rarely depicted in other contexts. E. portraits in the formats of a standing figure holding his codex and an author seated before a desk or lectern engaged in composing his book were well established elements of the decorated Gospel book as early as the 6th cent.; the earliest extant 6th-cent. examples survive in Latin and Syriac Gospels.

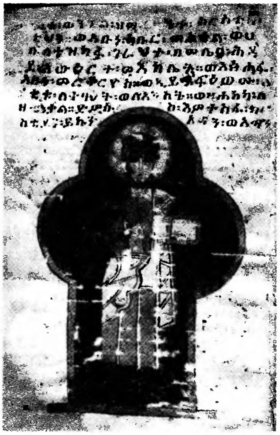

Fig. 1: St. Matthew; miniature from a Gospel Book of Däbrä Mäʿar; fol. 14v; 1340; photo 1993, courtesy of the author

No Ethiopian ↗manuscripts from the Aksumite period survived, but the introduction of E. portraits into Ethiopic (Gəᶜəz) Gospel books most likely goes back to this early period. Separate parchment leaves with E. portraits and decorated Canon tables, presently inserted into two later Ethiopic manuscripts of the Four Gospels at ↗Ǝnda Abba Gärima, have been dated by the carbon-14 process to the period between 430 and 650 A.D. (Mercier 2000b:40), but stylistic comparisons indicate that the illuminations were painted in the late 6th or early 7th cent. Their original provenance is unknown (AfrZion 129f.; the miniatures were first published in Leroy 1960, 1968).

The earliest presently known set of E. portraits integral to an Ethiopic Gospel book is found in the so-called Gospels of Iyäsus Moᵓa of ↗Däbrä Ḥayq Ǝsṭifanos, dated 1280/81 (ms. EMML 1832). Each full-page portrait is painted upon a verso page, facing the Gospel text on the recto page. Ethiopian scribes customarily copied the first page of a Gospel text on the first recto folio of a quire, a custom that goes back to the earliest centuries of production of manuscripts of the Four Gospels (cp. McGurk 1961) and is confined to Gospel books alone (Nelson 1981: 222, n. 57). Each E. thus introduces his respective Gospel. All sets of E. portraits in Ethiopic Gospel books follow this pattern of placement. Luke (Heldman 1994, fig. 50) and John in the Gospels of ↗Iyäsus Moᵓa are depicted as a frontal standing figure wearing a tunic and mantle as in some Greek E. portraits (Weitzmann 1935, pl. 79), the Gospel codex held in the draped left hand. Matthew and Mark of the Gospels of Iyäsus Moᵓa are seated figures. Mark wears a red monastic hooded cape (Heldman 1983, fig. 2), an apparent reference to the fact that successors of Mark at the patriarchal See of Alexandria were chosen from the Egyptian monastic community. The detail of the distinctive red monastic hooded cape is repeated in the portrait of St. Mark in the Gospels of *ᶜaqqabe säᶜat* Krəstos Täsfanä of Däbrä Ḥayq Ǝsṭifanos (Addis Abäba, National Library, ms. 28; s. AfrZion no. 65).

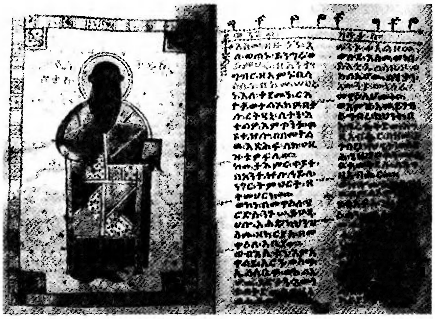

Fig. 2: St. Luke, miniature from a Gospel Book of Gʷənagʷəna; fol. 90v; period of the reign of *aṣe* Dawit (1382–1413), as per note on fol. 181r; photo 1974, courtesy of the author

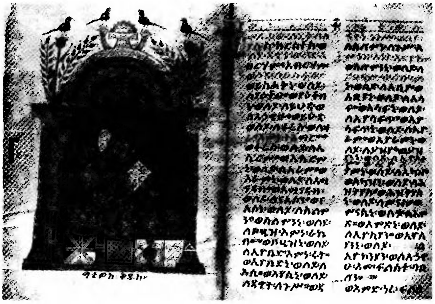

Fig. 3: St. Matthew, miniature from a Gospel Book of Kəbran, Lake Ṭana; fol. 24v; before 1412; photo 1986, courtesy of the author

E. portraits found in a number of illuminated Ethiopic Gospels books produced during the 14th, 15th and early 16th cent. repeat the essential formats of standing figure with codex, seated author, or a combination of the two. The portrait of Matthew in the Gospels of ↗Däbrä Mäᶜar, dated 1339/40 A.D. (s. Lepage 1987; AfrZion 130) shows a standing figure holding his codex (Fig. 1). Although his garments are treated rather decoratively, the simple tunic and the draped mantle of the Late Antique prototype of this portrait type remain recognizable. In contrast, the figure of Luke in a manuscript of the Four Gospels from a monastery at ↗Gʷənagʷəna in Akkälä Guzay, produced during the reign of *aṣe* Dawit II (r. 1382–1413), wears garments transformed by the painter into ornamental patterns (Fig. 2). This is typical of many sets of E. portraits created during the late 14th and 15th cent. (Heldman 1994, figs. 55–56). On the other hand, the painter of the evangelist portraits of the Gospels from ↗Kəbran Ǝsṭifanos followed middle-Byzantine models of the seated evangelist portrait type (Wright et al. 1961, pl. 8). The manuscript was produced before 1412 (Fig. 3; s. HamTana I, 84–91, ms. Ṭānāsee 1; AfrZion 178f., no. 69). More decorative interpretations of the

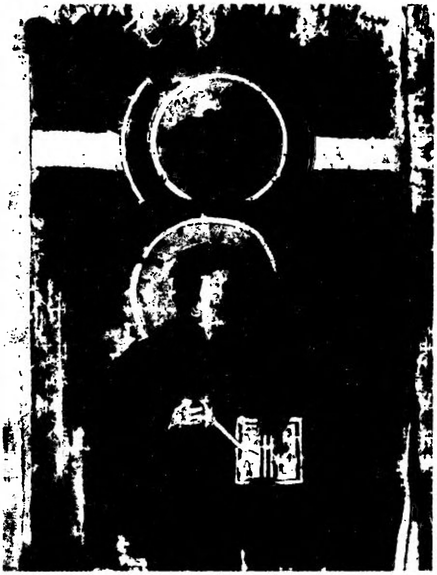

Fig. 4: St. Luke, miniature from a Gospel Book, Ǝnda Abba Pänṭälewon; fol. 85v, mid-15th cent.; photo 1974, courtesy of the author

seated E. are found in the Gospels of ↗Däbrä Maryam Qʷäḥayn, Eritrea, dated 1360/61 (s. Buxton 1970, fig. 75; Bausi 1994:24–44) and other illuminated Ethiopic Gospel books of the 15th and early 16th cent. (s., e.g., Wright et al. 1961, pl. 6; Hammerschmidt 1977, pl. 132–35; Jäger 1957, pl. 1–2; Spencer 1972:67; Mercier 2000:86f.; Horrowitz 2001:101).

Portraits of three E. in a mid-15th-cent. manuscript of the Four Gospels from Ǝnda Abba Pänṭälewon from the environs of Aksum depart from the simple E. portrait described above. Each E. is accompanied by his symbol – Mark is accompanied by a lion, Luke by an ox (Fig. 4) and John by an eagle. A single miniature with a portrait of John, presently in a private collection (Mercier 2000:60), is by the painter of the Ǝnda Abba Panṭalewon E. portraits. The symbols derive from the interpretations of Ezekiel's vision of God (Ezek 1:5–10) and the vision of John in the Apocalypse (Rev 4:6-8); the symbolic scheme devised by Jerome was adopted as a standard addition to the portraits of the evangelists in the arts of the Roman Church (s., e.g., Nelson 1980: 15–53). In the ↗Ethiopian Orthodox Täwaḥədo Church, the "Four Living Beings" that support the throne of God are understood to be intercessors there for all creation, and they are celebrated as such on 8 *Ḫədar* (BudSaint 221f.; ColSyn VIII, 168–73). The appearance of these animals as symbols in the portraits of the E. in this 15th-cent. Gospel book reflects the impact of European art, introduced to Ethiopia during the course of the 15th cent.

A set of strikingly different E. portraits decorates a 17th-cent. Ethiopian manuscript of the Four Gospels (London, BritLib, ms. Orient. 516), the distinctive style of which indicates that it was produced in the environs of ↗Lalibäla in Lasta (AfrZion no. 108; Mercier 2000:142f.). The iconography of these E. portraits, a standing saint with his hands raised in an orant pose and accompanied by his disciples (*ardəʾət*, 'helpers'), is unique to miniatures painted in this style. Matthew is accompanied by four disciples, Mark has two disciples who hold books, and those accompanying Luke hold large knives (AfrZion no. 108; Leroy 1967, pl. 55).

Portuguese ↗Jesuit missionaries to Ethiopia in the early 17th cent. brought one or more copies of the Arabic Four Gospels (*Evangelium Arabicum*), printed in Rome in 1591. Decorated with woodcuts designed by Antonio Tempesta, the book has a set of illuminations showing E. with the animal symbols. It furnished new models for E. portraits of later Ethiopic Gospel books. The portraits in the 17th-cent. Gospels from the Gana Yoḥannəs church at Säqält (Jäger 1957, pl. 5) follow the Arabic Gospel's composition rather closely. The impact of these models upon E. portraits in Ethiopian manuscripts is often less direct, yet present when the E. is depicted while writing, sitting upon the ground or a low stool with his symbolic animal beside him (Hammerschmidt 1977, pl. 129ff.). E.g., E. portraits of a 17th-cent. Gospel book (BritLib., ms. Orient. 515) show each E. seated on the ground writing, while before him his symbolic animal holds an ink horn into which the author will dip his pen. Because these portraits are painted in the 18th-cent. second Gondärine style, we must conclude that they were added some time after the manuscript was produced.

Marilyn E. Heldman

Evliyā Çelebi

E.Ç. (b. 25 March 1611, Istanbul, d. 1684?) was the author of a huge ten-volume work known as the *Seyāḥatnāme* ('Book of Travels'), in which he describes the journeys he had undertaken – some of them probably spurious – throughout the Ottoman Empire and adjacent lands. The *Seyāḥatnāme* is the only source that provides us with biographical data on E.Ç. It recounts his birth as the son of *Derwīš* Meḥmed Ẓillī, the chief court jeweller (E.Ç. is only his pen name, which he probably adopted in veneration of his teacher, the court-*imām* Evliya Meḥmed *Efendi*). After attending a *medrese* for seven years and a Qurʾānic school for other eleven, he excelled as a *Qurʾān* reciter and found favour with *sulṭān* Murād IV, who took him to the palace school for further education.

Before starting his extended travels in 1640, E.Ç. explored Istanbul and its environs, which he described in the first volume of his work. His further journeys took him through Anatolia and the Balkans, from Vienna to Baghdad and from Crimea to Eritrea.

In volume ten he gives an account of his journey to the Kingdom of ↗Funǧ and to the Ottoman province of ↗Ḥabeš on the Red Sea. Travelling from Cairo along the Nile, he reached Sinnār, the capital of Funǧ, on the 20 *Šaʿbān* 1083 H. [11 December 1672]. From there he went, together with the King of Funǧ, ↗Bādī II – E.Ç. only calls him by his title, *qaqān* – into the deep south of the latter's realm, up to the mountain of "Ševām", which was situated, according to E.Ç., 180 days' journey south of Cairo.

Then he turned to Sinnār (18 February 1673) and went on his way back to Egypt, but decided to grasp the opportunity for a visit to "Ḥabeš". He seems to have made this journey via Qūṣ (Raǧab) to the north through Ethiopian territory, which he calls "Dümbīye", probably identical with Ethiopian Dämbəya. He reached "Ḥabeš" near Dinqilāb (Dungunab) and then turned south to "Sevākin" (↗Sawākin), where he embarked for the archipelago of ↗Dahlak and the harbour of "Musova" (Massawa). Zaylaᶜ was the last town he visited in "Ḥabeš" before he eventually returned to Cairo. During his journey in the Sudan and "Ḥabeš", it seems, he not only travelled as an emissary of Ottoman statesmen, as he usually did, but he also engaged in some trade.

In his account of Funǧ, as well as in that of "Ḥabeš", E.Ç. gives some examples of the local languages, which he calls Hebrew in Funǧ and Ḥabeši or Süryānī in "Ḥabeš", Hebrew and Süryānī being *topoi* for languages unknown to himself. Examples of the languages of the ↗Banyan, Hindu and Jain merchants, are also provided.

Due to his vivid imagination, E.Ç. occasionally mixes facts and fantasy. Nevertheless, the *Seyāḥatnāme* offers a wealth of information about the lands and peoples he describes.

Korkut Buğday

Ewald, Heinrich von

E. (b. 16 November 1803, Göttingen, d. 4 May 1875, Göttingen) was a prominent 19th-cent. German Protestant theologian and Orientalist/Semitist. A prolific author, E. contributed to many branches of theology and Semitic/Oriental Studies (e.g., the New Testament, Arabic grammar and metrics, South Arabian, comparative linguistics); the Old Testament and the history of Ancient Israel were at the centre of his scholarly endeavours. Unsurprisingly, therefore, his contributions to ↗Ethiopian Studies were limited in number. E.'s impact on the development of this discpline was rather due to his activity as a teacher than to his research. During the decade of 1838–48 which he spent at Tübingen University (he otherwise taught in his home town of Göttingen) E. initiated August ↗Dillmann into Ethiopian Studies and inspired him to work in this field. Dillmann's dedication of his famous 1857 Gəʿəz grammar to E., "his dear and venerated teacher and friend, master of Semitics", indicates his lasting gratitude. Theodor ↗Nöldeke, another leading German Semitist of the late 19th/early 20th cent., was also a student of E.

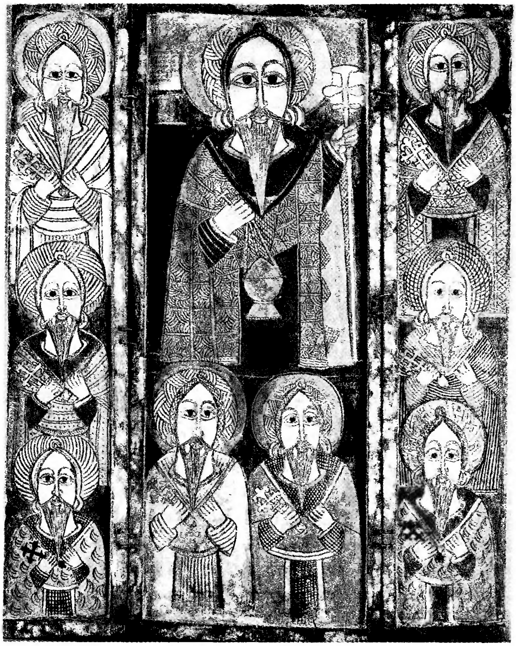
Michael Kleiner

Ewosṭateans

Members of the religious movement originating in the strenuous preaching of ↗Ewosṭatewos of Däbrä Ṣärabi (ca. 1273–1352), who was born and educated in eastern ↗Təgray, the E. (ደቂቀ፡ ኤዎስጣቴዎስ, *däqiqä Ewosṭatewos*, 'Sons of Ewosṭatewos') proved to be especially momentous for the history of what are now the Eritrean or Ethio-Eritrean regions of ↗Säraye, ↗Ḥamasen, ↗Šire and ↗Bur (including ↗Akkälä Guzay, ↗Šəmäzana and part of ↗ʿAgäme). Thanks to their missionary activity, those areas were intensively Christianized in the 14th and 15th cent. and witnessed both a wide diffusion of monastic settlements and a considerable elaboration of a much older theological and literary heritage (Lusini 1993:28ff.).

In the "long" genealogies of northern (Təgrayan) stock, ranging from the 14th to the 17th cent. and centred on Ewosṭatewos, he is given twelve pupils (to become later, according to various traditions, spiritual mentors of celebrated monastic leaders in the same line): 1. ↗Absadi of Däbrä Maryam, "spiritual father" of his own successors Zäkaryas and Romanos, as well as of Muse of Mayä Gʷärzo ("father" of ↗Dəmyanos of Qʷäḥayn who begat ↗Yonas of Bur); 2. ↗Märqorewos of Däbrä Dəmaḥ, "brother" of Absadi; 3. Matewos of Bärbäre or Dabra Bäkʷər (↗Amba Sänayti); 4. Bäkimos of ↗Däbrä Ṣärabi (Ṣəraʿ), first successor of Ewosṭatewos (before Ṗawlos, Ananya and Iyosayas) and "father" of the better-known ↗Filəppos of Däbrä Bizän, whose rank was inherited by ↗Yoḥannes of Däbrä Bizän, in turn "father" of Yəbarəkannä Krəstos; 5. Gäbrä Mäsqäl of May Qorqor (Säḥart); 6. Ṣawa Dəngel or Wängel of Bur or Mänbärta; 7. ↗Matyas of ʿAd(də)qe or Šəmagele (Ḥamasen); 8. ↗Gäbrä Iyasus of Däbrä San or Däbsan (Ǝnfraz), from among whose disciples Matewos, his successor, Fiqṭor and ↗Ǝndrəyas are remembered; 9. Matewos "the Egyptian"; 10. Bärtälomewos; 11. Fiq(i)ṭor; 12. Qozmos of ↗Däbrä Bäggəʿ (in Šäwa). As apparent from other sources, the puzzling references to (9.) "Matewos the Egyptian" and (10.) "Bärtolomewos" are to the homonymous Alexandrian patriarch (1378–1408) and Ethiopian metropolitan (ca. 1398/99–1438; s. *abunä* ↗Bärtälomewos) respectively: since Ewosṭatewos died long before their tenures, the list may well reflect a posthumous arrangement, aimed at both conforming to the "perfect" number of the Apostles and obliterating the bitter struggle between Filəppos of Däbrä Bizan and Metropolitan Bärtälomewos, who had been sent to Ethiopia by the Egyptian Patriarch Matthew II (s. also LusStud 122).

Oral traditions only know, instead, of seven E. (ሸውዓተ፡ ደቂቀ፡ ኤዎስጣቴዎስ, *Šäwʿattä däqiqä*



‘Saint Ewosṭatewos, master of faith for Ethiopia and Armenia’ (mid top) with eight disciples: ‘Absadi of Däbrä Maryam Särawe’, ‘Sinoda of Zälgʷan’ and ‘Zäʾamanuʾel, master of Wälläqa’ (left from top); ‘Ḥawa[r]ya Dəngəl’ and ‘Ləbsä Krəstos’ (mid low); ‘Märqorewos of Däbrä Dəmaḥ, Särawe’, ‘Gäbrä Iyä[sus] of Däbrä Sa[n]’ and ‘Bäkimos of Däbrä Śärabi’ (right from top); wooden triptych; private collection; late 17th cent.; courtesy of the author

Ewosṭatewos). Besides Märqorewos, Bäkimos, Gäbrä Iyäsus and Matewos of Bärbäre, they include ↗Gäbrä Amlak and ↗Buruk Amlak, eponymous founders of Ǝndä Abba Gäramlak at Qʷäyaṣa (Šəre) and Ǝndä Abba Buruk in Märagʷəz (Säraye), as well as the elusive Aron, whose name is associated to the monastery of Dammo Gälila (south of the valley of ↗ʿAdwa). Apart from even later traditions (Conti Rossini 1942:201), or the scanty commemorations almost concealed in different layers of the ↗*Sənkəssar* (LusStud 10), a further list of Ewosṭatewos's disciples – rather minor historical figures, still playing a significant role in the ecclesiastical life of the northern provinces of Ethiopia from the end of the 14th to the mid of the 15th cent. – is transmitted in the 15th/16th-cent. ms. Vat. Aeth. 46 (with the first recension of Ewosṭatewos's Vita), fol. 131r–33v: it was drawn by an *abba* Arkälädəs or Arkä Śəllus, head of Däbrä Maya Aʿəraf (a priory of Däbrä Bizän) around 1450, and possibly one and the same person as the owner of the book (Conti Rossini 1927:512ff.).

A colophon by *abunä* ↗Yosṭinos in an Octateuch manuscript of Däbrä Maryam, dated to 1408/9, recounts the life of this community during the tenure of abbot Täwäldä Mädḫen, third successor of Absadi and immediate predecessor of Fiqṭor (Lusini 1996:79-92). Useful details for the chronology of the events concerning the E., with special attention to Absadi and Filəp̣pos of Däbrä Bizan, as well as to the latter's successors (Yoḥannəs, Śäräqä Bərhan and Peṭros), are found in the 17th-cent. “Annals of ʿAddi Näʿammən” by the priest Maḥṣanta Maryam, with a list of twelve E. (including Filəp̣pos) who “went to the land of Amḥara” in 1389/90, following the arrival of Metropolitan Bärtälomewos, and returned to their own country only five years later (KolTrad III, A23). Written from the point of view of Däbrä Bizän, the “Annals” may well mirror documents originally issued within this monastery (*ibid.*, A13f.; cp. LusStud 12). Its founder Filəp̣pos also gave his community an organic series of precepts – concerned with both spiritual and material aspects of monastic life – that are embedded in his Vita (Conti Rossini 1900: 94a-98b). It is the only such written instrument known for the E. (Conti Rossini 1916:381–87).

Except for Gäbrä Iyäsus, who proceeded on to ↗Bägemdər attempting to convert there the ↗Betä Ǝsraʾel of Ǝnfraz, the E. were asserting themselves chiefly in the northern parts of the empire. Here they soon dimmed the long-standing prestige and influence of such older monastic foundations as the 6th-cent. ↗Däbrä Damo, ↗Däbrä Sina and ↗Däbrä Libanos of Šəmäzana, the decline of which was eventually triggered by the presence and activity of the communities for both monks and nuns established by Ewosṭatewos and his offspring in remote places of Təgray and Eritrea (CRDLib 179). In their search for suitable places, the E. were often met with hostile receptions that forced them to withdraw into frontier areas – this being also the case for Gäbrä Iyäsus – where they rapidly increased and created a careful organization on their own "in complete defiance of the rest of the Ethiopian Church" (TadTChurch 211).

While originating from eastern Təgray, the E. had soon to relinquish their original dwelling and cross the ↗Märäb in order to flee the fierce reaction that broke out under *aṣe* ↗ᶜAmdä Ṣəyon I. By the end of the 14th cent., they were firmly established along the western edge of the Eritrean plateau. The earliest monastic settlement of the *Däqiqä Ewosṭatewos* beyond the Märäb was ↗Däbrä Maryam in Qʷäḥayn, founded by Absadi in approximately 1374. In the early decades of the 15th cent., its scriptorium saw the production and canonization of the most ancient and authoritative hagiographic traditions concerning the E. As suggested by the illumination found in a local manuscript of the *Acts of Saints and Martyrs* (cp. ↗*Gädlä sämaᶜətat*) dated to 1466/67, Däbrä Maryam is also likely to have been the site of the painters' workshop responsible for the Psalter of ↗Bəlen Sägädä – the famous ↗*aqa(n)ṣen* of Säraye who was close to Yonas of Bur (BN, ms. d'Abbadie 105) – and other miniatures in its peculiar style that are scattered through the adjoining regions of Säraye, Ḥamasen and Šəre and can be associated with the "house" of Ewosṭatewos as well (Heldman 1989:6ff.).

On leaving for Egypt and the Holy Places around 1338, Ewosṭatewos entrusted Absadi with the guidance of the community, then perhaps gathered at Däbrä Šəmana of Ḥənṭalo (↗Anṭalo). The expansion of the movement, having since come to a standstill, must have been revived by the return to Ethiopia, especially after Ewosṭatewos's death, of some of the disciples who had followed him as far as to Armenia for some 14 years (most of them perishing on the difficult journey): Bäkimos, Märqorewos, Filəppos, Gäbrä Iyäsus and Qozmos of Däbrä Bäggəᶜ. Actually, the greatest achievements of the E. – also part of the Ethiopian community of ↗Jerusalem since the late 14th cent. (e.g., CerPal vol. 2, 363, 367f., 397f.) – coincided with a long vacancy of the metropolitan seat. Bärtälomewos held office only 13 years after the death of *abunä* ↗Sälama "the Translator" (Fiaccadori 1989:151).

The regional or peripheral character of the movement is however liable for the limits and fortunes of the "house" of Ewosṭatewos, doomed to a greater homogeneity, but also to dissension with the local clergy and ruling class, and to conflicts with the emperor and the metropolitan or other monastic families supported by them. Most of these families derived from the Šäwan monk ↗Täklä Haymanot, albeit displaying no compact regional front. As to the controversial matter and the interlinking persecutions, the celebration of the Saturday/↗Sabbath, indeed a serious point at issue, was but an aspect, even if extremely apparent, of a more substantial opposition between vast portions of the Ethiopian regular clergy, above all the Təgrayan, and the emperors who tried to impose on the great monastic units, traditionally jealous of their autonomy, by absolutely enforcing the central authority of the monarchy in keeping with the claims of the Coptic patriarchate, i.e. of the metropolitans sent to Ethiopia from Egypt. When the E. finally refused to comply with Bärtälomewos's provisions, Filəppos of Bizän was detained at ↗Däbrä Ḥayq by the powerful *ᶜaqqabe säᶜat* ↗Säräqä Bərhan, an intimate friend of *aṣe* ↗Dawit II and the most faithful supporter of the Egyptian bishop among the Ethiopian hierarchy. Nor was Filəppos released until after the death of his jailer in ca. 1403 (CerMaria 85f.; Cerulli 1958:271f.).

An interesting contemporary picture of the organization and administration of the E., under the strict authority of their leadership, and a brief statistical survey of the relevant structures are provided in the *Mäṣḥafä* ↗*bərhan* (inspired) by *aṣe* ↗Zärʾä Yaᶜəqob (VI [3-5]). There were three major centres: Däbrä Maryam, Däbrä Bizan and (Däbrä) Däqqi Ita in Märagʷəz (the southernmost district of Säraye), all with a great number of inmates and dependencies (*mənetat*). Taking literally the advice of their teachers, the members of the "house" declined to receive, and even denounced, Holy Orders as conferred by the Egyptian bishop, a declared opponent of the

Saturday/Sabbath (TadTChurch 211, n. 5–7); for his own part, the metropolitan refused priesthood to the E., debarring them from the sacrament of ordination (LusStud 121, 127). A few sympathizing, duly ordained priests celebrated the liturgy for each community, headed by a lay brother in full charge of the religious life of its members. This figure, called *danya* ('judge, overseer', modern form ↗*daññа*, s. BeckHuntAlvar 89 and n. 2, 556), bestowed the monastic habit and fixed the penance to be assigned by the priests on hearing confessions. So did the E. manage to keep their independence, avoiding narrow control by the Emperor and the clergy loyal to him and preventing outside interference in monastic affairs. Also, E. were eventually able to find a fit with local rulers and military leaders (e.g., Bəlen Sägädä) that was to pave the way to the religious acknowledgement of their "house" in the last ten years of *aṣe* Dawit's reign.

Zärʾa Yaʿəqob exactly informs about the dreadful clash between the Egyptian bishop and the E. (who had grown to an alarming rate) under the reign of his father *aṣe* Dawit, by whom they were banned in ca. 1400, suffering defections and problems that created lasting feuds within the "order", as reported in hagiographic sources (TadTChurch 215, n. 2–3). Yet, four years later, impressed by the strengthening of their religious and political influence even on his principal courtiers, Dawit changed his mind in favour of the E., making it possible for them to receive Holy Orders from the metropolitan – which they kept declining by that time – and giving extended land grants to some of their communities, as in the case of Däbrä Dəmaḥ (Conti Rossini 1904:44). The E., whose status had been suddenly transformed "from one of an actively persecuted minority into that of a respectable school", acquired thereby complete freedom of movement throughout the empire. This accounts for both their missionary advance to the south (from Däbrä San) and their inner development in the north: a chain of small communities was started by abuna Filəp̣p̣os on his way back from detention along the main road from Amhara to Bizän, and soon after extended to the eastern edge of the Eritrean plateau – on the western side of which the E. had long been established. The whole region became, once and for all, an almost exclusive domain of the "house" of E. (TadTChurch 217f.).

On ascending the throne, Zärʾa Yaʿəqob found no theological reason for abolishing the first Sabbath; nor did he see any harm in allowing a practice that could contribute to the unification of his empire or to "the fabric of religious nationalism of Medieval Ethiopia of which he was the principal author" (TadTChurch 219). All the more so, as since his youth he had been entertaining close relationships with the pro-Sabbath clergy. On these grounds, he took the sensible political decision of bringing a final end to the controversy. In 1449 he had the new Metropolitans ↗Mikaʾel and Gäbrəʾel, in Ethiopia since 1438, reverse the opinion of their predecessors Sälama and Bärtälomewos (then blamed for their "ignorance of the Scriptures"), and relinquish the traditional doctrinal position of the Coptic Church. In 1450, at the council summoned and presided over by the Emperor at ↗Däbrä Məṭmaq (the E. being there headed by ↗Gäbrä Krəstos, abbot of Däbrä Maryam), the observance of the Saturday/Sabbath was declared mandatory to all Christians, in accordance with the Holy Scriptures accepted by the Ethiopian Orthodox Church.

Giving thereby full legitimacy to the E., Zärʾa Yaʿəqob marked this event by generous land grants to Däbrä Maryam and Däbrä Bizän, so that they might "preach and teach the Orthodox faith". Still in 1626, the Jesuit Manoel ↗Barradas, while noticing a severe decrease in the number of monks (from 500 to 50), was deeply struck by the extension of the landed properties of Däbrä Bizän, then the leading settlement of the order (*Tractatus* II, 42, in BecRASO IV, 267f.; tr. Filleul 1996:148f.). Such restored or increased wealth, favouring closer contacts with the court, may also have contributed to the creation of a distinctive E. style of illumination in the last third of the 15th cent., with a limited but demonstrable impact of icons from the royal precincts, too (Heldman 1989:8). At the same time, Zärʾa Yaʿəqob lavishly endowed the rival followers of *abunä* ↗Täklä Haymanot (TadTChurch 206-19, 229f.). By smoothing inequalities through fair-minded donations, he was trying to settle the internal conflicts among the Ethiopian clergy and achieve perfect union within the Church.

As a matter of fact, the "house" of Ewosṭatewos came next to that of Täklä Haymanot, with no substantial difference of rules (Conti Rossini 1916:380f.) except for the subdivision into small groups of monasteries forming independent congregations and the lack of a central figure like that of the abbot of Däbrä Libanos of Šäwa

(↗*ʾƎččäge*). As for the practice of monastic life, the E. were – and still are – much more austere in several respects: from strict enclosure and fasting to common life and relationships between monks and nuns. The two orders had since shared a common attitude against the matrimonial habits of the emperor (LusStud 5), if not against the traditional practices of the Ethiopian Church or the Alexandrian opinion on Sabbath. In due time, however, they experienced serious theological and political quarrels, grafted onto the long-standing background of ethno-geographic discrepancies despite ambiguous institutional boundaries and mutual influences. Over the past few centuries, the engagement between the "house" of Ewosṭatewos and the Šäwan ↗monasticism, as typified in the respective genealogies, was resented in ↗Dämbəya, Bägemdər and Goǧǧam (CrumLand 85), more than in the northern regions, where the E. had always prevailed and owned most of their landed property (Conti Rossini 1916:396-412, with a detailed list of monasteries and "fiefs"). It acquired further authority from the support of the already mentioned Aksumite foundations (Mario da Abiy-Addì 1970:338, n. 4). As regards the relationships with ↗Ǝsṭifanos and his "house", the 16th-cent. Vita of ↗ʿƎzra of Gundä Gunde has it that during the reign of *aṣe* Bäʾəda Maryam I (1468-78) a few disciples of Yonas of Bur, for fear of the Emperor, denounced the ↗Stephanites journeying with them to Jerusalem; and a disputation over the celebration of the Saturday/Sabbath – curiously enough, disregarded here by the E. – broke out between the two groups (Caquot 1961:74ff.).

During the controversy on the anointing of Christ (↗Christology), which culminated under *aṣe* ↗Fasilädäs (r. 1632–67), the *qəbatočč* or "unctionists" (↗*Qəbʾat*) of ↗Goǧǧam based in the monasteries of ↗Däbrä Wärq and ↗Märṭulä Maryam (Derat 2003:264-67) were tracing their origins to the "perfect" teaching of Ewosṭatewos as opposed to that of Täklä Haymanot, patron of the *karročč* or "unionists" (↗*Karra haymanot*). A disparity already evident in the religious history of the country since the 14th–15th cent. was highly enhanced thereby. It also entailed a conscious revival of the E. that led to the rewriting of their genealogical and hagiographical sources: first and foremost the Vita of the founder ("redazione β" in LusStud, 35, 42f., 51ff.), credited then with a symptomatic prophecy on the danger represented by the heretic *Niqolawəyan* (Turaev 1905:76; 1906:39). This denomination refers probably to the followers of that *abba* ↗Niqolawos who attended the synod convened by *aṣe* ↗Yoḥannəs I in 1681, siding there with the Šäwan *qəbatočč* of Däbrä Libanos (TurIz 156). The translation of a relic "of the doctor of the world, *abunä* Ewosṭatewos" from Armenia to ↗Gondär three years before may be also understood within this competitive framework, which was to shape the position held to by the order in the subsequent centuries.

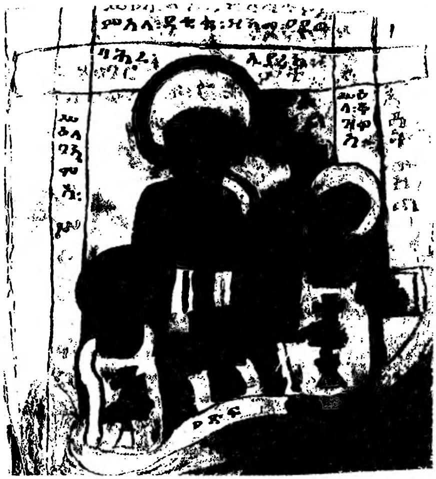
Gianfranco Fiaccadori

Ewosṭatewos

The monk E. (**ኤዎስጣቴዎስ**, also **ዮስጣቴዎስ** Yosṭatewos; b. 21 *Ḥamle* [15 July] 1273 ca., d. 18 *Mäskäräm* [15 September], 1352 ca.), one of the most famous Ethiopian saints, was born as Maᶜəqabä Əgziʾ (lit. 'Trust of the Lord') to Krəstos Moʾa and Śənä Ḥəywät. According to the 16th-cent. Vita (↗*Gädl*) of E.'s pupil ↗Ananya of Däbrä Ṣärabi (Lusini 1990:165; Raineri 1990: 69), E.'s birth place was not far from this later monastery, in the Ṣəraᶜ district of eastern Təgray (*awrağğa* of ↗Kələttä Awləᶜalo). While still a youth, he was sent around 1280 to his maternal uncle ↗Danʾel or Zäkaryas (baptismal and monastic name, respectively; Lusini 1990: 346f., 350f.), abbot of Däbrä Maryam on Mount ↗Qorqor in Gärᶜalta, under whom he studied and was initiated into monastic life, uttering his profession at the age of 15 and then being renamed E.

The major source of information about him is undoubtedly his own *Gädl*, written in the "flourished" 15th-cent. style on the initiative of his pupil ↗Absadi of Däbrä Maryam – upon whose *Gädl* E.'s own is partially dependent. Three different recensions of the latter are known, distinguished from one another by the use and extension of biblical quotations, alteration or shifting of episodes, inclusion or exclusion of some of the appended ↗*Taʾammər* – up to 14 in the "long cycle", the 12th one betraying perhaps a date not earlier than 1453. A useful, though ritual, chronology for the life of the saint is provided by a few 17th-cent. monastic genealogies, like that transmitted in the early 20th-cent. list of *käntiba* Däbbas, relying upon monastic traditions of the church of Çəᶜaräši, a village in ↗Dämbäsan: E. spent 12 years with his uncle, 7 at Ṣärabi, 7 back at May Qʷerqʷər in ↗Säḥart, 7 in ↗Bur, 10 at ↗Däbrä Bärbäre of (Amba) Sänayt(i), 7 at Abra Näddäd in Säraye, 14 in Armenia, i.e. "Lesser Armenia" or Cilicia (↗Armenians); "and the sum of the days of his life (was) 79 years" (Conti Rossini 1900:156). The years given for "Armenia", 14 also in the 16th-cent. *Gädl* of his pupil ↗Gäbrä Iyäsus of Däbrä San (Conti Rossini 1938:443), should be rather understood as "the duration of his stay abroad" (TadTChurch 207, n. 1). Further travels of the saint are reported in the *Gädl* of another pupil of his, ↗Märqorewos of ↗Däbrä Dəmaḥ: from Däbrä Šəmana of Həntalo (↗Anṭalo), where both Märqorewos and his "brother" Absadi entered the monastic life, E. reached Däbrä Säqʷərt in Säḥart, then Gädamä Bäraqit in Qʷäḥayn (Gädamä Qaḥen), where he stayed more than 7 years, before dwelling for 7 other years at Gädamä Bärqʷaḥ (Conti Rossini 1904:21, 31).

Soon around 1300 he established his own community at Ṣärabi. He gathered a great number of followers and students there, the most illustrious of whom amount to twelve – according to a somewhat later "canon", different from the oral tradition of the "Seven [spiritual] sons of E." (*Šäwᶜattä däqiqä Ewosṭatewos*; ↗Ewosṭateans). Beside a strenuous plea for the independence of regular clergy from civil and (secular) ecclesiastical authorities, a major point in E.'s theology was the celebration of the ↗Sabbath, i.e. the observance of the rest of both Saturday and Sunday (styled as *Sänbätä Ayhud* 'Sabbath of the Jews' and, respectively, *Sänbätä Krəstiyan* 'Sabbath of the Christians'), which was in keeping with the "old teaching of the Apostles", but against the Alexandrian position shared by the Ethiopian Church. He also recommended his followers not to long for holy orders, namely priesthood, as they were conferred by the anti-Sabbath metropolitan – a recommendation with far-reaching consequences for E.'s community. An autonomous tradition surviving in the unpublished 16th/17th-cent. *Gädl* of ↗Zena Marqos of Däbrä Bəśrat (Cerulli 1962:198) has it that at the royal court E. held a tough confrontation about the Sabbath(s) with the Šäwan monk ↗Anorewos "the Elder", appointed ↗*nəburä əd* (i.e., '[religious] prefect') of Waräb by the Egyptian Metropolitan ↗Yaᶜəqob, who had arrived in ca. 1337, when he also met E. on his way to the court. Anorewos was then summoned to the presence of *aṣe* ↗ᶜAmdä Ṣəyon, who had him flogged as dividing the empire by such "religious



Abba Ewosṭatewos with his disciples: Bäkimos of Däbrä Ṣärabi (left) and Qozmos of Däbrä Bäggəᶜ (right), 'how they crossed the Mediterranean Sea' (*baḥrä Iyariko*); 15th/16th-cent. illumination, ms. Vat. Aeth. 46, fol. 1r; courtesy of Biblioteca Apostolica Vaticana, Rome

disputes" (TadTChurch 208f., n. 12). It is worth noting here that the monastic father of Danʾel of Däbrä Maryam was a certain ᶜƎbnä Sänbät ("[Corner-]Stone of the Sabbath"; Lusini 1990: 348f., 351f.); and, as to its origins, the controversy over the Sabbath(s) in the Ethiopian Church points to ↗Palestine, not to ↗Egypt, and is much older than the 14th cent. Whether it was a part of the "Old Testament customs" (cp. ↗Ayhud) complained about by Metropolitan ↗Säwiros between 1077 and 1092 (SawHist vol. 2, part 3, 330) is hard to say, but it goes certainly back to the period of the ↗Zagʷe dynasty and the 12th cent. at least, for it is alluded to in an inscription carved on a wooden "throne" (*mänbär*) of the ↗*tabot* by *aṣe* ↗Lalibäla, whose relationships with Jerusalem are well known (Fiaccadori 1992: XXXIII and n. 59; cp. LusStud 27f.). However, it is only from the 14th cent. onward – when the predication of pugnacious monks seemed to undermine the concord of the missionary program launched by the Emperor and the Metropolitan, and aimed at smoothing the way to the expansion of the empire – that one finds explicit mentions of it in the texts.

Next to E.'s theological doctrines, amongst wanderings and surprise moves, the envy and jealousy aroused by the saint – going as far as to force him to leave the country – are strongly emphasized in the sources. In his *Gädl*, for instance, there is a report of an attempt made on his life by rival members of the clergy of ↗Säraye, who tried to stone him to death while he was in his cell, possibly at Gädamä Bärqʷaḥ. Following this and other similar episodes, around 1338 he put his community under the care of Absadi and headed to Jerusalem and the Holy Places. In the first recension of his *Gädl* these events are recounted in the more reliable terms of an exile enforced "at the time of Nägädä Krəstos, governor of Säraye", because of the saint's support to the protest movement led by the main monastic centres against ᶜAmdä Ṣəyon, whom they blamed for his non-Christian matrimonial habits (ms. Vat. Aeth. 46, fol. 40v–41r). In the short work by *abunä* ↗Yosṭinos, actually a colophon in a manuscript of Däbrä Maryam (dated to 1408/9), it is also clear that, since E. was banished by ᶜAmdä Ṣəyon, he got polemically engaged by fostering the ambitions of a local squire, Wärasinä Ǝgziʾ, the later governor of Säraye (after Nägädä Krəstos) with whom, though, he always entertained ambiguous relationships, probably owing to Wärasinä Ǝgziʾ's involvement in the contemporary slave-trade between the Eritrean highlands and the Red Sea ports (Lusini 1996:89f.; cp. LusStud 58–61). According to the standard edition of his *Gädl*, E. was thus prompted to cross the lands of the Bogos (↗Bilin) and the "two Marya" (i.e. the Red and Black ↗Marya), in northern Eritrea, and to get into the country of the ↗Noba, ruled by a Christian prince called Säbʾa Nol in the local language, Wəludä Ityopya in Ethiopic. From there, asked by ᶜAmdä Ṣəyon to settle the question of the Sabbath(s) with his opponents before the Coptic Patriarch Benjamin II (1327–39), E. went to Egypt – some time toward the end of the pontificate of this Patriarch – but was accused of heterodoxy by his fellow travellers (not necessarily his disciples). Although sympathetic to his cause, Benjamin is reported to have said that, as a teaching of the Apostles, the observance of the Saturday as a Christian Sabbath had long been abandoned. E. lived for a few years in Egypt, spending some time in strict asceticism at Scetis (the monastery of St. Elija was among those visited by him). There he also met the "patriarch of Armenia" who had been "banished for the sake of the name of Christ, and had come to the city of Alexandria": certainly *katᶜolikos* Yakob II Tarsonacᶜi, deposed in 1341 and exiled to Egypt from ca. 1343 to 1354 (before being restored to his chair in 1355).

As a result of a predictably unfavourable reception in Egypt, some time after 1343 E. proceeded on to the Holy Land: he was accompanied by Bäkimos of Däbrä Ṣärabi, Gäbrä Iyäsus, Märqorewos and a few other faithful joined by Zəkərya, a monk of Scetis. He visited ↗Jerusalem, then the seat of a flourishing Ethiopian community, and Golgotha, Bethlehem, Nazareth and the Jordan river. Inclined to a rigorous monastic vision, and paternally solicitous for the spiritual good of his sons, he wanted to go "to Armenia, to that patriarch persecuted because of the apostolic law" (similar statement in the *Gädl* of Gäbrä Iyäsus; Conti Rossini 1938:443): i.e. because of his unfailing opposition to the "perjure" King Lewon V, released by Pope Clement VI from the oath engaging him not to call upon the help of the papacy (then resident at Avignon) against the Mamluks (1338). Such a defence of the canons, to the bitter end, by Yakob II is not so different from that held by E. against ᶜAmdä Ṣəyon. It may well explain the keen interest of the saint in seeing "that patriarch", indeed a "companion" of righteous leadership and moral propriety. All the more so, as the Armenian milieu Yakob II belonged in – the Latin-ruled Cilicia – was in fact leaning heavily away from its traditional Monophysitism, toward Catholicism and dependency upon the pope.

E.'s. *Gädl* openly suggests that he crossed the "Mediterranean sea" (*baḥrä Iyariko*: from Gr. *Illyrikón*) on his own "tunic" (*ᶜaṣf*); and the scene is depicted and labelled in a rough illumination on fol. 1 of the 15th/16th-cent. ms. Vat. Aeth. 46, where he is flanked by his disciples Bäkimos and Qozmos, i.e. Qozmos of ↗Däbrä Bäggəᶜ (GreTisVat 198). The tunic becomes a regular boat or ↗*tänqʷa* in later representations of the same subject: e.g., in a rare icon dated to ca. 1740-55 (Addis Abäba, IES, Mus. 3792, Chojnacki 2000:117, 312f., no. 77).

After nine days of adventurous sailing, E. landed at ↗Cyprus, where a church of Ǝgziʾətənä Maryam ('Our Lady Mary') is mentioned that can be identified with the Latin chapel of Sancta Maria de Cava in the village of Spigliótissa, on the east coast of the island, not far from Famagosta (Ammóchostos). He paid homage to an anonymous bishop of Cyprus, possibly the Armenian one, and was hosted by a wealthy lady, ᶜAziza (Ar. ᶜAzīza), "with whom girls were (staying) who learned weaving precious garments": a probable hint at the famous manufactory of the *opus Cyprium* or *Cyprense* ("Cyprus work"), a sort of gold embroidery. After resuming his sea voyage, during which the news miraculously came of the death of *aṣe* ᶜAmdä Ṣəyon (1344), he landed in Armenia, at a place – possibly Lajazzo (Lāyās) the great port of Cilicia – that already had a settlement of Ethiopians, as suggested in the fifth miracle (*täʾammər*) of the Saint. Preceded by the fame of his holiness, E. raised a young boy from the dead and then introduced himself to the local bishop. Yet, despising "the iniquitous glory of the world", or rather escaping the inner political and religious struggles of Cilicia (between pro- and anti-Latin parties, i.e. in favour or against the ecclesiastical union with Rome), he preferred to retire inward, to a town with walls "80 cubits high and 40 cubits thick", from which "he wandered and moved throughout the land of Armenia", being revered by the latter's patriarch. He died on 18 *Mäskäräm* [15 September] 1352 ca., in that far-inland fortress-town which can be identified with ancient Colonia Pontica (Kolōneia on the Lykos, Ar.: Qalūnīyat al-ᶜAwfī), today Şebinkarahisar, in the mid of north-eastern Anatolia: a place then in the realm of the learned and tolerant *sulṭān* Ġiyāṯaddīn Eretna (1326–52, until 1343 under the suzerainty of Ḥasan, lord of Azerbaijan). There the Armenian patriarch – coming from Sis (Sīs), were his seat was – presided over the funeral rites for the saint, whose body was deposed "next to the tomb of the holy martyr Behnam, in a church of Armenia" (likely to be the so-called Bozuk Kilise, the "Ruined Church", of Şebinkarahisar). This important detail is repeated in both the *Sənkəssar* (18 *Mäskäräm*: ColSyn VI, [118] 436f.; BudSaint 65) and the Acts of Gäbrä Iyäsus (Conti Rossini 1938:444).

At the beginning of the 16th cent., the wonderworking "sepulchre of the saint *abuna* E." at Colonia (Qʷälonəya) was visited by the *näggadi* ('pilgrim', i.e., a temporary member of the Ethiopian community in Jerusalem) Täklä Maryam, ↗*dañña* (or *danya* 'judge, overseer', a special title in the monastic hierarchy of the Ewosṭateans) of Däbrä Ṣärabi, who drew a note about that in the ms. Vat. Aeth. 24, fol. 189 (GreTisVat 127). As late as in 1679, according to the Chronicle of *aṣe* ↗Yoḥannəs I, the Armenian Yovhannēs Tᶜiwtᶜiwnči – archbishop of Šemiramakert (Van) and maybe *katᶜołikos* of Ałtᶜamar (1663–83) – still brought "from Armenia" to ↗Gondär "a bone of the hand of the doctor of the world, *abuna* E. with beautiful name" (GuiIohan 38f.). Apart from the authenticity of the relic itself, soon to be kept in the Gondärine church of Mädḫane ᶜAläm, this episode provides a valuable terminus for the neglect or abandoning of the Ewosṭatean sanctuary of Colonia/Şebinkarahisar.

Gianfranco Fiaccadori

Exegesis

The Ethiopian tradition has it that the *tərgʷəm* (**ትርጓም**) or *ars interpretandi* started with the biblical Enoch, mentioned in Gen 5:18–19. He is seen as the visionary *par excellence* who commented in all languages on the heavenly experiences he was allowed to have. This is obviously an elaboration of Gen 5:24. His visions, along with their interpretation, are collected in the book which goes under his name. Local scholars are inclined to deem that the Book of ↗Enoch was written in 4014 B.C. and they regard it as the first book of the Bible. However, the mostly held traditional position is that biblical E. made its way into Ethiopia when the Sacred Books were first introduced into the country by the Queen of Sheba (↗Makədda), in the 10th cent. B.C. According to tradition, when ↗Mənilək I, the son of King Solomon and the Queen of Sheba, reached adulthood and paid visit to his father, the latter gave him copies of the Sacred Books, together with 318 Levites to translate and interpret them; and the first books translated and interpreted were 1–2 Kgs. As far as the E. of the N.T. is concerned, the commonly accepted view is that it was a gift of the Risen Christ, who, on the day of Pentecost, bestowed on his disciples the knowledge of 70 languages beside their own – that means the ability to announce the Gospel in the languages of the listeners.

When it comes to verifying traditional data, it must be recognised that there are internal (in the commentaries) and external evidences confirming that the interpretation of the texts has been going on for a long time in Ethiopia. This work throughout the centuries is witnessed by several lengthy genealogies of students (**መምህራን**, *mämhəran*). For the O.T. the list of interpreters starts with Mənilək (10th cent. B.C.) and reaches Frumentius (4th cent.; *abba* ↗Sälama Käśate Bərhan). The Vita of *abba* ↗Täklä Haymanot lists all the interpreters up to the 13th-cent. ↗Yared, the

6th cent. introducer of the Ethiopian sacred chant is one the authorities mentioned therein. The series of names goes on from Täklä Haymanot to *əččage* ↗Qalä ᶜAwadi who lived in 17th-cent. Gondär and embraces a total of 57 names.

Scholars agree that the work of interpretation, while deeply promoted by the exceptional activity and learning of *əččage* ↗ᶜƎnbaqom, who died in ca. 1560, received a major impulse and a definitive shape during the epoch of the ↗Gondärine kingdom, which was inaugurated with the transfer of the capital to ↗Gondär in the fourth year of the reign of *aṣe* ↗Fasilädäs (1636), the epoch which saw the flourishing and systematization of the ↗*andəmta* commentaries. The explicit references to teachers are rare and scattered, yet also indicative of the high esteem in which they were held. Among the numerous masters, the already mentioned Qalä ᶜAwadi is said to have contributed towards the ordering of the exegetical procedure and the rules of interpretation.

Qalä ᶜAwadi taught *mämhər* Esdros, one of the most-prominent scholars who left a mark in the interpretation of sacred texts. He lived in 18th-cent. Gondär and is credited with working hard to reorganize the various commentaries on the N.T. He was blind, but **አራት፡ ዓይና** (*arat ᶜayna*, lit. 'four eyed'), i.e. master of the four branches of E. (O.T., N.T., patristic works and monastic canons and writings). It is said that after Esdros had taught for some years, he withdrew to near lake Ṭana, where he examined 300 books. Once he completed his researches, he summoned his disciples and they formed a school known as the **ታች፡ ቤት** (*tačč bet*, 'the lower house'). Those of his former pupils who refused to return to him and update their knowledge, came to be known as the **ላይ፡ ቤት** (*lay bet*, 'the upper house'). In fact, *mämhər* Esdros is seen as a reformer; in his quest for constructing his E. on a sound basis, his main effort was to seek and choose the best Gəᶜəz text available. Another of his merits was the development of a method for providing concise explanations. One of his most renowned disciples was Śənä Krəstos (late 18th–early 19th cent.), who in his turn instructed *aläqa* Wäldä Ab, a native of Šäwa. Because of his unmatched gift of understanding and explaining the sacred texts, Wäldä Ab earned the fame of being "the father of the *andəmta*". It is likely that he knew Arabic and Arabic Christian literature. Another celebrity is *ᶜaqqabe säᶜat* Käbte, who died in Gondär ca. 1780. One finds abundant praises of him in the chronicles of his time: "... when this man expounded the Old and the New (Testaments) and the masters and the statutes of the Church, every man was astonished" (BlunChr 296).

There are foreign (*afrənǧ*) interpreters who are remembered alongside local teachers: Mäᶜəlim (from Ar. *muᶜallim*, 'teacher'?) Peṭros is one of them, some scholars are thinking that he could be the German Peter ↗Heyling. Pawlos Zəkrin is another name, and supposedly an Arab. There are mentions of a Sädi (Sədi) Pawlos, about whose identity scholars are divided, some are claiming that he is Paulus Johannes ↗Bachmann, while others are pointing to an Arab individual, Sayyid Būlus. Whatever it may be, this indicates to what an extent Ethiopian traditional E. was open to foreign opinions.

The general feeling towards the *mämhəran* and their *tərgʷəm* is ambivalent. While some revere them as being devout and learned, others lower them to idle *viveurs* twisting the Scriptures in order to suit their own purposes. The following sayings are suggestive of the prejudices against the interpreters: "The tobacco plant never lacks verdure, nor a heretic his interpretation"; "Who can compete in tree-climbing with the brood of a monkey and in speaking with the brood of a heretic?" (Habtä Maryam Wärqənäh 1969:218).

Traditional E. is at present taught at the ↗Holy Trinity Theological College, St. Paul's Seminary and St. Frumentius Käśate Bərhan College in Addis Abäba. In Šäwa there are teachers at Däbrä Libanos, Däbrä Ṣəge, Zəqʷala, Zʷay, Ankobär, Addis ᶜAläm; in Wällo: Däse, Lalibäla, Tädbabä Maryam; in Təgray: Aksum, Däbrä Damo, Mäqälä, Č̣iḥ; in Gondär city: Mänbarä Mängəst Mädḫane ᶜAläm, Gəmğa Bet Maryam; in Bägemdər/Gondär region: Däbrä Tabor, Mäkanä Iyäsus, Däräsge, Zuramba; in Goğğam: Däbrä Marqos, Moṭa, Dima Giyorgis, Märṭulä Maryam, Däbrä Gännät Elyas; in Gamo Gofa: Č̣ənč̣a; in Harärge, Harär. In the state of Eritrea, there is one N.T. teacher in Asmära and another one, master of the interpretation of the monastic canons and books (*Mäṣaḥəftä mänäkosat*), in Ḥəmberti. There are teachers in other monasteries, too.

Tedros Abraha

Expeditions

E. to Ethiopia were one of the instruments of European expansion, whether in the sphere of knowledge or influence. Often combined, directly or indirectly, with the initiators' political aims, E. were carried out during a limited period under the leadership of one or several Europeans with some scholarly background. Ethiopia's ancient Christianity, and later its geographical and natural diversity and its research potential in linguistics and ethnology, attracted European researchers since early times.

The first E. in this sense was that of the orientalist ↗Wansleben in the 17th cent. ↗Ludolf's student, he was sent by his sovereign, the Duke of Saxe-Gotha, to collect Ethiopian manuscripts and to inquire into the interest of Ethiopians for Protestant ideas. Wansleben never reached Ethiopia (he collected some mss. in ↗Egypt). This E. was rather isolated in history, followed only by the famous 18th-cent. journey of ↗Bruce, which was rather an individual undertaking. The time of E. dawned only 100 years later.

The early 19th cent. was marked by the rapid rise of E. of a natural-scientific character. The German ↗Rüppell collected meteorological data in ↗Massawa and northern Ethiopia and did ↗research in botany and zoology – a few stuffed animals, sent by him from Massawa, are still exhibited at the Senckenberg-Museum in Frankfurt. In the 1830s, ↗Schimper, sent on the account of a natural-scientific society in Mannheim, changed from a travelling scholar into a local settler. However, he continued to report on natural-scientific discoveries, which was often his only source of income. Other famous E. from this period were also focused on natural sciences. Especially important for the rapid rise of cartographic and geographical knowledge was the E. of Antoine d'↗Abbadie (↗Cartography), which, albeit private, was organized in order to serve the furthering of science.

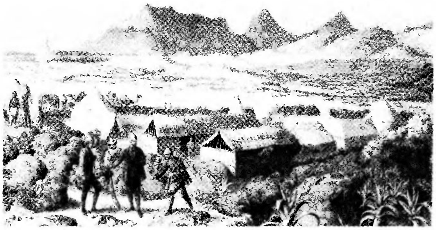
A central factor in the motivation of E. lay in the "discovery" of main African rivers and their sources, which was almost a mythically-connotated aim, as the most ancient culture of Africa depended on the ↗Nile originating somewhere in inner Africa. This was the underlying factor which had already motivated ↗Bruce, who managed to visit the source of the Blue Nile (↗Abbay; BruNile)), and which inspired the great "run" of the mid-19th cent. for the discovery of the sources of the White Nile. ↗Beke described his exploration of the Blue Nile; d'Abbadie published his observations on connections between rivers; the missionary ↗Krapf in his travel account of 1858 on East Africa focuses on the course of rivers. Krapf was among the first to link clearly his discoveries with ideological aims, hoping to initiate evangelical movements in "Ormania" (↗Oromo) and then in all Africa; he developed the project of an E. to ↗Käfa, following the Sobat and the White Nile (this E. was only realized by ↗Bieber about half-a-century later), expecting that evangelization would start from rivers serving as communication routes (Krapf 1858:86, 88).

The Deutsche Afrika-Expedition of 1862, funded by a geographical committee of the State of Saxe-Coburg-Gotha and led by von ↗Heuglin, later by ↗Munzinger, shows a different focus – close to what d'Abbadie had already started in the 1840s: ethnography and the understanding of the local political order became crucial. In addition to natural-scientific (e.g., meteorological) observations, the minute description of local peoples, their socio-political organization, languages and history is found in these reports. The enhancement of geographical knowledge of the world aroused so much enthusiasm that newspapers now report regularly and in great detail on the achievements of this E. To a certain extent similar, even if different in his (missionary) aims, the 1850s' reports of P. Léon des ↗Avanchers also contain thorough observations on peoples and local kingdoms south of the Abyssinian empire (today's south-west Ethiopia). His E., funded by the ↗Capuchin order, however, were primarily mission journeys, his reports serving the better understanding of the peoples in order to facilitate missionary work.

Other geographical E. were those of ↗Antinori and ↗Cecchi. Sent by the Società Geografica Italiana in the 1870s, Cecchi's book (CecZeila) remains an important source for Ethiopian ethnohistory, especially of the south. The linguist ↗Reinisch made two E. to Massawa in 1875 and 1879/80, which laid the basis for decades of linguistic publications on local languages, much facilitated by his good contacts with local personalities. In 1884/85 ↗Paulitschke undertook the "Austrian" ethnographic E. to ↗Harär and surrounding countries.

International politics in the late 1860s added a new type of E. In 1867 the first E. with explicit political-military aims started from Massawa, the Reconnoitring Party, led by Colonel William Lockyer Merewether, the British agent at Aden, and the acting British Consul Munzinger, moving along the coast and into the nearby highlands. The aim of this E., whose reports have not been published, was preparation for the huge-scale invasion of British-Indian troops at the end of 1867. The arrival of military forces, around 50,000 men strong, needed thorough technical preparation, practical reports on the political situation, and on the routes and the establishment of contacts with local leaders. Also during this intervention, which was intended to free ↗Tewodros II's European captives in ↗Mäqdäla, a number of such small-size E. were necessary, led by Munzinger and ↗Speedy under the intelligence department. Shortly before, Egypt had taken over the Ottoman coastal province, which led to Egyptian expansion and finally to the ↗Egyptian–Ethiopian war of 1875/76. This again was prepared by E., carried out with scholarly methods, but with military and political aims.

In 1874 an E. was led by the Austrian Armenian ↗Arakel *bey* Dabroyan to the Ṭəlṭal salt-plains (↗ᶜAfar Depression). This source of the regional ↗salt-trade, on which he reports, was thereafter claimed by Egypt. Even more ambiguous was the E. of the Egyptian intelligence officer ↗Haggenmacher to the Somali regions; officially, he led a (very small) geographical E. in order to enhance knowledge of the virtually "unexplored" (i.e. by Europeans) Somali lands, but unofficially he had to investigate the possibilities for Egyptian expansion. The geographical E. of the Egyptian officer Lockett into Ḥamasen in 1875 served to collect data, possibly to prepare for Egyptian domination over that region. An E. of two Italian warships, *Esploratore* and *Ischia*, at the end of 1879 to ᶜAsäb laid the basis for the formation of the ↗Colonia di Assab. Italian colonial expansion was largely prepared by E., the most important being the unsuccessful E. of Count ↗Porro in 1886, on the account of the Società d'Esplorazione Commerciale in Africa (Milano), aiming at the annexation of Harär (cp. Wagner 2003:135–42). Two other Italian E., of ↗Giulietti in 1880/81 and ↗Bianchi in 1883/84, ended with the death of their leaders, which was used by Italy as an excuse to occupy Massawa in February 1885. The special Italian relationship to the ᶜAfar led to such E. as that (failed) by Augusto Franzoj and Ugo ↗Ferrandi in 1886 to the southern ᶜAfar.



Expedition of Duke Ernst II of Saxe-Coburg-Gotha in Mänsaᶜ in 1862; drawing by Robert Kretschmer; from Ernst II von Sachsen-Coburg und Gotha et al. 1864

In contrast to that, the establishment of political relations (and the furthering of economic aims) motivated E. during the same period. The diplomatic mission of the Egyptian governor of the Sudan, ↗Gordon, to *aṣe* Yoḥannəs, however, was a great failure, as he was acting as envoy of Muslim Egypt. The earliest political E. was the one of ↗Salt in 1809/10, who had to investigate the possibilities of diplomatic relations with the Ethiopian rulers. The 1840s' diplomatic mission of ↗Harris to Šäwa was a great success.

The time of *aṣe* ↗Yoḥannəs IV is marked by a rising number of diplomatic E. from many European countries. The Greek consul of Suez, Mitzakis, made an E., on which he later reported in detail in Greek newspapers; he was said by other diplomats to have planned to bring the Ethiopian Church close to the Greek Orthodox. The Italian traveller Pellegrino Mateucci visited the court, as did Juan Víctor Abargues de Sostén, sent by the Madrid Geographic Society in 1883, but also bearing a letter of the Spanish king. In the same year the German diplomatic envoy ↗Rohlfs arrived at the court.

All these E. resulted into publications both in newspapers and in geographical organs. Moreover, the British and French consuls permanently established at Massawa in Ottoman territory since the 1840s undertook journeys to the Ethiopian rulers, following which most of them published books on their experiences. Diplomatic E. preceded the establishment of permanent diplomatic relations in ↗Mənilək II's period, such as the one by the German minister Friedrich Rosen in 1905. In the same year, Austria sent the diplomatic-commercial E. of ↗Höhnel, accompanied by Bieber. All these E. had a mixed diplomatic and scholarly-geographical character.

Additionally, private commercial interests led to a rising number of E. in the 1880s. The first descriptions of the ↗Ogaden are partially due to such E. (e.g., Rimbaud 1884). The Italian company Bienenfeld, involved in colonial projects, also sent E. (e.g., ↗Sacconi, Ogaden 1885). The documentation of itineraries of 19th-cent. E. is important for today's historiography.

A new aspect motivating E. was ↗tourism. The first E. of this kind was certainly the hunting-E. of Duke Ernst II of Saxe-Coburg-Gotha of 1863, who had already been the great promotor of the above-mentioned Deutsche Afrika-Expedition. He still very much identified himself with the tradition of scholarly E.; the leader of his E. was therefore a zoologist, ↗Brehm, while other members were his wife and his nephew von Hohenlohe-Langenburg (later one of the founders of the colonialist movement in Germany), a belletristic writer, Gerstäcker, the E.'s chronicler, and a painter, Robert Kretschmer, who documented the E. in drawings, the E.'s doctor being the famous Bilharz. He was the forerunner of a great number of tourists, some of them somehow imitating scholarly E., most of them coming as hunters, later as "adventurers" or as treasure-hunters (e.g., Leichner 1935). The British tourist Powell and his wife, exploring Ethio-Egyptian borderlands, were killed by Kunama in the 1870s. Other tourists of the 1880s left valuable and detailed travel accounts. Max Grühl in the 1920s made a touristic E. to Käfa, together with his son Waldemar; their adventureous reports motivated many tourists to follow their steps. Wilfred Thesiger (1910–2003), the son of the British minister in Addis Abäba, became known for his 1930s' E. through the ʿAfar deserts, continuing the romantic traditions of many adventurers before him.

After the mid-19th cent., a second rise in the number of E. can be observed under *aṣe* Mənilək II, when modern Ethiopia was consolidated. The rapid expansion of colonialist projects in Africa also motivated a number of E. Splendidly imitating the great inner-African E. of Stanley and Livingstone, but quite unknown, is the E. of the German-American journalist Heinrich Nebel (pseudonym Ruppert Recking) in 1898, who, together with ʿAlī Zober of Zanzibar and Hausa-Senegalese troops, travelled from the Congo to the recently occupied Käfa on the account of the Belgian King Leopold II. The aim was possibly to establish a joint Ethiopian-Belgian society for the exploitation of Käfa. In parallel Marchand undertook his unsuccessful French military E. to ↗Fashoda.

But this period also saw again a rising number of purely scholarly E., like the zoological E. of ↗Erlanger, the 1901–03 E. of ↗Duchesne-Fournet, or, in the same period, that of the viscount du ↗Bourg de Bozas. The 1905/06 ↗Princeton Expedition, under the leadership of ↗Littmann, resulted in a vast collection of Təgre oral traditions. Following the establishment of diplomatic relations with Mənilək II, the German Emperor sent the ↗Deutsche Aksum-Expedition, also led by Littmann, in 1906, with the main task of archaeological exploitation of the Aksumite sites.

During ↗World War I the aim of E. changed; in 1915 the anthropologist ↗Frobenius officially led a scholarly E. to neutral Eritrea, but in reality carried out a secret mission of the German empire, which resulted into a year-long captivity in Eritrea of his collaborator Friedrich Salomon Hall (s. Scholler in PICES 5). Ethnological E. in the 20th cent. widened considerably knowledge of Ethiopian population movements, the ethnic groups of Ethiopia and interethnic relations. South Ethiopian monumental stelae were the focus of the 1920s' E. of ↗Azaïs and ↗Chambard. The ancient Oromo socio-political order (*gadaa*) was scrutinized by a German E. in the 1930s led by Frobenius and carried out by, among others, Adolf ↗Jensen. The "Frobenius-E." to southern and south-western Ethiopia was launched in the early 1950s by the social anthropologists Jensen, ↗Haberland and ↗Straube (VSAe I – II) and set the framework for future ethnological research in these regions (cp. Braukämper 2001).

The term "E." today is still in use by natural scientists and by tourist companies, but in the context of the humanities has rather been replaced by terms like "fieldwork", which is also methodologically different. The extremely large production of literature due to E. cannot be underestimated in its importance for the spread of knowledge of (and, partially, distorted images on) Ethiopia and its peoples and constitutes an extremely rich source for historical research.

Wolbert Smidt

Ǝža

Ǝža language

Ǝ. (እዣ) is the name under which the language spoken by one of the seven members of the so-called *Säbat bet* ↗Gurage ('Seven Houses of Gurage', s. map for Gurage) is known in linguistic literature, whereas its speakers, as well as the other *Säbat bet* Gurage, call it *Äžža* or *Äžina*, with the suffix *-ina* marking the language.

Ǝ. is classified as part of the Central Western Gurage branch of the South Ethiopian ↗Semitic languages (Hetzron 1977:21). Ǝ. is known for having palatalization and labialization of velar consonants. What distinguishes Ǝ. from most of the other Western Gurage languages is the fact that it maintains morpheme-internal gemination, e.g. *säbbär-o-bb-a-m* 'they broke to her detriment'. The elementary ten-word list in Ǝ. includes: *att*, 'one', *ḫʷett*, 'two', *sost*, 'three', *əsat*, 'fire', *əḫa*, 'water', *eyat*, 'sun', *bännä*, 'moon', *däm*, 'blood', *annäbät*, 'tongue', *sənn*, 'tooth'. The independent pronouns of Ǝ. are: *əyya*, 'I', *yəna*, 'we', *aḫä*, 'you (m. sg.)', *aḫᵓ*, 'you (f. sg.)', *axu*, 'you (m. pl.)', *aḫma* 'you (f. pl.)', *ḫʷut* 'he', *ḫʸit* 'she', *ḫəno* 'they (m.)' and *ḫənäma* 'they (f.)'. Demonstrative pronouns are *zə(ḫ)* 'this, these' and *za(ḫ)* 'that, those'. The copula in the present tense is suffixed to its complement: *gʷad-u* 'it is white', *dengʸa-ro* 'they are boys'. In the past and future tenses, the copula is an independent word: *gʷad bannä* 'it was white', *dengʸa yiḫrošä/yiḫärote* 'they may/will be boys'. Yes or no questions are formed by simply changing the intonation of the affirmatives. The 'wh'-words are: *mʷan* 'who', *mər* 'what', *mäčä* 'when-future', *mäčra* 'when-past', *ete* 'where' and *ənde* 'which'. The causative prefixes are *a-* and *at-*. Possessive markers are suffixed to the noun, e.g., *bet-əna* 'my house' vs. *bet-ənda* 'our house'.

Although Ǝ. has no written literature, it is rich in oral literature. Different types of songs are sung for a variety of occasions; *wəyäg* for praising the deeds of heroes and their tribes; *bädra* for praising the deeds of the war god ↗Waq; *wärkʷä* for praising the deceased when an important figure dies. Different types of songs are also sung while farming and harvesting *ənsät*.

Degif Petros Banksira

Ǝža ethnography

Ǝ. (also Äža) designates a *gän* ('ethnic/territorial unit') of the *Säbat Bet* ↗Gurage confederation and its population. The Ǝ. before were members of the *Ammǝst Bet* Gurage ('Five Houses of Gurage') confederation. Ǝ. country is situated at the eastern edge of the Gurage highlands south of ↗Muḫǝr. Their eastern neighbours are the ↗Mäsqan. To the east and south the Magʸača river forms the border to the ↗Čaha. In the south-east the ↗Gumär are settled. Ǝ. is part of "Ǝža and Wälläne *wäräda*" of Gurage zone (↗Wälläne), formerly a component of ↗Čabo-Gurage *awrağğa*. Important centres are Agana and Božžäbär. The Ǝ. intensively cultivate ↗*ǝnsät*. A traditional specialization in trade is bamboo and palm leaves. Today seasonal or constant labour migration to Addis Abäba and other cities is an important means of cash income.

The Ǝ. are composed of subgroups of different origins. While the others claim to have migrated from the north, the Negera, Šarara and Yaliyyaṭǝb sub-units say that they are descendants of *ḥāğğī* Aliyye, who is known as apical ancestor of the ↗Sǝlṭi. Pockets of Negera are also to be found outside of Ǝ. in Aymälläl, ↗Wǝlbaräg and in Wänči, were they commissioned the *gäbäz* ('administrator') of Qǝrqos Church on the Lake ↗Wänči island (Akalu Woldemariam 1983:14; cp. Haberland 1960:10ff.).

When the Negera reached Ǝ. country after a long migration from the Muslim east via Arsi, Gädäb and Aymällä they had to confront the Qončača clan, which was till then the dominant group in Ǝ. country. Since a battle in ca. 1550, the Ǝ. *gondär*-ring, the emblem of chieftainship in Gurage, remained in the hands of the Negera and inter-marriage was established with the Qončača. The political unity of Ǝ. country continued to be unstable till the middle of the 18th cent. due to conflicts within the Negera clans (Akalu Woldemariam 1983:40). The Ǝ. had frequent territorial conflicts with the Čaha and their allies Aklil and Gumär. Another long lasting conflict was that with the Oromo of Amaya which reached its apex in the early 19th cent. The Ǝ. were conquered by Mǝnilǝk II's troops in 1875. The Negera clan could remain in a dominant position.

Religiously heterogenous, the majority of the Ǝ. are Orthodox Christians, followed in number by Muslim and Catholics. For the old Gurage folk-religion the Lake of Božžäbär had some significance as a place of sacrifice. The ↗*Waq* spirit of the Ǝ. is known under the name of *Ǝnggʸeber*.

Dirk Bustorf

ᶜEzana

ᶜE. (ዔዛና, b. 325[?], r. ca. 330–65/70[?]) was an Aksumite ruler famous for his conversion to ↗Christianity. He is attested by ancient sources of three categories: a) literary; b) epigraphic; c) numismatic.

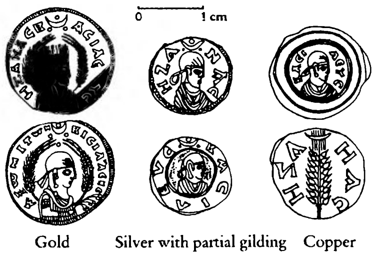
a) A letter of the Roman Emperor Constantius II (r. 337–61), dated 356/57 and addressed to the "*tyrannoi* Aizana(s) and Sazana(s)", dealing with the activities of Bishop Frumentius (↗Säläma Käśate Bǝrhan), has survived in an apologetic writing of ↗Athanasius of Alexandria. The story of Frumentius's fate at the royal court and the spread of Christianity to ↗"India" is preserved in Latin by the *Historia ecclesiastica* of Rufinus of Aquileia (written in 403), and was reproduced in Greek by later Church historians. Purportedly going back to Gelasius of Caesarea's lost work (ca. 390), it rather refers to Frumentius's companion Aedesius as informant, but does not mention the name(s) of the king(s) of the time.

b) ᶜE. continued the already established habit of erecting monumental ↗inscriptions announcing the subjection of enemies with divine assistance. Eleven more or less damaged and fragmentary epigraphic documents bearing his name (or just attributable to him) can be reduced to four victory celebrations only. They were intended to offer triple versions of the text (Greek, pseudo-Sabaean and Gǝᶜǝz, unvocalized or vocalized, with some deviations) and to be set up in more than one location. Three of these campaigns fall into ʿE.'s non-Christian time: against the Bega (↗Beğa; six versions: RIE nos. 185 [I and II], 185bis [I and II], 270, 270bis; perhaps during the King's younger years because not led by him in person), against the ↗Agʷəzat (one version: RIE no. 187) and Afan (one version: RIE no. 188). The fourth campaign (three versions: RIE nos. 189, 190, 271) against ↗Noba and ↗Kasu bore witness to a Christian king. The transition of the religious formulas from the old, pre-Christian pantheon to a monotheistic, Christian creed (the terminology of which was difficult to render in Gəʿəz, s. ↗Əgziʾabəḥer) has aroused some speculation, but a Jewish interval is out of the question. Three more inscriptions which have been claimed for ʿE. by some scholars definitely do not belong to him (RIE no. 186 of his brother, nos. 277 and 286).

c) ʿE. is possibly the fifth in the sequence of coin-striking kings (↗Coinage). His coins are well known by a relatively large number of specimens in all three metals and their iconography displays the change of religious symbols announcing the new religion in about the middle of his reign. Further chronological clues may be derived from numismatic evidence (metrology and statistics).

The Greek rendering of ʿE.'s personal name is either *A(e)izanas* (Constantius's letter, inscriptions) or *Ēzanas* (coins) with final sigma, according to Greek morphology (however absent on his late gold issues). Some inscriptions (RIE nos. 188, 189) contain the patronymic *wäldä* ↗*Əllä ʿAmida* and the clan name *bəʾəse Ḥalen* ('man of Ḥalen'), also present on gold coins in the Gr. form *bisi Alene*. His throne name is unknown; in traditional ↗chronography the elevation of the Christianity to official religion falls within the reign of the half-legendary kings ↗Abrəha and Aṣbəḥa.

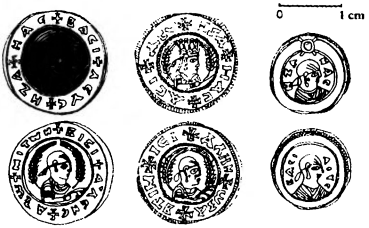
On the conversion of ʿE. there are several conflicting opinions, owing to different appreciations of both the details in Frumentius's story (told by his companion Aedesius) and the question as to whether Athanasius of Alexandria really ordained him and had him sent back to Aksum as bishop early or later in his long (and three times interrupted) pontificate. In theory, dating to 328/30, 339, 346/50 or 362/65 would be possible. The traditional chronology maintained by the Ethiopians is 333 A.M. [340 A.D.] and – although resulting from artificial reckoning of mediaeval chronographers – could incidentally be right, but was often misunderstood as 333 A.D., in favour of the early dating widely accepted in modern (even scholarly) Western literature.



Pre-Christian coins of ʿEzana; drawing courtesy of the author

A Christianization of the coins would statistically fit well into the later 340s and could match a date of the "Trinity inscription" (RIE no. 271) to 349 (355 or 360 being the alternative). As a result, a "middle chronology" may be preferred: ʿE. began his reign as a child (according to the story of Frumentius) ca. 330 and, if he dismissed his tutor Frumentius in ca. 339, when he became of age, his year of birth might have been 325. Such a chronology is compatible with a date of Frumentius's first arrival in ca. 328. The existence of a juvenile reign is indeed somewhat surprising, but not entirely impossible. The length of ʿE.'s reign can only be guessed: the 30 years (plus 7 for the younger years) given to him (that is, to Abrəha and Aṣbəḥa) in the Ethiopian "king lists" (s. CRList, "list C"; Dombrowski – Dombrowski 1984:162) recall the biography of such famous rulers as Constantine the Great, and reappear for ↗Kaleb, too. Any date after the letter of Constantius (356/57) is possible. Considering the relative frequency of coins with Christian symbols versus pre-Christian coins has its problems, because we may have to reckon with a posthumous continuation of the gold coinage and with a copper coinage assuming an anonymous character.

The monumental inscriptions give us some information about ʿE.'s territorial claims and his military campaigns. The protocol of his titles includes a fixed sequence of peoples and localities which he declares to be under his rule on both sides of the Red Sea: the Aksumites, of course, listed first, followed only in the Bega-campaign (↗Beğa) inscriptions by the Ethiopians (↗Ḥabašat, inhabitants of the highlands), then the Arabian regions (Ḥimyarite/Sabaean, plus the Tihāma or coastal strip; ↗Ḥimyar), finally



Gold Gold Silver with partial gilding

Christian coins of ʿEzana; drawing courtesy of the author

the remote African areas of Bega and Kasu (i.e. ↗Kuš, here ↗Meroe).

A crucial question is that of a (continued or renewed) Aksumite presence in South ↗Arabia. The titles boasted by ʿE. in this connection – possibly a mark of inertial conservation – are in fact contradicted by the silence of South Arabian epigraphic sources. The numismatic evidence is not decisive about that.

The evaluation of ʿE.'s religious policy is characterized by much speculation in a certain Christological (Monophysite) direction. In general, this policy is to be seen as an *imitatio imperii Romani*, which could have been transmitted by such a counsellor versed in theology as Frumentius. On the other hand, Aksum became involved in the ecclesiatical tensions when Emperor Constantius II attempted to regiment the Church. That his emissary ↗Theophilos the Indian, who was sent to South Arabia and seems to have reached Aksum in the 340s, was unsuccessful may also be attributed to Frumentius's influence on the King. Constantius's letter of 356/57 indicates yet another fruitless effort to control the situation. Although we do not know how this letter was received by ʿE., it is hardly imaginable that he would not have protected Frumentius – especially since it is almost certain that the King had already converted. His famous trinitarian inscription (RIE no. 271) is theologically much elaborated; the same is true of the interlinked coin typology, which served a clear concept. Supposedly, the then ↗Aksum Ṣəyon was turned into a Christian sanctuary as early as the reign of ʿE. If there were royal tombs (as maintained by tradition), this would likewise be an imitation of Constantine I and Constantius II.

In his late years ʿE. had a co-ruler, Sazanas, who is mentioned as such in Constantius's letter; at the time of the Bega campaign, Sazanas had only served as one of the army leaders and is called the King's brother in the relevant inscriptions. An elevation in rank would also have followed the example of the Roman empire.

↗Ǝllä Amida; ↗Ǝllä Azgʷagʷa

ʿƎzəl

ʿƎ. (**ዕዝል**) is one of the three categories of melody (↗*Zema*) or mode (*səlt*) that constitute the Ethiopian Christian musical system, the creation of which is traditionally ascribed to Saint ↗Yared. ʿƎ. is closely associated with annual holidays and is exclusively used to chant the hymnary during Holy Week. The term ʿƎ. is of uncertain derivation, but is said to mean 'to separate, isolate, set aside', or 'to retire, withdraw from'. In terms of its metaphorical significance, ʿƎ. is linked to the sun, an association derived from traditional accounts of the life of Saint Yared.

ʿƎ. provides a repertory of short melodic patterns that constitute the smallest of the three divisions of the indigenous Ethiopian notational system. Each ʿƎ. melody is represented by a sign (↗*mələkkət*) derived from the Gəʿəz syllabary.

The musical content of ʿE. is somewhat difficult to describe because of the problems encountered in translating Ethiopian intonation into Western notation. Like the ↗*araray* mode, ʿƎ. uses a pitch set that may be expressed in Western staff notation as a pentachord with a variable third degree, C–D–E/F–G–A.

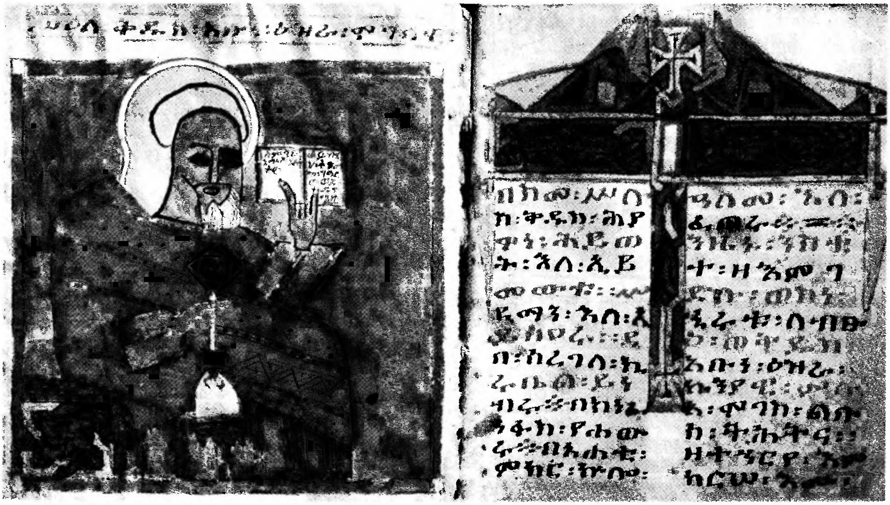
Kay Kaufman Shelemay

ʿƎzra

ʿƎ. (**ዕዝራ**) was a saint and prominent 15th–early 16th-cent. follower of ↗Ǝsṭifanos. According to his Acts, possibly dating to the 16th cent. and only known from one manuscript (Mordini 1952:50, no. 1 [= no. 40 in Schneider's unpublished checklist], reproduced for Conti Rossini from a mid 19th-cent. intermediary copy, s. StrANL 29ff., no. 9), he was born in Kəsad Ǝnba, district of Ḥəzbä Səbuḥa (↗ʿAgamä), from Yəsḥaq and his wife Ləʿul Śämra, whom he married after the death of her first husband (Caquot 1961:72). ʿƎ. started his religious life at the age of twelve, when his father died, and his elderly brother, Ǝsṭifanos, brought him to Käswa (↗Gundä Gunde), at the school of *abunä* Yəsḥaq, then head of the monastery (↗Stephanites). Here he was soon to receive the monastic habit and name of ʿƎ. (ibid. 73).

As there was a shortage of priests, due to the persecutions of the Stephanites, *abba* ↗Abäkäräzun chose twelve monks, including ʿƎ., to go to ↗Jerusalem to receive holy orders. They departed in 1476, after Abäkäräzun died and was succeeded by ↗Gäbrä Mäśiḥ. During the journey, the Stephanites were accused of heresy by their fellow pilgrims. However, in Jerusalem they were all ordained deacons (the story is reflected in another document written under *aṣe* ↗Iyasu II, in which they are instead said to have suffered divine punishment; s. Cerulli in PICES 3); ʿƎ. received priestly ordination from the Syrian Patriarch and returned to Ethiopia, having witnessed, among other things, the ceremony of the "descent of the light" on to the Holy Sepulcher (Fiaccadori in StAeth 38, 40 and n. 14). When he arrived to Käswa, he used the technical abilities he had acquired abroad to build a water mill at the request of *aṣe* ↗Naʿod.

Naʿod's favourable attitude towards ʿƎ. may be partially connected to his ride to Təgray, during which a passage of the Acts of Ǝsṭifanos was read to him on the apparition of the Virgin ↗Mary to Ǝsṭifanos himself. ʿƎ. stayed at Naʿod's court between 1499 and 1508, thus being able to achieve reconciliation between the Emperor and the Stephanite movement – no longer considered in terms of religious dissidence or haeretical trends. In fact, he played an important role in convincing the Metropolitan *abunä* ↗Yəsḥaq to revoke the excommunication of the Stephanites; he was interrogated by ecclesiastics and his faith was found to be sound (on this complicated dossier, often misunderstood as referring to Beta Ǝsrael, s. Fiaccadori 2004a:687f.). Yəsḥaq's successors, *abunä* ↗Yaʿəqob and above all *abunä* ↗Marqos



Miniature with the front page from the ms. with the Acts of Gäbrä Maśiḥ, ʿƎzra and Habtä Śəllase, fol. 66v–67r; Gundä Gunde (= Mordini 1952:50, no. 1); photo 2002, courtesy of Michael Gervers (always in good terms with ᶜƎ., who helped him to sit on Yəsḥaq's "chair": ibid. 686), continued his favourable policy towards the Stephanites: Marqos gave holy orders to several of them and consecrated for them 80 ↗*tabots*.

After the death of Naᶜod, ᶜƎ. had to flee persecution. He took refuge for a year in Läkma and then moved to Käswa, but soon had to flee again; when he returned to Käswa, he found the church burnt and rebuilt it. Aged and sick, he was invited to Dusᵓa by Gäbrä Mäśiḥ, head of the Stephanite congregation monastery; there he died and was buried (ca. 1520). Gäbrä Mäśiḥ's successor ordered ᶜƎ.'s remains to be translated to Käswa.

To ᶜƎ. himself the curios legend about Däqqä Ǝsṭifa (lit. 'children of Ǝsṭifa[nos]', i.e. the Stephanites) should be also traced that is preserved in two obscure five-verse ↗*qəne*-strophes (s. Cerulli 1933:99-103) and elucidated in the narrative attached to them in the ↗Däbrä Bərhan Śəllase version of the "short chronicle" (Foti 1941:92ff., 119f.). Däqqä Ǝsṭifa went to the "country of the Greeks" (*hagärä Ṣərᶜ*), i.e. Egypt (s. Fiaccadori 2004:142f., 157), where he learnt "the interpretation of the ↗*säwasəw* and the mystery of religious hymns" that he later tought to *ase* ↗Ǝskəndər, soon becoming his favourite. Yet, he commited adultery with the Emperor's wife. Upon surprising the couple in the palace, Ǝskəndər exchanged with the adulterer those *qəne*; then the two lovers managed to flee.

Ezra, Apocalypse of

The Apocalypse of E. (also known as 4 Ezra) is a book of visions composed by a Jewish author ca. 100 A.D. and ascribed to the Biblical figure of E. the Scribe. Additional material was apparently added near the middle or second half of the 3rd cent. by one or more Christian authors. E. was almost certainly composed in Hebrew, however, all the surviving versions including the Latin, Syriac, Georgian, Coptic and the Gəᶜəz are dependent on the Greek.

The book is composed of seven visions. The first three are in the form of dialogues between E. and the Archangel Uriel and deal primarily with the destruction of the Temple and Jerusalem. The fourth reveals a mourning woman who is transformed into the heavenly Jerusalem. In the fifth E. sees an eagle which represents the Roman Empire. The sixth vision concerns a man, who rises from the sea, who defeats his enemies and is acclaimed by the joyous multitude. In the seventh vision, E. receives the 24 books of the Bible and the 70 books.

There are numerous parallels between Apocalypse of E. and 2 Baruch (also known as the Syriac Apocalypse of ↗Baruch) and the Book of ↗Enoch. Cf. 4 Ezra 6:49–52 and 1 Enoch 60: 7–9; 4 Ezra 7:32f and 1 Enoch 51:1, 3; 4 Ezra 7: 37 and 1 Enoch 62:1. The authors also seem to have been familiar with the Psalms of Solomon. The best edition of the Ethiopic version is still Dillmann (1894). The Apocalypse of E. is usually included in Ethiopian ↗Canon tables, and has also been the subject of ↗*Andəmta* commentary literature.

F

Faɖakoobe

F. (Faɽakōbe, Fālakōbé, Sāho sp. Farhakoobe), known also as Đasamó or as Muḥammad Farakobe Abū Bakr b. Ḥasan b. Ḫalīfa from the clan of Ḥassan Geyša (the Gaʾaso subgroup of the ↗Mīnifire), was a famous traditional singer and poet of the ↗Sāho. According to oral traditions he lived in the 19th cent. The German scholar Leo ↗Reinisch recorded and translated a few of his poems and songs (Reinisch 1889:290f.). As Reinisch reports, F. may have died either in 1867 or 1868 during the Napier expedition against *aṣe* ↗Tewodros II. He was buried in Irʾafale (Irafayle, Iɽaafalo), a Red-Sea coastal village.

The name *Farhakoobe* is probably best analyzed as Sāho *fárhak* 'wanting' (also 'while he [same subject or different subject from the main verb] wanted', a *k*-participle of *farhe* 'want') plus *oobe* 'he came down'. Morin (1999) explains it as 'he came when he (God) wanted', i.e. 'he came by God's will', and corrects the name to *Faɖé-k ɔ̄bé* with a form *faɖé-k* that means 'if he wanted' in ᶜAfar.

Many of F.'s poems are about love and marriage, others praise courage, describe historical incidents and the Sāho nomadic life, the social and physical environment, tame and wild animals and the conflicts and disputes between the Sāho clans as well as between Sāho and neighbouring groups (such disputes were usually caused by the competition for new pastures and wells).

F. is reported to have been always travelling to participate in different Sāho ceremonies and holidays and he was eager to receive gifts and support from clan leaders. Sometimes he exploited the tensions and conflicts between the different Sāho groups, especially the competitions between the Minifire, ↗Asaorta and ↗Ḥazo. It is said that F.'s behaviour was unpredictable and flexible; he could adjust himself to whatever situation he faced. Most clan leaders were afraid of F. and they gave him gifts in order to avoid his poetic attacks. In his turn, he tried to win the support of different clan leaders and *šayḫs*: in his poems he could describe the clan's generosity, hospitality and co-operation, since these values occupy a special position in the life of Sāho people. But if an unpleasant incident from the side of clan leaders or *šayḫs* occurred, the rumours were reported to F. and he would quickly compose a poem. The person involved, however, could try to prevent F. from doing so by giving him a present. F. could also regain the favour of the individuum concerned and rehabilitate him by composing a new piece.

Like most of the traditional poets, F., though famous, was treated by Sāho society with suspicion and disdain. It is said that he was not happy about his profession, he felt guilty and prayed to God to free him from being a poet. He even composed a poem about himself describing the tragedy and hopelessness of his situation.

Abdulkader Saleh

Faitlovitch, Jacques

F. (also Ya'akov Faïtlovitch, b. 1881, Łódž, Poland, d. 1955, Tel Aviv) was a scholar and activist on behalf of the ↗Betä Ǝsraʾel. He studied oriental languages in Paris under Joseph ↗Halévy, who stimulated his interest in the Betä Ǝsraʾel. After receiving a Master's degree in oriental languages in Paris and a doctorate from the University of Lausanne in Switzerland, in 1904, F. traveled to Ethiopia under the sponsorship of Baron Edmond de Rothschild. On his return-trip, he brought two "Fälaša" boys with him, ↗Täʾammərat Amanuʾel and Gette Erməyas. He also organized "pro-Fälaša" committees in Italy and Germany. In 1908–09 he traveled to Ethiopia yet again and met with *aṣe* ↗Mənilək II. Following his third visit in 1913–14, he began to establish schools, including a boarding school in Addis Abäba (1923). He also sent several youths to study in Palestine and Europe, most notably ↗Yona Boggalä. As his activities were curtailed during the Fascist conquest and World War II, he settled in Palestine and continued to lobby on behalf of the "Fälaša" until his death in 1955. His library including over two dozen manuscripts is housed in the library of Tel Aviv University.

F.'s publications can be classified into four main categories: (1) accounts of his travels (1905; 1910); (2) popular pieces designed to encourage interest in the situation and activities on their behalf (1907; 1920); (3) letters to the Betä Ǝsraʾel (1913); (4) academic studies (1906; *Proverbs Abyssins*, Paris 1907).

Despite the publication of numerous articles dealing with F.'s life and his influence on the Betä Ǝsraʾel, no comprehensive biography has been written. Although much of the literature on F. has an almost hagiographic tone, in recent years more critical perspectives have been adopted by scholars.

Fala

F. (ፋላ) is a mountain rising ca. 365 m above the plain of Aroge, where one of the battles between the troops of *aṣe* ↗Tewodros and those of the ↗Napier expedition took place.

The plain of Aroge lies to the north-west of ↗Mäqdäla and it was there that the British and the Ethiopians had their first decisive clash on Good Friday, 3 *Miyazya* 1862 A.M. [10 April 1868].

The British were nearly equal in numbers to the Ethiopians, but they were much better armed and knew how to use their advantage. The movement started at 6 o'clock in the morning when the First Brigade commanded by Colonel Phayre and the Third Cavalry under Colonel Loch started moving towards the plain across the ↗Bäšəlo river. At 9:30 a.m. the Commander-in-Chief of the British army, Robert Napier, moved in with the Second Brigade. Later, they were joined by the Naval Brigade and several infantry companies.

Aṣe Tewodros superintended the main gun and the artillery unit at F., whereas his general, *fitawrari* ↗Gäbrä Ḥəywät Goššu, led the infantry and the cavalry in the Aroge plain. It was Tewodros who started the military action by firing the canon from F. at half past four in the afternoon.

The British could use their technical and tactical advantage. As Ethiopians could not employ their usual tactic of a massive attack for lack of space, they had to resort to a frontal attack. The British then pretended to retreat, but then surrounded the Ethiopians and opened fire from three sides, immediately inflicting heavy losses. Gäbrä Ḥəywät Goššu was killed together with at least 700 or 800 of the ca. 4,000 soldiers who fought on the Ethiopian side. 1,500 more were wounded. The Ethiopian army had to retreat; many fled without returning to Mäqdäla. Tewodros, however, stayed on in his headquarters at Sälamge and even attempted some peace negotiations. Despite an offer by Napier to accept his surrender, he vehemently refused (and eventually committed suicide).

Fälaša ↗Betä Ǝsraʾel

Fälaša Bet

F.B. (ፈላሻ፡ ቤት, 'Fälaša House') was the name given to the area, or areas, inhabited by the Fälaša (↗Betä Ǝsraʾel) craftsmen outside ↗Gondär. The principal Betä Ǝsraʾel area, situated west of the city, beyond the Qäha river, was also known as ↗Kayla Meda, since Kayla was another name for the Fälaša and, because of its dryness, Abʷara ('dust'). The Betä Ǝsraʾel, though mainly blacksmiths, weavers and potters, also cultivated in the F.B. area, whence some travelled to the city to engage in building operations. The separation of the Fälaša, as well as of the Muslims of Gondär, was based partly on custom, but also on the decision of a church council, held in the city in 1668, during the reign of *aṣe* ↗Yoḥannəs I. It decreed that both minority communities should not remain with the Christians, but should live apart, forming a village of their own. Early in the 19th cent. William Coffin (Pearce 1831:240f.) estimated that the population of F.B. numbered "scarcely four hundred", while Eduard Rüppell thought that F.B. comprised some 60 houses, which likewise would suggest a population of 300 or 400 inhabitants.

Richard Pankhurst

Fälasfa ṭäbiban: Mäṣḥafä fälasfa ṭäbiban

The M.f.ṭ. (**መጽሐፈ፡ ፈላስፋ፡ ጠቢባን**, 'The Book of the Wise Philosophers') is a collection of sayings, apophthegms and anecdotes of Greek philosophers, early Church Fathers, biblical figures and so-called wise men, but also proverbs and banal wisdom. The sayings are not ordered according to authors or themes; the most important or popular philosophers, such as Aristotle, Plato, Socrates or Diogenes, are mentioned, but in most cases the sayings remain anonymous.

The M.f.ṭ. belongs to a period of ↗Gəʿəz literature that witnessed an increased translation activity from Arabic into Gəʿəz. Besides the *Life and Maxims of Secundus the Philosopher* (↗Secundos), translated from Arabic, the M.f.ṭ. is the only Ethiopic literary product that can be considered properly philosophical. It is in fact a translation of the Arabic gnomologium entitled *Kitāb al-bustān wa-qāʿidat al-ḥukamāʾ wa-šams al-ādāb* ('Book of the Garden and Basis of Wise Men and Sun of [Ethical] Rules'). In one manuscript of the latter, the compiler (or simply the copyist) Naṣrallāh b. Yuḥannā is mentioned; his literary activities are otherwise unknown. This manuscript was the *Vorlage* of the Ethiopic version, made between 1510 and 1522 by *abba* Mikaʾel "the Translator", a writer of Egyptian origin. At present two recensions – a long and a short – of the M.f.ṭ. are known.

Such a collection of sayings was very popular in Ethiopia, as is indicated by the great number of its manuscripts. The oldest manuscripts of the collection, from the 16th cent., preserve the most part of the content of the Arabic text; later manuscripts, especially from the 19th/20th cent., convey texts enlarged by sayings of Church Fathers or other stories, e.g., of the wise Ḥikar (↗Aḥiqar [EAE vol. 5]), that are unknown in the Arabic original and represent Ethiopic scribal modifications.

The *Kitāb al-bustān* is, in its turn, a Christian collection generally based on two books of sayings: the *Nawādir al-falāsifa* ('Apophthegms of the Philosophers'), written by the Syrian scholar Ḥunayn b. Isḥāq (809–73 or 877), one of the most important translators and mediators of Greek science to the Islamic world; and the gnomologium called *Muḫtār l-ḥikam wa-maḥāsin al-kalim* ('Choice of Wise Sayings and Fine Statements'), composed in 1048/49 by the Egyptian savant Mubaššir b. Fātik, which also contains much Christian material, e.g., sayings of such early Church Fathers as ↗Gregory of Nyssa and ↗Basil the Great or legendary sages from the Egyptian Hermetic tradition. Besides the two aforementioned collections, the Christian compiler of the *Kitāb al-bustān* used other material from Christian sources and doxographic extracts, mostly from Galenic writings.

The evaluation of Arabic gnomic literature has just begun; but the traditional view concerning the central position of Ḥunayn b. Isḥāq's *Nawādir al-falāsifa* in the history of the transmission of the M.f.ṭ. should definitively be revised, for it is but a distant echo of the Greek gnomological and doxographic tradition, within which the exact position of the M.f.ṭ. is still to be established.

Famines

Ethiopia has had a long and tragic history with F. Most of them were caused by drought and/or crop failure, but others were due to ↗locusts, rinderpest or wars. The devastation caused by F. usually intensifies because they are frequently followed by ↗epidemics such as smallpox, cholera, typhus, diarrhea or influenza (↗Diseases).

History

The earliest records of F. are preserved in the *Sənkəssar* and date from the 9th and 12th cent. References to F. in the 12th to the 13th cent. also appear in the Acts of *abba* Täklä Haymanot of Šäwa and, in the 16th cent., the Acts of Täklä Alfa of Däbrä Dima. References to early F. are also recorded in Haräri historical writings for 657 H. [1259 A.D.] and 673 H [1275 A.D.].

Detailed descriptions of F. caused by locusts are preserved in the writings of Alvares and in the Chronicle of *aṣe* Gälawdewos (r. 1540-59). Regarding the severity of a F. he experienced, the latter claims that "its like had not been seen since the time of the kings of Samaria and at the time of the destruction of the second Temple". Later outbreaks were reported in 1616 and 1628. Serious F. due to locusts are also known to have occurred in 1626/27 and in 1633, as described by the Jesuits. F. likewise featured in chronicles from the Gondärine kingdom. Outbreaks without reported causes were recorded in 1668, 1752 and 1772/73, and one account caused by locusts in 1647/48 (Pankhurst 1972, 1973).

The first recorded 19th-cent.-F., in Təgray 1811–12, was caused by locusts; Pearce said that it "committed great ravages", a description the local ruler *ras* Wäldä Śəllase also confirmed. A later F. in Šäwa (1827/28) was apparently caused by a combination of drought and some form of cattle disease (Pankhurst 1985:53ff).

One of the most serious and best documented F. in Ethiopia's history was that of 1888–92 (↗*Kəfu qän*). This outbreak stemmed from a combination of natural disasters: 1. a major epidemic of rinderpest, 2. unprecedented drought and harvest failure, 3. extensive plagues of locusts and caterpillars. The rinderpest was unintentionally introduced by the import of new strains of cattle by the Italians and reportedly led to the death of just under 90 % of the country's livestock. This, in turns, caused an acute shortage of meat for consumption, as well as of oxen for ploughing. Consequently, cultivation was greatly reduced. The drought and heat meanwhile caused the crops in the fields to wither and die; the remaining produce was further ravished by swarms of locusts and caterpillars induced by the excessive heat. These developments combined to produce an acute shortage of both livestock and cereals, a sharp rise in farm prices, a major outbreak of F., which was followed by epidemics of smallpox, typhus and cholera. It is estimated that the combined effects of F. and the epidemics may have killed a third of the entire population (Pankhurst 1966).

Causes and significance

Droughts are known to occur at more or less regular intervals in Ethiopia. The minimum factor for plough ↗agriculture being the rain, not the soil fertility, Ethiopia has a long history of local harvest failures due to insufficient, too short, interrupted or even too heavy rains. If these occur over large areas and/or repeat themselves over several years, F. are hardly avoidable.

Larger F. occurred in more recent years with a certain regularity; a pattern of an eleven years' cycle is sometimes suggested. F. have in recent years also become more devastating and affected increasing numbers of people because of the population growth.

Theoretically, F. could be prevented through foresight and planning. The Bible gives probably the earliest account and lesson of a successful political intervention to prevent a major drought from becoming a F. (Gen 41–44). There is normally food available in at least some parts of the country, so that prevention might appear to be a problem of distribution, transport capacities and pre-emptive action.

Traditionally Ethiopian peasants knew that against the uncertainty of weather there is no protection or cure except keeping reserves for surviving a bad year. Cattle are valued also as a safety stock to be sold in drought periods. By exchanging goods with less affected regions, peasants could always escape the worst F., as long as not the whole region was affected. The problem grew to disaster dimensions when the peasantry was too impoverished to keep the necessary reserves and political authorities neglected the need for tax relief and local emergency stock keeping.

The more affluent parts of the urban population made sure to collect sufficient food for their own needs right after harvest, particularly when predicting a shortage, leaving the rural areas with correspondingly lower stocks. This had the additional fatal effect that food aid had to be distributed to the most remote villages at enormous costs, while the towns in most F. hardly felt grain shortages (Pausewang 1991:23).

F. is usually understood to be caused by recurrent droughts. An increase in frequency and severity can naturally be explained through population growth and deteriorating soil fertility, as well as variations in weather conditions. Recent debates on F. relief question whether F. is caused by natural as opposed to man-made factors such as climatic changes and, in particular, political interventions, instability and conflict. Political factors are basically three: 1. increasing tax and levies on peasant production lead to impoverishment and growing pressure on productive resources; 2. the failure to install preventive mechanisms such as food security stores and more efficient local productive capacities; and 3. the priority given to food for the army and the urban population deprives rural populations of their necessary food security reserves. In the wake of this debate, food assistance also comes increasingly under critical scrutiny, suspected of discouraging local production and making rural populations dependent on food aid instead of local production. At the same time, an increasing population growth rate of almost 3 % annually (2.7 % in 2003, CSA 2004) causes a duplication of the rural population for every generation. As long as alternative employment in industrial production or other non-agricultural sectors is not available, even measures to improve the productivity of agriculture will not be sufficient to cope with an ever-diminishing ratio of man to land and hence a vulnerability of food production (Eshetu Chole 1988).

Famine as a factor in politics

During the reigns of *aṣe* Mənilək II and *aṣe* Ḥaylä Śəllase I, increasing burdens were laid on peasants, since their productive capacity was the major source of the means to finance the centralization of the empire, the growing army and administration, and the modernization of the country. The conquest of the South, as well as subsequent changes in rural policies, brought a palatable impoverishment of farmers, accompanied by changes in ↗land tenure which disowned a sizeable number of peasants, making them tenants or land labourers, or evicting them. Increasing taxes, levies and other contributions forced the peasants to produce more to be able to survive on their land, but to consume less themselves (Pausewang 1983).

Under Ḥaylä Śəllase, the problem reached a politically serious dimension. When F. hit evergrowing numbers of people, the reasons were sought in different ways. Population growth obviously contributed, as the land had to feed ever-more mouths. Ecological deterioration also in the 20th cent. and before started to narrow the margins and increase the variations in rains. But the more important reasons were sought in the socio-economic conditions of agricultural production. Demands on peasants were rising. Landlords increased their "share" in the peasants' crops to cover growing urban costs of living. Prices for inputs were rising, as were the margins of traders. And the terms of trade for agricultural produce generally deteriorated. Investors were ready to compete for land, causing the eviction of many peasants by their landlords. Taxes and levies, as well as corruption added to the burdens of peasants. In addition, even the most self-supplied peasant needs some money to pay taxes, to buy clothes and tools, to pay for school fees for a child or health services for a sick family member. With generally declining rural terms of trade, peasants had to sell more food to get hold of the needed cash. With increasing sales, they became more dependent on traders and on taking out loans. Interest rates and loan services added to their need to sell. This combined burden narrowed their ability to keep stocks for surviving a bad year or two (Stahl 1974; Cohen – Weintraub 1975; Pausewang 1983).

The demand to improve the living conditions for peasants became, therefore, a political issue of primary order. Since 1965, the growing radical student movement adopted the slogan መሬት፡ ለአራሹ (*märet lä'arašu*, 'land to the tiller') and launched demonstrations for their demand (Balsvik 1985). It turned against Ḥaylä Śəllase personally when it became known that he attempted to hide the F. of 1973 in order not to disturb his coronation anniversary celebrations. There had been some concern for prediction of recurrent droughts and prevention of F., but it had not reached beyond a planning stage when Ḥaylä Śəllase's government fell in the face of growing popular protests sparked by the damaging F. in 1973 in Wällo and Təgray.

After the ↗Revolution, the new *Därg* regime promised F. should never occur again. But in 1984–85 it delayed reacting to a new F. until after its 10th-anniversary celebrations. In the following years it used food aid politically, denying rebel-controlled areas (Eritrea and the north of Təgray) relief food which was redirected to feed the army instead. This led European aid agencies to open the Cross-border operations from Sudan to feed the famine victims in the north. In 1995 drought demanded a new relief operation, and since then a growing number of people have become dependent on relief supplies to avert acute F.

Fandaanano

The Hadiyya term F. (collective from *fandaano*, pl., sg. *fandaančo*) in general refers to the traditional way of life of the ↗Hadiyya in southern Ethiopia and in a narrower sense to their autochthonous Cushitic folk religion (↗Religions, traditional). The origin and the etymological derivation of the term F. remains doubtful. Before it finally collapsed in the 1970s because of the conversion of the Hadiyya to one of the Christian congregations or to ↗Islam, F. basically determined their social norms and their moral concepts. All customs of their life-cycle, their juridical laws and political actions were to a large extent influenced by F. as a comprehensive cultural system embracing the religious as well as the relevant secular spheres alike. From the 13th cent. until the ↗Oromo expansion in the 16th cent. the Hadiyya were part of a Muslim-dominated state in the area between the Rift Valley and the Harär plateau. Islam gradually declined afterwards in favour of a syncretic folk religion, which became known as F., but a considerable number of its elements persisted in more or less clearly visible patterns. Until the present many Hadiyya even tended to equate F. with Islam, although the knowledge of the ↗Qurʾān had neither been actively preserved nor substituted by another holy script. However, its followers made a clear difference between F. in the sense of "true religion", on the one hand, and "pagans" (*ibǧe*, sg. *ibǧekiččo*), on the other. In this quality F. also became a kind of missionary religion

Mourning woman with ostrich feathers in Hadiyya following *fandaanano* traditions; photo 1999, courtesy of the author which spread among neighbouring groups such as the ↗Kambaata, ↗Ṭimbaaro and ↗Allaaba.

Its characteristic elements can be described as follows. The F. believe in a High God *Waaʾa*, who is considered as a manifestation of the black (blue) sky. Similar to the supreme beings of other folk religions of southern Ethiopia (e.g., ↗*Waaqa* of the Oromo, ↗*Waq* of the ↗Gurage, *Maganno* of the ↗Sidaama and Kambaata, etc.), he is conceived as a kind of *deus otiosus*, who, after the creation of the world, retreated from its active governing. The fate of humans is therefore mainly dependent on subordinate spirits and demons, with whom, consequently, most of the worship is associated. There are special categories of patron spirits for individuals: *ǧaara* predominantly for men, *idoota* for women and *woriiqa* with a focus relating to important ancestors. They are regarded as responsible for the fertility of men, animals and plants and for good luck in any respect and will regularly be offered small gifts of barley, butter and honey-water. The main adversaries of the benevolent spiritual beings are devils categorized as *šeṭaana* and *habusa.* Other categories of spirits reveal by their names that they originated either in Islam or in Christianity. *Ǧiina* and *ibliisa* are derived from the the Muslim *ǧinn* and Iblīs, respectively (cf. Qurʾān 15: 14). Spirits reflecting the Christian background are, for example, *Kitoosa* (Christ), *Maaraame* (St. Mary), and *Gergiisa* (St. George), which partly serve as objects in possession cults.

F. people performed a ritual prayer at sunrise and sundown by bowing down to the north (-east), i.e. roughly corresponding to the direction of Mecca (*qibla*). They buried the dead and turned animals to be slaughtered towards the same direction. They observed a time of fasting (*soomaano* or *soomu*) which clearly revealed the model of ↗Ramaḍān and originally followed the Muslim calendar, but became more and more different from it in the course of time. If F. people violated any important prescription of their faith, they had to undergo a special rite of purification (*manisimma*), which was also demanded from new converts as a kind of baptism. Ceremonies of this type were presided over by high priests (*anǧaamma*, sg. *anǧaanččo*), spiritual leaders of the Hadiyya subgroups and lower categories of priests who acted as diviners (*kiiraano* and *hiraagaano*), sacrificers at ceremonial occasions and media in possession cults (*morotta*), employing various spirits for their séances (cf. above). In their ↗eschatology, concepts of the hereafter, heaven, hell etc., the Islamic model is reflected in many details.

In the year 1999 less than 200 people (out of a population of more than a million Hadiyya) were still active followers of the F. way of life. Its legacy, however, was still visible in numerous concepts and practices, particularly among the Orthodox Christians and Muslims.

Fanfa

F. is a type of pan-pipe which consists of six or eleven graduated end-blown bamboo flutes of varying lengths, bound together with several ranks of string. Hence, several flutes, each having a different pitch, are combined to form a single instrument. To help keep the canes in place, the body is often covered with a mixture of rendered sheep fat and cow's manure.

The flutes, having no mouthpieces, a single player blows across the top of the tubes to produce the desired sounds. Relative tuning is determined by the length and circumference of the tubes and the manner in which they are blown. Over-blowing produces overtones or harmonics and is one of the playing techniques used to alter the pitch as well as the sound texture. The instrument is played by the ↗Konso.

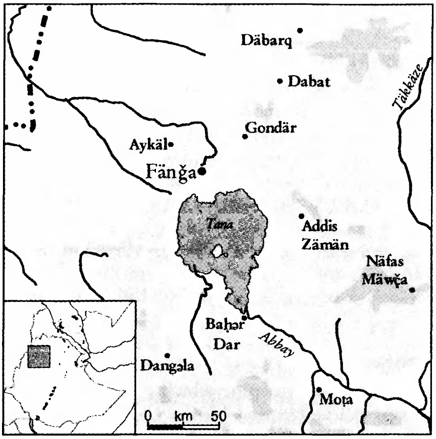
Fänǧa

F. (ፈንጃ) served as a regional capital in ↗Dämbəya. It is closely associated with *däǧǧazmač* ↗Maru who, from about 1800 to 1827, ruled Dämbəya and a large area to its west as far as the Sudan borderlands. *Däǧǧazmač* Maru built a residence there and founded the church of Fänǧa Maryam. The residence is now in ruins, but the church is still in service. Fänǧa Maryam was one of the most important churches during the ↗*Zämänä mäsafənt* and its foundation-document has survived. After *däǧǧazmač* Maru's death, F. continued to serve as the capital of Maru's political heir, *däǧǧazmač* ↗Kənfu.



F. is also associated with the *abuns* of Gondär who had their *gʷəlt* there.

Fanno

F. (ፋኖ) is the term derived from the Amh. ፈነነ (*fännänä*, 'he fled', or 'voluntarily took part in a warlike expedition for the sake of booty'), which was used for irregular soldiers (one as well as a group of them), or "free-booters", as opposed to the regular soldiers of the ↗army, usually designated as ወታደር (*wättadär*). F. often accompanied royal campaigns, but were not remunerated by the state, were not issued with uniforms and generally fought of their own volition, without an order or a military leader. A ↗*šəfta* rebel could also be referred to as F.

Raids and expeditions carried out by F., like those undertaken by regular troops, constituted a serious burden on the peasantry. The ceaseless exactions of the soldiers are described in the Ethiopian chronicles, notably that of *aṣe* Śärṣä Dəngəl, as well as by such foreign writers as Manoel de Almeida, Hiob Ludolf, Nathaniel Pearce, Walter Plowden and Augustus Blandy Wylde. The latter, e.g., observed that bands of warriors "little by little [...] increased till they [...] got out of all proportion to the wants of a peaceful country" (Wylde 1901:165).

Fänta

Däbtära F. (ፈንታ) was known to the missionary ↗Gobat and the travellers ↗Ferret and ↗Galinier, and particularly as a correspondent of the French traveller and scholar Antoine d'↗Abbadie. As a secretary at the court of *aṣe* ↗Śahlä Dəngəl in 1848 he wrote several letters to Gobat, then Anglican Bishop of Jerusalem, seeking his intervention on behalf of the Ethiopian monks in the Holy City. Between 1853 and 1854 he wrote five letters to d'Abbadie containing valuable news about contemporary Ethiopian politics.

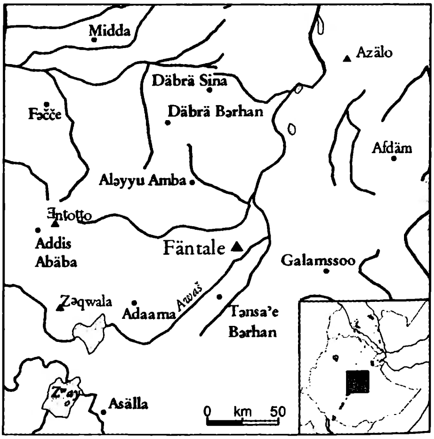
Fäntale

F. (ፈንታሌ, also Fanta Ale) is a broad volcanic cone, which culminates at 2,006 m A.S.L., overlooking, more than 1,000 m above, the depression of the middle-Awaš. Long black scoriaceous lava flows (trachytes, basalts) spread between the courses of the Käsäm, to the north, and the Awaš, to the south. Smoke fumes rise from time to time from the crater of a caldera volcano 3.5 km in di-



ameter. The hot springs of Fəlwəha in the northern part reveal the persistence of tectonic activity.

There are historical records of eruptions of the F. On the slopes of the volcano, the Karrayyuu (↗Baarentuu) and ↗Ittuu Oromo practised stockbreeding and seasonal agriculture, in competition, sometimes violent, with the ᶜAfar. In 1966, following the example of the national parks launched by the British government in Eastern Africa, the imperial government created by decree the Awaš National Park (↗National Parks) which covered 827 km^2. This created conflict with the local populations and the government sent armed forces to drive out of the park the Oromo and ᶜAfar dwellers. These groups, nonetheless, still continue to visit the area in search of pasturages. Provided of camping sites and located on the railway and road towards Dərre Dawa, this faunistic reserve is today an attraction for tourists, who climb the volcano and bathe in the Fəlwəha springs.

Fanu'el

F. (ፋኑኤል, d. 18 June 1549) was, according to a ↗*Sənkəssar* story referred to by ↗Täklä Ṣadiq Mäkʷəriya (TSTarik III, 64), but absent in any of the published editions, an Ethiopian aristocrat of royal blood, who traced his descent to *aṣe* Säyfä Arᶜad (r. 1344–71). The name of his mother was Mägdälawit.

During the unhappy reign of *aṣe* Ləbnä Dəngəl (r. 1508–40), F. held the office of ↗*wagšum* and was among the few prominent warlords who were lucky enough to survive during the onslaught led by *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī. When, in 1540, *aṣe* ↗Gälawdewos became emperor, he had at his disposal only two such warlords: ↗Dägälhan and F. (Kropp 1988:25). Gälawdewos charged F. to fight against ↗ᶜAdal and in March 1548 appointed him "over all lands of the East, such as ↗Däwaro and its dependencies" (ConzGal 38). F. coped well with the fading Muslim threat, until, during his next campaign in ᶜAdal, "came the One Who comes to vanquish every mortal one and took him away to the country of those like him".

Fäqi Däbbis

The mosque of F.D. in Yəfat was excavated in 2000. Three radiocarbon datings were obtained. The existing ruined mosque had been destroyed by fire in the first half of the 15th cent. The wooden roof covered with earth collapsed and was never rebuilt. Surprisingly, the excavation discovered an unknown earlier building, destroyed during the 14th cent., beneath the present ruins. This is very probably the oldest mosque securely dated in Ethiopia.

Farā'iḍ, Kitāb al-

K.f. (كتاب الفرائض, *Kitāb al-farā'iḍ*, lit. 'Book of Obligations or Law'), published, transliterated and translated by Enrico Cerulli, was a text that he had acquired in the city of ↗Harär (CerStud 284–343). It was the first, extensive text in Old ↗Harari, written in Arabic characters, to become known to western scholars. Its importance is primarily linguistic, and Cerulli used it as the basis for his grammar and glossary of Old Harari (ibid. 344–442).

The text, however, is also interesting beyond its linguistic value. The Arabic word *farīḍa* means 'religious duty' and the plural *farā'iḍ* refers to the 'obligatory portions' fixed by Muslim law in favour of heirs to property. Consequently, in the Arabic-speaking world *ᶜilm al-farā'iḍ* became the normal term for "law of inheritance" and K.f. would be the usual title for a treatise on hereditary law. In Harär, however, the title K.f. seems to have a quite different meaning. The first part of Cerulli's text contains numerical sayings like "Four things do not last forever: the friendship of a liar, the wedding dinner of a miser, the wealth of this world and the shadow of a cloud" (CerStud I, 285 [text] = 321 [tr.]). Some of the sayings have religious content or pertain to ritual obligations, such as the enumeration of the prerequisites for fasting (ibid. 284 [text] = 320 [tr.]). The second part (ibid. 291–303 [text] = 329–43 [tr.]) starts with a catechism-like commentary on a creed. The articles of faith are first given in Arabic and then explained in Harari. Later, religious formulae also are interpreted and religious duties enumerated such as the five prescriptions for ablution (ibid. 298 [text] = 337 [tr.]). Though this may be a point of contact between the two parts, the first one falls into the genre of wisdom literature and the second one into that of religious teaching.

With the discovery of more manuscripts (there are many in private ownership in Harär, several in the Institute of Ethiopian Studies in Addis Abäba and two in the Staatsbibliothek Preußischer Kulturbesitz zu Berlin), it became obvious that this difference in content corresponds to two different works which normally were copied together. A lacuna in Cerulli's manuscript at the passage of the first to the second work obscured this fact. Now, we also know the authors of both parts. The first one was written by *āw* ʿAbdarraḥmān al-ʿArāšī and the second by *faqīh* Ṭayyib al-Wanāgī aṣ-Ṣadrī (both otherwise unknown). The Institute of Ethiopian Studies (mss. IES 257 and 268) owns a third K.f. written by a certain ʿAbdallāh ʿUmar b. Ǧibrīl al-Aswām as-Sāḫitī. In all three works the name of the author is preceded by the formula: (*Hāḏā*) *kitāb al-farāʾiḍ bi-kalām al-Ḥabaš aḫrağahū* ... ('[This is] the book of obligations in the language of the Abyyinians [i.e. Harari] which N.N. extracted ...). The term *aḫrağa* ('to extract'), which in Arabic is normally used for the compilation of collections of prophetic traditions (*ḥadīṯ*) on special themes, could be the clue to the meaning of K.f. Perhaps it is the usual title for a compilation of sayings and maxims in the Harari language, which people are obliged to read or memorize, not so much for legal or ritual reasons, but to preserve the cultural heritage of the town.

Färänǧ

F. (**ፈረንጅ**, earlier **አፍረንጅ** *afränǧ*, Tgn. **ፈረንጂ** *färänǧi*), the Ethiopic designation for a foreigner, was originally the name for a Frank, borrowed into Ethiopic from Arabic during the medieval times, which underwent major changes in Ethiopia during the 19th and 20th cent.

The term, when first introduced into the country, became the accepted Gəʿəz name for a Roman Catholic (cp. Littmann 1916:239) and gradually, by extension, for any foreigner. This was noted in ↗Ludolf's *Lexicon* (1661:383), which translates the word as "a Frank or man of the Latin or Roman religion" but notes that the term was also popularly used for "all Europeans (except Greeks)". Foreigners of the Orthodox Christian faith were by contrast generally referred to as *gəbṣ(awi)*, a term which was originally associated with ↗Egypt, but had acquired a wider meaning. The word *gəbṣ* was thus used for ↗Greeks and ↗Armenians, both of whom, Ludolf explicitly notes, were not considered as F. Declining preoccupation with religion in the 19th cent., and the coming of European Protestants, indistinguishable from Catholics in physical appearance, caused the word F. to become more loosely applied. The result was that the early 19th-cent. German lexicographer ↗Isenberg (1841, vol. 1, 137) accepted Ludolf's old definition of F., but inserted into it the word "European". This change of meaning is further evident from the statement by ↗Massaja (1867:352), that the word F. meant European, without any religious inference. Antoine d'↗Abbadie's dictionary (1881:590) later stated that the word was by then used for a European "without distinction of religious belief" but added, significantly, that the word was "always used in an injurious sense".

The term F. was widely used for the Italians at the time of the battle of ↗ʿAdwa in 1896. A famous poem of the time, for example, noted that the Italians had given *aṣe* ↗Mənilək II the firearms with which he later defeated them, and put it this way: "What kind of fools are these men of the country of the F. [...] they themselves made the instruments of their own destruction, and gave them to us" (Cerulli 1916:569). The term F. had by that time lost its religious connotation. This is evident from 20th cent. Amharic dictionaries, which agree that the word by then implied a European, without any religious qualification. Some limitation nevertheless remained, in that Greeks were by then usually referred to as *grek*, as well as by the earlier name *ṣərəʿ* (and Russians were known as *moskob*).

The advent in Addis Abäba, in the late Mənilək period, of numerous Greek road-builders, masons, petty traders, and restaurateurs introduced a new element into the story, for, irrespectively of their actual nationality, they tended to be referred to collectively as *grek*. This development coincided with the expansion of the European diplomatic community, and the coming of a number of prominent French and other European merchants, all of whom came to be called F. The two terms *grek* and F., as the French linguist ↗Cohen (1924:30) noted, thus designated "classes rather than nationalities". This was confirmed by another contemporary, ↗Faitlovich (1910:122), who observed that if a European was seen on foot he was looked down upon, and called a *grek*, a name which Europeans did not like. The result was that Greeks, who had once been differentiated from F. by reason of their Orthodox faith came instead to be regarded as different from them on account of their socio-economic class. This is well illustrated by the story of a Greek who had improved his status in life. It was said of him that he had been a *grek*, but had become a F. (Cohen 1924:30f.). With the subsequent decline of the Greek community the term *grek* came to be used only for Greeks proper, with the result that the term F. became at last applicable to virtually all (white) Westerners. Evidence of this may be seen in the fact that ↗Betä Ǝsraʾel, immigrants to Israel, oblivious of the term's original Christian connotation now often apply the term F. to ordinary Israelis: a case, one could say, of Jews who became F.!

Faraqa

F. is a gift of food made to the traditional Qurʾān teacher in Harär, ↗*kabīr*, two days after the *qalam masbar* examination. *Qalam masbar*, lit. 'breaking the writing-pen', is a ceremony of testing the knowledg of Qurʾān. For boys, the ceremony takes place on graduation from the Qurʾān school. For girls, the ceremony takes place before the wedding: the bride, in the presence of her Qurʾān teacher, of her parents and their ↗*afōča*, has to prove that she can read the Holy Qurʾān. The ceremony takes place on a Sunday. In the event that the bride cannot read the Qurʾān, her brother does this in her stead.

Two days later, the bride's parents send to the *kabīr* two containers filled with 20 balls of sweetmeats, *muṭabbaq*, and two small jars of tea. This gift of food is called F. In addition, the *kabīr* is given a present of raw meat.

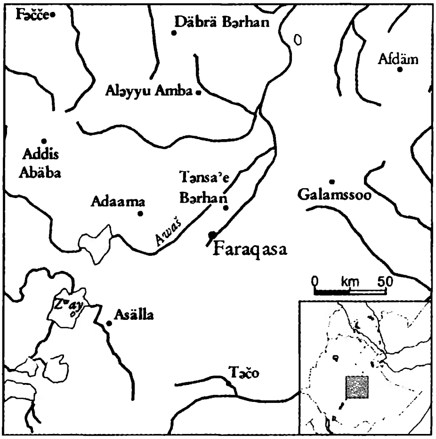
Faraqasa

F. (ፋሬቃሳ) is an inter-religious and inter-ethnic pilgrimage-site in eastern ↗Arsi. The location is associated with *ayo* Momina – also known in Oromiffa as *Gifti Arussi*, and in Amharic as *Yäʾarusiwa Ǝmmäbet*. Momina, who was reportedly born a Christian, came from the Yäǧǧu area of Wällo. Towards the end of the 19th cent., she settled in Arsi and converted to Islam. A woman of great charisma, Momina could reputedly prophesy and influence the future; she was also venerated for her piety and abilities as a clairvoy-



ant. She attracted large numbers of adherents, both Muslim Oromo and Christian Amhara. Her popularity is said to have displeased many northern settlers as well as the Orthodox priesthood. She was accordingly imprisoned in 1923 and her wealth and lands confiscated. Three years later, however, she was reinstated and died in 1929.

Momina's mission was continued by her great-grandson *qäññazmač* Tayye, who had previously served in *aṣe* Ḫaylä Śəllase I's ↗Imperial bodyguard. He converted from Christianity to Islam as well and adopted the name *sayyid* Nūr Aḥmad. Under his leadership, which began in 1952, F.'s importance increased and he was visited by numerous Oromo, Amhara and other pilgrims, including a handful of Europeans. This continued until pilgrimage was discontinued under the *Därg* in 1974. The settlement of F. is currently the site of Momina's mausoleum, *ləǧ* Tayye's former residence and a mosque.

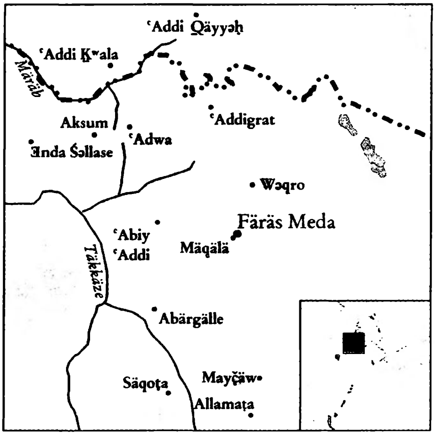
Färäs Meda

F.M. (**ፈረስ፡ ሜዳ**) is a location near Mäqälä (Təgray) and the site of an important battle on 3 March 1914 between the forces of *däǧǧazmač* ↗Gäbrä Śəllase and *däǧǧazmač* ↗Śəyyum Mängäša.

The death of *aṣe* Mənilək II and the downfall of Empress ↗Ṭaytu's power in early 1914 put an end to political stability in Ethiopia. *Däǧǧazmač* Gäbrä Śəllase of ʿAdwa was one of the many feudal lords who became anxious about their future. His rivals in the region, *ras* Səbḥat, *däǧǧazmač* Śəyyum Mängäša and *däǧǧazmač* Abärra, accused him of treason against *ləǧ* ↗Iyasu and did their best to prevent his coming to Addis Abäba to explain his reasons, which made the armed conflict inevitable.



On 25 February 1914 *ras* Səbḥat surprised *däǧǧazmač* Gäbrä Śəllase with an attack on Akora (district of ʿAgamä), but the latter's troops, armed with Wetterly rifles newly acquired from the Italians, defeated the attackers and *ras* Səbḥat, his three sons, *däǧǧazmač* Asgädom and *däǧǧazmač* Arʾaya were killed in battle. The government in Addis Abäba was furious and sent reinforcements to *ras* ↗Wäldä Giyorgis Abboyyä, who was already advancing on Aksum. However, *däǧǧazmač* Śəyyum Mängäša decided not to wait for reinforcements and on 3 March attacked Gäbrä Śəllase at F.M. near Mäqälä. A pitched battle lasted for six hours, but the large army of Wäldä Giyorgis was coming, so Gäbrä Śəllase fled into the Danakil desert in Eritrea. After the downfall of *ləǧ* Iyasu he returned to a position of honour in the government of Təgray and married a daughter of his old foe Śəyyum Mängäša, Wälättä Ǝsraʾel. Their son Zäwde Gäbrä Śəllase is a prominent Ethiopian historian.

Färäsulla

F. (**ፈረሱላ**), a word derived from Arabic (KaneDic 2280) and used in most Ethiopian languages, as well as in Swahili, denoted (and still denotes) one of the most important Ethiopian units of weight. Already mentioned by James Bruce in the late 18th cent., it served throughout much of the country for weighing a wide range of local articles, including coffee, ivory, hides, wax and gum, as well as copper, cotton and other imported goods. The F., like other Ethiopian ↗measurements, varied considerably on the basis of local traditions, and the type of commodity weighed. It was, however, generally considered as being made up of 20 *räṭəl* (**ረጥል**, or **ነጥል**, *näṭəl*), each weighing the equivalent of 18 ↗Maria Theresia thalers. The F. may thus be roughly equated with about 17 or 18 kg.

Fares

F. (ፋሬስ; b. Säläwa, d. 26 July 1716) was an astute military leader and a leading political figure in Təgray and at the Ethiopian court at the turn of the 18th cent.

F. is first mentioned in 1672 when he was arrested for what was undoubtedly rebellion against *aṣe* ↗Yoḥannəs I. In the late 1670s, he was at the head of a renewed uprising, together with a *däǧǧazmač* ↗Zämaryam. Inspired in part by Təgrayan clerics of ↗*Täwaḥədo* (Unionist) conviction who opposed the court and its ↗*Qəbat* (Unctionist) allies, the rebellion was centered in Säläwa and Ǝndärta. Abandoned by Zämaryam after the first year, F. was at length defeated, and he submitted in 1681.

F. was among the senior nobles in the *Täwaḥədo*-sanctioned coalition who enthroned ↗Iyasu I in 1682, and he was given Ǝbnat and Maya to govern. With the death of *ras* ↗Anəstasyos in 1688, he assumed command of the coalition and received the titles of *bitwäddäd* and *ras*. The following year he was appointed *azmač* of Bägemdər, and in 1693, *Təgre mäkʷännən*. Throughout the 1690s, F. was the power behind Iyasu's throne. He was not only commander-in-chief of the royal army, but also first minister and chief counsellor at court. When he was not accompanying Iyasu on military campaigns, he remained behind in Gondär or Aringo in charge of defence and matters at court.

In 1690 a new ranking of the empire's officials was drawn up that recognized the primacy of the military charge of *ras*, now combined with the court appointment of *bitwäddäd*. The fact that the reordered ranking, more than a century in the making, received formal sanction shortly after F.'s ascendance at court, was certainly due to F.'s ambition and prominence. In the ecclesiastical realm, Iyasu's reign was an era of unrivalled *Täwaḥədo* supremacy, a cause that F. championed.

After about 1700, F. and the coalition he led fell from Iyasu's favour. In 1702 Iyasu reaffirmed F.'s appointment as *Təgre mäkʷännən*, but two years later he ordered F. to administer Təgray in person, in effect banishing him from the court, and stripped him of his duties as commander-in-chief. In response, F. resorted to a series of desperate gambles to reassert his hold over the empire. In March 1706, he led the nobles who proclaimed Iyasu's deposition, an act almost without precedent in the kingdom, and who then enthroned Iyasu's compliant son, ↗Täklä Haymanot I. During the next two years, F. struggled to contain a mounting tide of opposition, in the process almost certainly acquiescing in if not authorizing Iyasu's murder in October 1706 and possibly that of Täklä Haymanot in June 1708. F. clearly intended to enthrone Täklä Haymanot's infant son as the next emperor. In July, however, deserted by many of his commanders and outmaneuvered by his *Qəbat* opponents, he was captured at ↗Ǝnfraz by forces under ↗Yostos, the future emperor and a long-time Təgrayan rival. Exiled to Məsrəha Island in Lake Ṭana, F. died in 1716 and was buried at Abora in (?) Säläwa. His wife, Lahyä Dəngəl, died in 1697, a daughter, Wädaǧte, in 1747. His son, Səbhat Läʾab, a minor official, met Iyasu II in Təgray in December 1749.

Few noblemen ever attained the power and stature that F. achieved in the 1680s and 1690. His achievements, however, must be weighed against the measures he took to dominate the court after 1700-measures his successors in the office of *ras* widely emulated during the 18th and first half of the 19th cent.

Faris

Däǧǧazmač F. (ፋሪስ; d. 1605) was a minor feudal lord from a locality in ↗Gəšše in the district of Mänz of the Šäwa province. As his life-story exemplifies, the struggle for power that followed the death of *aṣe* ↗Śärṣä Dəngəl could give a warlord vast opportunities for booty and promotion, but for premature death as well.

In 1602, with 800 of his warriors, he came to one of the pretenders to the throne, the future *aṣe* ↗Susənyos. The latter, however, suspected perfidy, arrested him and looted his native Mänz. F. fled, but after the death of *aṣe* ↗Zädəngəl on 28 August 1604 he came to Susənyos again and concluded an alliance with him. However, in May 1605 he decided to go over to Susənyos's rival *aṣe* ↗Yaᶜəqob, but was arrested again and once more fled to his native Mänz. When Susənyos came there in December 1605, F. sought refuge on an *amba* called Dayär and was killed during its siege. The historiographer of *aṣe* Susənyos, Məhrəka Dəngəl concluded his story of F. with the words: "The reason for F.'s death is that F. said: 'I shall come to King Yaᶜəqob, and if not, I shall go to my country and live by myself'; that is why he perished".

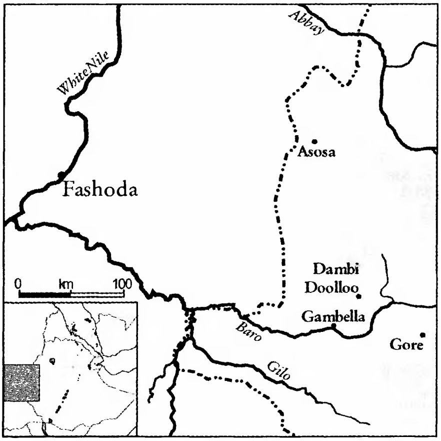
Fascism ↗ Colonialism

Fashoda

F. (Fāšōda, now Kodok) is a town situated at 9°50' N, 31°58' E on the west bank of the White Nile in the Southern Sudan. Once a royal village of the Shilluk, and later, in 1836, the headquarters of the newly-created *mudīrīya* of the White Nile, in September-November 1898 it became the scene of the so-called F. incident, or the F. crisis, which was a major landmark in the history of European colonialism in Africa. Ethiopia, already established after the ↗ᶜAdwa victory (of March 1896) as an independent regional power, played an important role in that story.



At the heart of the issue was the British-French rivalry and competition over hegemony in their occupied continent. The British interest in controlling an uninterrupted north-south line, from Cairo to the Cape, collided with the French vision of their territories stretching east-west, from ↗Djibouti to French West Africa. The inevitable collision point, the area of the upper ↗Nile River, was of extra strategic importance. Should the French control the White Nile–Sobat River meeting area, they would not only interrupt British transcontinental communications, but would also have a strategic leverage on the irrigation of British occupied ↗Egypt and the Sudan.

French hopes of materializing their aspirations over that vital area were pinned on the goodwill of *aṣe* ↗Mənilək II. Independent, powerful Ethiopia stretched between Djibouti and the upper Nile basin. From the distant West Africa, Paris could only send a mission to claim the desired area symbolically, but its actual occupation and maintenance was possible only through co-operation with Ethiopia. While the British were still busy fighting the Mahdist state of the Sudan, the French in West Africa sent a mission under Major Jean-Baptiste Marchand. It left Brazzaville on 1 May 1897 and after an exhausting, long journey planted the French flag in F. on 10 July 1998. Meanwhile, Paris did its best to cultivate Mənilək's goodwill. Léonce Lagarde was dispatched in January 1897 to negotiate with *ras* Mäkʷännən in Harär and later with the Emperor in Addis Abäba. In their signed conventions the French declared Djibouti an official port of Ethiopia and ceded to Ethiopia some Somali and ᶜAfar-inhabited territories. In secret Mənilək agreed to facilitate the French Upper Nile enterprise. The understandings included Ethiopian assistance for French missions, Ethiopian occupation of portions of the White Nile and – if necessary – even an effort to block the British.

In reality Mənilək, having gained what he could, did the minimum to help the French. He thought nothing of colliding with neither the Mahdists nor the British. In spite of the war between the Sudanese Islamic state and the British, the Emperor now cultivated relations with both parties. He thus avoided risky conflicts and safeguarded his new borders. He did render some services to the French, but not to the extent of enabling them to establish contact with and reinforce Marchand. On 22 June 1898 a small Ethiopian-guided French mission finally managed to reach a location near F.

On 2 September 1898 the British under General Kitchener occupied the Mahdist capital. They now hastened to sail down the Nile and reached F. on the 18th. In spite of the French presence, they hoisted the British and Egyptian flags. Kitchener and Marchand in their confronting camps avoided bloodshed and waited for Paris and London to solve the issue. Fearing war, the French government gave up on 4 November. Marchand and his men were allowed to evacuate through Addis Abäba. They reached Djibouti in May 1899. By that time the French, in March 1899, recognized British sovereignty over the Upper Nile; they were compensated with territories in the Sahara. The peaceful solution of the crisis enabled the two colonial super-powers to start rebuilding their relations towards the Anglo-French Entente of 1904. Mənilək's F. diplomacy further cemented Ethiopia's position as a European-recognized African empire.

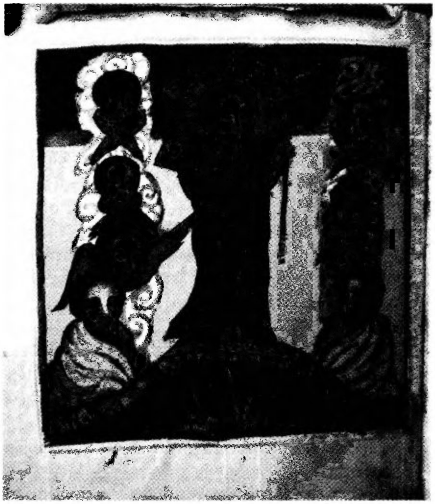
Haggai Erlich

Fasika

F. (**ፋሲካ**, 'Easter, Passover', also 'Paschal Lamb'), also called **ትንሣኤ** (*Tənśaʾe*, 'Resurrection') is the most important among the nine major ↗feasts of Our Lord Jesus Christ of the Ethiopian ↗Calendar. F. is one of the five moveable feasts and it is celebrated between 26 *Mäggabit* [22 March of the Julian Calendar/4 April of the Gregorian Calendar] and 30 *Miyazya* [25 April/8 May, respectively]. According to the ↗*Didəsqəlya*, "The Holy Fast shall be ended on the day of the Passover, on which came Salvation". F. is preceded by the Holy Week, or Passion Week (*Sämunä ḥəmamat*), with its own order and readings established in the ↗*Gəbrä ḥəmamat*. Every day the ↗Psalter, ↗*Mälkəʾa Maryam* and ↗*Mälkəʾa Iyäsus* are read and ↗*däbtära*-cantors perform ↗hymns and ↗*qəne*.



Resurrection of Christ, ms. *Laḥa Maryam*, 18th cent., Ǝndabba Ḥadära church, Tämben; fol. 108v; photo 2002, courtesy of Michael Gervers

Holy Week begins on Palm Sunday (*Hośaʿəna*), with the commemoration of the entrance of Christ into Jerusalem (Mat 19:9–21) and blessed "palm branches" being distributed among the people, who bring them home. Maundy Thursday (*Ṣälotä ḥamus*) is marked by the ceremony of the washing of the feet and in the Liturgy the establishment of the ↗Eucharist at the Last Supper is commemorated. At home the people prepare *gʷəlban*, made of cooked wheat and crushed beans. On Good Friday (*Səqlät*) a 48-hour fast (*Akfälot*) starts. The texts of the Hours (↗*Säʿatat*) are read, along with the O.T. and Gospel readings related to the events of Christ's life that happened on this day, with excerpts from the Church Fathers and the Miracles of Mary (↗*Täʾammərä Maryam*).

On Holy Saturday, F.'s eve (*Qədame səʿur*, or *Sänbätä mäḥatəwä fasika*), the churches are crowded from 6 a.m. The clergy are arrayed in their most splendid vestments. In the morning the particular "Service of peace" (*Gəbrä sälam*) is held, with young reeds (*qeṭema*) blessed and distributed. The ↗Revelation of John and the Psalter are to be read in full on this day.

Close to midnight, the doors of the ↗*mäqdäs* are opened, the curtains are removed and the clergy march in procession round the altar. As the Resurrection is proclaimed, the people light candles (*tʷaf*; ritual representing the descent of the heavenly light), while singing "Send your light upon us ...". An outburst of chanting is followed by a simultaneous procession around both the ambulatories. The deacons sing in front of the open door of the *mäqdäs*: "The Lord rose up as though awakening from sleep, and like a mighty man aroused by wine" (Ps 78:65), while the people clap their hands. Drums are beaten for the first time after the Great Fast (↗Lent); women ululate. After the procession, the deacon proclaims: *Krəstos tänśəʾa əmmutan* ('Christ is risen from the dead!'), while the people respond: *Bäʿabiy ḫayl wäsəlṭan* ('With great power and authority!') etc. The solemn liturgy, in which the Anaphora of St. Dioscorus is read, proceeds after midnight.

At three o'clock in the morning, the total abstinense ends (during the following 50 days until Pentecost there is no fasting). After the liturgy the faithful go home and eat Easter lamb. The people greet each other, saying: *Ǝnkʷan läbərhanä tənśaʾew adärräsäwo* ('Congratulations! He [God] has brought you to the Resurrection of Light'). The Monday after the the Feast of F. is called *Maʿədot* ('Passover', in the memory of the crossing of the Red Sea by the people of Israel); all the other days of this week also have particular names.

Many European travellers have described F. celebrations as one of the most conspicuous expressions of Ethiopian Orthodox ↗Christianity; ↗Poncet, describing the Easter celebration of 1704, reports that *aṣe* Iyasu I ordered his soldiers and servants to discharge their rifles together in honour of the feast.

The ↗*Fətḥa nägäśt* strictly enjoins Ethiopian Orthodox Christians to keep the date of F. apart from the Jewish Passover (for this a complex system of calculations in the Ethiopian ↗Computus was elaborated).

Passover (*Fəśəḥ* in the Ethiopic sources, but commonly known as F. as well) is celebrated among the Betä Ǝsraʾel from the 15th to the 21st of the first month in commemoration of the Israelite exodus from Egypt. On the eve of the holiday a lamb is sacrificed. During the holiday no leavened or fermented products are consumed. Thus, food and drink cannot be kept overnight. A special unleavened bread (*qiṭṭa*) is eaten. Milk is drunk as soon as it is taken from the cow. Special holiday prayers are recited. At the end of F., fresh bread is baked and beer prepared.

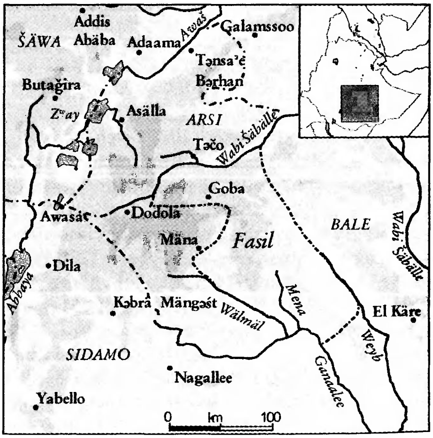
Maija Priess

Fasil

F. (ፋሲል) is the name of an *awrağğa* in Bale. By the end of the 1970s it was named Fasil/Mändäyo and, subsequently, Mändäyo, Gobba having remained its chief town. The province, with an area of 13,900 km², increased its population from 166,700 in the census of 1970 (12 inhabitants/km²) to 303,748 inhabitants in that of 1984 (21.8 inhabitants/km²), an increase of 82 %, higher than the Ethiopian average. The urban population was 43,696, including 22,963 in Gobba. In 1991 the north of Bale (highlands) became the Bale zone, a subdivision of the Oromiyaa *kəlləl*, whereas the south (lowlands)



joined the Somali *kəlləl*. The *awrağğa* of F., like all the other provinces, disappeared as an administrative unit to the profit of the *wäräda*.

Even if the limits sometimes varied, one can estimate F.'s population at 460,681 inhabitants by adding the *wäräda* of Agarfa (65.6 inhabitants/km^2), Sinana and Dinšo (93.2 inhabitants/km^2), Gobba (45.8 inhabitants/km^2) and Gasära and Gololča (45.1 inhabitants/km^2; CSA 2000). The increase in the population (34 %) would be thus less than between the two preceding censuses, but the territory of the four *wäräda* is half the size. The urban population, 88,131, more than doubled, the increase in Gobba having proportionaly been minor (38,069 inhabitants).

The territory of the F. *awrağğa* extended, from north to south, from the right bank of the Wabi Šäbälle to the southernmost limit of the highlands. It was inhabited mainly by Oromo farmers who had cleared the forests at the top of the mountains. According to historians (MHasOr), this *awrağğa* would correspond to one of the centres whence the Oromo migrated in the 17th and 18th cent. Between 1963–67, this high area was the sanctuary of ↗Waqoo Gutu, leader of the peasant uprising against the expulsions. In spring 2000, fires devastated the forests. The bulk of the population live in the north of the mountains, now part of a national park, along the main road passing through the towns of Dinšo, Robe and Gobba.

Fasil Gärram

F.G. (ፋሲል፡ገራም or Fasilo ፋሲሎ; d. 1586/87) was the younger son of *abetohun* Yaʿəqob and the youngest grandson of *aṣe* ↗Ləbnä Dəngəl. He became a prominent figure in Ethiopian history many years after his death, because his son, *aṣe* ↗Susənyos, practically created a new branch of the dynasty. His grandson and namesake *aṣe* ↗Fasilädäs founded the capital city of Gondär, which started a new stage in the development of the Ethiopian Christian empire.

F.G. lived the life of a common warlord of noble birth who did his best to use the political instability of the time for his own advantage. When *aṣe* Minas died in 1563 and his younger son ↗Śärṣä Dəngəl was proclaimed emperor, F.G. was one of the officers of the army of the old warlord ↗Ḥamälmal, who immediately rebelled. On 23 February 1564 he concluded peace with the new Emperor, but his officers, including F.G., raided and looted the royal camp on 2 March. Later F.G. made peace with Śärṣä Dəngəl and even occupied a high post at the royal court, which did not prevent him, however, from another attack on the royal residence on 3 September 1566. In January 1567 F.G. decided to proclaim an emperor of his own, but his soldiers deserted him, so he fled, but was arrested and exiled to the island of ↗Däq. Later he was pardoned and appointed governor of ↗Qʷara district. In late 1586 or early 1587 the Oromo tribe of ↗Ǧawe raided Qʷara. They killed F.G. and captured his young son Susənyos, whom they adopted and made *ilma gossa*, 'the son of the clan'. This was the end for F.G. and the beginning of the famous dynasty of his descendants.

Fasilädäs

F. (ፋሲለደስ, with the regnal names Səlṭan Säggäd [II] or ʿAläm Sägäd, b. 1603, d. 1667, r. 1632-67) was a son of *aṣe* ↗Susənyos and *ətege* Səlṭan Mogäsa Wäld Səhla. According to Jerónimo ↗Lobo (1728:148), Səlṭan Mogäsa's grandmother was a Muslim who always felt sympathy for Islam, a factor which may have influenced F. So far no official chronicle of F.'s reign has come to light (cp. Kropp 1986).

F. had one full-brother, *abetohun* ↗Gälawdewos, and at least four half-brothers and two half-sisters: Qʷäsṭantinos, Əlfyos, ↗Yämanä Krəstos, Dawit, *wäyzäro* Wängelawit and *wäyzäro* Krəstosawit (Perruchon 1897:88f.).

F.'s father, *aṣe* Susənyos, helped the Portuguese and Spanish ↗Jesuits for about 20 years in their attempt to introduce Roman ↗Catholicism. F. had grown up during these bitter religious controversies. On 11 February 1626 he joined his father and many members of the nobility in declaring obedience to the Roman Pope (BecRASO XI, 509). At that time his sympathy apparently was already for the Orthodox party of ↗Səʿəlä Krəstos and his followers, as if doubtful about

Fasilädäs' castle at Gondär; photo 1990s, courtesy of Galen R. Frysinger

his real intentions, pledged allegiance to him only in so far as he would defend the interests of the Roman Catholic Church.

In 1628 Orthodoxy was restored in Tǝgray, where the rebellion against Susǝnyos was led by ↗Täklä Giyorgis and Zäwäldä Maryam, a grandson of *aṣe* ↗Śärṣä Dǝngǝl. Täklä Giyorgis was taken prisoner and hanged in ↗Dänqäz. Yet in 1629 F. was still considered a Catholic (BecRASO XII, 297). He co-operated with his father in replacing Sǝʿǝlä Krǝstos by *däǧǧazmač* ↗Śärṣä Krǝstos, but in 1631 the latter rebelled and declared himself a supporter of Orthodoxy and of F., who was believed to support the rebellion in Goǧǧam (*ibid.* VII, 107). The prince wanted to suppress suspicion and marched against Goǧǧam; he brought Śärṣä Krǝstos to Dänqäz and executed him.

Under the influence of F., Susnǝyos proclaimed freedom of conscience (BassÉt I, 125), permitted the restoration of Orthodoxy in Bägemdǝr and authorized F. to convene a state council, a majority of which declared itself supporters of Orthodoxy (on 18 June 1632). Susǝnyos then asked Alfonso ↗Mendes, the Catholic Patriarch, to announce the restoration of the ancient faith, but the latter refused. Yet, on 25 June 1632 the restoration of Orthodoxy was proclaimed. Susǝnyos broke completely with the Jesuits and abdicated in favour of F.

The new Emperor, failing to convince his uncle Sǝʿǝlä Krǝstos to come to the court and to renounce the Catholic faith, had him deported to Sǝwada and hanged on a cedar. In 1633 all the Jesuits went in exile to May Gʷagʷa (↗Fǝremona). F. began his reign by requesting the Patriarch of Alexandria for a new metropolitan. But Peter ↗Heyling reports that the delegation was unsuccesful because the envoys were considered unreliable. In March 1633 an impostor appeared in Ethiopia, claiming that he was the new ↗*abun* sent by the Patriarch of Alexandria. Bruce calls him Sǝʿǝlä Krǝstos; he acted as a metropolitan, ordaining deacons and priests and consecrating *tabots* (Perruchon 1897:84, n. 2). In fact, he was a merchant called Rizqallāh (Guidi 1899:11), possibly an Armenian (DonMurad 187, n. 4).

When the Portuguese troops landed at Mombasa (at the time an African Portuguese colony), F. became convinced that Mendez had succeeded in his plans to overthrow him. He ordered the Jesuits to leave the country entirely, but they sought protection with *baḥǝr nägaš* Yoḥannǝs Abbay, who refused to deliver them to the Emperor; he sent them on to the Turkish *paša* of Massawa and Sawākin. F. then concluded a treaty with the *paša* which stipulated that the two ports be closed for the Roman priests. This may have led Catholic authors to conclude that F. embraced Islam.

In 1635, having taken his crown with him, the Emperor fled from ↗Libo because of the revolt of ↗Mälkǝʾa Krǝstos. The rebel sat on the throne and placed a sort of diadem on his head. The people of Qǝre and Doräba Bet rejoiced and said that the hidden Emperor had appeared (Perruchon 1898:85). In response, F. sent messages to Damo, *däǧǧazmač* of Sǝmen, to *ras* ↗Zäkrǝstos of Damot and to his brother Gälawdewos, at that time *däǧǧazmač* of Bägemdər, who finally defeated and killed the rebel.

In 1636 the campaigns against the ↗Agäw and the ↗Oromo continued. In the same year *abunä* ↗Marqos and Peter Heyling arrived in the new capital Gʷändär (↗Gondär; s. PankHist I, 115). Always fearing Portuguese intervention, F. began to make contacts with anti-Portuguese and anti-Catholic powers: the Zaydī *imām* of the Yemen, the Ottoman *sulṭān* in Istanbul, the Great Moghul in Delhi and, perhaps, the Shah of Persia.

In January 1642 the Emperor sent a letter to the Zaydī *imām* of the Yemen, al-Muʾayyad billāh (r. 1619–44), who in 1635 had succeeded in expelling the Ottoman Turks from his land, a feat which probably strongly impressed F. He wanted to open a caravanroute from Gondär to ↗Baylūl, a port on the Red Sea which was independent from the Turks. To realize this aim, the caravans had to be protected with firearms, only obtainable from the *imām*. In his letter F. underlines that he is a Christian, but nevertheless wants negotiations. In January 1643 the *imām* answered that the Emperor should show some interest in Islam. In 1647 F. sent *al-ḥāǧǧ* Sālim b. ʿAbdarraḥīm to the *imām* with a letter, which apparently mentioned the trade route and also referred to Islam, but so secretively that the real meaning remained obscure. When the Ethiopian envoy, a Muslim himself, said that the emperor wanted to embrace Islam, the *imām* sent ↗Ḥasan b. Aḥmad al-Ḥaymī to Gondär with an open message which mentioned greetings and gifts, and a secret one which should only be delivered to the Emperor in a private audience. During this audience it became clear that F. was in no way interested in Islam. Consequently, the secret letter was not handed over. It was lost in a fire started by the Gondärians in the house in which the envoy was staying, an incident by which the Emperor was quite upset.

The stories about *abunä* Marqos and *abeto* Gälawdewos that al-Ḥaymī collected before arriving to Gondär in 1648 give insight into the situation at F.'s court. Al-Ḥaymī relates that F. became jealous of *abunä* Marqos because of the great wealth he had gathered and the esteem he enjoyed with the nobility and the army. Accused of licentious behaviour (cp. BecRASO IX, 82), Marqos was deposed in 1646 and banished to an island in the Nile.

Dissension now arose between F. and his brother Gälawdewos about the new *abun*. The latter's candidate was *abba* Yoḥannəs, who arrived via Dankali, but was sent on to Särka, on the boundaries of Sənnar (BassÉt II, n. 291). The Emperor's candidate, *abba* Mikaʾel, arrived via Sənnar and was installed as metropolitan.

Before his death in 1632, Susənyos recommended to F. not to confine Gälawdewos to the *amba nägäśt* (probably ↗Ambassäl, s. van Donzel 1983:124, n. 28), but rather to keep him at the court as a minister. F. agreed with this request, putting his brother in charge of military affairs, though Gälawdewos had already rebelled in 1638 in Lasta, together with his half-brother Ǝlfyos (Perruchon 1898:88). Only in 1647 did F. succeed in subdueing him. According to the Ethiopian sources he was brought to ↗Wähni Amba (BassÉt II, n. 286), but al-Ḥaymī reports that he was exiled to an island in the Nile (DonHaySirat 189). Nobody heard any more about him and it was believed that he had been killed.

According to the report of the Jesuit Torquato Parisiani from 1649 (BecRASO XIII, 333–45), F. was informed by *abunä* Marqos that Gälawdewos was plotting to restore Roman Catholicism; the Emperor then had his brother strangled. The same source says that F. then decided that his country should embrace Islam in order to prevent the Portuguese from re-entering Ethiopia. But, as is clear from al-Ḥaymī's account, F. had no intention of becoming a Muslim; he had only used Islam as a decoy. The Jesuits were led astray by their animosity against the Emperor, who had played a complex deception on the *imām* of the Yemen.

In 1660 F. sent a certain Hag Mikaʾel Abū Yūsuf to the Ottoman *sulṭān* in Istanbul to buy weapons. In Alexandria Mikaʾel told a Coptic priest that F. had more than a hundred wives, that there were no eunuchs at the court because the Ethiopians consider castration a sin, that the Emperor ate cooked meat and that he drank wine. He also mentioned the very fine library at ↗Azäzo, probably the same the Emperor was to burn later. The Turks had provided three to four hundred arquebuses, but the ↗Oromo had none. It is not known whether Mikaʾel ever reached Istanbul (DonMurad 13–19).

In 1663 F. sent the Armenian *Ḫoǧa* ↗Murād and a Muslim merchant as ambassadors to the court of the Grand Moghul, Awrangzeb. To finance the journey and the fine appearance of the envoys, F. provided them with young slaves – boys and girls – to be sold at the slave-markets of Mūḫa. According to the 17th-cent. report of François Bernier, another Ethiopian embassy arrived in Delhi in 1664 (s. Bernier 1972). Murād was sent every year to Mūḫa in order to sell slaves and to buy Indian merchandise; he also travelled every year to meet with the Governor-General of both the Dutch and the English East India Companies. On behalf of F. the ambassadors asked the Grand Moghul for a copy of the Qur᾿ān and for eight other Islamic books; they reported on the increasing number of Muslims in Ethiopia since the departure of the Portuguese. According to Bernier's spokesman, an Indian who had returned to his country in the company of Murād, F. had at least 80 sons and daughters, but his army was quite miserable. As Manucci (1907:lxxiif.) reports, the Emperor had music played after dinner and claimed all musical instruments to be his, including those of India.

Meanwhile the situation in Ethiopia remained turbulent. Campaigns continued to be undertaken against Lasta, Goǧǧam and the Agäw. In 1660 La᾿əkä Krəstos, son of the rebel Mälkə᾿a Krəstos, presented himself before F. in chains and without clothes. F. gave him his daughter, *wäyzäro* Tawklya (Thecla) in marriage. In 1663 he ordered *azzaž* Damyanos to be put to death, and *ras* Wäldä Giyorgis and his sons were imprisoned.

F. had to pay attention to internal religious matters. In 1655 he convened a synod at ↗Aringo, where the issues of the Unction (↗*Qəbat*) and the Union (↗*Täwaḥədo*, ↗*Yäṣägga ləǧ*) were again discussed (Guidi 1900–01:15ff.). Around 1665 another synod witnessed the controversy between the ↗Ǝwosṭateans (mostly from Goǧǧam) and the followers of ↗Täklä Haymanot of Däbrä Libanos. F. was, or was made, a protagonist of the faction of Däbrä Libanos. The Emperor was apparently still alive when in 1667 another synod was held in Aringo.

In 1666, apparently still fearing the influence of the foreign priests, F. ordered the books of the Franks to be burned. In 1667 *abeto* Dawit, a son of the Emperor, rebelled, but was brought before his father, who put him in irons and sent him to Wähni Amba. F. died in 1667 and was buried at Azäzo. Later his remains were interred in ↗Daga Ǝsṭifanos, the church he had restored.

Fasting

Fasting, Christian

F. (ጾም) is one of the central ritual acts demonstrating one's adherence to Christianity in general, and the Ethiopian Orthodox one in particular. According to ch. 15 of the ↗*Fətḥa nägäśt*, F. is observed "at certain times determined by law, to attain forgiveness of sins and much reward ... [it] also serves to weaken the force of concupiscence so that [the body] may obey the rational soul" (Paulos Tzadua 1968:93). Ethiopian Christians observe an extraordinary number of fast days, generally reckoned to be about 250. Of these approximately 180 are obligatory for all believers, while the rest are observed by the clergy and other particularly devout individuals. In addition to the organized calendric fasts, throughout the history of the Ethiopian Church there were ascetics renowned for their extreme fasting, often subsisting on little more than wild plants and water.

Although accounts differ, it is generally agreed that the most important fasting periods are:

1. (ዓቢይ፡ ጾም, *ʿabiyy ṣom*) ↗Lent, which lasts for 56 days;
2. the Fast of Nineveh (ነነዌ, *nänäwi*) commemorating the preaching of Jonah, on Monday, Tuesday and Wednesday of the third week before Lent;
3. the vigil (ገሀድ, *gähad*) on the eve of Christmas;

4. the vigil (ገሃድ, *gähad*) on the eve of Epiphany;
5. the Fast of the Assumption of the Virgin (ፍልሰታ, ↗*Fəlsäta*), 15 days;
6. the Fast of the Apostles (ጾመ፡ ሐዋርያት, *ṣomä ḥawaryat*), which begins after Pentecost and varies from 10 to 40 days depending on the date of Easter;
7. Advent (ጾመ፡ ልደት, *ṣomä lədät*), which begins on 15 Ḫədar and continues for 40 days;
8. every Wednesday (ረቡዕ, *räbuʿə*) and Friday (ዓርብ, *ʿarb*).

F. is generally interpreted to mean that only one meal is eaten, either in the evening or just after midday. One abstains totally from meat, fats, eggs and dairy products such as milk, butter and cheese. Smoking is generally prohibited, but beer and wine may be consumed in moderation.

Several modern studies have speculated about the links between ritualized fasting, chronic food shortages and the need for social control in traditional Ethiopia.

Fasting of the Beta Ǝsraʾel

The ↗Beta Ǝsraʾel followed a complex cycle of fasts and feasts, using both a lunar and solar calendar according to information dating to the 19th and 20th cent. Practices before the early 19th cent. are not known in any detail.

The weekly fast days in the 1840s were Monday, Thursday and Friday, though a century later the only fast day was Thursday. By the 1970s that day was only observed by the elderly (Quirin 1992:150, Leslau 1951:xxxiii, Shelemay 1986: 55). F. was generally practiced by not eating or drinking before sunset. In the lunar calendar, a fast known as *maleya* was observed on the 29th as a reminder of each new moon.

In the yearly calendar, fasts were observed during nearly moon. On the 14th of the first moon, the fast of ጾመ፡ ፋሲካ (*Ṣomä fasika*, 'Passover') preceded the festival. The fast of ጾመ፡ ቶሞስ (*Ṣomä tomos*, 'the Fast of *Tomos*') occurred from the 1st to the 10th day of the 4th moon, and the fast of ጾመ፡ አብ (*Ṣomä ab*, 'the Fast of *Ab*') occurred from the 1st to the 17th days of the 5th moon (*Ab*), mourning the destruction of the first temple in Jerusalem. For the first ten days, the fast included abstention from meat and dairy products even during the evening; otherwise, it was observed the usual way by not eating or drinking before sunset.

The fast of *Elul* in the 1840s occurred the first ten days of the 6th moon (*Elul*), but a century later it was reduced to only the tenth day and was called the fast of our atonement, as a reminder of the more important fast of አስተስርዮ (*Astäsrəyo*, 'Day of Atonement') one month later (Quirin 1992:148, Shelemay 1986:53). *Astäsrəyo* was a fast on the tenth day of the seventh moon (*Tišri*); in the 20th cent., it began to be called by the Hebrew name, *Yom kippur*. As late as the 1970s, it was commemorated by a day-long fast and an all-night prayer vigil by priests, broken the next morning by scattering grains on stones for the birds and a community meal (Quirin 1992:273, note 170).

One of the most important observations by the 1970s was the fast, pilgrimage to a hilltop and feast known as *Səgd*, or the Fast of Suplication *Məhläla*) on the 29th day of the 8th moon. In the mid-19th cent., this observance was known as አማታ፡ ሳው (*Amata saw*, 'Assembly of the People') during which people assembled on a hilltop, followed by a seven-day fast by monks (Flad 1869:51).

The Fast of ጾመ፡ አስቴር (*Ṣomä aster*, 'the Fast of Esther') during the 19th cent. was held twice annually, probably due to the confusion between the Jewish month of *Adar* and the Ethiopian Christian month of *Ḫədar*. It was held on the 13th and 14th days of the ninth moon (falling during the Ethiopian month of *Ḫədar*), but the real fast was on the 11th to 13th days of the 11th moon. During the 20th cent., the *Ṣomä aster* was eliminated.

F. was also observed by both Christians and Beta Ǝsraʾel between death and burial whenever either a Christian or Beta Ǝsraʾel in the community died (Salamon 1999:47).

Fasting, Islamic

As one of the five pillars of ↗Islam (اركان الإسلام, *arkān al-islām*), prescribed by Islamic law and sanctioned by tradition, F. (ጾም, *ṣom*, also ጦም, *ṭom* [Arab. صوم, *ṣawm*], thus ጧሚ, *ṭʷami* or ጦመኛ, *ṭomäñña*, 'one who keeps F.') is obligatory for all adult Muslims of either sex. Consequently, it has been observed by Ethiopian Muslims since the introduction of Islam into the country. Though F. is usually only associated with ↗*Ramaḍān*, the pious also fast during the preceding two months, *Rağab* and *Šaʿbān*, and for six days in the tenth month (2–7 *Šawwāl*, also called *səddəsto*). Additionally, in times of crises (war, famine or drought), the *imāms* of the mosques often enjoin the faithful to keep a one-day fast for God's mercy.

Traditionally, F. is more strictly and faithfully observed than the daily prayer. With respect to this, Trimingham (1965:78) observes that F. is more visible than prayer, and eating whilst others are F. arouses open criticism and brings shame upon the individual.

F. proper usually begins immediately after the consumption of the last meal before the F. day. Trimingham (TrIslam) also alludes to the practice, widespread among the ↗Oromo (presumably of southern Ethiopia), of "purging themselves during the days preceding the fast in order to expel [...] the impure food and forbidden drinks they have consumed throughout the year ...".

Those who fast usually conduct their daily business as usual, but they also go to the mosque more regularly than usual, not only to offer prayers, but also to hear lectures on F. Whilst F., they are expected to be kind and generous, avoiding indecent talk, slander, lies and quarrelling, even if provoked. Day-long fasts are concluded with a feast and after eating, people go to the mosque to offer the regular and special prayers. Though the end of F. (*ʿĪd al-fiṭr*, 'Feast of the breaking of the F.') is colourfully celebrated and is an occasion for feasting, some rejoice simply from a sense of relief from the restrictions imposed by F. Overall, the act of F. creates a good opportunity for socializing and interaction among believers.

The description of the daily F. routine outlined above is not entirely representative of the practices followed throughout Ethiopia and is only typical of urban Islam. For a variety of reasons, Muslims in the rural areas keep the fast in a different manner. These differences, however, only reflect an economic disparity between town and country rather than a diversity in religious beliefs and practices or in the degree of piety.

Despite its physical strain and financial cost, F. is considered spiritually rewarding, rejuvenating and morally uplifting. It gives a person a sense of achievement and fulfilment of his obligations towards God and inspires self-discipline, humility and responsibility towards the less fortunate among his coreligionists. It is one of the acts of worship (*ʿibādāt*) that reinforce a sense of solidarity and unity among the diverse members of the Muslim community of Ethiopia.

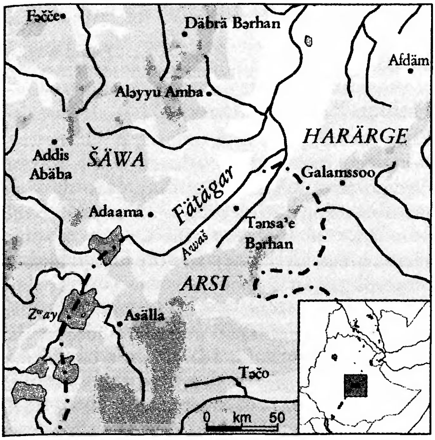
Fäṭägar

F. (ፈጠጋር, also Fäṣägar), a large historical region (possibly, once a Muslim sultanate), was located in the south-east ↗Šäwa region, on the northern shore of the ↗Awaš. As the Chronicle of *aṣe* ↗ʿAmdä Ṣəyon I testifies, F. was coveted both by the Emperor and by ↗Ṣabraddīn b. Dalḥūy of Ifat (KrAmdS 2; MarAmdS 52f.). According to other sources, in the course of the 14th-15th cent., F. was progressively integrated into the Christian empire. The conquest meant the evangelization of the region, initiated by the 13th-14th-cent. *abunä* ↗Täklä Haymanot and carried out (among others by a certain Matyas (Turaiev 1905:198f.), mostly under the patronage of ↗Däbrä Libanos).

The region held a strategic position between the Christian empire and the southern Muslim sultanates. This was the reason why *aṣe*



↗Dawit II settled his royal residency there, at Ṭəlq. In the 15th cent. the site was secure enough to permit the settlement of the royal family. *Aṣe* ↗Zärʾa Yaʿəqob was born at Ṭəlq and founded the churches of Aṣädä Mikaʾel at Ṭəlq and Mikaʾel at Yäläbaš. His son, *aṣe* ↗Bäʾədä Maryam I, spent his childhood there and was crowned in Yäläbaš. *Aṣe* ↗Ǝskəndər was born at Ṭəlq, too.

In the beginning of the 16th cent., F. came back under Muslim control, under which it remained even after the death of ↗Aḥmad b. Ibrāhīm al-Ġāzī. During his attempt to reconquer the region, *aṣe* ↗Gälawdewos was killed in F. in 1549. Later the region was occupied by the ↗Oromo, and the name F. gradually fell out of use.

Marie-Laure Derat

Fatansa Illuu

F.I. (b. at Hadesso near Gečinai-Gomboči, d. ca. 1900/01; "horse name" Abbaa Boora, 'Lord of the Light-bay') was the king (Or. *mooti*) of ↗Nonno Illuu and ↗Gabba (Illuu) during the last 20 years of the 19th cent., with his residence at Bure. He was a warrior of Abbaa Boora, first *mooti* of Gabba (hence his "horse name"), who successfully rebelled against Abbaa Boora's grandson Bungul (cf. Yasin Mohammed 1990). As part of the non-Muslim Oromo polities of the south-west, F.I. attempted to keep Gabba independent from the Muslim Oromo kingdom of ↗Guummaa. In 1882–83 he avoided direct confrontation with *ras* ↗Gobäna Dači and later with *ras* ↗Täsämma. But during the late 1880s F.I. revolted successfully against *ras* Gobäna's local governor, the French M. Pino (cf. Michel 1900: 186). About 1900, F.I. was crucial in stifling the uprising of Prince ↗Firissa of Guumaa against *ras* Täsämma. He captured Firissa and handed him over to Täsämma who had him hanged. Soon afterwards F.I. was struck by lightening and died (cf. CerFolk).

Fatḥ ar-Raḥmānī, Al- ↗Hāšim b. ʿAbdalʿazīz

Fatḥ Madīnat Harar

The Arabic work F.M.H. (فتح مدينة هرر, 'The conquest of the town of Harär'), attributed to the otherwise unknown Yaḥyā b. Naṣrallāh, contains a legendary history of Harär in the 13th cent. The text is preserved in several manuscripts from Harär and Somalia. Though the main personalities mentioned in the text seem to have actually lived in the 13th cent., as confirmed by independent sources (genealogies, lists of rulers and oral traditions), the text includes certain legendary features (such as people riding on lions and the transformation of a dead snake into stone) and blatant anachronisms (the appearance of the "Portuguese" and the "Italians" using railways and tanks during that era).

The story begins in the year 1216 with the arrival in Harär of its most venerated saint ↗Abādir ʿUmar ar-Riḍā, together with 405 other saints from Mecca. Among Abādir's companions were not only local saints of Harär and Somalia, such as ʿUmardīn b. Quṭbaddān ʿUmar, ↗Barḫadle Yūsuf al-Akwān and Ismāʿīl al-Ǧabartī, but also well-known Muslim mystics like Bāyazīd al-Bisṭāmī (d. 877 in the Iranian Qūmis), who in reality had nothing to do with Ethiopia. Three months after their arrival, all the tribes assembled in Harär and chose their leaders from among the saints. The assembled tribes were the ↗Nole, the Alaa (↗Qottu), the ↗Somali and the ↗Argobba. At this point in the text it is evident hat later conditions were transposed into the time of Abādir. The same is true for saints such as *āw* Barre of Somali, *āw* Wafle of the Nole and *ḥāǧǧ* Afayzaru of the Argobba, whose real existence was probably between the 15th and 17th cent. The tribes pledged themselves to provide Harär with food and firewood. From this, it would appear that F.M.H.'s author wanted to show that Harär's supremacy over the surrounding tribes had old and religious origins.

The following decades witnessed numerous battles against Christians, mostly the "Portuguese" and, to a lesser extent, the "Italians". All of the places where the battles took place were quite near Harär: Baabbillee, Afardabba, Barahseri, Bissidimo etc. The names of the "Portuguese" kings (Karnibāl b. Mahrawāl, Ǧurniyāl b. Karnibāl, the queen Markaniš bint Karniyāl, Sayaḏār b. Mahrawāl) are not helpful for identifying the "Portuguese". It does not seem impossible, however, to identify the "Portuguese" enemies of Harär with the Persians (Šīrāzī) who came to Somalia at the end of the 12th cent. (Cerulli 1959:237–42). In this case, the lesser-known enemy of the 13th cent. could have been replaced by the better-known enemy of the 16th cent. A Portuguese queen also plays a role in the oral tradition of Harär and Somalia.

In 1234/35 Abādir and several other saints left Harär for a pilgrimage to Mecca, where they stayed till 1279. Before he left, Abādir handed the imamate over to his brother ʿUmardīn, who died in 1251. Several other saints succeeded him, but they all fell in the wars against the "Portuguese" or died in other ways. Even after Abādir's return to Harär in 1301 the battles continued. Finally, Barḫadle Yūsuf al-Akwān went to Mogadishu to ask for help. The *sulṭān* of the town, Aḥmad b. Ādam, also otherwise unknown, granted logistic support. This enabled Abādir to defeat Sayaḏār b. Mahrawāl and to distribute the conquered land to the Muslims. The text ends with a prophecy made by Abādir about the Italian conquest of Ethiopia.

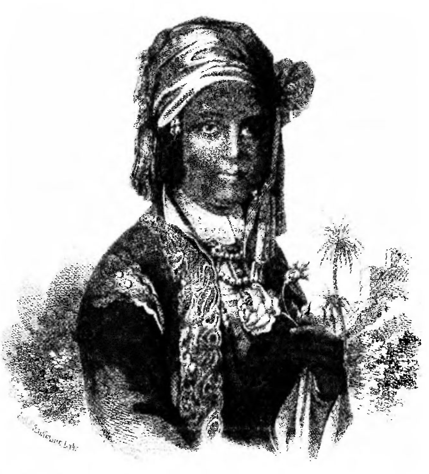
Fathme, Pauline Johanne

F. (b. ca. 1832, Labu, Guummaa, d. 11 September 1855, Riehen, Switzerland) was a former Oromo slave living in Germany, who through her conversion history became influential for the foundation of the Protestant Oromo mission. Her German life-history was the first published biography of an Oromo.

F.'s original name was Ganamee, daughter of the local chief Yaaᵓii Šaseedaa Odaa in the state of Guummaa (d. 1837/39 in a battle near F.'s native village). In that time this state was regularly subject to slave-raids. In about 1840 she was kidnapped and brought to a slave market in Sinnaar. Sold and resold several times, she became a housemaid of the Egyptian ruler Muḥammad ᶜAlī in Cairo, where she was given the name "Fāṭima" and practised Islam. In about 1847 she was given to the adventurer John Baron von Müller and became his housemaid in Stuttgart, Württemberg. Here she received a Catholic education, but was sent to a Protestant School in Kornthal on the initiative of the Queen Mother of Württemberg. On 12 July 1852 she was baptized there and received new Christian names, with the family name "F." (mostly she was called Pauline – an allusion to the first "convert" to Christianity, St. Paul). F. had already shown



Pauline Fathme; from Ledderhose 1855

enthusiasm for Christianity and repeatedly expressed the wish to go to her people to tell them about "God in Europe". After baptism she showed such a great zeal that she even tried to convert those Germans whose religious devotion seemed weak. Spittler in Basle, later founder of the Protestant St. Chrischona mission in Ethiopia (↗St. Chrischona Pilgermission), was her godfather. ↗Krapf (dreaming of an Oromo mission since 1840), before departing for his expedition to Ethiopia in 1855, visited her in 1854, greatly encouraged by her to open a mission also among the Oromo. Starting from mid-1855, however, having contracted a lung disease, she lived among the deaconesses of Riehen near Basle, wishing to become a deaconess herself.

F.'s hope for a conversion of the Oromo, repeatedly expressed also during her last days, became virtually a founding legend of the later St. Chrischona Oromo Mission. Shortly after her death, the pietist Ledderhose published her biography, together with a call to open a mission in "Ormania" (as the countries of the Oromo were called among missionaries). From the beginning, this idea accompanied the establishment of the mission in "Abyssinia" after 1855, which was conceived as a first step on the way to the Oromo. Later missions to the Oromo (1867, 1871–86, 1927) again repeatedly referred to F.'s "call for a mission" and led to several re-editions of her biography.

Fāţima bint Kawšan

Gīsti ('princess') F. (فاطمة بنت كوشن; b. ca. 1793, d. after 1885) was the sister of the mighty Somali chief ↗Ādam b. Kawšan of the ↗Garri group. She played an important role in the nuptial policy of her brother, who married her off to the *amīr* of Harär, ↗Abū Bakr b. *aftal-garād* ʿAbdalmannān b. Muḥammad (1834–52). She became the mother of Abū Bakr's son ↗Aḥmad b. Abī Bakr. After Abū Bakr's death in 1852, Aḥmad's succession was opposed by the Nole Oromo (↗Qottu). F., however, was able to push through the claims of her son. She then became the queen dowager and used this position to exert a strong influence on her son, who was of feeble health. Aḥmad tried to free himself from his mother's interference in politics and threatened her with fetters should she continue meddling in governmental affairs. After 1855, however, Aḥmad became so ill that he had to turn over the government to his mother.

↗Muḥammad b. ʿAlī b. ʿAbdaššakūr, from another line of the ↗ʿAlī b. Dāʾūd-dynasty, tried to take profit from Aḥmad's weakness and the rule of a woman. He left Harär, made friends with the Oromo tribes and attacked the town. F. could defend the town proper, but all the ↗coffee and ↗*čat* plantations in the vicinity were destroyed and the town's trade was interrupted. To end the war, F. had to concede new privileges to the Oromo and after Aḥmad's death in 1856 Muḥammad b. ʿAlī b. ʿAbdaššakūr was proclaimed the new *amīr*.

Muḥammad first persecuted F. and confiscated her property. Her influence with the people, however, continued. So Muḥammad changed his attitude towards her and married her. She remained influential even after the Egyptians killed her husband when they occupied Harär in 1876. In 1885, when she was visited by Philipp ↗Paulitschke during his stay in Harär, she was 92 years old and still a much-respected person in the town.

Ewald Wagner

Fāţimids

The F. were the Ismāʿīlī Shīʿite dynasty that ruled North Africa, Egypt and large parts of the Mediterranean world from 297 H. [909 A.D.] to 567 H. [1171 A.D.]. The dynasty was first established in Ifrīqiyā on the Tunisian coast in 916

A.D. by the central leader of the Ismāᶜīlī movement and founder of the F. dynasty, ᶜAbdallāh. After several expeditions, the general of the F. caliph al-Muᶜizz (341–65 H. [953–75 A.D.]), Ǧawhar, a freed slave, conquered Egypt in *Šaᶜbān* 358 H. [July 969 A.D.] and founded al-Qāhira (Cairo). Having transferred the seat to Cairo in 362 H. [973 A.D.], Egypt remained at the centre of the F. power for two centuries.

The F. rulers were one of the three contemporary Muslim dynasties claiming the caliphate, rivalling with the ᶜAbbāsids in Baghdad and the Umayyad rulers in al-Andalus. Not least through an efficient system of religious propaganda and a secret network of agitators, the F. dominated large parts of the Mediterranean world, including North Africa, Sicily (until the Norman conquest in 1072 A.D.), Palestine, Syria, the Ḥiǧāz and the Red Sea coast of Africa and the Yemen. The F. dynasty traced their origins to Fāṭima, the Prophet's daughter and wife of his cousin and first Shīᶜite imam, ᶜAlī b. Abī Ṭālib. From the very beginning, however, their claimed ᶜAlid genealogy, formulated in official documents dating to 402 H. [1001 A.D.] and 444 H. [1052 A.D.] was repudiated by the ᶜAbbāsids, the spokesmen of Sunnī Islam, who attributed heretical beliefs to their teachings. Generally noted for their prosperity and cultural achievements, the F. were overthrown by Ṣalāḥaddīn and his newly founded Sunnī Ayyūbid dynasty in 567 H. [1171 A.D.].

Thanks to their ideological orientation and administrative and economic organization, the F. had diverse political and commercial relations with the major dynasties ruling at that time, including the Ethiopian monarchy. In most cases on friendly terms, they frequently exchanged messages and embassies with the Ethiopian rulers, especially for religious and economic motives. The necessity of acquiring a new metropolitan (↗*abunä*) from the ↗Coptic Church in Alexandria made it imperative, sometimes humiliating, and often expensive for Ethiopia and their sovereigns to send emissaries, letters and costly gifts to the F. caliph in Cairo, or his *wazīr*, as well as to the patriarch, whose seat was transferred from Alexandria to Cairo during the middle of the 11th cent.

Since the 4th cent. it was the Coptic patriarch as the supreme head of the Ethiopian church who had the right to appoint, consecrate and send a Coptic monk, sometimes a bishop, from the Monastery of St. Macarius as head of the Ethiopian church. Apart from occasional delays, there was a regular supply to Ethiopia. Sometimes contracts were made with Alexandria/Cairo through ↗Nubia to induce the patriarch to send a new *abun*, as is related in the *History of the Patriarchs of the Egyptian Church*, formerly fully attributed to Sawīrus b. al-Muqaffaᶜ (↗Egypt).

To serve these interests, Ethiopia adopted a policy of co-existence in her relations with Egypt, troubled only occasionally by F. protests against the treatment of the Muslims in Ethiopia and the low water-level of the Nile. The Egyptians attributed the failure of the annual rise of the lifeline of their country, resulting in insufficient agricultural productivity and famine, to Ethiopia's interventions at the sources of the Blue Nile (↗Abbay). Referring to the F. caliph al-Mustanṣir (1035–94 A.D.), who had sent a mission led by the Coptic Patriarch Michael IV (1092–1102 A.D.) to Ethiopia to dissuade the sovereign with rich gifts from interrupting the flow of the Nile to Egypt; this well-known legend was first reported by the Coptic historian Ǧirǧis al-Makīn (d. 1273) in his *Maǧwī ᶜal-mubārak*. On the other hand, the Ethiopians also tried to threaten Egypt if their caliph would not yield to demands concerning the Copts and the patriarch. Although many Egyptians believed in the reality of such a danger and the Ethiopians pretended that they were able to control the annual rise of the Nile waters, no credibility can be attached to these legends. Kept alive for various reasons by the Muslim authors, e.g., Ibn Faḍlallāh al-↗ᶜUmarī (d. 749 H. [1348 A.D.]) and al-↗Maqrīzī (d. 845 H. [1442 A.D.]), it should be noted that al-Qalqašandī (d. 821 H. [1418 A.D.]), who had derived his materials in his *Ṣubḥ* from al-Makīn, doubted its accuracy (al-Qalqašandī 1913–18, vol. 5, 323, 4–8; also van Donzel 2000:304–07).

The exchanges of embassies not only served religious and diplomatic motives, but favoured commercial activities between Ethiopia and Egypt. The F. rulers, having extended their frontiers further south and revived the eastern trade in the Red Sea, which became a "F. lake" with the development of ᶜAyḏāb into a major port and the stationing of a special fleet there, absorbed as an example a large number of black slaves, chiefly from Ethiopia and the surrounding areas. Regarding the growing Muslim colonies in Ethiopia, the F. occasionally interfered in Ethiopian matters by putting pressure on the Coptic patriarchs. In general, however, their pretended role as promoters of an expansion of Islam in Ethiopia and their protection of the Muslim population appear merely as a myth, as pointed out by Tadesse Tamrat (TadTChurch 50).

Fäws mänfäsawi: Mäṣḥafä fäws mänfäsawi

M.f.m. (መጽሐፈ፡ ፈውስ፡ መንፈሳዊ, 'Book of Spiritual Medicine') is the title of two distinct but similar texts of ↗Gəᶜəz literature, both of which are penitential manuals for confessors going back to Christian Arabic originals. The two M.f.m. also display the same basic structure. Each begins with a comparatively short introduction (up to three chapters) that offers: a) instructions about the theological foundations of confession, penance and absolution; b) advice to the confessors on how to best comport themselves with their penitents. Thereafter, the bulk of both texts consists of extensive collections of penitential canons which concern themselves with a wide variety of subjects. While the two M.f.m. thus share the same general structure, the actual canons which form their second parts are in each case entirely different.

Already in the 19th cent. scholars like Dillmann, Wright, and Zotenberg described a considerable number of manuscripts of both the M.f.m. (cf. DillmLond, DillmBodl, WriBriMus, ZotBNat), and their often detailed catalogue entries leave little doubt that they deal with two different texts with the same title. Wright even explicitly distinguished between the two M.f.m. in his catalogue index. Despite this, all histories of ↗Gəᶜəz literature up to the present day inexplicably mention only one of the two texts.

The one M.f.m. regularly (but in several respects inadequately) sketched in the literary histories was compiled in the 13th cent. by the Coptic bishop Michael of Aṯrīb and Malīǧ (historical cities in the Nile Delta). Bishop Michael's M.f.m. [henceforth M-M.f.m.] – or rather, to be precise, its Arabic *Vorlage*, the *Kitāb aṭ-ṭibb ar-rūḥānī* (equally 'Book of Spiritual Medicine') – thus originated in the same milieu and roughly at the same time as the Arabic *Nomocanon* that was to be received in Ethiopia under the title of ↗*Fətḥa nägäśt*. Therefore, the M-M.f.m. largely draws from the same sources of ecclesiastical law as the latter. Internally, the *Kitāb aṭ-ṭibb ar-rūḥānī* is divided into 47 chs., each of which (the two introductory chapters excepted) assembles canons prescribing acts of penance for a particular category of sins. The Gəᶜəz M-M.f.m., however, offers only a truncated version of the Arabic original: in all known Ethiopic manuscripts the text abruptly ends after ch. 34. The date of M-M.f.m.'s translation cannot be determined with certainty. It could have taken place any time between, roughly, 1300 and 1620. While the three oldest extant manuscripts all date from the reign of *aṣe* Iyasu I (1681–1706), their numerous textual variants make it clear that the book's translation, contrary to what is asserted in the histories of Gəᶜəz literature, must have occurred at least two generations earlier. The translator was often not quite up to his task, frequently distorting the meaning of the Arabic original in the process and sometimes rendering the M-M.f.m. utterly nonsensical – another feature it shares with the *Fətḥa nägäśt*. Though we know little about the history of confession and penance in pre-19th-cent. Ethiopia, it seems safe to assume that the M-M.f.m. had no great impact on the Christian life of the country. Its canons, largely dating back to Late Antiquity and the early Middle Ages and originating in Byzantium and the Orient, must have been too far removed from Ethiopian life to be widely applicable.

The second M.f.m. – hitherto not mentioned in any history of Gəᶜəz literature – was transmitted anonymously [therefore henceforth A-M.f.m.]. Internally, it is much less structured than the

M-M.f.m. The A-M.f.m. lacks a clear division into chapters, does not arrange its multitude of canons according to subject matter, is repetitive in its treatment of quite a few of its themes, and only occasionally and non-specifically names sources (probably often apocryphal) for its material. An Arabic *Vorlage* must also be assumed for the A-M.f.m. This hypothesis is based on the observation that large parts of its Gəᶜəz introduction are identical in content, phrase by phrase, with sections from the M-M.f.m.'s introduction, while at the same time the Gəᶜəz wording of those content-identical passages is totally different in the two M.f.m. This can only be explained through an independent translation into Gəᶜəz of a hitherto unidentified Arabic *Vorlage* of the A-M.f.m. – a *Vorlage* which in its turn, due to the similarities in content and intention, still in Egypt had borrowed parts of its own introduction from the *Kitāb aṭ-ṭibb ar-rūḥānī*.

Feasts

Feasts, Christian

The liturgical ↗ calendar of the Ethiopian Orthodox Täwaḥədo Church is largely composed of a cycle of fasts (↗ Fasting) and F. The latter include both major and minor F. of Christ, as well as F. of St. Mary, and F. of the saints. Since of the observance of each of the major F. will be discussed in detail under the heading of that holiday (↗ *Mäsqäl* etc.) this article offers a brief overview of the F. and highlights some of the themes which bind them together.

The F. of Christ are divided into major and minor F. The major F. include four F. with fixed dates:

1. ትስብእት (*Təsbəʾət*, 'The Incarnation') – Annunciation of the Virgin Mary, 29 *Mäggabit* – commemorates the announcement by St. Gabriel that Mary would bear a son who would bring believers salvation from sin. The F. is also referred to as His Conception (*Ṡənsätu*) and is celebrated nine months before Christmas. This date is central for the cycle of the "moveable F." in the Ethiopian calendar.
2. ልደት (↗ *Lədät*, 'The Nativity') – Christmas, 29 *Taḫśaś*. According to the ↗ *Fətḥa nägäśt*, ch. 115, Christmas (and not Annunciation) is the principal feast of the year (Guidi 1897:135), however, in practice other holidays appear more important. In the Ethiopian calendar, Christmas, like Easter, is preceded by an extended fast (of 40 days). A midnight mass is celebrated on Christmas. The Anaphora of the Three Hundred (318 Fathers of Nicea) is recited (↗ Anaphoras). The game of ↗ *gänna* which is played on Christmas also gives its name to the holiday. The holiday is also known as *Qəddus B[äᶜ]alä Wäld* ('The Holy Feast of the Son').
3. ጥምቀት (↗ *Ṭəmqät*) – Epiphany, 11 *Ṭərr*. This F. marks the blessing of the water and the commemoration of the Baptism of Christ in the River Jordan. On the eve of the F., the clergy perform a majestic procession, while deacons are currying the church "altar-tablets" (↗ *Tabot*), covered by embroidered veils. The *tabotat* are put in a special tent, next to it in another tent the ↗ *däbtära* sing their songs during the night. This is followed by the liturgy which is recited as part of a midnight mass. In the morning the water is blessed. Passages from the story of the Jesus's baptism are read from the Gospels. At the end of the prayers, people abundantly sprinkle each other with water. *Ṭəmqät* is also marked by various sports including a form of mock jousting. In preparation for *Ṭəmqät* children are usually given new clothes, while adults take special care to wash their *šämmas*.

Counted with *Ṭəmqät* is ቃና፡ ዘገሊላ (*Qana zägälila*, 'The Miracle at Cana at Galilee'). According to the literature this F. is celebrated on 13 *Ṭərr*. However, it is commonly celebrated on 12 *Ṭərr*. The celebration of Cana was moved up in order to commemorate the return from exile of *aṣe* Ḫaylä Śəllase I on 12 *Ṭərr*, 1933 A.M. [20 January 1941 A.D.]. The Anaphora of the Three

Hundred (318 Fathers of Nicea) is recited on Cana.

4. ደብረ፡ ታቦር (*Däbrä Tabor*, 'Mount of Tabor') – The Transfiguration, 13 *Näḥase*. This holiday is also known as *Buhe*; it falls on the 13th day of the fast of the Assumption. On the eve of *Däbrä Tabor* children and young people light torches which symbolize the Body of Christ transfigured. Boys carrying torches run through the street, while every house displays candles. A division into teams, which whip each other is also reported to be part of the celebration of the Transfiguration.

There are also five "moveable feasts" related to the Easter (lunar) cycle. The five are counted in two different ways:

1. (5.) ሰሙነ፡ ሕማማት (*Sämunä ḥəmamat*) – Holy Week, which ends with
2. (6.) ትንሣኤ (*Tənśaʾe*, 'The Resurrection', ↗*Fasika*)
3. (7.) ቶማስ (*Tomas*, '[The appearance of Christ to the Apostle] Thomas')
4. (8.) ዕርገት (*ʿƎrgät*, 'Ascension')
5. (9.) ጰራቅሊጦስ (*P̣äraqliṭos*, Pentacost),

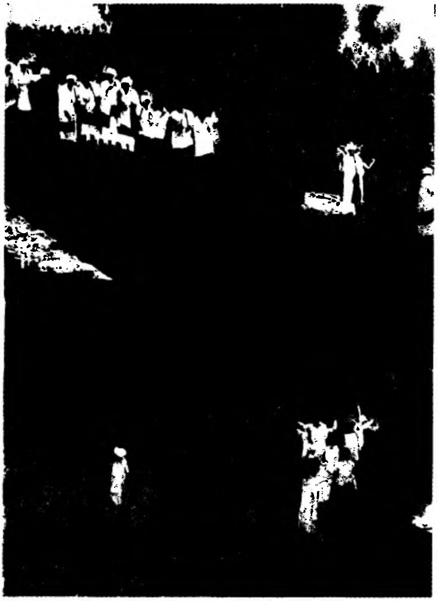
or dividing Holy Week into its separate days and omitting *Tomas*: ሆሣዕና (*Hośaʿəna*, 'Hosanna', i.e. Palm Sunday); ስቅለት (*Səqlät*, 'Crucifixion', i.e. Good Friday); ትንሣኤ (*Tənśaʾe*, 'the Resurrection'), ዕርገት (*ʿƎrgät*, 'the Ascension'), ጰራቅሊጦስ (*P̣äraqliṭos*, Pentacost).

On *Hośaʿəna* "palms" are blessed and the congregation circles the church chanting in commemoration of the Lord entering Jerusalem. In Aksum at the ↗Aksum Ṣəyon church a mule carrying palms is led in front of the church. A procession takes place with stations and prayers at the four cardinal directions. The blessed palms are distributed to the faithful in front of the church and taken home. Some plait the palm leaves into little rings which they wear on their fingers until Easter.

On Maundy Thursday unleavened bread is used in the mass. A ceremony of Washing the Feet is conducted in which the feet of twelve priests and/or deacons are washed in imitation of what Christ did to his Apostles.

Səqlät which commemorates the Lord's crucifixion is a day of fast and solemn prayer. Some people fast on Holy Saturday as well. The curtains of the sanctuary and the altar cloth should be black.

Although *Mäsqäl* 'The (Exaltation of the) Cross' on 27 *Mäskäräm* is officially considered as a minor F., it is one of the biggest celebrations in the Ethiopian tradition. It commemorates the discovery of the True Cross by Empress Helen mother of Constantine. On the eve of the feast, people bring torches of twigs (*čəbbo*) to make a bonfire (↗*Dämära*). Large processions come from different parishes and meet up. The onset of the holiday at sunset is marked by the lighting of bonfires, used to light torches which are carried throughout the towns and villages. People enter into houses and poke their lights into corners as if looking for something lost under beds and in stable and kitchen, repeating: "Turn out the spinach and bring the porridge. *Mäsqäl* has come", or: "All bad things have gone out, and good ones are coming", etc. It is reported (Parkyns 1966: 285) that every evening between St. John's day (↗New Year) and *Mäsqäl* is marked by a period of mock warfare between members of the opposite sex in which the two sides exchange insults. When the boys attack the girls with nettles, the latter retaliate by discharging a filthy, smelly liquid on their attackers. These hostilities come to an end on the eve of the holiday, which is marked by the discharge of firearms. However, Parkins



Christian Orthodox feast in Lalibäla; photo courtesy of the Frobenius Institut, Frankfurt am Main (ODT_1.02.08.00_003.3)

Festal procession of clergymen with an icon of St. Mary; church of Žämmädu Maryam, Wällo; photo 1970, courtesy of Diana Spencer

reports that in ʿAdwa these gender-based hostilities were replaced on the holiday itself by fighting between the different "parishes" of the town. In the evening of *Mäsqäl* the theme of combat is reprised by young men, who shout their war chants.

Other minor F. of the Lord include: **ግዝረት**, *Gəzrät* ('The Circumcision [of the Lord]'), on 6 *Ṭərr*; **ስምዖን** (*Səmʿon*, 'Simeon', i.e. The Presentation of the Lord), on 8 *Yäkkatit*; *Mäsqäl* ('The [Finding of the True] Cross', on 10 *Mäggabit*.

The following F. are listed to complete the number:

በአተ፡ ግብጽ (*Bäʾatä Gəbṣ*, 'The Entry [of the Holy Family] into Egypt'), 24 *Gənbot*,
ባረከ፡ እግዚእነ (*Baräkä Ǝgziʾənä*, 'Our Lord has blessed'), the Multiplication of the Loaves, 28 *Ṭərr*,

or the three Sundays of Advent:

ስብከት (*Səbkät*, 'The Preaching'), commemorating of the preaching of the prophets that the Messiah will come to redeem His people,
ብርሃን (*Bərhan*, 'The Light'), commemorating Christ having come into the world for its enlightenment,
ኖላዊ (*Nolawi*, '[Our Lord as] the Shepherd'),

and

ገና (*Gänna*, 'The Vigil of the Nativity') also called **መርዓዊ** (*Märʿawi*, 'The Bridegroom'), 28 *Taḫśaś*, commemorating the reality of Christ's birth, the Eve of Christmas,
ደብረ፡ ዘይት (*Däbrä Zäyt*, 'Mount of Olives'), the Sunday of Mid-Lent, which is the 4th Sunday before Easter. It is held that the Second Coming will take place on the Mount of Olives. Special prayers are offered that the faithful may be righteous on that day and sit on the right side of the Supreme Judge.

There are 33 F. of the Virgin Mary which were instituted by *aṣe* ↗Zärʾa Yaʿəqob as part of his programme of religious reforms. His devotion to Mary was also expressed in his patronage of art and religious literature in her honour. However, the F. appear designed not only to focus attention on a central figure, but also to secure Marian devotion as a lynchpin of the monthly and annual rhythm of Christian life.

Among these are included F. commemorating events in St. Mary's life:

ፅንሰታ (*Ṣənsäta*, 'Her Conception'), St. Anne's conception of Mary, 7 *Näḥase*,
ልደታ (*Lədäta*, 'Her Nativity'), 1 *Gənbot*,
በአታ (*Bäʾata*, 'Her Entry'), the entry of the three year old Mary into the Temple, 3 *Taḫśaś*,
↗*ʿƎräfta* ('Her Falling-asleep'), 21 *Ṭərr*,
↗*Fəlsäta* ('Her Assumption'), 16 *Näḥase*.

F. commemorating miracles of the Virgin:

በዓለ፡ ደቅስዮስ (*Bäʿala Däqsəyos*, 'The Feast of Ildefonos [Dexius]') when Mary asked him to establish a monthly commemoration of the Annunciation, 22 *Taḫśaś*,
ጼዴንያ (*Ṣedenya*, 'Saïdnaya/Sardenai'), commemorating Mary's miracle in a monastery near Damascus, 10 *Mäskäräm*,
ደብረ፡ ምጥማቅ (*Däbrä Məṭmaq*, '[Apparition at] Däbrä Məṭmaq'), *21 Gənbot*.

F. concerning sanctuaries of the Virgin:

ደብረ፡ ቍስቋም (*Däbrä Qʷəsqʷam*, 'Mountain of Qʷəsqʷam'), commemorating the stay of the Holy Family at Qusquam (al-Qusia), in Egypt, 6 *Ḫədar*,
ቅዳሴ፡ ቤታ (*Qəddase beta*, 'The Consecration of her church [at Phillipi]'), 21 *Säne*,
ዘአንቅዓ፡ ወልዳ፡ ማይ (*Zäʾanqəʿa wälda may*, 'The Source which her Son caused to spring'), one of Jesus's miracles performed in Egypt, 8 *Säne*,
ሕንጸታ፡ ቤተ፡ ክርስቲያን፡ በስማ (*Hənṣäta betä krəstiyan bäsəma*, 'The Building of the church bearing her name [at Philippi]'), 20 *Säne*.

F. regarding titles or epithets of the Virgin:

ደብረ፡ ጽዮን (*Däbrä Ṣəyon*, 'Mountain of Zion'), 21 *Ḫədar*,
ኪዳነ፡ ምሕረት (↗*Kidanä məḥrät*, 'The Covenant of Mercy'), commemorating of the agreement between Christ and his mother concerning the forgivance of sins, 16 *Yäkkatit*.

There are also numerous F. commemorating the saints.

Each of the 14 Eucharistic Anaphoras is associated with a number of holidays and F. Thus the Anaphora of Our Lord Jesus Christ is performed on three Marian F.: *Däbrä Qʷəsqʷam*, the Consecration of Marian churches (*Qəddase beta*), and the Assumption (*Fəlsäta*). The Anaphora of Our Lady by ↗Cyriacus of Behnesa is read on many Marian F., Christmas Eve, Annunciation and the holiday of St. Cyriaque (for a complete list s. Stoffregen Pedersen 1990:120ff.). The performance of each anaphora with several F. serves to link together holidays which might otherwise be viewed as totally separate events.

The F. can be analyzed through a number of different frameworks. On the most basic level, the F. can be said to combine to construct the rhythms which characterize the Christian year. Often major F. come at the end or in the midst of extended fast periods and thus provide relieve for the believers. In this context it is also significant to note that the annual observances of many holidays are reprised on a monthly basis through commemorations on the same day of every month. Thus, for example, the 1st of every month commemorates the Birth of Mary, the 3rd of every month – her presentation at the Temple, the 10th – Finding of the Holy Cross, the 16th of every month – the Covenant of Mercy. These commemorations serve to embed these festivals in the daily lives of the faithful, "so much so that the names of these holy days come to take the place of calendar dates" (LevWax 73).

From a sociological perspective the F. of the Church can be seen as occasions which define community on a variety of levels. Thus such major festivals of the Church as *Gänna*, *Mäsqäl*, and *Ṭəmqät* are celebrated at all churches and can be said to define the community of believers versus that of non-believers. In contrast, there are numerous F. that are observed only at churches which have a *tabot* devoted to Mary, to *Kidanä məḥrät* or to the saint commemorated on a particular day. In such circumstances the local parish (↗ *Aṭbiya*) or religious association (↗ *Maḫbär*) celebrates and asserts its identity. Finally, the veneration of saints is often associated with a *maḫbär* or particular families. In such cases, the commemoration of a saint's day is an expression of kinship or association solidarity (Pankhurst 1992:150–54).

One vehicle for the dramatization of these different levels of communal organization is the parading of the *tabot* at F. On *Ṭəmqät* celebrations began on the eve of the F. when priests and *dabtära* bearing *tabot* and other church vessels come together and go to a local river or lake, where tents are pitched and food is collected in tents. On major F. of the saints, the *tabot* of the neighbouring churches are taken out and paraded to honour the saint being commemorated on that day.

The prominent role of competitive sports and/or mock combats are also another expression of the communal aspect of the different F. *Fəlsäta* was, in the past, marked by "skirmishes between the town's people and the slave establishment of the king" (PankSoc 195). In the area of Lalibäla, a game involving two teams and the throwing of spears is played on Easter (Pankhurst 1992:208). In this case, as well in the playing of *gänna* on Christmas, the whipping on *Däbrä Tabor*, and the gender-based fighting of *Mäsqäl*, F. can be seen as the vehicle for the symbolic playing out of local rivalries.

Christian F. are a major occasion for the circulation of resources between believers and the church and for the giving of ↗ alms to the poor. Offerings on F. include widely varying sums of cash, prepared foods, livestock (sheep and cattle) and church utensils such as oil and incense. On saints' days, devotees of a saint give alms in honour of their patron. Membership in a *mäḫbär* requires members to both contribute to their religious organization and to host its members for F.

Although F. are a major feature of the religious life of Christian Ethiopia, there is still no systematic, comprehensive study of their role in believers' experience. Existing church literature generally focuses on the precise list, date and basic meaning of the F., and ethnographic studies offer only brief glimpses to the ritual of individual F. without integrating them into the religious economy as a whole. Nor has sufficient attention been given to the different layers of belief and practice revealed in each F. The contrast between "official" church celebrations including the recitation of the liturgy and more "popular" aspects is certainly deserving of further exploration (e.g., it is known that some of the ecclesiastics [also some saints, e.g., ↗ Mäbaˀə Ṣəyon] disliked "non-Christian" rituals, especially games, be performed during the F. and opposed them, but in vain; s. Caquot 1952:138ff.). Similarly the pre-Christian roots and elements of the F. (in honour of the saints in particular, e.g., ↗ Gäbrä Mänfäs Qəddus) has yet to be systematically explored; many of the games and combat situations associated with the F. may have their source in pre-Christian custom. The connection of the F. with the climate, agricultural cycle and even solar symbolism have yet to be adequately studied.

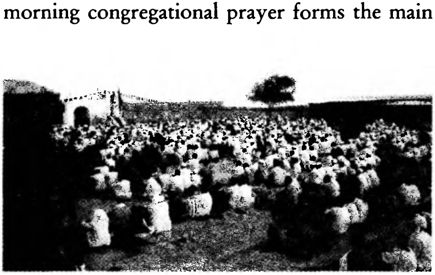
Feasts, Islamic

The three principal Islamic festivals annually celebrated throughout the Muslim parts of Ethiopia are: عيد الفطر *ʿĪd al-fiṭr*, observed on 1 *Šawwāl* to mark the end of the month-long fast of ↗*Ramaḍān*); عيد الأضحى *ʿĪd al-aḍḥā*, 'Festival of Sacrifice', also popularly known as *ʿArafa* (cp. ↗Aräfa), from the name of the hill near Mecca, and celebrated on 10 *Ḏū l-ḥiǧǧa*; and مولد النبي *Mawlid an-nabī*, the anniversary of the Prophet Muḥammad's birthday (12 *Rabīʿ al-awwal*).

During the post-Liberation imperial era (1941–74), the first two festivals were not officially celebrated. After the morning prayers, representatives of the Muslim community in Addis Abäba were received by the Emperor in his palace and, after expressing his felicitations, he invited them to a reception. This event was announced over the radio and reported in the government press. An artillery salute was also fired from the palace grounds at daybreak to herald the occasion. However, government offices and schools remained open throughout the day of the festivities. The three festivals were only officially recognized by the Ethiopian state as national holidays in 1975.

ʿĪd al-fiṭr (also known as *ʿĪd aṣ-ṣaġīr*, to distinguish it from *ʿĪd al-aḍḥā* or *ʿĪd al-kabīr*) is celebrated at the conclusion of the fast. An early-morning congregational prayer forms the main public event associated with this occasion. The prayer is preceded by official speeches delivered by the *imām* of the central mosque and the chairman of the Ethiopian Supreme Council for Islamic Affairs (and occasionally by the city mayor or his representative) and followed by a sermon delivered by the *imām*. Although the faithful are urged to stay until the end of the sermon, they usually disperse early. They return home in procession and then exchange good wishes with family members, neighbours and acquaintances. Sheep and goats are slaughtered during the festivities and portions of the meat are distributed as alms among the poor. Many offer the *zakāt al-fiṭr* (↗Alms) both in cash and kind before the *ʿĪd* prayer. The festival is colourful and people usually dress in their finest clothes. The *ʿĪd al-fiṭr* is traditionally considered more solemn than the *ʿĪd al-aḍḥā*, even though it is no more than an occasion marking the close of *Ramaḍān* and the end of restrictions imposed on believers by the Qurʾān.



ʿĪd al-aḍḥā prayer in the esplanade of Ras Mədr in Massawa on 16 March 2000; photo courtesy of Jonathan Miran

On *ʿĪd al-aḍḥā* the same sequence of rituals associated with the *ʿĪd al-fiṭr* is followed: a communal prayer, official speeches and a sermon by the *imām*. Additionally, special prayers of supplication (دعاء, *duʿāʾ*) are offered on behalf of the pilgrims at Mecca for their well-being, acceptance of their sacred journey by God and safe return home. After the prayers, people return home to sacrifice rams (in commemoration of Abraham's intended sacrifice of his son, as commanded by God). According to Trimingham (TrIslam 229), in the early 20th cent., Muslims of Addis Abäba organized displays of horsemanship on the plain of Fəlwəha for three days. The number of people attending the festival in Addis Abäba nowadays is relatively small for two reasons: Gurage Muslims traditionally go out to visit their families in the countryside at this time; many Muslims are on pilgrimage to the two holy sites during this period.

A number of other festivals take place around the major shrines of Muslim saints, both during the *Mawlid an-nabī* and at different times throughout the year. These are attended by multitudes of pilgrims and provide occasions for collective worship whose intensity is only surpassed by the festivals described above. The ritual ceremonies and cults observed on such occasions are partly Islamic and partly traditional and ancestral (↗Pilgrimages; ↗Šayḫ Ḥusayn; ↗Saints).

عاشوراء (*ʿĀšūrāʾ*; 10 *Muḥarram*) is observed mournfully in *Šīʿa* lands to commemorate the martyrdom of *imām* Ḥusayn b. ʿAlī, the Prophet's grandson, at Karbalāʾ in 680 A.D. In northern and central Ethiopia this occasion is celebrated with a visit to ↗Nägaš in north Təgray, where, according to tradition, a group of the Prophet's followers were buried, ca. 6th cent. Once they have congregated there, the pilgrims take part in a festival marked by the recitation of panegyrics in praise of the Prophet, his companions and saints. On the eve of the festival, sheep and goats brought by the pilgrims are slaughtered and the meat is shared among the participants. Trimingham (TrIslam 252) refers to a fertility ritual performed by the women of the ↗Asaorta: "First a goat or a kid is sacrificed and the woman remains some four or five days praying for the saint's help, after which she leaves the cemetery, strips herself, and rubs earth taken from the tomb over her body".

Outside the capital and the major towns, social events are celebrated simultaneously with the principal Islamic festivals. Such events are characterized by, among other things, traditional games played by young boys and girls and competitions involving adult males, which add to the festivity of the religious holidays. In regions where Christians and Muslims have enjoyed close interactions (such as Wällo and north Šäwa), certain festivals, such as visits to local shrines, are jointly celebrated. However, the reasons for attending such festivities are not always strictly religious or spiritual; some are simply seeking healing from physical or mental afflictions, or material prosperity. In addition to the Islamic festivals, Muslims participate in Christian festivals, such as the Ethiopian New Year and *Buhe*, in their wider, popular social manifestations. The Islamic New Year (1 *Muḥarram*), whose onset is announced in the mosques, is only observed privately by the Muslim elites. The inhabitants of Harär and other predominantly Oromo-inhabited areas celebrate various festivals that reflect more indigenous social customs and traditional rites than the rituals prescribed and sanctioned by the monotheist faiths.

In addition to the annual festivals described above, there are others organized by Muslim families and held on important occasions: births, circumcisions, engagements, weddings, completion of portions of the Qurʾān and many other social events. Efforts have been made – though with limited success – by Muslim religious leaders and elders to give these occasions a distinctively Islamic character and to free them from the influence of both tradition and modernism.

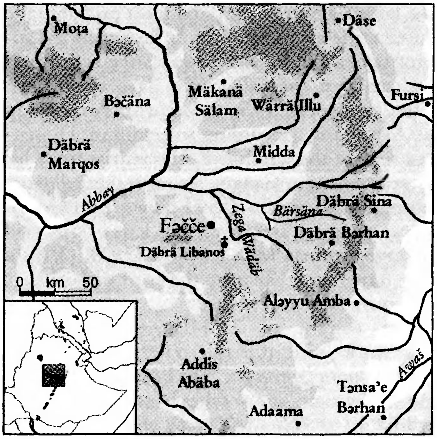
Hussein Ahmed

Fəčče

F. (ፍቼ, Oromo Fiichee) is a small town 115 km north-west of Addis Abäba at 2,738 m A.S.L. Nowadays this town is a centre for the Northern Šäwa Zone, one of the twelve zones of the Oromiyaa Region.

F.'s foundation by *ras* ↗Darge Śahlä Śəllase, a member of the royal family, goes back to about 1879. *Ras* Darge Śahlä Śəllase had been appointed by *aṣe* ↗Mənilək II to rule over the then ↗Sälale district. Prior to the settlement of the royal family and the establishment of the Orthodox Church there, the area is said to have been inhabited by ↗Oromo peasants, among whom a person called Hirpaa was well-known. Elders of the area say that the name F. itself is taken from the name of a person dwelling in the area. There also exists a hypothesis that the area had been previously called Balbala Hanquu ('gate of *hanquu*' [a medicinal plant]) because so many of these plants were found there.

F. is located on a highland, thus the weather is cold throughout most of the year. The reason why the town was founded at such a height is said to be for strategic purposes, i.e. the royalty of the time wanted to control any movements of



both the ↗Amhara in the north and the Oromo in the south.

F. is today subdivided in six *qäbäle*. It has one high school, one hospital (very recent), one community health centre, three elementary schools, and a few clinics and drugstores. The commercial activity of the town is very low since it is not located in a cash-crop area.

Dwellers of the town include: small-scale merchants, civil servants and farmers, most of whom live hand to mouth existence. According to the 1999 population estimate, the town has 28,457 inhabitants (CSA 2000). The population comprises Amhara, Oromo, Gurage and Təgrayans; the first two groups being numerous and the last two groups quite few in number.

Fəkkare haymanot

The F.h. (**ፍካሬ፡ ሃይማኖት**, 'Synopsis/Exposition of the Faith') is, more or less, a summary by *abba* ↗Giyorgis of Gasəčča of his work known as *Mäṣḥafä* ↗*məśṭir*. *Abba* Giyorgis's Vita (ms. EMML 1838, 19th cent.) and one of the three manuscripts in which the "Synopsis" is preserved (ms. EMML 204, 20th cent.) call the work F.h., while the second and the oldest copy (ms. EMML 6456) and ms. Ṭānāsee 178 give it the title *Fəre haymanot* (**ፍሬ፡ ሃይማኖት**, lit. 'Fruit of the faith'), a more fitting and most probably the correct title for its contents. In fact, what the author says about himself towards the end would indicate that the title might have been taken from the words of St. Dioscurus, Archbishop of Alexandria. According to tradition, Dioscurus sent to the faithful in Alexandria, from his imprisonment in Gangra, his teeth that fell from his mouth when he suffered blows from his opponents. In an accompanying letter he is said to have written: **ንሥኡ፡ ፍሬ፡ ሃይማኖት** (*Nəśəʾu fəre haymanot*, 'Receive the fruit of faith!', s. *Haymanotä abäw* 1967:9).

The copyist of EMML 6456 introduces the work with the title **ሃይማኖቱ፡ ለጊዮርጊስ** (*Haymanotu lägiyorgis*, 'The Faith of Giyorgis'). *Abba* Giyorgis, on the other hand, uses the titles **ስብሐታተ፡ መኃልይ** (*Səbḥatatä mäḫaləy*, 'Praises for Chanting'), **መጽሐፈ፡ ብርሃን** (*Mäṣḥafä bərhan*, 'Book of Light') and **ፍካሬ፡ ሃይማኖትየ** (*Fəkkare haymanotəyä*, 'Synopsis/Exposition of my Faith'). It seems that the first two titles concern only the introductory part of the text. The third title relates to the main parts that follow, the faith and the anathema against those who deviate from the faith.

According to *abba* Giyorgis's Vita, the composition of this short treatise was inspired by an inquiry about the Orthodox Faith that Giyorgis received from a certain prince called Tewodros, whom Taddese Tamrat believes was the son of *aṣe* ↗Dawit II (TadTChurch 224f.): "So he composed for him (this) work called F.h. When the king and all the priests of the mystery saw and read the work, they said, 'Truly John the Golden Mouth [Chrysostom] and Cyril the Mouth of Blessing have arisen in our time. Ethiopia is likened to Constantinople and is equated with Alexandria'" (Colin 1987:32f.).

The treatise has three separate parts: an introduction, a confession of faith and anathemas of the heresies, all of which are refuted and condemned in the *Mäṣḥafä məśṭir*. The treatise begins as follows: "I, Giyorgis, a sinner and transgressor, have written this which deals with praises in chanting ... I, Giyorgis, son of priest Ḥəzbä Ṣəyon, have composed (this) ...". Towards the end, *abba* Giyorgis tells about his life: "I have lived in this world with this faith of mine all my life, being condemned by the heretics and condemning the heretics, for there is no agreement between the children of God and the children of the Devil" (Getatchew Haile 1981: 241, 251). It is undoubtedly this Giyorgis whom *aṣe* ↗Zärʾa Yaᶜəqob describes as "priest Giyorgis who fights about the person of the Trinity" (CRRicBerhan II, 131).

Fəkkare Iyäsus

The F.I. (**ፍካሬ፡ ኢየሱስ**, 'The Explanation of Jesus') is a Gəᶜəz treatise about the last days of the world (cp. ↗Eschatology), the prophecy "on the signs of the future generations in the coming days" that was announced by Jesus Christ at the Last Supper, at the request of the Apostles (cp. also HamSixBerl 65). Christ reveals things that would happen in the future: the fall of the righteous faith and the decline of morals, the coming of false messiahs; hatred between people, arrogance of rulers, wars, droughts and other calamities. Some of the future events are metaphorically described and in these cases the narration develops from the explanation of the meaning of the metaphors; (e.g.: "In that time gold will be dishonoured, and iron will be elevated. What I call 'gold' is not gold but the people of gold, who are Christians, and [the people] of iron are pagans" (s. Vajnberg 1907:10, 34) – a method resembling the *Andəmta* commentary.

The F.I. states that one day total destruction will come, followed by 29 years "without people" (except for a few who will have repented). Then a righteous king Tewodros will come "from the east", with a (righteous) metropolitan. The king will gather those who have survived and rebuild the churches. Peace will be re-established, wrongdoing will not take place any more. The time of peace and well-being will last 40 years. Three rulers will reign for 37 years each. Then false messiahs will come and seduce many people. This will be followed by the end of the world ("100 years will be [lasting] like one day"). The sky and the earth will disappear, the righteous will be separated from the sinners and everyone will get what they have deserved. In the coming world the worthy ones will be united with God forever.

It was tentatively suggested that the F.I. was written in the early 15th cent. Tewodros – the name of the mythical king – is thought to refer to *aṣe* ↗Tewodros I, who reigned for only a short time in 1412–13 (s. Conti Rossini 1899:20; Basset 1909). However, this is far from being certain (cp. TadTChurch 220, n. 4; HamTana 109). In the Ethiopic ↗*Sənkəssar*, the commemorative reading for Tewodros on 29 *Säne* goes back to the 16th-cent. recension of the work, but similar notes were composed for other monarchs as well (the information on this reading in a presumably "older" *Sənkəssar* of ↗Däbrä Bizän, reported in Basset 1909:11, needs to be confirmed). In spite of the arcaic "apocalyptic" traits of the F.I., its manuscript tradition hardly goes back to the time prior to the 17th cent. (cp. Basset 1909:12): in the presumably earliest ms., the 16th-cent. Paris, BN Éth. 113, the folios with the F.I. seem to have been added after the manuscript was prepared (s. ZotBNat 131); other mss. date to later periods (cp., e.g., BN Éth. 123; unclear is the age of ms. Berlin, Peterm. II, Nachtr. 55).

Conti Rossini (1901:20) reports the existence of two recensions of the F.I., but does not indicate their respective features. Literary elements (s. Basset 1909:2), used by the anonymous author (in a few manuscripts the work is ascribed to a certain Ǝzra, s., e.g., BN Éth. 146) are considered to be common for any eschatological discourse; however, it is noticeable that the F.I. does not stress eschatological *topoi* characteristic for the 15th-cent. context – e.g., the 1,000-year feast on Mount Zion (s. ↗Däbrä Ṣəyon) or the issue of the Resurrection of the Dead (cp. ↗*Dagəm mäṣʾatu läkrəstos*).

It has been commonly accepted that the F.I. is a genuine Ethiopian text, even if not as ancient as thought before. There is evidence that at least from the late-18th cent. onward the treatise was obtaining more and more popularity, this coinciding with the growth of eschatological expectations during the calamities of the ↗*Zämänä mäsafənt* period (cp. ZanLitTheo 3ff.). In the 19th cent. *dağğazmač* Kaśa Ḫaylu was influenced by the prophecy of the F.I. since the early stage of his struggle for power (s. Basset 1909:7), and he ascended the throne in 1855 as *aṣe* ↗Tewodros II (in fact, he emphasized his role as a messianic king rather than the traditional requirement of Solomonic descent).

Tewodros's suicide at ↗Mäqdäla in 1868 did not put an end to the circulation of the prophecy. The mythical king, whose image in the meantime aquired new features, still was expected to come and there are indications that some tried to link the prophecy about Tewodros to the rise of Mənilək of Šäwa (Basset 1909:8f.). The popularity of th F.I. was sustained at least till the late 19th cent., as numerous copies of the work, together with such still-unresearched pieces as its Amharic translation (mss. EMML 435, 4720, 4895) and Amharic commentaries (e.g., mss. EMML 1810, fol. 73a–77b; 4429, fol. 63a–75a), as well as a kind of refutation of the F.I. by Gäbrä Mikaʾel Gərmu (mss. EMML 1470, fol. 188b–193b) witness. Today a new edition of the F.I. and its study are highly desirable.

Fellata

The term F. (Kanuri name for the Fulbe, sg. Fullo) designates a member of a pastoral people of Muslim faith, originating in western Africa. They are commonly labelled Fulani in the anglophone and Peul in the francophone areas. Several nomadic and semi-sedentary F. groups inhabit Sudanese-Ethiopian border areas in northern Sudan and in Eritrea, occasionally also Gambella, Anfillo and Beni Šangul. The F. speak Fulfulde, the Fulbe language; a few have also adopted Oromiffa, in addition to Arabic. In encampments near Kassala, the F., living among the Haḍánḍowa, have adopted the Beğa language, weapons, way of dressing etc. (Paul 1954:146). In Beni Šangul the F. are also called Mbororo (or "Umm Bororo") after one of their subgroups; the Berta or Oromo also tend to identify them with other groups of West-African origin like the ↗Hausa, sometimes erroneously calling all of them "F.", or more generally ↗"Tuḵrir".

The Fulani languages belong to the Senegambian Fula-Wolof family (of the Atlantic branch of the Niger-Congo languages). Among the F. of Ethiopian and Eritrean regions, the East-Central Fulfulde dialect should prevail, but no linguistic research, except by Ellero in the 1930s, has ever been undertaken here (EllLusAnt 99–102). The F. on the other side of the border in the Sudan, north of Gallabat, are better documented. They move freely across the borders and stay sometimes for one year at a place, selling products from their cattle, such as milk, butter and meat, to locals. They also act as medicine-men, selling "magic" products. Recent political turmoil in the southern Sudan has changed the migration patterns, some F. stopping to move to Ethiopia, others settling permanently.

The diverse F. subgroups – the Mbororo and the Malle from Mali dominating in the Ethio-Sudanese border regions – have their own autonomous leaders who stay in the Sudan. They bear the title *sulṭān* and have several *amīrs* under their rule. These most eastern groups of the Fulbe once, many generations ago, migrated to the White and Blue Nile regions in the Sudan in the course of their yearly migrations. From here further smaller migrations, often after a pilgrimage to Mecca, first led several F. (Fullo) to the western Eritrean plains (also here identified as "Taḵruri"). Their place of origin, according to interviews of the 1930s, was northern Nigeria (EllLusAnt 97). Here they were mainly plantation workers (around ↗Ḥumära and in Kunama areas on farms on the Gaš river).

The F. in the Kassala region (in the Sudan-Eritrean border area), from Timbuktu in Mali, settled there after a pilgrimage to Mecca in ca. 1901/02 and have much increased in numbers since then; they have adopted a semi-nomadic style of life (Paul 1954:146). Other F. groups are settled in cities like Täsänäy, Aqordät, Kärän, Massawa and Asmära (EllLusAnt 103). Later, F. subgroups also migrated to other regions, such as Beni Šangul, where during the last decade some stayed in villages, becoming farmers and fishers at the Dabus, like other West-Africans (as the Hausa, who often live together with the F.). Most F., however, stay nomadic cattle-herders.

Fəlsäta

The ↗feasts of the Dormition of the Virgin Mary on 21 *Ṭərr* (29 January; ↗*Ǝräfta*) and of her Assumption or bodily Ascension into heaven on 16 *Näḥase* (22 August; called *Fəlsäta*, ፍልሰታ), were celebrated at least as early as the 15th cent., as suggested by the Ethiopic ↗*Sənkəssar* (BudSaint 523–27; ColSyn IX, 150–57 and BudSaint 1222ff.; GuiSyn III, 335–40 respectively). Neither event has a scriptural basis, being derived from the apocryphal Marian literature (s. *Mäṣḥafä* ↗*ərgäta lämaryam*; *Mäṣḥafä* ↗*əräfta lämaryam*). The reading for 21 *Ṭərr* emphasizes that the two feasts are separate commemorations rather than almost duplicate commemorations of

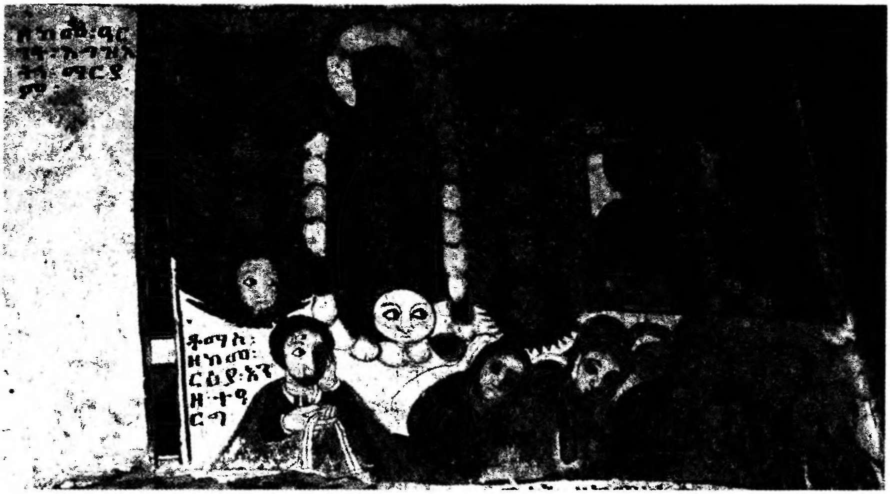

Fig. 1: Assumption of St. Mary witnessed by St. Thomas; cloth mural; 17th cent.; Ṣəraᶜ, church of Abrəha and Aṣbəha; photo 2000, courtesy of Michael Gervers

the same event. Both are important feasts in the calendar of the Ethiopian Orthodox Täwaḥədo Church; the Feast of Mary's Assumption is preceded by 16 days of ↗fasting.

The images of Mary's Assumption (ፍልሰታ፡ ለማርያም, *Fəlsäta lämaryam*) do not appear in Ethiopian art until the 17th cent., and depictions of Mary's Death are extremely rare prior to the 17th cent. as well. A unique representation of Mary's Death is included in an early 15th-cent. manuscript of the ↗*Dərsanä Maryam* at the church of Bethlehem near Däbrä Tabor (Leroy 1967, pl. 13; ChojPaint fig. 140; AfrZion 92). The shrouded body of the Virgin is surrounded by the Apostles with the figure of Christ in the centre, a composition based upon the Byzantine Dormition (Greek: Κοίμησις) of the Virgin (Taft – Carr 1991:652; Schiller 1980, fig. 587-92). However, this Ethiopian miniature is no direct derivation from the standard Byzantine iconography of Mary's death. On the other hand, 18th- and 19th-cent. Ethiopian murals of Mary's death follow the Byzantine iconography of the Dormition with the figure of Christ receiving Mary's soul (ChojPaint, fig. 150a, 151a, 152a). A tale in an early 16th-cent. collection of the *Miracles of Mary* (s. EMML 3872, fol. 90r; ↗*Täʾammərä Maryam*) accounts for a miniature of Mary's Assumption (probably by Nicolò ↗Brancaleone) in a Psalter that was created for Prince Səmᶜon (EMML 3872, fol. 90a).

From the 17th cent. onward, European works of art provided visual models for images of Mary's Death (Schiller 1980, fig. 701), as well as for those of her Assumption (AfrZion fig. 35). These subjects appear in miniatures that decorate various Marian literary texts, in devotional images in the form of painted wooden panels (s. Chojnacki 2000:193) and mural decoration (ChojPaint 320-26; Chojnacki 2000:76, 193, 223; Mercier 2001:162f., 171; Jäger – Pearce 1965:50, 54; di Salvo 1999:137, 206, 208; Wion 2001:304). Most Ethiopian representations of Mary's Assumption show the Virgin standing upon a crescent moon, a model that European iconography created to signify the *Immaculata conceptio Mariae* (Schiller 1980:154–57; cp. *aṣe* Zärʾa Yaᶜəqob's ↗*Raʾəyä täʾammər*, where Mary is the woman "clothed with the sun, with the moon under her feet and upon her head a crown of stars whom John the Evangelist saw [Rev. 12:1]"; Getatchew Haile 1992:63ff.). However, within an Ethiopian cultural context, this representation is referred to Mary's Assumption. The murals of the Assumption at the late 19th-cent. church of Mädḫane ᶜAläm at ↗ᶜAdwa as well as in other 19th-cent. mural cycles in Təgray (s. fig. 1; ChojPaint fig. 151b, 152b) show the Virgin with her hair arranged in a topknot, as in a full-page miniature of the Virgin inscribed *fəlsäta* in an 18th-cent.

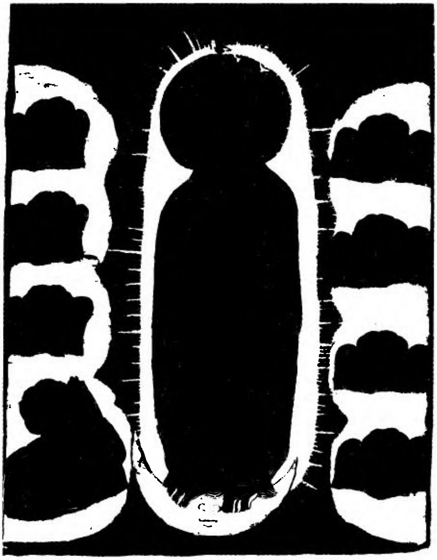

Fig. 2: Assumption; miniature from a ms. of the *Täʾammərä Maryam*; late 19th cent.; Ǝnṭoṭṭo Maryam; photo courtesy of the author

manuscript of Marian prayers (ChojPaint fig. 149; AfrZion no. 117). This distinctive version of Mary's Assumption follows what must have been a very well-known painting executed by an Indian painter elaborating upon a European Baroque model (AfrZion 251f.); this lost image was probably the property of an 18th-cent. ruler at Gondär. The painting of the Assumption of Mädḫane ᶜAläm church in ᶜAdwa has an additional element: the apostle Thomas in the upper left corner with Mary's girdle in his hand. The full-page miniature of the Assumption (s. fig. 2) in a late 19th-cent. manuscript of the *Täʾammərä Maryam* (EMML 22, fol. 143v) shows again Thomas among the cherubim gazing upwards. According to the legend, the apostle, when riding upon on a cloud from India, saw the body of Mary being taken to heaven by angels (Budge 1933:166).

Fəlwəha ↗Addis Abäba

Fəqər əskä mäqabər

The F.ə.m. (ፍቅር፡ እስከ፡ መቃብር, 'Love to the Grave', 1958 A.M. [1965/66 A.D.]) is an important Amharic novel by ↗Ḥaddis ᶜAlämayyähu. It has 35 chapters in 552 pages. For some, the F.ə.m. is a story of tragic love between Bäzzabbəh, the son of an ordinary farmer, and Säblä Wängel, the daughter of a landlord. For others, it is a story of "feudalism" in Ethiopia, portraying the various manifestations of class-conflict as the lovers provoke a revolt. Some consider it a novel narrating the common front of the church-state, which pays no heed to the problems and conditions of the common man. The F.ə.m. is all this and much more.

In many of the early Amharic novels, e.g., *Addis ᶜAläm* and *Arʾaya*, the characters that advocate and practise change are returnees from abroad. In the F.ə.m. the issues of change are presented by portraying the normal social life in the community in a very ordinary manner. The agents of change and those opposing the change are members of the same community.

The novel can be read for the knowledge it provides on various traditional practices and ways of life in Goǧǧam, the setting of the book, and, figuratively, in many parts of the country. Some of the descriptions give rich information about topics like Church ↗education and traditional ↗poetry; in addition to practices like ↗*gəbər*.

The F.ə.m. was printed seven times during the rule of Ḫaylä Śəllase I, the *Därg* regime and the incumbent government. It was also narrated by Wägayyähu Nəgatu over the radio. As a result, the novel and the serious subject-matter it deals with have reached quite a wide audience.

Fekade Azeze

Fəqərtä Krəstos

F.K. (**ፍቅርተ፡ ክርስቶስ**, fl. 17th cent.), also known as Ǝmmämuz (contracted form of Ǝmmä Məʿuz, lit. 'Mother of the Odouring One'), was a holy nun. Her Acts (followed by seven miracles and ↗*mälkəʾ*, s. *Gädlä Fəqərtä Krəstos* 1995 A.M.), which recently became known, seem to be the only source on her life. According to this text, she was born to a noble family; her father was a certain Laba from ↗Därа; her mother's name was Wängelawit. Both pious people, they revered in particular the Marian feast of *Kidanä Məḥrät* (16 *Yäkkatit*; *Mäshafä* ↗*kidanä məḥrät*), but remained childless for a long time. F.K. is said to have been conceived on 4 *Miyazya* and born on 29 *Taḫśaś* while priests were bringing the Holy offerings into the neighbouring church; on the same day she was baptized with the name of Maryam Ṣädala. As she grew up, she was called Muzit (Məʿəzt) and was married to Zärʾa Krəstos, an officer of the emperor – both deciding, however, to preserve their virginity. Unexpectedly, an angel predicted for them the birth of a child; but at the age of seven their son was taken to heaven by an angel.

The Acts of F.K. also refer, vaguely, to a controversy of faith that arose in the time of *abunä* ↗Marqos, probably the one who entered his office in 1636 and died ca. 1648, and was a contemporary and an opponent of *aṣe* ↗Fasilädäs. As partisans of the *abun* (other religious leaders mentioned are *abba* Akalä Krəstos and *abba* Kidanä Maryam), F.K. and her husband were tortured and became martyrs, together with thousands of their followers. Yet, after two weeks, F.K. arose from the dead and appeared before the Emperor to reproach him. Angered, he thought that his order had not been properly executed. F.K. was then imprisoned, but soon was released by an angel.

Followed by her disciples, she quit with the ↗*tabot* of Kidanä Maryam. Unusually, it was the Metropolitan who gave her the monastic habit and name, F.K. After staying four years in ↗Waldəbba, she moved to Eldəbba, there meeting a nun called Ǝmmäwätät. Later, she was to meet other nuns too around ↗Bäšəlo, in Dara, in the desert of Ṣaniko and Wägda, but was not allowed to enter ↗Däbrä Ḥayq Ǝsṭifanos.

Once, F.K. dispatched her followers to gather the remains of her own dead body and of her fellow martyrs. Her remains were sent to the Emperor who, afraid about the matter, relinquished the "wrong faith". F.K. kept wandering with her *tabot* and founded churches and monasteries in the country of Zobel in Rama. She also worked miracles in the country of the "cannibals with tails" (maybe reminiscent of the legends on the Ǧəratom/Žaratam, the "Caudate people" serving in the army of ↗Ǝsato; s. Fiaccadori 1992:90), baptized by her and taught how to seed plants and make the harvest plentiful. Another time, "a great monk" arose from the dead and told F.K. that he was the Metropolitan Zämäläkot (?), sent to Ethiopia 528 years before (i.e. in the early decades of the 12th cent.); he evangelized the country, but after his death a pagan king ascended the throne. In the narrative of the Acts other miracles are included: from conversions of pagans and the killing of a dragon to F.K.'s own pilgrimages to ↗Jerusalem and the Holy Land, as well as to ↗Armenia, where she visited the tomb of ↗Ewosṭatewos.

In the end, F.K. settled in a place called Mačmatəs near "the desert of Siḥat", probably near ↗Däbrä Sina in Sänḥit, Eritrea. There, despite the opposition of some monks, she founded a monastic community (soon divided into a monastery and a nunnery), with a church built of "the wood *ḥuspu*" ('hyssop', translated in the 1995 edition as *səmiza*, *sänsäl*, i.e. *Adathoda Schimperiana*: its stakes take root if used for fences), which, according to Christ's promise, was to last until the second coming of the Saviour. This church, dedicated to the Virgin as Kidanä Məḥrät, is thought to be in the monastery of Ǝmmäməʾuz (Ǝmmämuz) at Ṭəba, Mäqet (Wällo). The monastery of Rama Kidanä Məḥrät in the Rayya Zobəl Qoba *wäräda* (Təgray) also claims foundation by her. On the other hand, there seems to be no evidence about F.K.'s stay near Däbrä Sina.

F.K. died on 27 *Yäkkatit*. Although her Acts do not openly state the nature of the religious controversy in which she was involved and possibly killed, tradition has her as an anti-Catholic saint and contemporary of *aṣe* ↗Susənyos. It appears that the story of F.K. became better known when Wäldä Giyorgis, a son of Adäl Täsämma (↗Täklä Haymanot of Goğğam), entered Ǝmmäməʾuz. The monastery, by that time in decline, soon obtained support from Wäldä Giyorgis. The Kidanä Məḥrät church got a new *qəne maḫlet*; the nearby monastery of *abba* ʿAmdä Śəllase was placed under the administration of Ǝmmäməʾuz. The monastery's church was not affected by the huge forest fire of 1946 A.M. [1955/57 A.D.]. Abbot Ḫaylä Maryam brought the only extant, rather shabby manuscript of the Acts of F.K. to Addis Abäba and presented it to *ətege* ↗Mänän, who had it copied.

Fəqrä Maryam Ayyälä

F.M. (ፍቅረ፡ ማርያም፡ አየለ, or Fəqre Ayyälä; b. March 1922, Kalaš, Märhabete, Šäwa Province, d. 1971, Addis Abäba) was an outstanding Ethiopian actor and musician. He attended traditional Church school in the small town of Goha Ṣəyon in Šäwa, and served there as a ↗*diyaqon* for six years. During the Italian invasion, he spent ca. six months in prison. In the course of education and life he gained knowledge of many languages: apart from Amharic, he knew Oromiffa, Təgrəñña, Gəʿəz, as well as English, Italian and Arabic.

In June 1946, he became an employee of the Addis Abäba Municipality Theatre Section to work as an actor, vocalist and trumpet-player with a 60-*bərr* monthly salary. He was one among the few privileged performing artists who were transferred to the newly built Ḫaylä Śəllase I Theatre in 1956. His employment contract indicates his job classification as 1st Class Actor with a 175-*bərr* monthly salary.

Fəqrä Maryam Ayyälä on stage; photo courtesy of the author

F.M. performed major roles in Yoftahe Nəguśe's አፋጀሽኝ (*Affağäšəññ*, 'You [fem.] Put me in Conflict [reference to political struggle over Ethiopia]'), Afäwärq Addafre's መቀነትዋን፡ ጥፍታ (*Mäqännätəwan ṭəfta*, 'She has Lost her Belt'), Mäkʷännən Ǝndälkaččäw's አልሞትሁም፡ ብዬ፡ አልዋሽም (*Almothum bəyye alwašəmm*, 'I do not lie saying that I am not dead'), Siläši Dəfabbaččäw's ጎንደሬው፡ ገብረ፡ ማርያም (*Gondärew Gäbrä Maryam*, 'Gäbrä Maryam of Gondär'), Gərmaččäw Täklä Ḥawaryat's ቴዎድሮስ (*Tewodros*, '[Emperor] Tewodros'), Franz Zolveker's ዳዊትና፡ ኦርዮን (*Dawitənna Oryon*, 'David and Uriah'), Käbbädä Mikaʾel's አኒባል (*Anibal*, 'Hannibal'), Dawit Abdu's translation of Graham Greene's *The Way to Glory*, Abbe Gubäñña's ቂመኛ፡ ባሕታዊ (*Qimäñña baḥtawi*, 'The Vengeful Hermit'), Aššäbbər Gäbrä Ḥəywät's የንግሥተ፡ አዜብ፡ ታሪካዊ፡ ጉዞ (*Yänəgəśtä azeb tarikawi guzo*, 'The Historical Journey of the Queen of the South'), Ṣäggaye Gäbrä Mädḫən's የፌዝ፡ ዶክቶር (*Yäfez doktor*, 'The Mock Doctor') and አውናባጅ፡ ደብተራ (*Awnabağ däbtära*, 'The Charlatan Church-scholar'), Mängəśtu Lämma's ጠልፎ፡ በኪሴ (*Ṭälfo bäkise*, 'Snatch and Run'), as well as in Täsfaye Gässäsä's የሺ (*Yäši* [proper name]). He had also performed as a comedian with Sahlu Ezenäh.

F.M. also had high reputation as an excellent vocalist, song-writer and composer. እስቲ፡ ተናገሪ (*Ǝsti tänaggäri*, 'Do Speak'), ሙሽራዬ (*Mušraye*, 'My Dear Bride'), አንቺ፡ የውበት፡ ጮራ (*Anči yäwəbät čorra*, 'You [fem.], a Ray of Beauty'), አልመታም፡ ቀረሁ (*Almätam qärrähu*, 'I will not Come'), ሽምብራ፡ ዱቤ (*Šəmbəra dubbe*, 'Check-pea') and ና፡ ጎበዜ (*Na gobäze*, 'Come, my Brave Man') are considered to be some of his best songs.

His popularity, on the one hand, and misconduct and drinking habit, on the other, caused him many problems: he was often reprimanded by the theatre management and once even imprisoned for three days. One of the disciplinary measures was a ban on playing music at night-clubs on a part-time basis. In October 1962, F.M. was caught singing in a night-club at the Addis Abäba Hotel. The next day, his salary was cut by half; in August 1964 he was dismissed. Four years later F.M. got his job back, but only for two years, as in October 1970 he was sacked again. He died shortly after, poor and homeless. The mourning ceremony took place at actress Asnaqäčč Wärqu's place for three days. F.M. was buried at Bale Wäld Church in Addis Abäba. He was survived by an illegitimate child.

F.M. deserved high recognition as an actor; he even inspired Ṣäggaye Gäbrä Mädḫən to write a one-act play ክራር፡ ሲከር (*Kərar sikärr*, lit. 'When *Krar* is Played', here 'When Contradictions Reach the Climax'). The voluntary service F.M. rendered in Korea as a member of the 7th Infantry Division of the UN Army in the 1950s is also worth remembering.

Fəqrä Maryam Gämmäčču

Bishop F. (ፍቅረ፡ ማርያም፡ ገመቹ; b. 21 November 1926, Qärsa, Wayu Tuqa *wäräda*, Wälläga, d. 8 March 1994, Konč̣i) was the Roman Catholic Vicar Apostolic of ↗Neqemte. He studied first at the Consolata Catholic School in Dambi Dolloo and in 1932–41 he attended the Catholic elementary schools in Komto and Dambi Dolloo. He then moved to Addis Abäba for his secondary studies in 1943–47 at the Catholic Seminary. In December 1947 he was sent to Rome as a diocesan seminarian, together with other candidates to the priesthood (including *abba* Gäbrä Maryam Amänte, a student from Wälläga, who later worked for many years at the Catholic Cathedral of Addis Abäba); until 1952 F. stayed at the Collegio Etiopico in the Vatican (↗Santo Stefano dei Mori).

At the completion of his philosophical training at the Collegio Urbano, F. decided to join the Congregation of the Mission, or Vincentian Congregation (↗Lazarists). It seems that the issue of choosing between the Ethiopic (Gəᶜəz) and the Latin Rite played a role in his decision. He went to Paris to undertake his canonical year of noviciate with the Vincentian Congregation, followed by further theological training. He was ordained priest in Paris on 15 September 1957.

When he returned to Ethiopia, he was assigned as director of the Lazarist School in Addis Abäba. F. remained in the capital for five years and took on several responsibilities. He was involved in starting the Minor Seminary (of the Latin Rite) for the Vicariates of Harär and Ǧimma in the Lazarist compound of Addis Abäba. He was thereafter transferred to Neqemte (Neqämt), where he was active in both the pastoral ministry and the social promotion of the people he served. In Konč̣i, near Neqemte, F. restored the Holy Saviour church and built a clinic and an elementary school. In 1981, F. erected the church of Maryam Ṣəyon at Aryağawä in the proximity of Konč̣i, along with an elementary school and a clinic. On 28 October 1985, he was appointed bishop, in fact the first Oromo Roman Catholic bishop. His consecration took place on 16 February 1986. He resigned as bishop for health reasons on 18 January 1994, died soon thereafter and was buried in Konč̣i Holy Saviour church.

F. took a clear-cut stand towards the Gəᶜəz Rite (↗Catholicism). Although neither a formal decree, nor a circular was issued upon his episcopal ordination, Bishop F. made an important and legitimate gesture, asking some priests, who used to say Mass in the Ethiopic rite, not to do so in his juridically Latin-Rite Vicariate; he also demanded that both they and the religious congregations operating in the Vicariate of Neqemte remove all vestments of the Ethiopic rite. However, both the Ethiopic rite and its liturgical vestments which F. wanted to abolish had been tolerated by his Dutch predecessor Mgr. Henny Bomers; some of the religious congregations chose to retain the liturgical vestments anyway.

After the political events of 1991, F. gave a lengthy interview to the newspaper of the Italian Episcopal Conference "Avvenire", in which he complained about most of the developments that followed the overthrow of the *Därg*.

capital of Šäwa (*Guida* 407f.; BTafA 64ff., 677, 913, 947; PankHist II, 159, 162f., 356). F.G. was used as a residence early in the 19th cent. by *nəguś* ↗Śahlä Śəllase (GueCopMen I, 71); and subsequently served as a place of refuge, in difficult times, for Bäzzabbəh Wäriq, *aṣe* Tewodros II's governor of the province (Fusella 1961:24).

F.G. grew in importance during the future Emperor ↗Mənilək II's reign as *nəguś* of Šäwa. The Italian missionary ↗Massaja claims that this took place in the late-1860s when Mənilək, fearing the province's occupation by Tewodros, established the mountain as one of his principal defensive positions: to protect Ankobär from attack, and to serve as a place of refuge in which he and his followers could find safety. Fortifications, according to Massaja, were erected under the supervision of the monarch's principal mason, by name Wäldä Giyorgis (MasMis vol. 9, 75ff.; BTafA 593ff.). To increase the importance of F.M., Mənilək reportedly declared it a royal city, and heaped favours on its already existing church, that of Giyorgis. To emphasize its renown he appointed an *aläqa*, a notable scholar called ↗Täklä Ṣəyon, as well as many priests and *däbtära*. They established a traditional church school with around 50 students, some from as far as Gondär and Goǧǧam. Massaja, who travelled to F.G. to discuss religious doctrine with its priesthood – and later introduced European vegetables there, also taught several young Ethiopians, including the illustrious future scholar, *aläqa* ↗Aṣmä Giyorgis Gäbrä Mäsih (MasMis vol. 9, 85f.; BTafA 64). The missionary also left engravings of both the mountain and the school, as well as an unflattering account of traditional Ethiopian scholarship (MasMis vol. 9, 77; vol. 10, 101).

After the death of Tewodros in April 1868, Mənilək no longer had any fear of an attack by the latter, with the result, according to Massaja, that his interest in F.G. waned. Its status as a royal city was accordingly revoked in 1870, and work on its fortifications was suspended. Subsequent threat of occupation by *aṣe* ↗Yoḥannəs IV, however, led to resumed work on the fortifications, which had been completed, Massaja reports, by 1870 (MasMis vol. 9, 77, 118; vol. 10, 9f.). Confirmation of the defensive significance of F.G. at this time is provided by the Italian traveller ↗Cecchi, who recalls that ditches were dug, and barricades erected, to make the mountain a secure refuge in times of danger (CecZeila 414f.). With the resumption of more stable times F.G. lost virtually all its importance.

The term F.G. had earlier been applied to one of the buildings erected by *aṣe* Iyasu I (r. 1682–1706) in the Gondär palace compound (BassÉt II, 324).

south-west of the town of Sänᶜafe and within 10 km distance of the ancient archaeological site of Mäṭära. The F. site probably dates to the Pre-Aksumite culture period and includes the ruins of building structures with walls constructed largely from schist rock. Architectural elements at F. suggest that the site contained a Pre-Aksumite temple structure. Also documented at F. were Pre-Aksumite inscriptions engraved in stone blocks (RIE nos. 69f.), and a rectangular-shaped offering table with two projecting broken stone sphinx-like figures.

Fəre haymanot ↗Fəkkare haymanot

Fəre Mikaʾel

F.M. (ፍሬ፡ ሚካኤል) was a monk from the Wäräb region of Šäwa during the 15th cent. He was ordained by *nəburä əd* ↗Ǝndrəyas of Säffəᵓa some time during the reign of Zärᶜa Yaᵓəqob, and received the skullcap (*qobᶜ*) from abbot Märḥa Ṣəyon.

According to tradition, F.M. stayed six months in contemplation in a cave dug out by himself near the king's residence. After he returned from this time of meditation, he was appointed the new *nəburä əd.*

Legends record that F.M. had a spiritual relationship with St. ↗Anorewos. He reportedly healed an injured warrior by means of dust from the saint's grave. He ordered a holy grove, where "idolators worshipped their gods" to be deforested. He blessed the woodcutters and let the wood be burnt. The incense found in the grove was spread over the place. Certain pieces of wood were later used for church construction. Another holy grove near a place called Zad was completely burnt out. In the imperial residence the servants of a prince fell ill of a disease called *ker*. Inspired by St. Anorewos, the prince had a vision of F.M., who asked him to leave the place. As the prince hesitated, F.M. appeared him for the second time. Later F.M. physically appeared near the residence. Another legend says that once, when the priest was praying to God, F.M. had a vision of the *tabot* hovering at the height of three cubits above the earth. On another occasion, when F.M. was reciting the Revelation of John, the water he was standing in front of started sparkling. When fasting, F.M. skipped three to four meals in a row. And still he was powerful enough to carry the loads of others, in addition to the Psalter of David.

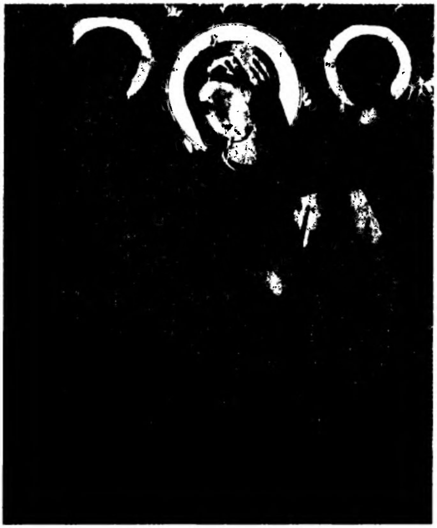
Friedrich Heyer

Fəre Ṣəyon

F.Ṣ. (ፍሬ፡ ጽዮን, fl. ca. 1440-70) was an Ethiopian painter from the monastery of Däbrä Gʷəgʷəben on Lake Ṭana, where he painted a series of devotional images of Our Lady ↗Mary for *aṣe* ↗Zärᵓa Yaᶜəqob. His only extant signed work is a large wooden devotional image (178 cm x 102 cm) painted for the church of St. Stephen at the monastery of ↗Daga Ǝsṭifanos (Heldman 1994: 24f. and pl. I, II; AfrZion no. 76). In the upper register Mary with her Son Jesus are depicted, being flanked by the archangels Michael and Gabriel. The lower register shows St. Stephen the Deacon flanked by St. Peter and Paul. In the legend which is written at either side of St. Stephen the painter identifies himself: "This picture was made in the days of our king Zärᵓa Yaᶜəqob and our Abbot Yəsḥaq of Daga. The painter [is I] the meek F.Ṣ. the sinner from Däbrä Gʷəgʷəben ..." (Heldman 1994:24f.; dates of Yəsḥaq's tenure are unknown).

Stylistic analysis allows the attribution of other works to F.Ṣ. (Heldman 1994:27–52; AfrZion nos. 4, 5, 78, 80, 81). In addition, a number of painted panels datable from the second half of the 15th cent. are related to the distinctive style of F.Ṣ.'s signed icon (Heldman 1994:54–69). All the paintings attributed to F.Ṣ. are Marian icons although each of them exhibits variations in iconography and inscription. These include a wooden panel (168 cm x 111 cm) of Our Lady Mary with the Twelve Apostles, presently at the monastery church Mädḫane ᶜAläm on ↗Rema island (Anfray 1978:168f.), the right panel (584 mm x 578 mm) of a diptych in a private collection (AfrZion no. 6) and painted icons now preserved at the ↗Institute of Ethiopian Studies in Addis Abäba University (IES nos. 3980, 4186, 4053).



St. Mary with Child; wooden panel painted by Fəre Ṣəyon for Daga Ǝsṭifanos Monastery, Lake Ṭana; 15th cent.; photo 1967, courtesy of the author

F.Ṣ.'s devotional images display shared motifs and stylistic similarities with early 15th-cent. Italian paintings of the Madonna and Child, the feature demonstrating that F.Ṣ. had seen Italian pictorial models. His signed panel at Daga Ǝsṭifanos with a Christ child holding a grey dove should be compared with 14th-15th-cent. Italian devotional images where the Christ Child holds a goldfinch, a symbol of Christ's Passion (cp. Friedmann 1946:7f.). F.Ṣ. borrowed the bird's motif but not the symbolism because F.Ṣ.'s bird is not a multicolored goldfinch but a grey dove, a popular Marian symbol in the devotional literature of the Ethiopian Church (VelMe II, 287, 296; Grohmann 1919:72f., 88f., 173f.; Heldman 1994:130ff., 178f.). Other motifs borrowed from Italian Renaissance paintings by F.Ṣ. include, e.g., the sword carried by St. Paul (Daga Ǝsṭifanos panel, s. Heldman 1994:130-37).

The most likely milieu of cultural exchange for F.Ṣ. and a source of artistic motifs should have been the court of *aṣe* Zär᾽a Ya῾əqob. It is documented that the Emperor owned at least a few imported devotional images (CerMaria 96, 101), some of which may have been presented by emissaries from European Christian states (TadTChurch 248-67). The Marian icon was a necessary accessory for the cult of Our Lady Mary introduced by Zär᾽a Ya῾əqob during the 1440's. The Emperor mandated a ritual celebration of Our Lady Mary in the Sunday service as well as on the 32 annual Marian feast days (cp. ↗Calendar; ↗Feasts). The ritual included the solemn procession of a portable icon of Our Lady Mary through the congregation, accompanied by the burning of incense (PerZarY 81; Budge 1923:l-lii; BeckHuntAlvar 77ff., 125). In his *Mäṣḥafä ↗bərhan* Zär᾽a Ya῾əqob described how to exhibit Mary's icon within the church, placing it upon a high "throne" (*mänbär*) with a baldachin above it (CRRicBerhan II, 4).

A direct connection between F.Ṣ. and the royal court is suggested also by the striking relationship between the iconography of several of F.Ṣ.'s devotional images and the writings on the Virgin composed by Zär᾽a Ya῾əqob, in particular his collection of Marian tracts entitled *↗Ra᾽əyä tä᾽ammər* (s. Getatchew Haile 1992: 63–145). F.Ṣ. probably worked with theologians such as *abuna* ↗Yosṭinos from the court St. Mary church in ↗Däbrä Bərhan (Getatchew Haile 1983a), developing schemes that gave visual form to Zär᾽a Ya῾əqob's Mariology.

Marilyn Heldman

Fəremənaṭos ↗Sälama Käśate Bərhan

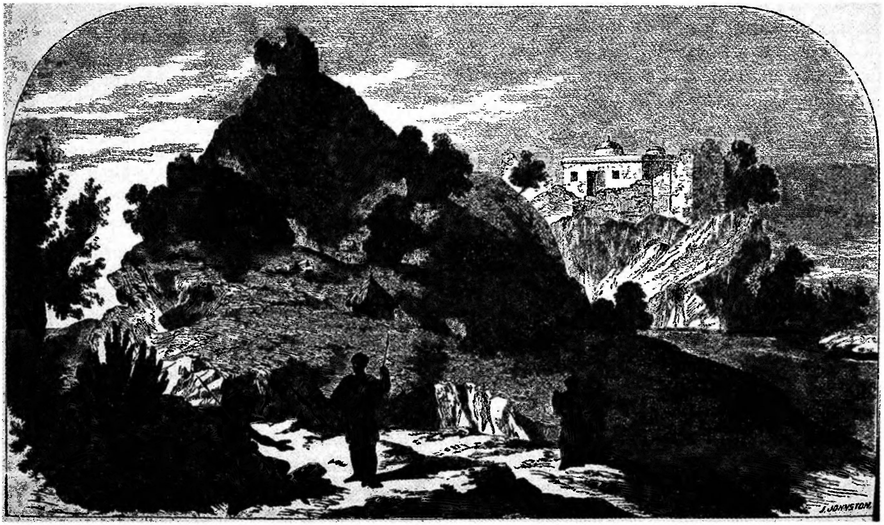
Fəremona

F. (ፍሬሞና), a historical site next to the village of May Qaḥqəḥä ("Maygoga") in Təgray, was one of the principal centres of activity of the ↗Jesuit mission and hosted a community of Ethio-Portuguese.

The hill of F. (1,981 m A.S.L., also called Ǝndet Näbbärš), flanked by the eponymous stream of May Qoqa – a tributary of the Wärʾi river and affluent of the Täkkäze – and 6 km north-east of ↗ʿAdwa, stands on a strategic location in the highlands of Təgray. Close to the ecclesiastical and former political centre of ↗Aksum (14 km north-east), it dominated an important road-junction, connecting ↗Ḥamasen, ↗Dämbəya and ↗ʿAgamä. Later, the Italian administration built there the main ʿAdwa-Asmära road. The area of F. enjoys a relatively low annual rainfall (400–800 mm), concentrated between July and August, and benefits from a mild climate. Its population density is high (100–200 inhabitants/km²) and the inhabitants, mostly Təgrəñña-speaking, practise agriculture and stock breeding.

The origin of the name F. is uncertain, but epigraphic and historical evidence points to ancient times. A reference to "Däbrä F(ə)rem" in the *ḥaśani* ↗Danəʾel inscriptions in Aksum could suggest the existence of an ancient monastery dedicated to Fəremənaṭos or Frumentius (↗Sälama Käśate Bərhan; s. Fiaccadori 1990: 327), a hypothesis that the Jesuit missionaries would later support (s. BecRASO V, 417f.; cp. Pennec 2003:154–59). In 1522, the name appears again when a "frate Raphaello" (↗Franciscans) is reported by Alessandro ↗Zorzi to have travelled southwards through "Flemona" and "Axon" [Aksum] (CrawItin 140).

F. acquired importance with the arrival of the Jesuits. Following the religious disputes in which the Bishop – later Patriarch – Andrés de ↗Oviedo confronted *aṣe* ↗Gälawdewos around 1558, the missionaries went into "exile" to Təgray, where they enjoyed the favour of *baḥər nägaš* ↗Yəsḥaq. In the early or mid-1560s, fleeing the torrid climate of ↗Dəbarwa and probably having been granted lands by Yəsḥaq (BecRASO XI, 292), then at war with ↗Minas, they settled in and around F., together with remnants and descendants of the expedition of Christovão da ↗Gama. This community, counting some 230 Catholics (ibid. V, 430, 417f.), suffered troubles due to political instability: around 1572 Turkish troops – later to occupy Dəbarwa – ravaged the area (ibid. 440). However, they enjoyed the support of some local notables (ibid. X, 207) and a relative tolerance during ↗Śärṣä Dəngəl's long reign.



Fəremona in the 1830s, with the church of Ǝnda Giyorgis in the background; etching by J. Johnston; courtesy of Basler Mission21

The missionaries – the Patriarch together with Manuel Fernandes, Antonio ↗Fernandes and Francisco ↗Lopes – managed to keep a stable community. They received annual alms from the Portuguese king (the Ethio-Portuguese half-castes being his subjects) that reached Massawa on an irregular basis (BecRASO XI, 93) and were engaged in administering their church, preaching in the surrounding areas and providing medical care. The Jesuits also befriended with the local population and important groups of the Təgray religious microcosm, such as the monks of ↗Ǝnda Abba Gärima (ibid. V, 453–66; for the second mission, s. XI, 109). They built there a rudimentary church, which later hosted the reremakers of most of the missionaries (on a possible grant by the *nəguś*, s. Couto 1777, Década VII, Livro VII, Capitulo XII; BecRASO V, 463).

The situation improved during the second missionary period (1603–32). Under *aṣe* ↗Yaʿəqob and ↗Susənyos, the village was granted as ↗*gʷəlt* to the Jesuit church and had its own ↗*šum*, appointed by the Portuguese (BecRASO XI, 100). A new church of stone and lime was erected, as well as a house with stone and mud walls, serving as a seminar for young boys (ibid. V, 456, 458; XI, 311f., 382f.). The compound, strongly fortified in the progress of time, successfully protected the community from several ↗Oromo raids upon the area (ibid. V, 458f.; XI, 434, 473; Beccari 1912: 174). F. also became a place of pilgrimage, for an image of the Holy Virgin – a copy of the famous icon kept in Santa Maria Maggiore, Rome – and the tombs of the missionaries were venerated there (BecRASO XI, 62, 115, 159, 285, 312; VIII, 199). Around 1627, a new church, dedicated to the Virgin of the Assumption, was built, as well as a tower for protection and a water cistern (ibid. XII, 181, 482). During these years F. played a key role as a pivotal point connecting the coast with the southern residences – e.g. ↗Gorgora (s. Paez 1616, f. 351).

Following the restauration of the Orthodox Faith, in 1633 the Jesuits were obliged to abandon F. (BecRASO XII, 521). The community of "Portuguese" remained in place until 1648–51, when an *abba* Yämanä Krəstos, vicar of *abunä* Marqos, lead an expedition that murdered several of them and exiled the survivors to Dämbəya (ibid. XIII, 322, 380). At the end of the 17th cent., "May Gʷagʷa" and "ʿAdwa" are reported to have provided 1,000 ounces of salt-tax (HuntGeogr 239, 259) to the Christian state. By then F. probably had been abandoned in favour of a settlement on the other side of the stream of May Qoqa. In 1919, *däǧǧazmač* Kaśa Ṣəyon erected a fort on top of the hill, later turned into a fortress by the Italians. The ruins of the Portuguese compound were still visible in 1936 (Guida 243).

On the same hill, to the north, the important complex of the church of Ǝnda Giyorgis (possibly bound to the ancient Däbrä Fərem) is lying. The place has an early origin, as it appears in a land-charter of *aṣe* Yəsḥaq (1414–29; CRAxum 23) and the church architecture shows late ↗Aksumite or medieval influences. In the interior of the church building there are traces of Portuguese craftsmanship (DAE III, 66), which could point to its use by the Jesuit mission (the place, though, is not mentioned in their texts). So far no survey or excavation has been carried out at F. and an archaeological enquiry is, therefore, a desideratum.

Andreu Martínez

Ferenc, Alexander

F. (b. 24 July 1945, Chelm Wielki [today known as Chelm Slaski], d. 20 January 2001, Warsaw) was a Polish ethiopisant. A student of Stefan ↗Strelcyn, he successfully completed High School in Oświęcim (1962) and graduated five years later in Semitics and Ethiopian Studies. His M.A. thesis, "The Life of Isaac of Gunda Gunde", was written under supervision of Stefan Strelcyn. His doctoral thesis, "History of Oromo (Galla) on the Basis of Amharic Sources", was completed in 1976 under the supervision of Prof. Witold Tyloch. F. published many articles on the Oromo people from an Ethiopian historiographical perspective. He lectured at Warsaw University, primarily focusing on the Gəʿəz language, as well as the history of Ethiopian literature and the history of the Ethiopian

Orthodox Church. As a pioneer of his field in Poland, he popularized Ethiopian religion and poetry. He published, in numerous parish journals, translations of various ↗*qəne*, mainly dealing with Christ and Mary.

Joanna Mantel-Niećko

Ferguson, Charles Albert

One of the founders of the discipline of sociolinguistics, F. (b. 1921, Philadelphia, PA, d. 2 September 1998, Palo Alto, CA) included several important contributions to Ethiopian studies in his multifaceted output. F. was Director of the *Language Survey of Ethiopia*, part of the five-nation Ford Foundation project, "Survey of Language use and Language Teaching in Eastern Africa (SLULTEA)", during 1968–69 (the other members were M. Lionel Bender and Robert L. Cooper, with J. Donald Bowen, overall SLULTEA director, also taking part from Addis Abäba and Nairobi). The overall results of the survey were published in *Language in Ethiopia* (BendLang), which still serves as a starting point for the study of Ethiopian languages in the broader context, although requiring revision in social and educational facets to account for later developments.

The details of F.'s multifaceted career can be consulted in the obituaries in *Language* and in *Language in Society*. His major areas of interest were psycholinguistics, sociolinguistics, language in religion, phonology, language typology, Arabic and Bengali languages, and applied linguistics. He brought his deep and wide experience in linguistics, and especially in applied linguistics, to the Ethiopian survey, and maintained an ideal balance among the descriptive, sociolinguistic and educational aspects of the project. His publications (a sample is listed below) included the Ethiopian musical notation attributed to ↗Yared, the status of ↗Arabic in Ethiopia, Ethiopia as a language area (↗Ethiopian Language Area), a typological comparison of the Amh. copular construction and the nature and functions of language surveys.

M. Lionel Bender

Fernandes, António

F. (b. in Braga, Portugal, d. 1593, Fəremona) lived in Ethiopia for 36 years as a member of the first ↗Jesuit mission. Apparently, one or both of his parents were Jewish converts, since he was identified as *cristão novo* ('new Christian'), a rather problematic social condition to bear at that time in Portugal (Wicki 1956:455). It is possible that he decided to join the Society of Jesus, not only to respond to a spiritual calling, but also to avoid being charged with crimes connected with that condition. F. entered its ranks in 1556 in Goa where the formal requisites were not so strict as in Europe. Next year, as a lay brother, he was assigned to the Ethiopian mission headed by Andrées de ↗Oviedo. He received his orders in Ethiopia and, except for the first two years, developed his activities in Təgray, with Gonçalo ↗Cardoso and Manoel ↗Fernandes and, after 1566, at ↗Fəremona.

F. wrote some letters in which he expressed the missionaries' general thought about the mission's impasse: a military offensive intervention would be the only solution to open Ethiopia to Roman Catholicism. Particularly, F. complained about the delay due to the Portuguese lack of interest – "if this business was in the hands of the king of Castille, Ethiopia would already be reduced [to the Catholic faith]" (BecRASO X, 192). As time went on, his major preoccupation became the future of the Catholic community. Affected with paralysis, he died after 16 July 1593.

Isabel Boavida

Fernandes, António

F. (b. 1567, Lisboa, d. 12 or 13 November 1642, Goa) lived in Ethiopia for 29 years as a member of the second ↗Jesuit Mission. He entered the Society of Jesus as a novice in the Colégio do Espírito Santo, Évora, in 1586 and sailed to India in 1602. In Goa he was assigned to the Ethiopian mission and travelled together with Father Francesco Antonio de Angelis in 1604. To assist properly the Catholic community, scattered in different provinces of the country, the Jesuits, headed by Pedro ↗Páez, founded new residences. F. worked at Märäba (1605–07), (Old) ↗Gorgora (1608–09) – both in Dämbəya – Nanina and Qʷäläla (1610–11) in Goǧǧam. He participated in the theological controversies with the Orthodox Täwaḥədo clergy and composed a catalogue of the "errors" they defended (BecRASO XI, 201ff.); later, in 1621, he was said to be writing a controversial book (ibid., 484) that might be the ↗*Mäqśäftä ḥassätat* ('Whip of Lies'), later printed in Goa (1642), in which he refuted the ↗*Mäzgäbä haymanot* ('Treasure of Faith'), discussing such theological issues as the nature of Christ and the origin of the Holy Spirit.

In 1613 F. joined a secret diplomatic mission with Fəqurä Ǝgziʾ, appointed ambassador to the Holy See of Rome and to King Phillip III of Spain (II of Portugal) by *aṣe* Susənyos. They had to avoid the Red Sea harbours and the land-route to Cairo, all controlled by the Ottoman powers, and travelled southwards through Ǝnnarya, expecting to reach Malindi and open a long-sought new route to the Ethiopian plateau. They went as far as the lands of Kämbata and Ǧänǧäro and returned one year and seven months after. Several aspects of the way of life of the southern peoples were reported for the first time (Pais 1946: 202–34; BecRASO XI, 305–09).

As Vicar-General of the Jesuit mission since 1619, F. spread "the happy news on the conversion of Ethiopia" (ibid. XI, 509). He was given special ecclesiastical powers to test the Ethiopian clergy and to revise their sacred books. In the beginning of 1624, he finished a correction of the *Haymanotä abäw* ordered by Susənyos to replace the Orthodox version (BecRASO XII, 14, 55). Apparently, he also wrote (in Portuguese) a *Treatise in Praise of the Guardian Angel*, a *Treatise on Fasting*, another about *Ecclesiastical Immunity* and (in Gəᶜəz?) an *Instruction for Confessors*. After the arrival of Patriarch Afonso ↗Mendes (1625), he became his private confessor and senior of the Patriarch's household in Däbsan, Ǝnfraz, where he was also charged with the training and examination of new priests. F. accompanied the Catholic Patriarch to ↗Fəremona in 1633 and, one year later, to Sawākin, where Mendes remained imprisoned while other companions in faith and misfortune, including F., could sail back to India. For seven years he held the position of Prefect at the Jesuit College of São Paulo in Goa where he died.

Isabel Boavida

Fernandes, António

F. (b. 1603 in Viana do Alvito, Portugal, d. 1636, Dio, India) lived for eight years in Ethiopia, the last one under persecution, as a Jesuit missionary. Being assigned to the flourishing Catholic mission in Ethiopia, he arrived there with four brothers in the faith, João de Sousa, João Pereira, Francisco Rodrigues, and Damião Calaça. In 1630–31, he was working at the House of ↗Fəremona, with José Giroco, preaching and baptizing. Once the banishment order was issued in 1633 and the Jesuits definitely forced to leave Fəremona, where they were assembled, in 1634 at Easter time, F. sailed back to India where he arrived in October. He held the position of Principal at the Jesuit College in ↗Dio until he caught a bad fever and died.

Isabel Boavida

Fernandes, Manoel

F. (b. ca. 1515, Olivença, Portugal [today in Spain], d. 25 December 1583, Fəremona) lived for 26 years in Ethiopia as priest superior of the first Catholic mission. He was already a mature man when he entered the Society of Jesus and took holy orders (1553). Assigned to the Ethiopian mission, he travelled to India in 1555 and, two years later, to Ethiopia, via Ḥərgigo, with the group led by Andres de ↗Oviedo. When *aṣe* ↗Gälawdewos refused to accept the dogma of the Roman Church, the missionaries left the court and restricted their activities to spiritual assistance to the Catholic community in Təgray (BecRASO X, 146–56). The continuous conflicts that ravaged the country rendered Təgray a very insecure place and many Catholic families sought refuge in Dämbəya. Consequently in 1575, F. went there to assist them, replacing the deceased Father ↗Cardoso. As his peers did, he often requested Portuguese assistance for the "poor Catholic people wandering here and there" (ibid. 259) and defended Holy War as a means to open not only Ethiopia, but also "a certain Europe" (e.g., the countries where the Reformed Churches flourished) to massive conversion to Roman Catholicism (Guerreiro 1942:356).

Isabel Boavida

Ferrandi, Ugo

F. (b. 6 January 1852, Novara, d. 26 October 1928, Novara) was an Italian traveller. After several seaborne voyages and a visit to Egypt in 1861, F. was engaged in the failed attempt of the Franzoj expedition to reach the southern Danakil (↗ᶜAfar) in 1886. He was in Massawa in 1887 as a war correspondent. In April 1888 he moved to Zaylaᶜ and then to Harär, studying the Ogaden and the course of the Juba (↗Ganaalee) river. After a brief stop in Aden, he was back in Harär in November 1888 as agent of the Howarth House. He remained there until his repatriation in 1889.

In Harär the Società Milanese di Esplorazioni Commerciali in Africa entrusted him with the exploration of the courses of the rivers ↗Omo and Juba, a task which was never realized. F. briefly worked as a secretary in the Bienenfeld Company in Aden, from where in 1891 he attempted to travel to Somalia to explore the lower ↗Wabi Šäbälle and the Juba up to Manṣūr, near Bardera. After a short journey to German East Africa, he assumed a position in the Filonardi Company as inspector of Brava coastal customs. He recieved there an invitation from the Italian Geographical Society to participate in the ↗Bottego expedition. F. stayed in Lugh (later Lugh Ferrandi, cp. Guida 594) from December 1895 until the end of 1897, there facing the attacks of Ethiopian troops (after the battle of ᶜAdwa) and returned to Italy in November 1897, where he remained until 1900. After a period in Eritrea, in 1903 he was in Tripoli, where he explored its surroundings up to Homs. There he joined the Chiesi mission to Benadir, where, together with Girolamo Cappello, he was the head of the administration of the Società Anonima Commerciale Italiana del Benadir from 5 October 1903 until 11 November 1903 in Bardera. He returned to Italy in early 1909, but was again in Benadir in 1910 as Commissary of the Upper Juba until January 1912. He retired in 1923.

Giancarlo Stella

Ferret, Pierre Victor Adolphe

Captain F. (b. 1814, Realmont, Tarn, d. 1874) was a young graduate of the French Military Accademy of St. Cyr, and travelled with a fellow staff-officer, Captain Joseph-Germain ↗Galinier, to Ethiopia in 1840. Both were sent by the French Government to study the "customs, habits, religions, political institutions and natural resources" of the Ethiopians. On leaving France, the two travellers sailed first to Egypt, where they learnt Arabic in the hope that it would assist them on their journey. They then made their way down the Red Sea to Jeddah, and thence to Massawa, where they landed on 21 October 1840. They then proceeded via ᶜAdwa and Aksum to Šire, ᶜAgamä and Ǝndärta before crossing the Täkäzze river to visit Anṭalo and Çäläqot, and eventually proceeded to Gondär and Lake Ṭana. On their return to France, they published a detailed three-volume work, which appeared in Paris in 1847. It contained a valuable account of their travels and, notably, of their meeting with *däǧǧazmač* ↗Wəbe Ḫaylä Maryam, ruler of Təgray and Səmen. The third volume comprised a detailed survey of the country's geology, botany, zoology, astronomy, geography and meteorology.

F. subsequently pursued a notable military career. After fighting against insurgents prior to the Revolution of 1848, he was awarded the Légion d'honneur. He later fought in French Algeria and was inducted into Napoleon III's Imperial Guard. Captured by the Germans in the Franco-Prussian war, he was duly promoted a general and had a street named after him in his native town.

Richard Pankhurst

Fəśśəḥa Giyorgis ᶜAbiyä Ǝgziʾ

Däbtära F.G. (ፍሥሐ፡ ጊዮርጊስ፡ ዓቢየ፡ እግዚእ, b. 1868, Yəḥa, ᶜAdwa, d. 1931, ᶜAddi Zenu, Säraye) was a writer, historian and theologian who combined traditional church learning and western education. He is regarded as the founder of the Təgrəñña literary tradition.

F.G. was a native to the ᶜAdwa region, but he spent more than two-thirds of his life in Eritrea, where he eventually remained. Hardly anything is recorded about his early life, but he apparently enjoyed a high-church education in his home region and possibly in the monasteries of Eritrea such as Däbrä Maryam and Däbrä Bizän before he arrived in Massawa in the late 1880s.

Why he travelled to the coast is obscure. It seems that the great famine of 1888–92 had prompted him, like it did with thousands of others, to seek food at the port where grain, imported by the Italian colonial administration, was available. F.G. was in any case in Massawa as early as 1889 and he was already in contact with Count ↗Antonelli and other Italian officials.

At the end of this year, he accompanied *ras* ↗Mäkʷännən Wäldä Mikaʾel (apparently on behalf of the Italians) from Massawa through Asmära, Säraye, ᶜAdwa and Ḥawzen to Mäqälä probably as an interpreter and guide. In his *Storia d'Etiopia* he gives a vivid account of this journey and the tragic events he witnessed (Fesseha Giyorgis 1987:125-33). As soon as the *ras* joined the newly crowned Emperor *aṣe* Mənilək II, F.G. returned to Massawa, from where he went to Italy in 1890 to teach Geᶜez, Təgrəñña and Amharic at the Oriental Institute in Naples under the auspices of Francesco ↗Gallina to whom he dedicated his first publication in 1895. At the same time, he learnt Italian, Latin and Arabic which provided him access to foreign works on Ethiopia.

The first work of F.G. to be published was a brief account of his journey from his home country to Italy (Fəśśəḥa Giyorgis 1895) which he wrote at the instigation of the academic members of the Oriental Institute to serve as a textbook for Təgrəñña. It turned out to be a brilliant essay which scholars subsequently regarded as the first impressive Təgrəñña literary piece.

At about the same time, F.G. penned a more-elaborate work and perhaps one which attracted the attention of a wider public; namely, a history of Ethiopia from its origin to 1890 which was published by Yaᶜəqob Bäyyänä (s. Fesseha Giyorgis 1987). This work, written in Təgrəñña, is of a special interest to linguists and historians alike. His interpretation tends to be of the traditional type, but his presentation is very systematic and lucid. In so far as most Ethiopian traditional historians tended to be region-oriented in their accounts, events in the north were thereby generally neglected in the works of the writers from Gondär, Goǧǧam and Šäwa. Hence, F.G.'s historical work fills an important gap in the historiography.

A third work of F.G. was a history of the Arabs and the Egyptians which appeared in print under the title "Storia degli Arabi e degli Egiziani" (Fəśśəḥa Giyorgis 1897). This work was a mixture of translation and his own composition. Some tracts attributed to him were also published under the pen-name of Zäwäldi in 1899–1900.

When exactly F.G. returned to Eritrea, what he did for a living thereafter and whether he continued to write at all is unknown.

Fəśśəḥa Krəstos

F.K. (ፍሥሐ፡ ክርስቶስ, lit. 'the joy of Christ', var. ፍሣ፡ ክርስቶስ, Fəśśa Krəstos, ፍሣ፡ ክሶስ, Fəśśa Kəssos) is mentioned for the first time in the Chronicle of *aṣe* ↗Yoḥannəs I under the month of October 1677 with the title of ↗*fitawrari*. *Aṣe* Yoḥannəs died on 19 July 1682, and the new sovereign, *aṣe* ↗Iyasu I, appointed F.K. as regent of Goǧǧam. However, soon after F.K. was returned to Gondär and made a commander of one of the royal-guard regiments. In 1693 he was awarded his next title of ↗*däǧǧazmač*.

F.K. always remained with his sovereign and took part in all his campaigns. When, in March 1706, Iyasu took a sudden decision to abdicate in favour of his elder son ↗Täklä Haymanot, who at the moment was in rebellion and had proclaimed himself emperor, it was precisely to F.K. that Iyasu entrusted his other sons to be handed to Täklä Haymanot for further confinement at the royal prison of ↗Wähni Amba, the conventional place of detention for all possible pretenders to the throne. The future fate of F.K. is obscure, but he was still alive in May 1698.

Fəṭḥa Mägarəḥ

F.M. is the major customary law of the ↗Bilin. The name alludes to the legend of the founder of this ethnic group, who first established himself in the plain of Mägarəḥ, close to ↗Kärän in the present-day Ansäba *zoba*. According to Munzinger (1891:39), the idea of God as a principle of law is not known to the Bilin and law and morals are not connected. A bad action not involving a neighbour too closely is not a crime and the punishment in this case is left to God: "What is against God, relates to God". This seems to offer some evidence that traditional law in this area is secular and not influenced by religion.

The bulk of the Bilin converted to ↗Islam during the 19th cent. They were an oligarchic and aristocratic society divided into (at least) two castes. Their traditional law reflected the division between dominators and dominated, between nobles and vassals. Before the Italian occupation they were ruled in some periods by highlanders (*ḥabäša*), in others by Egyptians. According to Mondaini (1941), Bilin traditions originated in the highlands and were modified under the influence of foreign customs (↗Beǧa coming from the north and ↗Sāho from south-east), and by religion (Islam). The same author argues that differences between the F.M. and highland-Təgrəñña laws are not very relevant and that, on the whole, traditional law seems to have had a stronger influence than Islamic law in the life of the Bilin community (Mondaini 1941:136ff.). However, it is clear that in some cases the ↗*šarīʿa* modified the traditions, often radically (Favali – Pateman 2003:29); e.g., some of the most ancient aspects of tradition, such as vassalage, were entirely replaced with the Qurʾānic rules (Pollera 1996:99).

In the case of an irresolvable land dispute, a "foreign prince" could be asked to arbitrate; however, he made his judgement in accordance with the law of the F.M. (Munzinger 1891: 42ff.). Women were not allowed to participate in a blood feud. If a Bilin woman was accused of murder, the person to be targeted was whichever male was her "protector" (Conti Rossini 1916: 646). If the written code makes no provision for a particular case, elders will refer back to unwritten law that predates the F.M. (Ghebil Temnewo 1999:4).

Fəṭḥa nägäśt

The F.n. (**ፍትሐ፡ ነገሥት**, 'The Law of the Kings') is a book of law that has been in use in Christian Ethiopia since at least the 16th cent. In spite of its being an object of considerable pride and veneration by Ethiopians, it is not an original Ethiopian composition, for it is rather derived from an Arabic work known as مجموع القوانين (*Maǧmūᶜ al-qawānīn*, 'Collection of Canons'), written in the year 1238 by the Christian Egyptian jurist Abū l-Faḍāʾil b. al-ᶜAssāl aṣ-Ṣafī, a contemporary of Patriarch Cyril III of Alexandria (1235–43; s. ↗Coptic Church).

Ibn al-ᶜAssāl's work (GrafLit vol. 2, 400ff.) was divided into two parts, dealing with religious (22 chs.) and, respectively, secular or civil matters (29 chs.). The sources of the first part were the Old and the New Testaments, writings of alleged Apostolic origin, Canons of the early Councils and writings of Church Fathers. In compiling the secular part, Ibn al-ᶜAssāl relied mostly on a four-book collection of laws known as *Canons of the Kings* (GrafLit vol. 1, 618ff.). The first book of this collection is the *Procheiros nomos*, a handbook of Roman-Byzantine laws collected and edited between 870 and 878 under the Byzantine Emperor Basilius I; the second is an Arabic version of the so-called *Syro-Roman Book of Law*; the third has been recognized as an Arabic version of a handbook of Roman-Byzantine laws, i.e. the *Ecloga* of the Emperors Leo III and Constantine V (with the "Canons of the Nicean Fathers"); the fourth corresponds to the *Precepts of the Old Testament*, a compilation of ritual and moral rules from the Pentateuch with Christian interpolations. Some scholars deem this work to have been compiled for the use of the Episcopalis audientia, i.e. the court(s) held in Egypt by Coptic bishops – the author himself stating in his introduction that the *Nomocanon* was meant to guide the judges in their duty.

The date of the Ethiopic translation is still debated. Yet, according to the most authoritative opinion, based on philological evidence, the F.n. is a creation of 16th-cent. ↗Gəᶜəz literature (Guidi 1901:501f.). According to Ethiopian tradition, the F.n. was introduced into Ethiopia during the reign of *aṣe* ↗Zärʾa Yaᶜəqob: a certain "Ṗeṭros Abdä Säyd [ᶜAbdassayyid?]", an Egyptian native, brought the book from Egypt to Ethiopia at the request and at the expense of the Emperor. As to the translator, at the end of the F.n., a note reads: "(the book) was translated by Ṗeṭros, the son of Abdä Sayd" (Guidi 1897: 335; Paulos Tzadua 1968:319). A passage in the Ethiopic ↗*Senodos*, referring to a "Book of the Law of Kings", has prompted the hypothesis that the F.n. was translated before the *Senodos* (Getatchew Haile 1981:94). As a matter of fact, the same reference to a "Book concerning the Sentences of the Kings" is already found in the original section of the Arabic *Sinūdūs*, circulating as early as between 1229 and 1234, i.e. before the composition of Ibn al-ᶜAssāl's work (Bausi 1990:36f.).

The difficult style and poor quality of the Gəᶜəz translation are partly due to the fact that the translator had to deal with legal concepts and terms to which no Ethiopic correspondents existed. Admittedly, the F.n. does not reflect in full the life and customs of the Ethiopians. It is however undeniable that it was held in great esteem by local scholars and judges due to its spiritual character, brought about by continuous references to the Holy Scriptures and Church Canons, all of which constituted the core of traditional learning. The book's prestige was further enhanced by the belief, common among Ethiopians, that it had been written by the 318 Fathers of the Council of ↗Nicaea.

The formal position of the F.n. as the supreme ruling law of Ethiopia is confirmed by many documents. The first one to bear witness to the application of the F.n. as law goes back to the reign of *aṣe* Śärṣä Dəngəl (CRHist 75f.). The Chronicles of *aṣe* Susənyos, *aṣe* Iyasu II, *aṣe* Iyoʾas I, *aṣe* Tewodros II and *aṣe* Mənilək II mention the authority of the F.n. in civil and penal matters. More remarkably, in a law issued by Mənilək II concerning the powers and duties of the Minister of Justice, it was expressly provided that the F.n. be the law regulating civil and duties of the Minister. Art. 2 of the regulation established that "the Minister of Justice must supervise every judgement diligently and conformably to the expression of F.n." (MahZekr 68f.).

As a mark of importance of the F.n. in the legal system of Ethiopia, it is worth mentioning some instances related to the modern legislation of the country. In promulgating Ethiopia's first Penal Code in 1930 (↗Criminal Codes), the legislator clearly stated that his work was a "revision" of the F.n., "updated" so as to meet the needs of present times. He emphasized his intention not to depart from the law written in the F.n. and he made clear references to the latter in more than 60 Articles. In 1957 a new Penal Code was issued, prefacing to which Ḫaylä Śəllase I declared: "We have ensured that their concepts [the concepts elaborated by the Commission of Codification] adopted as a point of departure the venerable and well-established legal traditions of our Empire as revealed in the Fetha Neguest". In 1960 the Civil Code of Ethiopia was enacted, to which preface it was stated that "the Codification Commission ... has been inspired in its labours by the genius of Ethiopian legal traditions and institutions as revealed by the ancient and venerable Fetha Neguest".

The archaic tendency to blend secular with religious matters, common to the F.n., has indeed contributed to a conception of law as something intrinsically sacred in character, though this mental attitude was primarily derived from Christian principles deeply rooted in Ethiopia. A work such as the F.n., full of Biblical and Christian wisdom as well as of juridical principles of eminent pedigree, was to be much revered by people that boast such a longstanding juristic tradition and an almost innate sense of law. At the same time, the function of the book as a ruling law should not be overestimated; in fact, the common every day life (including dealing with crimes and judicial procedures) was better regulated by the ↗customary law. Being a very complicated book, the F.n. was heard of by many, but really understood only by a few educated clergymen and traditional scholars. It was studied in the school of exegesis (↗*Maṣḥaf bet*), i.e. the traditional school of the highest level; along with the computus, being considered the most difficult subject (s. Guidi 1899:xiv).

Paulos Tzadua – [Red.]

Fətḥat

F. (ፍትሐት, 'Absolution [of the Dead]'), both the ritual and prayer, is substantial part of the Ethiopian Orthodox funeral rite (↗Burial; ↗Funerals). The entire funeral rite is sometimes called F.

As the person feels that he or she will depart soon, immediately the priests are called to perform the ↗Unction, that should be preceded by the confession and absolution. Different prayers are prayed from the time the soul is separated from the flesh until the body is buried, e.g. prayer on the separation of the soul, prayer on the water with which the body will be washed, prayer on the oil which will be rubbed on the body. As to the F., in the common version of the *Mäṣḥafä*

↗*gənzät* there is an extensive prayer, called in full ጸሎተ፡ ፍትሐት፡ ላዕለ፡ ኵሎሙ፡ ሙታን (*Ṣälotä fətḥat laᶜəlä kʷəllomu mutan*, 'The Prayer of Absolution over all the Deceased') that should be read in the house of the deceased after the corpse is prepared for the burial (*Mäṣḥafä gənzät* 1944, ch. 9; Dobberahn 1997:900–17), but before the start of the funeral procession (which is called የጉዞ ፡ ፍትሐት, *yäguzo fətḥat*, lit., 'the F. travel'). The main sources of the prayer are the Old and New Testaments, especially the Psalms and the Prophets. The prayer asks God for forgiveness of sins and mercy to the souls of all the deceased faithful. It is performed before particular prayers for different categories of the deceased – clerics and laymen, men and women etc. It is remarkable that this F. is followed by still another absolution prayer for all the deceased, without differentiating between laymen and clergy (*Mäṣḥafä gənzät* 1944, ch. 10; Dobberahn 1997:918-33). Than the ritual proceeds till the last burial stage, called ግብ አተ፡ መሬት (*gəbʾatä märet*, 'entering the earth').

Ch. 22 of the ↗*Fətḥa nägäśt* dictates that the psalms and prayers should be recited for 40 days continuously and, when it is possible, after six months and one year. After the burial of the dead, there are prayers on the 3rd, 7th, 12th, 20th, 30th, 40th and 80th days (cp. ↗*täzkar*). The main prayer is on the 40th day for men and 80th day for women.

Merawi Tebeje – Red.

Fətḥat zäwäld

F. (ፍትሐት፡ ዘወልድ, 'Absolution of the Son'), is a prayer of absolution recited by the priest over the faithful at confession and at the end of the rite of offering up incense. It is part of the Coptic Ordinary of the Mass, where it has the Arabic title *taḥlīl al-ibn*. The prayer is based on the authority given by Our Lord to the Apostles and their successors, the clergy, in Jn 20:22–23, to absolve repenting sinners from their sins. As it is part of the preparatory service, or Ordinary of the Mass, of the Ethiopian Orthodox Church liturgy, one finds it copied in most manuscripts of the missal. It has also been published in Ethiopia more than once and an abbreviated version of it is found in the *Mäṣḥafä qəddase* published in the Vatican City in 1945. Marcos Daoud and Märsəᶜe Ḥazän's translation of the missal into English and Arabic in *The Liturgy of the Ethiopian Church* includes this prayer.

Getatchew Haile

Feudalism

F. is generally defined as the system of polity which prevailed in Europe during the Middle Ages and was based on the relation of superior and vassal arising out of the holding of lands on condition of homage and service. That polity has been described by Marc Bloch (1962, vol. 2, 446) as follows: "A subject peasantry; widespread use of the service tenement (i.e. the fief) instead of a salary ...; the supremacy of a class of specialized warriors; ties of obedience and protection which bind man to man and, within the warrior class, assume the distinctive form called vassalage; fragmentation of authority – leading inevitably to disorder; and, in the midst of all this, the survival of other forms of association, family and State ...".

A number of observers have seen striking parallels between this description and historic Ethiopian society. The historic Ethiopian state rested on a subject peasantry, from whose production it drew its sustenance. This relationship is summarized by the Amharic apposition: አረሰ/ነገሠ (*arräsä/näggäśä*, 'plowing/ruling'). ↗*Gʷəlt* is the term which, historically, most generally characterized the holding of land by Ethiopian rulers and soldiers. This term, which entails obligations of service, has often been rendered as "fief". While in theory all *gʷəlt*-holding emanated from the royal court, in practice regional rulers in Ethiopia, in turn, granted land to their subordinates in a process known in Europe as "sub-infeudation".

A warrior ethos dominated historic Ethiopian society as numerous noble titles attest: ↗*fitawrari* ('leader of the vanguard'), ↗*däǧǧazmač* ('commander of the front'), *qäññazmač* ('commander of the right'), *grazmač* ('commander of the left'; s. ↗*Azmač*). The French traveller Arnauld d'Abbadie (AbbSéjour vol. 1, 367) remarked: "The social form of the Ethiopians is completely military". From the 14th cent. onward, the core of the royal Ethiopian army was the ↗*č̣äwa*, a term frequently translated in this context as 'regiment'. The *č̣äwa* were specialized soldiers, who were supported either by grants of land or by the service obligations of subject peasants. One specialized soldier was the ፈረሰኛ (*färäsäñña*, 'horseman'), who, in this context, corresponds to the European mounted knight, without, to be sure, the elaborate armour of the latter. So far as ties of obedience and protection are concerned, historic Ethiopian society was markedly hierarchical, subordinates looking up to superiors as ጋሼ (*gašše*, 'my shield'). In the ritual of European feudal submission, the hands played an important symbolic role; the Amharic for tributary obeisance is እጅ፡ መንሻ (*əǧǧ mänša*, lit. 'raising the hand'). Authority was fragmented: ከጎንደር፡ ንጉሥ፡ ያገር፡ አምባራስ (*kägondär nəguś, yagär ambaras*, 'the local ruler [is more powerful] than the king in Gondär'). Even at the height of royal power, in the reigns of such rulers as Zärᵓa Yaᶜəqob (r. 1434–68) and Iyasu I (r. 1682–1706), the court operated through the nobility, which was based in the countryside and not at court. And the regional base of noble power is seen in recurrent centripetal episodes – following the reign of Śärṣä Dəngəl (d. 1597) and, most notably, in the period known as the ↗*Zämänä mäsafənt* (1769–1855). Finally, the concept of the state is an enduring one throughout Ethiopian history – the medieval Solomonic rulers evoking the legacy of Aksum; the idea of the state persisting through the trials of the period from 1527 to 1632, marked as it was by ↗*ǧihād*, ethnic migration and religious conflict; and the persistence of Solomonic norms through the *Zämänä mäsafənt*.

Social relations of production, a concern of Marxist scholarship, also suggest parallels between the Ethiopian and European examples. The Ethiopian ruling class was supported, to an overwhelming degree, by extracting surplus agricultural produce from the country's peasantry and herders. *Gʷəlt* land-holding entailed property rights, *gʷəlt*-holders, at least in some instances, being granted rights in specific plots of land, rights which they could, and did, transfer by inheritance, gift and sale. In some instances these rights were exclusive to the point of overriding any pre-existing rights which may have been claimed by cultivators. More commonly, *gʷəlt* rights co-existed with the inherited, ↗*rəst* rights of peasants to have access to agricultural land. In either case, *gʷəlt*-holding entailed the payment of agricultural goods as tribute or rent by the producers to the *gʷəlt*-holder. *Gʷəlt*-holding, in turn, was a constituent characteristic of the Ethiopian ruling class. However, the extent to which the status of Ethiopian peasants paralleled the status of medieval European "serfs" was a contested one.

A byword of class relations was ሰብእ፡ ሀራ፡ ወገባር፡ ምድር (*säbᵓ ḥarra wägäbbar mədər*, 'Man is free, land is tributary' in one rendering; Conti Rossini 1893:807, 811). The saying first appears in an edict of *aṣe* Zädəngəl at the beginning of the 17th cent. in a period of profound turmoil. It is usually understood as an institutional attack by the emperor on the military regiments, or *č̣äwa*, whose rebellious insubordination contributed so much to the disorder of the times. By contrast, Zädəngəl is held to have sought a general recruitment from the peasantry. It is most probable that the saying was already in circulation as an assertion of the absence of a "serf" status on the part of the peasants, whose position was that obligations were tied to the land, not to individuals. The slogan re-appears in the reign of *aṣe* Iyasu I and at several points in the 19th cent. Nevertheless, some ambiguity remains. In early 20th-cent. Ethiopia, the term ↗*gäbbar* had two quite divergent meanings – in such provinces as Goǧǧam, Bägemdər and Təgray it commonly described a self-consciously "free", tribute-paying farmer; whereas in southern Ethiopia its connotation quite closely approximated that of "serf", the southern *gäbbar* being subjected on terms of service to individual overlords.

Modern Ethiopia entered its relations with Europe in a period marked by political fragmentation. Europeans encountered a society dominated by competing nobles, whose great preoccupation was military activity, so it is not surprising that they found many parallels between contemporary Ethiopia and their Middle Ages. The structure and ethos of Ethiopian society changed little throughout the 19th and into the 20th cent. However, the restoration period of Ḫaylä Śəllase I's rule, which started in 1941, saw a systematic dismantling of most elements of "Ethiopian feudalism". This period saw a rapid development of the modern state, one increasingly centralized. The link between social and political power was increasingly weakened, while the state bypassed regional nobles through the creation of a national bureaucracy. Tribute was increasingly converted into government-collected taxes paid in cash. The status of serf-*gäbbar* was eliminated. So, too, in 1966 by imperial decree was the *gʷəlt* form of land-holding. Ethiopian society on the eve of the 1974 Revolution had lost much of its "feudal flavour", though its marked inequality remained.

Filəp̣p̣os

F. (ፊልጶስ, ca. 1274–1348) was the third abbot of Däbrä ᶜAsbo (later known as ↗Däbrä Libanos of Šäwa). According to his hagiography (*Gädlä Filəp̣p̣os*, perhaps of the first half of the 15th cent.), he was born in Zəma, in the Lat region, the population of which was predominantly pagan. His parents, Christians, sent him to a teacher; while a boy, he miraculously killed a local warlock. He decided to become a monk, went to Däbrä ᶜAsbo and, after three years of noviciate, received the habit and ↗*askema* from *abunä* ↗Täklä Haymanot (this is also recalled in Täklä Haymanot's hagiography); soon he was ordained as a priest. F. succeeded Abbot ↗Elsaᶜ in 1314 when the latter died shortly after assuming office. He moved a part of the community from the cave that was its initial shelter, and organized a coenobitic community nearby; during the 34 years of his tenure, Däbrä ᶜAsbo developed into one of the major monastic centres of Ethiopia (Turaiev 1908:190–93).

F. had close links to the Metropolitan *abunä* ↗Yaᶜəqob and assisted in the organization of his program of missionary activities. The *Gädl* reports that F. dispatched eleven pupils of *abunä* Täklä Haymanot – called in the sources 'teachers' (*mämhəran*) or 'hand-appointed' (*nəburanä əd*) – to build new monasteries and spread ↗Christianity in respective regions of Šäwa and provinces further to the south (Turaiev 1908: 198, cp. Fiaccadori 1988:142 and n. 13ff.; 146f.). *Abunä* Yaᶜəqob appointed F. head over them and elevated him to ↗*liqä kahənat* and ↗*ep̣p̣isqop̣p̣os* (notwithstanding the resistance of the royal church ecclesiastics, *kahənatä däbtära*). Däbrä ᶜAsbo thus became the centre of a monastic congregation, organized on the basis of the regular veneration of Täklä Haymanot's grave (according to the *Gädl*, however, this practice was gradually abandoned under *əččäge* Tewodros and ↗Yoḥannəs Käma).

Like some other monastic leaders, F. is remembered for his clashes with *aṣe* ↗ᶜAmdä Ṣəyon I, whom he openly reproached for his marital practices and his interference in church matters. He was tortured, but did not recant his accusations; along with his disciples, he was sent into exile, probably to ↗Wäläqa. He preached to the local population and worked miracles (e.g., the healing of the daughter of Tämben's governor); then, fearing his growing popularity, the Emperor repeatedly sent him further north (Qʷärqʷara, Zälan, Təgray). Under *aṣe* ↗Säyfä Arᶜad (in the time of *abunä* ↗Sälama "the Translator") F. suffered further persecutions: he spent some time in custody at ↗Zʷay and was expelled from one province to another. Fearing the Emperor, the monks of F.'s own monastery (administrated by Həzqəyas at that time) allowed him only a short stay. Aged 74 years and nine months, F. died in exile on 28 *Ḥamle* and was buried in Ḥaqqalet, Təgray.

The *Gädlä Filəp̣p̣os*, published from a single ms. (BritLib Or. 728, 18th cent., s. Turaiev 1908), is supposed to have been written under the tenure of ↗Yoḥannəs Käma who is mentioned in the colophone, yet this is most probably a recent composition. Cerulli recorded another manuscript of this work (ms. VatCerAeth 167, fol. 3r-74v), possibly of an earlier date, with the colophone explicitly mentioning, in addition to Yoḥannəs Käma, also Däbrä ᶜAsbo (an old name of Däbrä Libanos), *abunä* ↗Bärtolomewos and the 76th "Year of Grace" [1424/25 A.D.] (Cerulli 2004:319). The contents of this text has not been studied so far. Ms. EMML 6771 (16th cent.) contains still another copy of the *Gädlä Filəp̣p̣os* (fol. 3r-74v), possibly identical to the text recorded by Cerulli.

Attached to the *Gädl* in EMML 6771 there is a story of the translation of F.'s relics to Däbrä Libanos (fol. 77r–87v) which took place after *aṣe* ↗Əskəndər gave his permission to abbot ↗Märḥa Krəstos, some 100 years after F.'s death. This text, commissioned by *əččäge* ↗P̣eṭros (1496–1523), is preceded by a summary of F.'s life with details absent in the published version of the *Gädl* (Getatchew Haile 1990:75f.; Cerulli 1943:234ff.). The same short version of F.'s Vita seems to be found in the 16th-cent. manuscript from the Schoyen Collection (Mercier 2000:64f.).

Steven Kaplan – Red.

Filəp̣p̣os

F. (ፊልጶስ), a 14th- early 15th-cent. saint and prominent member of the Ewosṭatean movement, was the founder of the monastery of ↗Däbrä Bizän in Ḥamasen (today's Eritrea). The main source on F.'s life is his hagiography (*Gädlä Filəp̣p̣os*), composed not before the reign of *aṣe* ↗Zärᵓa Yaᶜəqob (Conti Rossini 1901:67f.; cp. LusStud 97; but KinBibl no. 64). Besides, there are data on F. in the "Chronicle of ᶜAddi Näᵓammən" (KolTrad 1, A23-24; cp. a related 15th-16th cent. chronological note in a manuscript from ↗Däbrä Dəḫuḫan, s. Lusini 1998:29f.), a commemorating note on F. in the *Sənkəssar* of ↗Däbrä Wärq (Schneider 1978) and oral traditions (all summarized in LusStud 97–107).

According to his *Gädl*, F. was born ca. 1322/23 in the time of *aṣe* ↗ᶜAmdä Ṣəyon. His father was Yərdəᵓannä Əgziᵓ from Ṣəraᶜ (he died shortly before his son was born) and his mother Mägdälawit, both "from the children of Iyankäre". *Abunä* ↗Ewosṭatewos had announced to Mägdälawit the coming birth of F. and his future fame. After some time Mägdälawit left the worldly life and sent F. to a monastery, too. Christ appeared to F. and ordered him to go to ↗Däbrä Ṣärabi, to Bäkimos, a pupil of Ewosṭatewos. F. became a "spiritual son" of Bäkimos; as the vita states, however, F. received the *qobᶜ* and ↗*askema* "from the hands of Our Saviour, speaking to him in the appearance of *abba* Ewosṭatewos" (Conti Rossini 1901: 79). Soon F. left the monastery and wandered into the desert (in Afä Gaḥgaḥ with *abba* Samuᵓel [of Waldəbba], ᶜAbiy Wägr in Bäräka, Təkul, Dubane and among the ↗Kunama; Conti Rossini 1901:81; LusStud 99). Then he settled in the monastery of *abba* ↗Absadi, another pupil of Ewosṭatewos. About 30 years old, he entered the desert (in Gʷäda) once again. Gradually F. acquired pupils; in 1373/74, after passing the place of Gärami in Ḥamasen, he founded a monastery, which became known as Däbrä Bizän, the stronghold of the ↗Ewosṭateans. The monastery became prosperous; F. imposed upon the monks the strictest discipline according to the "order of the Apostles". The monks did not have any private possessions; their manifold household activities were organized "according to the rules of Pachomius". Their ascetic practices were also the subject of detailed organization (Conti Rossini 1901:99f.).

The power of F.'s monastery increased to the degree that the ruler of ↗Dahlak, Malek (Arab. *malik* 'king'), sought good relations with F., crucial for the Muslim traders operating from Massawa (s. LusStud 100f.). According to the *Gädlä Filəp̣p̣os*, the community had 24 churches; the monks preached among the neighbouring "Barya" (↗Nara) and some of them (Erməyas, Yəbarkannä Krəstos etc.) were sent to establish a new monastery, a task they fulfilled struggling against Ḫətutay, a local Muslim ruler. F.

propagated his vision of ecclesiastical life, with strict adherence to the orders of the Apostles and great monastic fathers, and also defended the holy ↗Sabbath rest on two days, including Saturday – **ቀዳሚ፡ ሰንበት** (*qädami sänbät*). He united around Däbrä Bizän the leaders of several other communities (Conti Rossini 1901:107; LusStud 102f.).

The activities of F. aroused the animosity of the local clergy and attracted the attention of *aṣe* ↗Dawit II and *abunä* ↗Bärtälomewos. Aged and sick, F. was summoned to court (some sources report that he was one among twelve heads of Ewosṭatean monasteries who were requested to come for interrogation, s. Lusini 1998:30). The *kahnatä däbtära* (the priests of the royal camp church), *abba* Matyas of Šəmagle and Zäkaryas of Bärbäre immediately made accusations against him in front of the Metropolitan (Conti Rossini 1901:111f.), the main charge being the veneration of "two Sabbaths". F. refused to renounce his teaching and was imprisoned in ↗Däbrä Ḥayq Ǝsṭifanos (ibid. 116). However, after his victory over ↗Saʿadaddīn Abū l-Barakāt, *aṣe* Dawit changed his attitude to the Ewosṭateans in general and F. in particular. In 1403/04, after the death of *ʿaqqabe säʿat* ↗Śäräqä Bərhan, F. was set free (ibid. 118f.; Taddesse Tamrat 1970:103). The following four years F. spent in Amhara, preaching and working miracles. Then he headed to his monastery, passing through ↗Mäṭära, ↗Ǝgäla and ↗Säḥart(i) and concluding "testaments" (↗*Kidan*) with the local people (Conti Rossini 1901:119–22). F. died in 1406, on 5 *Näḥase* (BudSaint 1194), at the age of 84, having installed *abba* Yoḥannəs as his successor.

There is a later charter of *aṣe* ↗Yoḥannəs IV confirming land possessions granted to Däbrä Bizän by DawitII during the tenure of F. (Bausi 1995:29f.). In addition to the manuscript edited by Conti Rossini (1901), two early 16th-cent. copies of the *Gädlä Filəp̣p̣os* (one with an image of F.) have recently been discovered (Bausi 1995: 42–47).

Filəp̣p̣os

Abunä F. (**ፊልጶስ**, b. ʿAddi Qaš, Səfag, Eritrea, 1896, d. 1983, Addis Abäba) was the first Ethiopian bishop in ↗Jerusalem. Born as Gäbrä Ab Mängəśtu, F. became a monk at the monastery of *abunä* Ǝndrəyas, where he received a traditional ecclesiastical education. While *mämhər* Maḥṣäntä Śəllase was head of the Ethiopian monastery in Jerusalem (1906–23), F. served as its ↗*mäggabi*. He was a *liqä liqawənt* before the Italian occupation of Ethiopia in 1936. Having pronounced the opinion that the occupation was illegal, he was exiled to Italy. When he returned to Ethiopia, he was consecrated bishop by *abunä* Yoḥannəs on 12 September 1940 together with four other priests. After Ḫaylä Śəllase I's return to Ethiopia in 1941, in 1947 he was appointed the first Ethiopian bishop in Jerusalem, where he arrived on Easter that year. His first task, which he accomplished successfully, was a delicate one: to take care of the return to Ethiopia of some 30 monks and nuns in the Ethiopian monastery who had become Italian citizens and as such were now living in British mandatory internment camps. After that, he also proved by publishing various documents the Ethiopian ownership of ↗Dayr as-Sulṭān.

In 1956, he bought land at al-ʿAzarīya (Bethany) for a new Ethiopian monastery and a cemetery. Participating in an ecclesiastical assembly at Addis Abäba in 1965, he was retained there for the rest

Abunä Filəp̣p̣os; from Filəp̣p̣os 1960 of his life because of a theological quarrel between him and some members of the Holy Synod, who accused him of being too close to the Roman Catholic Church in Christological matters.

Filkəsyos

F. (ፊልክስዮስ, or ፊልክስዩስ, Filkəsyus) is the title of one of the most important texts of Ethiopian ↗monastic literature. It belongs to the three monastic writings which are traditionally called *Mäṣaḥəftä mänäkosat*, the other two being ↗*Arägawi mänfäsawi* and *Mar Yəsḥaq* (↗Isaac of Nineveh). Still today these ascetic writings remain basic works for the religious and spiritual education of Ethiopian monks. All three are often found copied together in the same manuscript.

The full title of the F. reads: ተስእሎታተ፡ ዜናሆሙ፡ ለአበው፡ መነኮሳት፡ ግብጻውያን። ወጸሐፎ፡ ቅዱስ፡ ፊልክስዮስ፡ ሶርያዊ፡ ኤጲስ፡ ቆጶስ፡ ዘመንበግ ('Questions about the stories of the Fathers, Egyptian monks. Holy Filkəsyus the Syrian, bishop of Mänbäg, wrote it', s. ms. BritLib Orient. 759, fol. 81ra, 5–9); it states that its author was Philoxenus of Mabbogh, an anti-Chalcedonian theologian (ca. 450–523) who wrote in Syriac. Philoxenus's authorship was accepted by Cerulli (CerLett 140) and Ricci (in: CE vol. 3, here 976b). In reality, however, the F. is an Ethiopic version of a work written in Syriac by Dāḏīšōᶜ Qaṭrāyā (i.e. "of [modern] Qaṭar"), an East Syrian ("Nestorian") monk of the monastery of Raḇ Kennārē, who lived in the 7th cent. (Baumstark 1922:226f.; Sims-Williams 1994:38f.). This work is in turn a commentary on ᶜƎnānīšōᶜ's (another 7th-cent. East Syrian author) compendium of early Egyptian monastic texts called *Paradise of the Fathers*, which included four parts: (1) the *Historia Lausiaca* of Palladius, (2) another collection of stories of monks also attributed to Palladius, (3) the *Monastic History* by ↗Rufinus of Aquilea, but ascribed to Jerome, and (4) a series of apophthegmata. Dāḏīšōᶜ Qaṭrāyā's *Commentary* is divided into two books, the first being a complement to parts 1–3 of ᶜƎnānīšōᶜ's work, and the second corresponding to the latter's part 4; it is composed in the form of questions and answers. It became a very popular monastic reading and was soon adopted by the West Syrian ("Jacobite") monks. In their version the name of the author as well as that of his monastery was suppressed in order to make the reading more palatable to the Jacobite readers. Instead of an "Old Man" of the original (Sims-Williams 1994:40f.), one of the answers was attributed to Philoxenus and this is the reason why the whole work was subsequently given to this author (though the known Syriac manuscripts – all of them acephalous – contain no hint to this effect).

Dāḏīšōᶜ's work was quite voluminous and, with time, abbreviated versions were composed. One of them, ascribed to Philoxenus, was translated from Syriac into Arabic. On the basis of the Arabic, the Gəᶜəz version was produced, in which the entire work is named after Philoxenus. The Ethiopic form with the ending *-əyos*/*-əyus* instead of *-ənus* is owed to the Arabic Vorlage, where the letters *Yāʾ* and *Nūn*, deprived of their diacritical points, looked the same.

According to the colophon of at least four manuscripts (out of 17 presently known, dating between the 17th and the 20th cent.), the work was translated into Gəᶜəz by the Metropolitan *abunä* ↗Sälama "the Translator" (van Lantschoot in: PICES 1, 400). The translation is dated to the year 1021 of the Era of the Martyrs, corresponding to 1304–05 A.D. Since, however, the tenure of Sälama falls within the years 1348–86, the sign for 20 (፳) should probably be replaced by that for 80 (፹) – an emendation (1081 Era of the Martyrs) that would give the year 1365 A.D. (s. LöfUpp 106).

The F. is written in the form of questions asked by "brethren", i.e. monks (introduced with the phrase ይቤሉ፡ አኃው, *yəbelu aḫaw*, 'the brethen said'), and answers of an "interpreter" (መተርጕም, *mätärgʷəm*). Some of the questions have additional explanations or comments by an "Old Man" (አረጋዊ, *arägawi*, or አረጋይ, *arägay*). In some of the manuscripts the questions are numbered, the figures ranging between 175 (ms. EMML 418, of the 18th or early 19th cent.) and 251 (ms. EMML 15, of the 17th or 18th cent.), but notwithstanding these differences, the text seems to be identical. The material is grouped into chapters, the division probably following that of ᶜƎnānīšōᶜ's *Paradise of the Fathers*.

The monastic authorities mentioned in the text are mostly Egyptian fathers, like Anthony (Ǝnṭonəs), Pambo (Bawmo or Bamwo), Sisoes (Sisoy), but also Syrian, like Awgin (Awkin [= Eugene]). The matters that the "brethren" inquire about are, e.g., whether anachoretism is better than coenobitism, or why Palladius did not write the story of *mar* Awkin in the *Book of Paradise*.

The portion corresponding to the second part of Dādīšōᶜ's work contains nine chapters, on such topics as prayer and vigilance (**በእንተ፡ ጸሎት፡ ወትጋህ**, *bäʾənta ṣälot wätəgah*), rules of (spiritual) combat (**ሥርዐተ፡ ተጋድሎት**, *śərʿat tägadlot*), repentance (**ንስሓ**, *nəśśəḥa*) and working miracles (**ምግባራተ፡ ተአምራት**, *məbaratä täʾamərat*).

In Ethiopia, the popularity of the F. is confirmed by the fact that there exists an additional commentary to it, in both Gəᶜəz (ms. EMML 2837, 17th cent.) and Amharic (ms. EMML 2305, 18th–19th cent.). There is no critical edition of the Gəᶜəz text, as is the case for the Syriac text of Dādīšōᶜ Qaṭrāyā and its Arabic version.

Filmona

F. (**ፊልሞና**) was a holy monk from Təgray who was active in the regions of ↗Ǝndärta and ↗Tämben. He lived in the second half of the 14th cent. during the reigns of ↗ᶜAmdä Ṣəyon I and ↗Säyfä Arᶜad. The Metropolitan who ordained him deacon was *abunä* ↗Sälama "the Translator". F. was the nephew and disciple of ↗Tadewos of Bärtärwa. He served as a monk at Däbrä Maryam and Däbrä Bärtärwa, and later founded the monastery of Däbrä ᶜAysäma, all in Tämben. He is said to have also met ↗Samuʾel of Däbrä Halleluya. F.'s Acts, probably composed at Däbrä ᶜAysäma in the first half of the 15th cent., were to be read on 22 *Täḫśaś*, the day of his death. His successor was Ǝndrəyas.

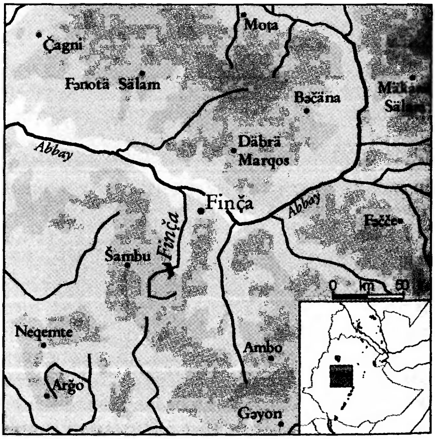
Finča

F. (**ፊንጫ**, Orom. Fincaa) is the name of a town as well as of one of the main tributaries of the ↗Abbay river. The town of F. (9°54' N, 37°27' E) is situated on the upper bank of the river F. at 2,320 m A.S.L. in Horo Guduru *awrağğa* in ↗Wälläga province.

The river F. has a total catchment area of 4,089 km² (BECOM 1998). It is a perennial river with an average annual discharge of 13,29 m³/second as gauged near ↗Šambu town (Ministry of Water Resources 2001). It originates from the highlands of Eastern Wälläga, bordered to the south by the ↗Gibe river basin. The catchment area of the F. river has one of the highest levels of precipitation in Ethiopia; around 2,000 mm rainfall annually (EMAtlas). The drainage basin



Finča; photo 1997, courtesy of the author

is rolling and undulating and is highly cultivated in its upper watershed.

A multipurpose dam was constructed close to F. town in its upper catchments area in ca. 1973. This dam is one of the major hydroenergy stations in the country, along with other major sources from the ↗Qoqa dam in the Awaš river and Mälka Wakena dam on the ↗Wabi Šäbälle river. The dependable installed capacity of the hydropower is 100 Megawatts with an average energy capability of 660 Gigawatts per year (AGRES 2001). There are also other identified sites for further hydropower development in its catchment area in the future. The water from the F. dam is also used for large-scale sugar-cane irrigation activity. The sugar-cane factory constructed close to the irrigation field near F. town is one of the major producers of sugar in Ethiopia (BECOM 1988).

Fine Arts School

The Addis Abäba F.A.S. (Amh. የአዲስ፡ አበባ፡ ሥነ፡ ጥበብ፡ ትምህርት፡ ቤት, *Yäʾaddis Abäba śənä ṭəbäb təmhərt bet*) was founded in 1958/59 by Allä Fälägä Sälam (b. 1929), who had studied art at the Art Institute of Chicago, USA. He became F.A.S.'s first Director. The objective of the School, which was under the Ministry of Education and Fine Arts, was to train professional artists and art teachers for the Ethiopian schools. There were only a few subjects offered at the very beginning: drawing, painting and a small number of academic subjects. Foreign artists of the staff provided the impetus for new means of expression and expanded the school's curriculum.

Since the 1960s, Ethiopian artists increasingly have worked as instructors, several of whom had graduated from the F.A.S. and went abroad for further studies. The most important, who, however, never attended the F.A.S., were ↗Gäbrä Krəstos Dästa and Alexander Boghossian, known as "Skunder" (↗Əskəndər). Gäbrä Krəstos was influenced by German Expressionism while in Cologne (1958–61) and Skunder was exposed to Surrealism and the art and philosophy of Negritude while in Paris (1957–66). Both artists influenced a whole generation of modern Ethiopian artists.

After the Revolution of 1974, the School was placed under the control of the Ministry of Culture and Sports Affairs and Abdäl Rähman Šärif (b. 1939) became the new Director. Education to diploma originally took five years, but after the Revolution, the curriculum was expanded and the entire diploma-course lasted only four years. The budding artist was not only expected to have talent and creativity, he had also to be class-conscious in the spirit of Marxism-Leninism.

After 1991, after the takeover by the Ethiopian People's Revolutionary Democratic Front, the school came under different administrative structures and in 1998 it was incorporated into the Addis Abäba University system. The curriculum is now designed to meet the requirements that would allow for its graduates to be awarded the degree of Bachelor of Arts in Art Education and the degree of Fine Arts, respectively. This has brought a change in name and the school is now called the Addis Ababa University School of Fine Arts and Design.

Finfinnee

In the oral tradition of the ↗Oromo, the "Horaa F." (the 'source of F.') was considered as one of the six holy springs owing to the medical properties of its thermal mineral water. The term itself is onomatopoeic, imitating the sound of the sprinkling water. Today, "the source of F." is Fəlwəha (Amh.: 'hot water'), the spring and locatity in the middle of ↗Addis Abäba.

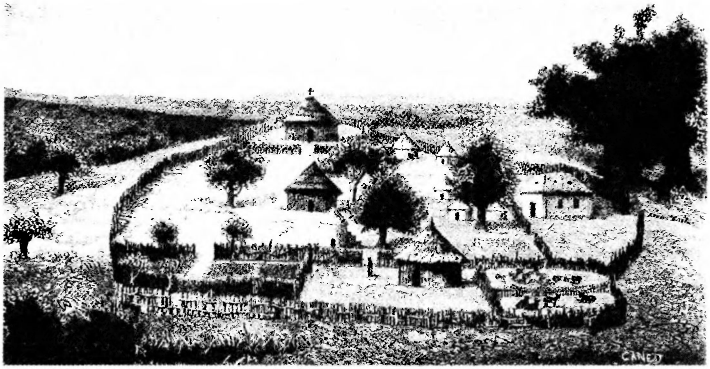
From the 17th cent. onward, the F. piedmont was inhabited by the Tuulama subgroups ↗Abbičuu and Galaan. Up to the early 19th cent. they were in recurrent conflict with each other. *Nəguś* ↗Sahlä Śəllase of Šäwa in his expansion southwards sided with the Abičuu and thus could include F. in his realm. One of the first mentions of F. in historical sources is the report of the traveller ↗Lefebvre, who noted that F. was one of the newly acquired Oromo provinces of Sahlä Śəllase (Lefebvre 1845, vol. 3, 13). The population had submitted not long before 1843 (ibid., vol. 2, 239); in that year Lefebvre visited it with the King and his army. F. is described as a plain with thermal springs, surrounded by mountains, hills and the river Aqaqi, and crossed by the rivers Qabänna and Bulbula. F. lay southwest of ↗Ǝnṭoṭṭo and east of the "Gaara" ('hill', probably meaning the Dalaatii hill, an assembly-place, later that of Mənilək's ↗*gəbbi*), and directly "neighbored" the Galaan Oromo. Yet, according to oral tradition, F. itself was at that time inhabited by Galaan; therefore, it seems that Lefebvre uses the term F. for those Galaan inhabiting F. Unlike those Christian Oromo who voluntarily submitted to Šäwa, the F. Oromo did not enjoy royal protection and were living in poor conditions.

In March 1843 Sahlä Śəllase discovered ancient church ruins in F. and planned to build a new church on the old foundations – symbolizing the continuation of an older Christian presence in the area and thus claiming F. as a historical part of his Christian kingdom (Lefebvre 1845, vol. 2, 240, 426). By the time of the first foreign visitors, these ruins were considered a unique example of an "advanced civilization" in the south (d'Abbadie 1890:278ff., 282). Later reports of Catholic missionaries contain detailed descriptions of these ruins "close to the Dildila hill" (as the main part of Ǝnṭoṭṭo was called). It was a square building measuring over 9 to 8 m, with three naves and possibly with a vault. Locally the place was known as Birbirsaa ('cypress tree') and was also called *Maariyaam güftii* ('St. Mary'). In the late 1860s local tradition attributed this former church to *aṣe* Zärᵓa Yaᶜəqob and it was said to have been destroyed by *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī, called "Grañ" (ibid.; Foucher 1986:2f., 5). Birbirsaa, with its ancient sycamore tree, served as a traditional assembly-place of the local Oromo. The plan of building a church on this site, however, was realized only much later.

The king built two churches on two other Oromo assembly-places in the F. area. In a territory called Ǧammoo, near the rock-hewn church of ↗Yäkka Mikaᵓel in the mountain chain near Ǝnṭoṭṭo, Qäranyo Mädḫanä ᶜAläm was founded in 1816 A.M. [1823/24 A.D.] and put under *abba* Zäwäldä Maryam of the ↗Ǝtissa Däbrä Ṣəlaləš monastery in Bulga. The second church was Qaallittii Saalloo Giyorgis. Both were burnt by the locals, then re-erected and protected by "Gondäre" gunmen. The slaughter of these (about 300 soldiers) in one overnight action was followed by revenge expeditions (cp. Haile Gabriel Dagne 1986:8).

After the inclusion of F. into the Šäwan kingdom, the Qortee lineage of the ↗Gullallee Oromo, another Tuulama subgroup (of the Ǧəddaa), migrated into this area and pushed most Galaan and Abičuu to the east and south (e.g., to Bišoftuu, Aqaqi). The territorial term "F." was then, in the 1860's, also used to designate the local Gullallee Oromo subgroup (s. d'Abbadie 1890:277). The only two villages in the plain of F. were, at that time, Gullallee (still today a name of two quarters in Addis Abäba) and "Mande" (ibid. 283, perhaps a misreading of Marii, an area in today's Addis Abäba).

In 1868 Mənilək – in that period residing at ↗Ləčče, about 100 km north-east of F. – suggested to the Capuchin Fr. Taurin de Cahagne that he should open a mission at F. among the Gullallee. After visiting the area, Fr. Taurin described "Finfini" as being "the most agreeable of the country ... it is not too cold, water is plentiful (and the area is) wooded ... I visited the territory and chose a hill covered with magnificent trees; but my choice was determined by the discovery



Finfinnee mission in the 1870s; from Massaia 1939, vol. 10:31

of a church destroyed by the invasion of Grañ". With the permission of the Oromo people, who owned the land, he built a Catholic church that was dedicated to Mary and consecrated on 25 July 1869. In a "ritual of adoption", he was also integrated into the local Gullallee group, led by Abbaa Obboo (Foucher 1986). Missionary education was started; later even some former students of the ↗Collège des Galla in Marseille arrived in the 1870s (Massaia 1939:285). Oromo texts, written by Taurin, were used in church services, among them the canticle *Maariyaam kan Birbirsaa* (Foucher 1986).

On 26 March 1878, *aṣe* Yoḥannəs IV crowned Mənilək as *nəguś* of Šäwa. Intending to submit permanently the southern Oromo, Mənilək needed to reside in a more strategic site than ↗Ankobär, where he held court. The first Oromo to submit were the Gumbičuu (from the Ǧəddaa Tuulama, as the Gullallee), the Galaan and the Gullallee – thus, it was on their mountainous stronghold of Ǝnṭoṭṭo, above F., that he established his residence in 1879. In the same year, *aṣe* Yoḥannəs IV expelled, by an edict dated 3 October, Mgr. Massaja, Mgr. Taurin, his coadjutor, and Fr. Louis de Gonzague. Thus the missionary station of F. (also called "Birbirsaa-F.") had to be given up and the church fell into disuse. Later, in 1896, Mənilək ordered the building of an Orthodox church on the site, consecrated in 1897, with *ras* Mäkʷännən as its first ↗*gäbäz* ('head administrator'). This was the church of ↗Gännäta Ṣəge Giyorgis, which was again rebuilt in 1906–11 (Foucher 1986:9; to become later the coronation church of Ḫaylä Śəllase I, s. Haile Gabriel Dagne 1986:11).

The residence of Ǝnṭoṭṭo was suitable from a strategic point of view, but in the rainy season the site was most unpleasant. With an entourage of about 50,000, the mountain quickly became deforested. During Mənilək's military campaigns in Arsi and Harär (1886–87), *ətege* ↗Ṭaytu Bəṭul spent most of her time at the nearby hot springs of Fəlwəha on the lower grounds of F., finding there relief from her acute rheumatism. In 1887, she built a house on a site nearby amid the luxurious mimosa trees and called it "Addis Abäba". Although F. could not yet be called a capital, an estimated 10,000 to 15,000 people moved down from the mountain and settled in the vicinity. But even for his coronation as emperor of Ethiopia, on 3 November 1889, Mənilək returned to Ǝnṭoṭṭo. Only gradually did Addis Abäba assume the role of an established capital.

The name F. is still used by local Oromo and employed as an alternative name of Addis Abäba. After 1991, in official documents of the regional state of Oromiyaa, "Addis Abäba" is often replaced by "F.". The stream is known today by its Amharic name Bantiqetu.

Finnish Evangelical Lutheran Mission

The F.E.L.M. (Finnish: Suomen Lähetysseura or SLS), the oldest of the Evangelical Lutheran mission agencies of Finland (founded in 1859), started co-operation with the ↗Ethiopian Evangelical Church Mekane Yesus (EECMY) on 22 October 1968. The first missionaries were sent in January 1969.

The mission work began in Hośaʿəna (↗Hossäyna; first Kambaata Synod, now South Central Synod) where the F.E.L.M. missionaries co-operated with local people and other missionaries in several parishes and taught in the Bible School and in the Theological Seminary. The Bible translation into ↗Kambaata and ↗Hadiyya was started with their participation. The School for the Deaf was established in 1982 with the support of the F.E.L.M. In 1976 the development work was started, first in Tunto with a health-care clinic.

Since 1993 F.E.L.M has been co-operating with the Illubabor Bethel Synod, with special emphasis on outreach work, women's work and the training of pastors and lay-leaders of the church. Teaching in the nursing school in Aʾira in the former Western Synod, now Birbir Dilla Synod, started in 1993.

The F.E.L.M. participates in community-based development-work projects with the support of Finnish International Development Aid. This work has included, since 1991, several ↗HIV/AIDS programmes besides traditional health care, literacy work, social work with day-care centres for children, family planning and marriage work. The mission opposes such traditions as genital mutilation of women (↗Circumcision, female) and tries to prevent unbalanced nutrition. The newest area is the North Central Ethiopia Synod since 2001, which work among AIDS orphans in ↗Däse.

In 1970s two other Finnish missions, the Finnish Lutheran Mission (F.L.M.) and the Finnish Lutheran Overseas Mission (F.L.O.M.), joined in the work of the EECMY. In 2004 there were about 35 Finnish missionaries in Ethiopia.

Fiqṭor

F. (ፊቅጦር, Arab. Buqṭur) was, according to the Arabic *History of the Patriarchs* and the Ethiopic ↗*Sənkəssar* (3 *Mäggabit*), a 10th-cent. monk of Syrian origin who had been driven out of the Egyptian monastery of St. Anthony (Dayr Anbā Anṭūniyūs, from where many metropolitans were selected for Ethiopia) with his fellow conspirator Minas. After that, F. and Minas went to Ethiopia, where they presented letters supposedly from Patriarch Cosmas III of Alexandria (923–34). It happened that the late king of Ethiopia had given responsibility for the choice of his successor to Peter the Metropolitan and the Metropolitan had selected the younger candidate (his name is sometimes thought to have been "Tabtahāğ", but this is nothing else but erroneously written Ar. *bibtihāğ* 'with joy'). The letter by Minas and F., presented to the unsuccessful older candidate, claimed that Peter was an impostor and that Minas was the legitimate bishop. This invalidated Peter's selection of the younger heir and, with the help of the army, the elder brother took the throne. Peter was deposed and Minas installed as Metropolitan. The two conspirators later quarrelled and F. fled from Ethiopia, apparently with considerable plunder. However, later letters from Patriarch Cosmas invalidated Minas's claim and he was executed. The incident was of some importance since Peter had meanwhile died and the Patriarch would not consecrate another bishop. The king therefore forced Peter's assistant to take up the metropolitanate illegally. This breach with Alexandria lasted until Patriarch Philotheus (979–1003) eventually sent Bishop ↗Danəʾel in response to a plea from the king after Ethiopia's sufferings under the "queen of the Banū l-Ḥam(u)wīya" (↗Ǝsato).

Fiqṭor

F. (**ፊቅጦር**, Arab. Buqṭur) was a metropolitan of Ethiopia who probably lived in the second half of the 11th cent. He is known only from an incidental reference in the *History of the Patriarchs of the Egyptian Church*. There had been problems with the Ethiopian metropolitanate during the Patriarchate of Christodoulos of Alexandria (1047–77) with the usurpation of the metropolitanate by an intruder, Qūrīl (Cyril) ᶜAbdūn. F. eventually fled Ethiopia and Patriarch Cyril II (1077–92) appointed a new Bishop, ↗Säwiros, possibly his own nephew. However, the relationship between these two individuals is by no means certain. The Ethiopic ↗*Sənkəssar* (12 *Säne*) states instead that Säwiros was a brother of the Bishop of Ethiopia, F., and had been brought up there. Because at this time another metropolitan Victor (Buqṭur) of ↗Nubia, appointed by Christodoulos, is mentioned by the *History of the Patriarchs* in connection with the accusation of demolishing a mosque, some scholars have assumed that it was his nephew who became bishop of Ethiopia (Monneret de Villard 1938: 128f.).

Fiqṭor

F. (**ፊቅጦር**, d. 7 April 1539) was the eldest son of *aṣe* Ləbnä Dəngəl (r. 1508–40), who had another three sons (↗Gälawdewos, ↗Minas and Yaᶜəqob) and three daughters (Amätä Giyorgis, Säbänä Giyorgis and Wälättä Qəddusan). F. was killed by *garād* ↗ᶜUṯmān, one of the warlords of ↗Aḥmad b. Ibrāhīm al-Ġāzī. He died childless. Immediately afterwards his brother Minas was confined to ↗Amba Gəšän, which was later stormed by Muslims; its inhabitants were massacred. F.'s death produced a lasting impression in the country (as well as in the contemporary Europe), his name being mentioned in the ↗*Dərsanä Raguᵓel*, a popular prophecy on the fate of the dynasty.

Sevir Chernetsov

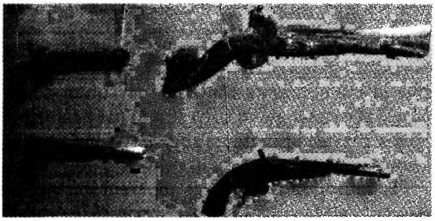
Fire-arms

F. which first arrived in Ethiopia in the 15th cent., during the reign of *aṣe* ↗Yəsḥaq, played a major role in the country's history. They often determined the outcome of battles, and the balance of power between provinces and states; and were in great demand by Ethiopian rulers.

The importance of F. was apparent during the reign of *aṣe* ↗Ləbnä Dəngəl, who in 1526 reportedly had only two swivel-guns and 14 muskets. These failed to repel *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ), who, after his rebellion in 1527, acquired seven cannon, and later over 200 muskets. The Portuguese, who came to the Emperor's aid, in 1541, brought, decisively, six cannon, 100 swivel-guns and over 600 matchlocks. Grañ responded by obtaining 10 field bombards and some 1,000 muskets from Arabia. In later fighting around Harär in 1559, *amīr* ↗Nūr b. Muǧāhid reportedly had five to seven cannon, and 500 muskets. By the 1620s the Jesuit, Manoel de Almeida, nevertheless stated there were only 1,500 muskets in the entire country, and that no more than 400 or 500 were employed in any expedition. Many weapons were, however, then being smuggled from Massawa into Təgray. The Scottish traveller James Bruce estimated that by the turn of the 1770s there were 6,000 muskets in Təgray, and only 1,000 in the rest of Ethiopia.

The number of F. thereafter increased steadily. The British envoy Henry Salt estimated there were 8,000 matchlocks in Təgray, in 1810, while the German Wilhelm Rüppell thought a generation later that the nominal capital, Gondär, had only 400. Šäwa, however, had by then about 1,000 F., including two cannon, 300 muskets, and 100 pistols presented to *nəguś* ↗Śahlä Śəllase by Captain ↗Harris's mission, in 1841. By the

Fire-arms: Ethiopian painting from the 1930s, showing the 1896 battle of ᶜAdwa (detail); photo courtesy of Robert Wiren



Fire-arms as used by Ethiopian soldiers (19th cent. and earlier), Ethnographic Museum of the Institute of Ethiopian Studies, photo 2004 by Wolbert Smidt, courtesy of the IES

middle of the century the Frenchman Arnauld d'Abbadie estimated that *däǧǧazmač* ↗Wəbe Ḫaylä Maryam of Təgray had 28,000 rifles, but that his nominal overlord *ras* ↗Ali Alula in Bägemdər, where imports were difficult, had only 4,000. The ↗Oromo south of the Blue Nile were, however, still unacquainted with F.

Aṣe ↗Tewodros, located in the north-west where fire-arms could not easily be procured, made European missionaries caste him nine cannons under the auspices of the former Tsarist soldier Moritz ↗Hall. At the battle of Mäqdäla in 1868, he had 37 pieces of artillery, but only 4,000 rifles, three-quarters muzzle-loaders, the rest match-locks. The British, by contrast, had 32 heavy artillery, 16 rocket-firers and 16,000 rifles, a quarter of them breech-loaders. They subsequently gave *däǧǧazmač* Kaśa Mərč̣a (later *aṣe* ↗Yoḥannəs IV) six mortars and 855 muskets or rifles.

The next two decades witnessed a fierce arms race between *aṣe* Yoḥannəs and *nəguś* Mənilək of Šäwa. Yoḥannəs, in his battles with the Egyptians at Gundät and Guraᶜ in 1875–76, captured 25 to 30 cannons and 20,000 modern Remington rifles. He suffered thereafter, however, from an arms blockade, first by Egypt and later by Italy, but obtained some smuggled weapons. Mənilək II meanwhile was actively acquiring F. According to the Italian geographer Antonio Cecchi, he had by 1881 22,000 rifles, but only 4,000 of them modern. Gifts from the Italian Government and sales by French merchants, however, transformed the situation. Mənilək, according to the French arms-dealer Arthur ↗Rimbaud, obtained 25,000 modern weapons between 1882 and 1887. Further imports were that year facilitated by Mənilək's occupation of Harär, by which time the Italian envoy Pietro ↗Antonelli estimated that Mənilək had 50,000 rifles, 12,000 of them modern. He was thus beginning to catch up with the previously much-better-armed Yoḥannəs, who in 1888, the year prior to his death, had an estimated 60,000 rifles. The production of ammunition by order of *aṣe* Yoḥannəs in a factory in Təgray, directed by Europeans, was the first industry built up in Ethiopia. Even before, already under *aṣe* Tewodros, black powder was produced on a small scale, e.g., utilizing ↗euphorbia coal. The production of patrons under *aṣe* Yoḥannəs, however, even if causing some unrest among European diplomats, never reached an important scale.

Mənilək, threatened by an Italian invasion, subsequently devoted immense efforts to importing F. By the time of the battle of ↗ᶜAdwa in 1896, he had 40 cannons and over 100,000 rifles, at least half of them modern. The Italians, on the other hand, had 56 cannons and less than 15,000 rifles.

F., throughout this time, were much prized by Ethiopians. They used them for ceremonial fusillades and evolved their own names for guns, mainly corruptions of the French, e.g. *wäǧigra* for *fusil* Gras (Pankhurst 1971:72ff.; KaneDic 1574).

Shortage of funds, Italian pressure on international arms-dealers and an Anglo-French arms embargo, greatly limited *aṣe* Ḫaylä Śəllase's purchase of F. prior to the Italian invasion of 1935. Ethiopia, according to contemporary estimates, thus entered the war with only about 400 light cannons, 2,000 to 3,000 machine-guns and 50,000 to 60,000 modern rifles.

F. continue to play an important, also symbolic, role in the local societies of Ethiopia and Eritrea. The appearance of kalashnikovs, easy to handle, contributed to the increase of armaments in minority ethnic groups, especially starting from the 1970s; they also became an instrument in the re-formulation of identities (cp. ↗Kara). Traditional enmities tend to become fueled by the appearance of F. (Matsuda 2002). The importance of F. as male status symbols, as known already among highland Ethiopians before the 20th cent., has the effect that the possession of F. is greatly appreciated, even if out-of-date or even if ammunition is lacking. Due to the crucial role F. played, e.g., in liberation struggles, even personal names like Kəlašni (from "kalashnikov", attested among the Kunama) are given to newly-born children.

Richard Pankhurst

Firriisa

F. (d. 1901) was the son of Abbaa Foggi by a slave wife and heir to the throne of ↗Guummaa. Before its submission to *nəguś* Mənilək of Šäwa, Guummaa was one of the most Islamized among the Oromo states of the ↗Gibe region. Carrying out the policy of territorial expansion, Abbaa Ǧoobir, following the policies of his father King ↗Ǧaawe Oučo (converted to Islam between 1854 and 1860, d. 1879), carried out policies of territorial expansion and ↗*ǧihād* against his non-Muslim Oromo neighbours.

When *daǧǧazmač* (later *ras*) ↗Täsämma Nadäw, Mənilək's general, finally conquered Guummaa in 1885, F. fled to Massawa, where he met *šayḫ* ᶜAbdarraḥmān (*šeh* Abderoman) from ↗Gomma, a follower of the Mīrġanīya Islamic brotherhood. They stayed together for a long time, making pilgrimages to ↗Mecca and Medina. When in 1899 F. learned that an uprising against Mənilək's administration had erupted in Guummaa, he went boldly through Eritrea to Kassala and thence to the Sudan and reached Guummaa, passing Anfillo and Leeqa. At Ebičča Ruya, in front of a gathering of the local chiefs, he proclaimed himself king and announced the *ǧihād* against the Christian empire. His appeal had some success among the chiefs; he defeated Täsämma Nadäw at Ganǧi, then beat back *fitawrari* Sägirde, dispatched by Täsämma, and was successful in several more clashes. However, as the pressure from Mənilək's troops grew, he decided to withdraw to the Sudan. Finally, he was delivered to *ras* Nadäw's soldiers, together with *šayḫ* ᶜAbdarraḥmān, by ↗Fatansa Illuu of Ñoñño (whom F. tried to convert to Islam) and executed. He is still revered and venerated as *walī* by the local Oromo.

Fisalgos

F. (**ፊሳልጎስ**, also *Fisəʾaləgos*, *Fisäʾaləgos*, from Greek Φυσιολόγος, 'Physiologus') is a small literary work, originally composed in Greek in Alexandria around 200 A.D. Each of its 48 chapters treats a species of animal (42 chs.), plant (2 chs.) or mineral (4 chs.), usually starting with a Biblical quotation (in the majority of cases from the N.T.) and the phrase "The Physiologus said about ...", followed by a legendary description of the species' properties and, as a moral, a Christian interpretation of these properties. The chapters usually close with the phrase "Rightly did he [the Physiologus] say what he said". E.g., the Phoenix, which burns itself and rises from its ashes, is compared to Christ: "Since the bird has the power to kill itself and to rise again, how then is it possible for the Jews to murmur against our Redeemer for having said: 'It is in my power to lay down my soul and to take it up again' [Jn 10: 18]" (ch. 7). The Physiologus makes use of pre-Christian motives current in Antiquity.

The F. was very popular and influential. It was translated into all languages of early and medieval Christianity. Already during the Aksumite period it was translated from the original Greek into Gəᶜəz. The translator was not too well-versed in Greek, which resulted in the transcription, instead of translation, of quite a few animal terms (e.g. **ጊጶስ**, *gip̣os*, from γυπός, gen. of γύψ, 'vulture', ch. 19). But also some original Gəᶜəz terms for animals are preserved in the F. as *hapax legomena* (Hommel 1879:370). Many of these Greek and Gəᶜəz terms were the subject of explanations in the Ethiopian lexical tradition (↗*Säwasəw*).

The F. is the major source for natural history in the Ethiopian traditional Bible interpretation (Cowley 1983:44, index; ↗*Andəmta*). It is also quoted in the ↗*Mäzmurä Krəstos* (WrBriMus 82).

A new edition, taking into account the newly discovered manuscripts, would be desirable, as well a further evaluation of the F.'s impact on the exegetical tradition.

Stefan Weninger

Fish and fishing

The relatively few species of fresh-water F. present in Ethiopia are similar to those of the basin of the Nile and the East African lakes: e.g., *Oreochromis niloticus* or *tilapia* (Amh. ቆሮሶ, *qoroso*), *Clarias gariepinus* (አምባዛ, *ambaza*), *Cyprinus carpio* (አባ ሳሙኤል, *Abba Samuʾel*) and *Barbus* sp.

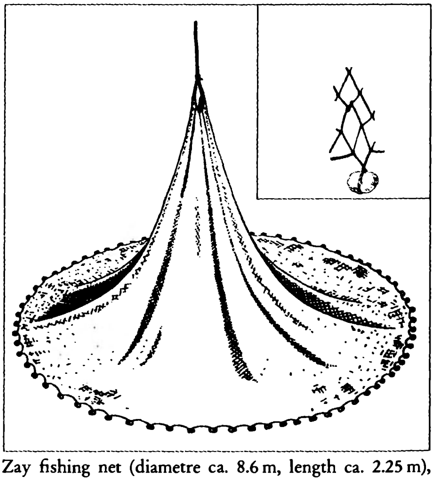
There is a wide range of fishing techniques in use. In north-western Ethiopia, for example, anaesthetic plants (among others *Milletia ferruginea*, *Maesa lanceolata*, *Solanum marginatum*) are thrown into the water to stupefy the F. The dried and crushed herbs are, traditionally after offerings for good success, scattered in the water. After some hours the dazed F. can be collected from the water's surface. Gill nets are used, e.g., by the ↗Wäyṭo of Lake Ṭana: the net is opened parallel to and a short distance from the shore. Then the water in between is beaten so that the F. flee and enter the net (Simoons 1960:159). A similar technique is known in the south, for example by the ↗Zay (VSAe II, 672f., table 42). Other techniques are catching the F. in cast nets. In fast-flowing rivers traps are built near dams and basketry. Tools include also scoop-nets and, as a more recent phenomenon, trawl-line and hook-line. In some cases spears (e.g., by Wäyṭo and ↗Gumuz) or bow and arrow (e.g., by Gumuz) are used (Simoons 1960:160; VSAe II, table 44).

Once captured, F. are tied together with the help of a string to be transported and sold in the neighbouring areas. Fishing is still a non-professional activity that provides a supplementary source of income for local households.

In the last four decades the various Ethiopian governments have paid special attention to fishing, strongly interested in its role for economic development. Hence, they set up programs aiming at the improvement of the equipment (providing boats) and techniques used. They also tried to organize the fishermen and bring their products to established markets. Fisheries were set up around ↗Arba Mənč̣, providing the markets of the town with cat-fish.

From the point of view of ichthyology, halieutics and maritime culture, the Eritrean coast has been strongly linked throughout time to the Yemen. F. abound there and fishing is practised in the small coastal villages. Their production is sold in the Yemen and ↗Massawa. Massawa is also a centre for modern fishing activities in Eritrea, exporting its products to the highlands as well as international destinations.

The importance of F. for the different populations of Ethiopia depends on their proximity to



Zay fishing net (diametre ca. 8.6 m, length ca. 2.25 m), with detail showing a stone weight, from VSAe II, pl. 41

waters rich in F., as well as to a large extent in their cultural and religious beliefs. The avoidance of F. is a cultural feature widely spread in the Horn of Africa. The ↗Kəmant as well as the ↗Oromo and most southern Ethiopian peoples (with the exemption of the Ganǧule [↗Harro]), for instance, believe that F. is impure, whilst the Wäyṭo of Lake Ṭana hold the opposite ideology, wherein their people are meant to eat anything living in the water. They hunt animals (e.g., the ↗hippopotamus), that are held as impure by the surrounding groups; such a practice is used to give an explanation for their status as ↗peripheral people. The ↗Waṭa, another group of this category, on the other hand, eat hippopotamus but avoid F. (VSAe II, 88, 717).

Like the Jews, the followers of the Ethiopian Orthodox Täwaḥədo Church distinguish between aquatic animals and marine monsters (Gen 1:21). Among monsters, the Leviathan and the Behemot (Job 40:25) do not seem to be comparable, respectively, to the crocodile and the hippopotamus, whose meat is forbidden. F. are divided into two groups, according to the presence or absence of scales and fins in their anatomy; in the first case their meat is eaten, in the second it is considered impure (s. Lev 11:9–12; Deut 14:9; Mt 13:47–50). F. is the only flesh allowed during ↗fasting in the *Fətḥa nägäśt* (ch. 15), but some ascetic devotees still include it in their fasts. It is normally fried (with an incision and without cutting the head) in special fat consonant with fasting or in ቀይ፡ ወጥ (*qäyy wäṭ*, 'red stew'). Its consumption, not highly valued, is relatively modest (150 g per annum and per capita) and strongly linked to fasting periods, especially Easter.

The indigenous form ዓሣ (ᶜ*aśa*) invaribly designates F. in Gəᶜəz, Təgre, Təgrəñña, Gurage, Gafat and Amharic (with the variants ᶜ*aía* in Tgt. Tgn., *asa* in Amh.). The term comes probably from the old Cushitic substrate and can also be found in Bilin, Kəmant etc. The new expanding Cushitic languages, however, do not include it (Oromiffa: *qurxummii*; Somali: *kalluun*, *mallaay* etc.). ᶜ*Aśa* indicates any kind of F., but some species also receive local names (s. supra). Loanwords (*šark* and *šrimp*, from English 'shark' and 'shrimp', respectively) and calques (*dəmmät* ᶜ*asa*, 'cat-fish') are also used. The term ዘንዶ (*zändo*, '[water-] snake' etc.) indicates the Leviathan, whilst the whale of Jonas is called ዓንበሪ (ᶜ*anbari*). Amharic vocabulary related to F. does not have a specific, but rather an analogical character, being poorly mastered by the speakers: አጥንት (*aṭənt*, 'bone') and አሾህ (*əšoh*, 'spine') indicate the fishbone, but also the scale of the animal, which is also named ቅርፊት (*qərfit*, 'peel'), ክንፍ (*kənf*, 'wing'), etc.; አቃጠነ (*aqqaṭṭänä*, 'to pull a F. out of the water with a hook [*mäqaṭən*]'), etc.

Although F. has such a marginal place in Christian Ethiopian society, everybody has notions of it, in particular due to the importance of this animal in the history of Christianity. F. is also present in popular culture and in Amharic proverbs, like ለዓሣ፡ መዋኘት፡ አያስተምሩትም (*läᶜaśa mäwañät ayastämrutəm*, 'one does not teach a F. to swim') and ዓሣን፡ መብላት፡ በብልሃት (ᶜ*aśan mäblat bäbəlhat*, 'to eat F. carefully [because of the fishbones]').

Fistula Hospital

The F.H. was founded in Addis Abäba in 1974 by Reginald Hamlin, a New Zealand gynaecologist holding a post at the Princess Ṣ́äḥay Hospital in Addis Abäba since 1959. He, together with his Australian wife Catherine, was expected to set up midwifery training, but they were soon touched by the plight of the fistula patients. Fistulas (abnormal openings) can occur as a complication of childbirth, when women are unable to reach a doctor during problematic labour. Ethiopia's rugged terrain, scattered population and poor communications prevent those in remote villages from receiving the required medical aid. Women are so damaged by the obstructed labour that they become incontinent and consequently social outcasts.

As Hamlin's skill in curing fistula patients became known, they began arriving in such large numbers that the wards of the general hospital were unable to cope. The social stigma attached to them also required the establishment of a special hospital. Money was raised from wealthy countries, particularly Australia and New Zealand. Hamlin was able to obtain the required permission to build from the Ministry of Health and, with the readily given approval of Emperor Ḥaylä Śəllase I, he was able to buy land on which to construct the hospital.

On 24 May 1974 a main ward of 40 beds was opened. By January 1991 over 17,000 patients had been treated. They came as social outcasts, but went away normally after three weeks able to reintegrate into society. The hospital still relies on public donations for the greater part of its finances. The Ethiopian Ministry of Health provides the funding for the doctors and some of the nursing staff. The hospital has 60 beds and about 16 operations are carried out each week. In less severe cases, stitching the torn bladder is all that is required. More serious cases require skin and muscle grafts. Overseas surgeons used to visit Addis Abäba to learn the latest techniques in fistula surgery from the Hamlins, and in 1965 Reginald Hamlin was invested with the Order of the British Empire in recognition of his outstanding work in this field. Hamlin died in 1993, but his wife Catherine continues to run the Addis Abäba F.H.

Fit Abbo ↗Gondär

Fitawrari

From the 14th cent. F. (ፊታውራሪ) was the title for a commander of an advanced detachment of a traditional Ethiopian ↗army en march. The F.'s duties were to contact first the enemy forces, to provide for the safety of the march and to supply the army by looting of local population.

Formally, a F. was lower in rank than other commanders (↗*azmač*), such as *grazmač*, *qäññazmač* and ↗*däǧǧazmač*, and the site of his detachment in battle-disposition was in front of the *däǧǧazmač*'s central regiment. However, this hierarchy was valid only within one army. As there were many armies in the country, the general hierarchy was far from being standardized. A Russian officer Arnoldi, who made a survey of the Ethiopian army at the beginning of the 20th cent., remarked that the hierarchy was intricate and impregnated with the same feudal spirit as the majority of Ethiopian institutions. As for the F., he wrote: "Not every F. is higher than *grazmač*, and sometimes *qäññazmač* means more than *däǧǧazmač*. First of all one should distinguish a *däǧǧazmač* F. etc. of the Imperial army from the same titles in vassals' armies. These are by no means equal figures and any F. of the *nəguś* has incomparably more land and soldiers than the best *däǧǧazmač* of a ↗*ras*. Every *däǧǧazmač* has also several F. and *qäññazmač* of his own, but again *qäññazmač* of a *ras*'s *däǧǧazmač* is incomparably lower in position than his namesake of a *nəguś*'s *däǧǧazmač*. Thus, for example, the *nəguś* has a trusted officer to whom he confides the command of the main bulk of his troops. By his title he is a F., but even *däǧǧazmačes* of the *nəguś* bow to him waist-deep and *rases* seek his favour" (Arnoldi 1907:22f.). Here the Russian officer meant *fitawrari* ↗Habtä Giyorgis Dinagde, whom *aṣe* ↗Mənilək II had made the War Minister with the title of F. in his newly established cabinet of ministers on the European model.

However, there was an Ethiopian logic in granting this particular title, because the high command over the armed forces belonged to the Emperor himself, who was in this case the *däǧǧazmač*, so his subordinate Habtä Giyorgis could only be his F. As Bairu Tafla remarked, "an attempt was made in 1907–30 to link the title to the modern ministry of war; but it lost its functional essence and was retained only as an honorific title bestowed usually upon civilians" (BTafA 914).

Sevir Chernetsov

Flabellum ↗Märäwəḥ

Flad, Johannes Martin

F. (b. 7 January 1831, Undingen, Württemberg, d. 1 April 1915, Kornthal, Württemberg) was a Protestant missionary. A farmer and saddler, he studied at the St. Chrischona Seminary near Basle. In 1855, Bishop Samuel ↗Gobat sent F. and Ludwig ↗Krapf to Ethiopia to establish a basis for missionary work there. F. returned in 1856 as part of the ↗St. Chrischona-Pilgermission. With other Pilgrim missionaries, with the help of the newly crowned *aṣe* ↗Tewodros II and *abunä* ↗Salama III, he started Bible work among the Ethiopian people, distributing and editing the new Amharic Bible (↗Bible translation). Their aim was to strenghten the Ethiopian Church and to foster spiritual and social development for Ethiopia and the surrounding peoples, according to the Moravian tradition of serving local communities. F. established his first school for the ↗Betä Əsraʾel near Gondär in 1856.

In 1858 F. married Pauline Keller (↗Flad, Pauline) in Jerusalem. With her he returned to Ethiopia where they raised 8 children (3 adopted). In 1860, the mission among the Betä Əsraʾel was established due to a report of F. to Gobat and the sending of Henry ↗Stern by the ↗London Society for Promoting Christianity among the Jews. In 1863 the relations with *aṣe* Tewodros went through a sever crisis; difficult times started for F. and other St. Crischona artisans (ordered by the Emperor to build giant mortars). The British ambassador ↗Cameron was imprisoned. In 1866 and sent by Tewodros as his ambassador to London to mediate in the crisis and, with Queen Victoria, to prepare Ethiopia's technical development. In 1868 Tewodros's prisoners were released by the ↗Napier expedition, and F. had to return to St. Crischona.

The F. family settled in the Moravian community of Kornthal. They continued their ministry through young Ethiopians F. was teaching at St. Crischona who later returned to Ethiopia and took up missionary activities there. F. himself made five more journeys to Ethiopia (1870, 1873, 1880, 1890, 1894) to bring help and foster missionary work in Ethiopia.

Johannes Martin Flad, Pauline Flad and their children (on the right ↗Mikaʾel Arägawi); photo courtesy of the author

In 1886, F.'s revised Amharic Bible was published. It was distributed throughout Ethiopia. Bible-reading movement around the copies brought by the ↗Church Missionary Society to ↗Ḥamasen eventually gave birth to the ↗Ethiopian Evangelical Church Mekane Yesus.

↗Mikaʾel Arägawi, F.'s first adopted son, became his most prominent successor in Ethiopia, whereas his son Frederic succeeded him in Europe. Käntiba Gäbru, another F.'s student, resumed the technical development, with Alfred ↗Ilg, during the time of *aṣe* ↗Mənilək II.

Wilfred Heintze-Flad

Flad, Pauline Keller

F. (née Pauline Keller; b. 26 November 1826, Saarbrücken, Prussia, d. 21 October 1909, Kornthal, Württemberg) studied to be a nurse and became Germany's first modern woman pharmacist. In Kaiserswerth she was a room-mate of Florence Nightingale, working with her at the Deaconesses' hospital. In 1851 she travelled to Jerusalem to start a hospital with Bishop Samuel ↗Gobat. There she met Johannes Martin ↗Flad, whom she married in 1858. The day after their marriage, they left for Ethiopia to engage in missionary activity among the ↗Betä Əsraʾel. She helped the needy, and her medical skills saved many lives. From 1863 she, together with Stern and Rosenthal, was a target of ↗Tewodros II's wrath for mentioning himan rights violations. After her release in 1868, she did not return to Ethiopia, but continued to be involved in the mission's work.

Florence, Council of

The Council of F. (1437–43) is known as the last serious, though unsuccessful, attempt by Rome to put an end to the long-lasting schisma that opposed it to the Eastern Churches.

The history of the Council offers itself a clear picture of the position of the papacy in late medieval times. Pope Eugene IV (1431–47) initially convoked on 18 December 1431 a Council to be held at Bologna. Its aim was to dissolve the Council of Basle (opened in 1431 by Martin V, closed at Lausanne in 1449) which, imbued with the "conciliar" theories set forth at Constance (1414–18), appeared as a major challenge to papal authority. The Council was finally opened in Ferrara on 8 January 1438 (Bull *Doctoris gentium*) and was later moved to Florence for economic reasons. Yet, the last sessions took place at the Lateran palace in Rome (1443–45). Beside the "conciliar" problem, other important elements in the background were the rise of the Ottoman power (Thessalonica and Constantinople fell to the Turks in 1429 and 1453, respectively; Petrocchi 1955:23) and a diffused ecumenical spirit for the reunion of the Latin and Eastern Churches.

With a clear unionist purpose, the discussions started in Ferrara with the Greek delegation, composed of 700 people, at the head of which were Emperor John VIII Paleologus and Patriarch Joseph of Constantinople. Before moving to Florence, 16 sessions had been held, mostly dedicated to doctrinal questions and led by an outstanding theological figure, Archbishop Basil Bessarion. In January 1439, the Council resumed its sessions again in the Tuscan capital; its discussions, centred on the *Filioque* clause, resulted in the decree of Union with the Greeks of 6 July (Bull *Laetentur caeli*; s. Wohlmuth – Alberigo 2000:524–28).

After the departure of the Greeks and following a strategy of one Church at a time, the turn came of the other Oriental Churches: Armenian, Syrian, Maronite. The Ethiopian community in Jerusalem (↗Dayr as-Sulṭān) was contacted in 1440 by the papal envoy, Brother Alberto da ↗Sarteano (s. Hofmann 1942b:11–16; ↗Franciscans). On September of the same year, a Coptic-Ethiopian embassy composed of twelve monks under the lead of Abbot Andrawos, a Copt from the monastery of St. Anthony in Egypt, departed from Cairo to join the Council. In Florence, on 2 December 1441, the Ethiopian deacon Peṭros, the head of the Ethiopian delegation sent by Abbot Niqodemos of Jerusalem, presented a discourse with conciliatory tones (Hofmann 1942b:17f.; Cerulli 1933b). Meanwhile, a comission formed by three cardinals (Giuliano Cesarini, the ↗Dominican Juan de Torquemada and Jean Le Jeune, Bishop of Thèrouanne) was appointed to study the "heresies" of the two Churches, the results of which came with the Bull of Union *Cantate Domino* (s. Wohlmuth – Alberigo 2000:567–83), read solemnly in the church of Santa Maria Novella on 4 February 1442.

Pope Eugene IV gives the Bull of Union to the Copt and Ethiopian delegation; bronze door by Antonio Averulino called "il Filarete", 1445; Rome, Basilica di San Pietro; photo 2004, courtesy of Andreu Martínez

The decree contained important discrepancies between the Latin original and its Arabic version (Hofmann 1942a:228) and was both a clear exposition of the Catholic doctrines and a severe rectification of the Coptic and Ethiopian "errors", such as food prescriptions, the practice of ↗Sabbath and ↗circumcision (ibid. 230; s. Wohlmuth – Alberigo 2000:577f.). However, the Union between Rome and the two African churches – who, like the other Eastern churches, attributed to the See of Peter only a spiritual primacy – never took place. Furthermore, only the Egyptian envoy signed the document (Hofmann 1942b:23f.) and there is no clear evidence that the Bull ever arrived inEthiopia (cp. Hofmann 1942a:232f.; Hofmann 1942b:30ff.; Tedeschi 1989:401ff.).

The Council nevertheless had an impact in Renaissance Italy: the Ethiopian legates provided humanists and geographers with first hand accounts on Christian Ethiopia (Tedeschi 1993:355ff.) The Bull *Cantate Domino* – whose solemn proclamation was represented in a bronze image by Antonio Averulino Collet "il Filarete" on the central door of the Basilica of St. Peter – played an important role: a canon on the authority of Scripture was refered to in the fourth session of the Council of Trent (Hofmann 1942a:234; s. Wohlmuth – Alberigo 2002:663–64). Furthermore, the coveted project of Unity with Copts and Ethiopians, although lingering for years (s., however, Lefevre 1941:82ff.), was to gather momentum with the religious mission lead by the ↗Jesuits and the crown of ↗Portugal in the second half of the 16th cent.

Andreu Martínez

Fogära

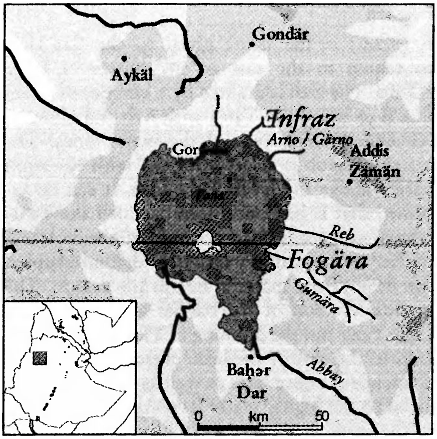
F. (ፎገራ) is the name given to the flat land stretching to the east of the shores of Lake ↗Ṭana. The area is drained by a number of rivers that flow into Lake Ṭana, with Reb and Gumära (Gʷəmära) being two of the major ones. The marshy region is largely treeless, with elevation barely above the level of the lake. It can be assumed that F. had once been part of Lake Ṭana, which was formed as a result of the volcanic barrier from the heavy lava flow that interrupted the flow of the major rivers in the region. The gradual erosion of the barrier at the outlet of Lake Ṭana and the draining of a large tract of flat land to the east of the lake, created the F. plain. Evidence of shore lines as well as local traditions attest to the higher water levels of the lake prior to the gradual erosion of the lava deposit by the River ↗Abbay in the south-eastern part of Lake Ṭana.

The waters of the Gumära and Reb and their tributaries often flood F. In 1992 over 12,000 people were displaced by flood. ↗Malaria epidemics occure in the region (e.g., in the 1950s; s. Simoos 1960). A large part of the inhabitants of F. move to the hilly areas surrounding the regions during the rainy season (June to August) and then return to F. plain during the dry season. The seasonal movement helps the population to avoid malaria and also to protect their cattle from tse tse-flies.

The villages in F. are located on higher plains or mounds scattered in the region. The villagers cultivate the area when the water-level is low, and grow crops, mainly field-peas, vetch and corn. Most of the farmers in the region depend on cattle rearing for their livelihood. Corn is widely grown on the rich alluvial black soil as the lake recedes. Local farmers command a good price with it since the corn matures early and reaches the market before corn in other parts of the region is ready.

Many churches are located in F., including ↗Krəstos Sämra, Qəddəst Ḫanna, Qəddus Giyorgis and Ǝngor Märqorewos. ↗Ṭana Qirqos, on an island close to the shore, is the most important among them.

F. is an important historical region. In 1619, *aṣe* ↗Susənyos established his camp (↗*kätäma*) at the Gumära, in the area which he had passed, or visited, on different occasions several times before. In May 1622, on return from one of his succesful campaigns against the ↗Oromo, the



Emperor attended a church council in F., where ecclesiastic parties came to argue over the issues of theology. Susənyos judged by formulating the Unctionist doctrine (↗*Qəbat*) himself, which however, did not stop the controversy (the discussion continued at the council of ↗Aringo 30 years later).

Č̣äqla Mänzo, another island close to the F. shore, obtained importance as a royal residence of ↗Iyasu I. There he built a castle and a church, with the *tabot* of St. ↗Gälawdewos (their ruins are still visible). He was murdered at this residence in 1706.

In 1777, *aṣe* ↗Täklä Haymanot fled the troops of ↗Mikaʾel Səḥul to F. but was defeated at Ṭeza Amba in F. and later imprisoned at ↗Ǝmäkina.

In the early 19th cent., *ras* ↗Wäldä Gäbrəʾel promoted ↗Gugsa Märsa to *grazmač* and made him governor of F., an important step for the latter's later career. Later in the century, F. often became a site of Tewodros II's military conquests. In the ↗administrative division of the 20th cent., F. formed a *wäräda* within the ↗Däbrä Tabor *awrağğa*.

Folktales

Folktales in Amharic

F. are fictional prose narratives which may be set in any time and any place. F. may include a "moral". Some tales are told as true stories. Mixed genres also occur (Molvaer 1995:158ff., 223).

In Ethiopia, F. (Amh. sg. ተረት, *tärät*) have been used in schools, with a moral attached, often contrary to wide-spread tradition. Some have been turned into poetry (Maḫtämä Śəllase Wäldä Mäsqäl 1967/68; Mängəśtu Lämma 1960/61). Students and foreigners have often retold them with a polished, literary slant (Wilks 1971; Courlander – Leslau 1950; Davis – Ashabranner 1959). Many are jokes and puns, often ascribed to the Ethiopian wit *aläqa* ↗Gäbrä Ḥanna Gäbrä Maryam (Pankhurst – Pankhurst 1982/83; Abbäbä Ayəččeh 1955/56; Aräfä ʿAyne Ḥagos 1986).

Folklore studies of the "romanticist period" (e.g., Davis – Ashabranner 1959) claimed it was possible to find the character of each Ethiopian nationality reflected in their typical tales. This view, however, reflected more the stereotypes of the different ethnic groups already existing in Ethiopia: trickery and cleverness among Amhara (ibid. 31), fighting, courage and strength among ʿAfar (ibid. 76), comedy and nonsense among "easy-going" Oromo (ibid. 92), hard work and the pursuit of wealth among Gurage (ibid. 127), etc. (s. Korten 1972:117; cf. Eadie 1924:72ff.).

Another approach focuses on the geographical origins and ways of diffusion of F. According to it, stories travelled all over the country, many deriving from Arabia, India, other parts of Africa and beyond (Courlander – Leslau 1950:131; but for critical analysis s. ibid. 4; Molvaer 1995:171). F. can also be seen as an educational device. Parents select stories to strengthen favoured traits in their children, which would vary from one child to another (Molvaer 1995:164f., 169f.).

Compiled trickster-tales are the most common tales in Ethiopia, according to the collection of 3000 stories by Davis and Ashabranner (1959: 31f.). Further evidence is provided by other collections, such as Molvaer (1995:171ff.). Among both rulers-oppressors and ruled-oppressed groups, such stories flourish. The trickster, often admired, always wins (unless outsmarted by another trickster) and may even be rewarded for his tricks by a tricked king (Eadie 1924:7–18).

The second most important theme in F. seems to be food and the acquisition of wealth (e.g., Wilks 1971:5–33, 73–80).

Filial duty is shown in providing for parents, first of all the mother, commended, even if it is done by stealing, cheating and harming others (Maḫtämä Śəllase Wäldä Mäsqäl 1967/68:9–17), whereas stealing may otherwise be censured (Davis – Ashabranner 1959:23–26).

Humorous stories also abound. Foolish people feature in many and the unreliability of women is a common theme (Molvaer 1995:200ff.; Pankhurst – Pankhurst 1982–83:99f.; Wilks 1971:12ff.). But women are sometimes shown to be more clever and down-to-earth than men (Courlander – Leslau 1950:19ff., 45ff.) and even devoted wives (Wilks 1971:44–50, 55–62). The capriciousness of justice and that might is right are told with both humour and sadness (Davis – Ashabranner 1959: 77–80, 112–15; Courlander – Leslau 1950:14–17, 25f.); sometimes justice is obtained by cleverness (Courlander – Leslau 1950:7–13, 29–33).

Ethiopian F. may deal with religious matters, especially aetiological tales, as well as myths and legends, which are told as true stories, expected to be believed. Some exceptions can be found: "Why the hyena became lame" (Molvaer 1995: 205), "How the sea became salty" (Wilks 1971: 5–11), "Why the donkey laughs and the frog croaks" (Courlander – Leslau 1950:105–12), etc., are told to satisfy a child's curiosity or just for fun.

F. are allegories, not told as literally true, with human or stereotyped animal actors (fables), or even speaking inanimate phenomena (Courlander – Leslau 1950:51–56). Spirits, devils and magicians appear occasionally (Wilks 1971: 91–100).

The point or "moral" of a tale is meant to be understood and appreciated and, although a child may be gently guided to the desired conclusion, it is normally not stated. It is a late innovation to attach an explicit "moral", often in the form of a proverb (**ምሳሌ**, *məssale*). Perhaps this new tradition came into existence under the influence of an Amharic translation of Aesop's fables by Amarä Mammo (1965/66).

Otherwise F. are told as plain stories. They reveal an adult, mostly male world, to which children are expected to aspire to; curiosity and innovation are not cherished traits (Wilks 1971: 51–54).

Public storytellers (men) tell stories to mixed groups of children or in village gatherings where adults are also present. These stories are of a general kind, without specific application, and serve to perpetuate shared values. Such tales are of interest to anthropologists, who look for institutionalized social phenomena.

For each public performance, thousands of F. are told in the homes, often introduced with a riddle (**እንቆቅልሽ**, ↗*ənqoqəlləš*) to sharpen attention and with a standard opening: **ተረት፡ ተረት፡ የመሠረት** (*tärät tärät yämäśärät*, 'tale, tale of the base'). This private situation is the most typical way of transmitting F. They are specific, selected and told to mould and correct a child's character, not for pure entertainment. The public performer may use theatrical effects (mime, song, dance), but this is not common when parents tell stories to their own children, where a more dignified relationship prevails, especially to the father (s. Molvaer 1995:161–65.) Mothers tell more stories to their children than fathers.

Several authors, e.g., Mängəśtu Lämma (Molvaer 1997:276) and Taddäsä Libän (ibid. 304ff.), have told of the influence of such story-telling on their literary talents. Others, e.g. Daññaččäw Wärqu (ibid. 292), have used F. in their novels, whereas some, e.g. Ḥaddis ʿAlämayyähu (1992/93; Molvaer 1997:147) and Səbḥat Gäbrä Ǝgziʾabəḥer (ibid. 355), have created original tales on the pattern of F.

There are tales purporting to explain the origin of things, not only in nature but also in the social organization (Davis – Ashabranner 1959:168–71); dilemma tales (ibid. 179–84), and tales told for fun, often by children to each other (cf. Pankhurst – Pankhurst 1982–83), who also tell "sexually explicit" tales among themselves (cf. Molvaer 1997:172). Many F. may seem amoral or immoral according to the prevailing ethos in the society (Davis – Ashabranner 1959:70ff.). Some include both myths and saints' stories among F. (ibid. 160–66, 168–72), but these are "border cases".

Ethiopian F. are mostly straightforward and easy to understand. By repeated retelling, they may attain some sophistication or great beauty. Whereas professionally trained people have collected tales from public performers, the usual case is that the most typical tales told in the privacy of homes are collected by amateurs and often printed in publications dealing with other social topics. Wide dispersion of F. may reveal many variations in the form. It is of the essence that variants of the same tale are found wherever F. are part of the living tradition and adapted to the listeners. There cannot be one "correct" version of any tale, although many F.

are also transmitted with surprising uniformity over wide areas.

Folktales in Təgrəñña

Təgrəñña F. as part of the wider Təgrəñña oral literature have received some consideration from as early as the first reports of the European missionaries and linguists. The Swedish mission in particular has made valuable contributions to the codification and standardization of the Təgrəñña language. Thus, in the religious journal መልእኽቲ፡ ሰላም (*Mälʾəḵti sälam*), which was published from 1909 to 1915, occasional reference is made to indigenous popular literature. Similarly in the ቀዳማይ፡ መጽሐፍ፡ ንባብ (*Qädamay mäṣḥaf nəbab*, 'First reading book'), published by the *Missione evangelica* in 1928, a number of stories are included.

Short F. can also be found in the grammars by de Vito (e.g., de Vito 1893:40–43) and Schreiber (1893:186–91): stories of the Fox (*wəḵarya*, nowadays: *wäḵarya*) and the Jackal (*täkʷla*, nowadays: *tåḵʷla*). These were, however, translations from French. In addition the works by Conti Rossini (1897, 1942) are important. A short collection of Təgrəñña F. by Gäbrä-Mädhən Dəgnäy, edited by Gallina (1902), was in part translated into English with a commentary by Ghirmai Negash (1999: 89–96). The extensive record by Kolmodin (KolTrad) of the traditions (*Zanta*) of the Ṣäᶜazzäga and Hazzäga (in Ḥamasen) is, however, primarily concerned with oral tradition.

As a consequence of the awakening of Təgrəñña literature in the 1940's, and more so following the independence of Eritrea and the cultural autonomy of Təgray province in the 1990's, F. in the mother-tongue have been printed in Təgrəñña school-books as a matter of course in both countries. The anthology by Yaᶜəqob Gäbrä-Iyäsus (1941 A.M. [1948/49 A.D.]) is well known – see the review by Moreno (1950) – and a collection of "44 Stories" by Yəshaq Täwäldä-Mädhən (1943). Alluding to this latter title, Täkkəʾä Täsfay called his collection "144 Stories" (1998), which is his rendering of Aesop's fables translated from English into Təgrəñña. A further collection of European fables was issued by Täkkəʾä Täsfay (1999).

Genuine folk-material can be found in Gäbrä-Kidan Dästa (1988 A.M. [1996 A.D.], 1990 A.M. [1997/98 A.D.]). Abrəha Rəstu (ca. 1966) deals with the richness of folk-literature from a religious viewpoint (cf. also Sälomon Gäbrä-Krəstos [1985/1993] with its extensive bibliography on the local traditions of Təgrəñña).

Rainer Voigt

Folktales of the Betä Ǝsraʾel

The oral literature of the ↗Betä Ǝsraʾel includes a large corpus of F.; however, only preliminary work has been done in documenting this rich collection of literature. ↗Faitlovitch collected written versions of 58 Amharic tales prior to 1935. These were published in Hebrew after his death on the basis of his manuscript (Wurmbrand – Noy 1990). More recent collections have been assembled since the massive migration of Betä Ǝsraʾel to Israel. Like Faitlovitch's collection, these were only published in Hebrew, and in several cases neither the Amharic nor Təgrəñña versions were preserved. In some cases manuscripts containing F. accounts were deposited in the Israel Folktale Archives at the University of Haifa.

On the basis of studies to date, it is possible to mention a number of dominant themes in Betä Ǝsraʾel F., such as animal tales (fables) and trickster stories (particularly those pertaining to *aläqa* ↗Gäbrä Ḥanna). While some scholars include among Betä Ǝsraʾel F. oral traditions that record historical events, these should perhaps be considered as legends and not F. Some attempts have been made to locate the distinctively "Jewish" characteristics of Betä Ǝsraʾel F. However, most Betä Ǝsraʾel F. can be easily placed in the context of the regions of Ethiopia in which the Betä Ǝsraʾel lived until recently.

Steven Kaplan - Hagar Salamon

Folktales in Oromiffa

The first Oromo F. to be published were three narratives collected by Karl ↗Tutschek in the middle decades of the 19th cent. that appeared posthumously in Praetorius's grammar (1893: 305–10). The first one is an anecdote about a soothsayer and a certain Waqayo Garada, the second a short story about leopards and their cubs, the third a longer narrative about a young man who, after rescuing a child from a man-eating snake, is instructed by him about how to trick his parents into rewarding him. This longer narrative, but not the other two, is called a *dubbii durii*.

In 1894 ↗Onesimos Nasib and ↗Aster Gannoo published their ↗*Ǧalqaba barsiisaa*, 'The Beginning of Teaching', a book aimed at teaching the Oromo how to write their language with the Ethiopian script. It includes proverbs, poems and traditional religious hymns, a Christian catechism, as well as a great number of narratives. Andrzejewski (1985:409f.) pointed out that the two authors used different sources and included in their book legends about Christian saints during the Roman persecutions, as well as several traditional Oromo narratives, that form the first major corpus of Oromo F.

A few samples of humorous tales, called *haasaa*, are found in Cerulli (CerFolk 190f.), together with some historical narratives and, especially, a huge number of poems and religious hymns, many of them transcribed and translated from Onesimos – Aster (1894). Moreno (1935) published another translated and annotated major collection of 59 traditional narratives of different kinds. Andrzejewski (1985:416f.) distinguished among them realistic fiction and fabulous narratives with animals or things as their dramatis personae.

During the 1960s Haberland (VSAe II:607–44) published the German translations of a sizeable corpus of myths and F. that he arranged as (1) the creation of the world and of man, (2) cattle, (3) pious and moralizing tales and themes from the Old Testament, (4) demons, (5) animal tales,

(6) fairy tales, adventures, and tribal legends. A smaller group of ten ↗Boorana F. has been published by Andrzejewski (1962). The second legendary narrative in this article is about Diido Gaawwole, a man who actually lived in the second half of the 19th cent. and who figures as the central character in several F. Also Tablino (1980: 104–29) includes translations of southern Oromo F. and myths, but the major work on this topic is Sahlu Kidane (2002), which includes 76 traditional narratives, partly with their text in Boorana Oromo. He carefully describes when, how and by whom they are told and divides them into three major ethno-genres: (a) *duri-duri*, children's tales about tricksters, ogres and rescues. The latter generally have a typical structure, of which there are several examples also in tales from the more northern Oromo groups (e.g., *Turaaḍaafi loon* 'Turaa and the cows' in *Quluu bareeda* 1980: 19–42), whereby one or more troubled characters address successively different humans, animals or even objects "in search of help or offering something to acquire help in exchange". Lonfernini (1984:218ff.) calls this kind of tale "filastrocca" even though it is not a 'nursery rhyme'.

The second ethno-genre identified by Sahlu Kidane is (b) the *mamaksa*, adult's tales that include both narratives and plain proverbs. *Mamaksa* narratives include morality tales where a villain harms a helpless victim and is subsequently exposed and punished by supernatural means, short illustrative tales that show the virtues of positive values and the bad consequences of misconduct, as well as "anecdotes of speech" about true, wise, or simply witty things that someone said in a particular situation. The third ethno-genre is (c) the *arga-ageti* or *argaa ḍageetti*, myths and legends that include both historical or allegedly historical narratives about wise men, famous leaders, or great warriors like the above-mentioned Diido Gaawwole, and tales about the origins of elements of the world and of human life, of particular groups of people, of social institutions etc.

After publishing in Oromo became more easy, a considerable amount of books with collections of F. have been published in Ethiopia, e.g. Walda Yohannes Warqinaa (1998), and especially the volumes of *Durdurii* by the team of the Gumii Qormaata Afaan Oromoo ('Committee for the Oromo Language'; Abarraa Nafaa, Asteer Ejersoo etc.).

Giorgio Banti

Food

Food ecology

Most traditional diets are dominated by products made from a single crop. The most prominent grains are ↗*ṭef* (*Eragrostis abyssinica*), maize (*Zea mays*), ↗sorghum (*Sorghum bicolor*), barley, wheat, oat (*Avena sativa*) and millet (*Eleusine coracana*). For a very high number of people ↗*ənsät* (*Ensete ventricosum*) is the most important staple F. A variety of nuts, berries, roots and tubers, onions (*Allium cepa*), garlic (*Allium ursinum*), red peppers (s. ↗*Bärbäre*, *Capsicum frutescence*) and green vegetables such as cabbage (*Brassica oleracea*) are propagated. Pulses grown include peas (*Pisum sativum*), beans (*Vicia faba*) and lentils (*Lens culinaris*). The general geographical distribution of these products is for the most part explained by annual totals and seasonality of rainfall. Thus, crops like sorghum and millet make their greatest dietary contribution in the lowlands, while the highlands is where the rest of the grains grow during two wet seasons.

The role played by livestock varies from insignificant to very relevant. The ʿAfar, Oromo and Somali raise sheep, goats and cattle wherever disease, especially sleeping sickness, do not prohibit them, whereas fowl are fairly ubiquitous in all Ethiopian households.

Food-preparation and consumption

The place of F.-preparation as well as the place for its consumption (the "kitchen", Amh. ማእድ፡

ቤት, *ma'əd bet*, lit. 'house where F. is consumed') is centred around the hearth in the form of an earthen oven or fireplace. It is in the kitchen where meals are made and consumed, storage is maintained, household decisions are made, neighbours are entertained, a bath is taken, hair is dressed and evenings are spent. The hearth occupies a central place in the family's economic life, transforming the results of its productive activities into consumable forms and thus "stands" in between F.-production and consumption. The social significance of cooking can be seen as a process that involves not only processing and combining, but also categorizing and naming.

The hearth is thus the basis of the nuclear family. The use of parent–child kinship terminologies refers to family members who share space around the hearth and where the older generation feeds the younger one. F., not blood, is then the tie that binds (Bakhtin 1984:163).

Women's cooking-tools and the processes assigned to them are subject to female representations expressed by the concepts of ባለሞያ (*balämoya*, 'professional') or ባልትና (*baltənna*, 'good housekeeping, housewifely skills') to indicate their ability to manage the hearth, while ገልቱ (*gältu*, 'unskilled person, slovenly housekeeper') or በሰሮ (*bäsäro*, 'poor housekeeper') underscores their ineptitude to run the household. The whole conceptual framework we call cuisine in Ethiopia is, therefore, considered to be the exclusive domain of the female gender.

In most areas of Ethiopia, F. is served in a sequence of three main meals per day: morning meal (ቁርስ, *qurs*), midday meal (ምሳ, *məsa*) and evening meal (እራት, *ərat*). In some areas, not every F. eaten is part of a meal. There are different types of "snacks" for the people to carry in order to eat them out in the field, pasture, or during a trip. Such snacks are, e.g., boiled, roasted or toasted peas or beans or seedlings of the same pulses, sometimes served with highly spiced liquefied *bärbäre* (አዋዜ, *awaze*). In some areas of north-central Ethiopia, serving one large meal each day is the normal pattern. Both morning and evening meals tend to be more like snacks and often involve left-overs of earlier meals.

Dishes

A single staple F.-crop is the principal item in the diet, eaten most days or even every day. Grains are most often pounded into flour, whereas root-crops frequently are grated before being boiled. In the former case, the end-product is either a pancake-like bread known as *əngăra* or a variety of ↗breads. These are then eaten either as they are or with a variety of stews (ወጥ, *wäṭ*) and soups (መረቅ, *märäq*), whose ingredients consist of greens of one kind or another and increasingly include onions and garlic. In many cases, the addition of condiments depends on local availability and preferences. Sometimes the end-product of grain-flour is a stiff porridge-like substance (ገንፎ, *gänfo*) that is normally formed into bite-size ball, dipped into a mixture of butter (↗milk and milk products) and red peppers, or pulses such as sunflower, seed (*Carthamus tinctorius*), nug and flax (*Linum usitatissimum*) during Lent or Ramaḍān, where it is consumed.

↗Salt and sugar are necessities, but the use of other ↗spices varies considerably. In Ethiopia, the stews are often fired with red peppers. Other kinds of preparation include boiling or roasting of grains and vegetables such as maize and potatoes, respectively. Rice, as a preference of urban dwellers, who have created a taste for wheat-flour to make leavened breads as well, is prepared in the usual boiled manner, simmered and consumed after the addition of meat or vegetable sauces.

Some other F., especially gathered ones, that include different kinds of greens, wild nuts, berries and ↗fruits, are also widely consumed. Vegetarianism during Lent is part of the Christian Orthodox tradition. Like agriculturalists, pastoralists (↗Pastoralism) consume very little meat. They rely on fresh and soured milk, along with butter and grain-porridge, as their staples, and slaughter animals only for sacrificial rites or other special ceremonial occasions or when livestock becomes old, feeble or sick.

In most parts of Ethiopia, meals are seldom accompanied by beverages (excluding water), except if these are part of rituals and feasts. For example, coffee-drinking in the early morning or evening or right after lunch is a lengthy process involving not only drinking, but also incense-burning, popcorn- (ፈንድሻ, *fändəša*) tossing, snack-eating and much sociability. With the exception of Muslims, the drinking of alcoholic ↗drinks is virtually ubiquitous.

The elements that constitute the cuisine include grains, legumes, vegetables, root-crops, and few flesh F. Grains are produced for both consumption and transaction. They occupy a major part of agricultural and domestic working-time. According to local interpretation, *ṭef*, barley, wheat, sorghum/millet and maize are Ethiopia's mainstays of the indigenous diet. In some arid areas, wheat, barley and oats are purchased staples.

While the well-to-do peasants subsist on wheat, barley and *ṭef* breads, the meals of poor peasants consist of breads made of sorghum or maize. Inter-house variation is therefore reflected in menu and meals, and distinctions in economic status indeed affect diet and cuisine. Grains are either heavily and finely ground, sifted and baked or lightly and coarsely ground and baked. Most main meals thus consist of *ənǧära* made of these grains. In poor peasant households, the function of the stew is almost limited to moistening the *ənǧära*, while in well-to-do peasant households, its function is to accompany it as means of consuming stew. This implies that in rich households, the consumption of *ənǧära* decreases with increasing consumption of stew. Moreover, while, for example, in fortunate households a lentil-stew (*šəro*) pottage may be flavoured with chopped onions and a lump of butter, in less fortunate families such stews are cooked with vegetable oil and water. Inter-household variation in F. expresses class ideologies and socio-economic distinctions (Goody 1982:55).

As an early-morning meal, coffee or tea with or without sugar (or in some areas salt) and accompanied by toasted or baked barley, wheat-bread, *ənǧära* or bakery-bread is often served. Bread is indeed the mainstay of the diet, something without which a meal would be incomplete. Hence, it is a quintessential symbol of reciprocity and household hospitality.

Wheat- and barley-flour are the main ingredients for making porridge dishes, which are more commonly consumed during life-circle celebrations such as births and weddings and as part of the F. served for breaking the fast during *Ramaḍān*. It must ideally have lustre, stickiness and taste. It should not be farinaceous or gritty, too hard or too heavy, nor should it be too liquid. Most of the time the relish, usually made up of glutinous ingredients like butter mixed with red peppers, flax, or linseed supplies the lubricant which allows the mouthful of porridge to slip down the throat smoothly. Butter-mashed flour F. like **በሶ** (*bässo*) among the Amhara and **ጥሕኒ** (*ṭəḥni*) among the Təgrayans are also typical of grain-based dishes. Oats are consumed as the main ingredient of a beverage (**አጃ**, *aǧǧa*) that is flavoured with ↗honey, sugar or butter. It is seen as a necessary diet for women during pregnancy and delivery and for individuals recuperating from all kinds of illnesses.

Legumes, greens and tubers form a characteristic part of the horticultural and agricultural subsistence-patterns. The production and place of peas, beans and lentils varies widely according to season. Around *Mäskäräm* and *Ṭəqəmt* they are eaten fresh (**እሳት**, *əsat*). During subsequent months many meals centre around stews based on peas, beans and lentils. These pulses are ground into flour and mixed with red peppers and other spices to prepare thin or thick stews like **ሽሮ** (*šəro*), **ክክ** (*kəkk*), **ቱምቱሞ** (*tumtumo*) and **ምስር** (*məssər*).

Legumes predominate in every meal and are by far the most important part of both diet and cuisine. Even when other meals are prepared, the above stews are sometimes added as side-dishes. When used this way, they come close to filling the role of "vegetable" F., present in amounts greater than a complement, but less than a main course or main ingredient. In *Mäskäräm* and *Ṭəqəmt* legumes are thus staple F. that play a major part in most meals. The rest of the year, legumes and grains are toasted (**ቆሎ**, *qolo*) or boiled and toasted (**አሹቅ**, *ašuq*) as a snack (**መቅሰስ**, *mäqsäs*) in the diets of at least the peoples of north-central Ethiopia. Finally, the above bean-based F., including **እልበት** (*əlbät*) and **ስልጆ** (*səlǧo*), are also most commonly consumed by Christian highlanders during Lent.

Among greens, onion and garlic are the single most important vegetable in the diet. In almost every household, onions are eaten every day as a prime condiment in any stew and the amount used in a meal is controlled by a strong cultural preference for the presence of onions. Stews, soups and sauces are made up of finely chopped onions and other vegetable ingredients. While two onion stalks are, for example, normally thought to be an appropriate amount for a *šəro* stew that will feed a family of three, chicken-stew (**ዶሮ፡ ወጥ**, *doro wäṭ*), consumed very rarely, requires three to four onion stalks. Red pepper, which is prepared through the combination of condiments such as onion-seed (*Nigella sativa*), false cardamon (*Afromomum angustifolium*), coriander (*Coriandrum sativum*) and garlic, is a prominent seasoning whose presence in cuisine is more frequent than its absence. It is not only an exclusively hot culinary but, like paprika, also adds colour to the flavour of F. Consumers may grab raw green peppers (**አርቅያ**, *arqəya*) at will and hack off a piece to eat along with meals. The various cuisines of Ethiopia also frequently use potatoes (*Solanum tuberosum*) and vegetables such as tomatoes (*Lycopersicum esculentum*) and cabbages as thickening agents for stews and soups. The importance and desirability of potatoes and vegetables are further indicated by their ubiquity in various regions and their appropriate addition to any culinary category. Aside from being eaten boiled, baked and roasted in or out of their skins, potatoes are also mashed and fed to infants.

The most popular squash eaten in Ethiopia is the large, round, hard squash (*Cucurbita peppo*), bright, orange or light green like a pumpkin on the inside. It is cut up, without the skin and seeds, and cooked in stew along with other ingredients. It is sold in markets cheaply and considered an inferior substitute for the more costly potatoes. The dry climate of many areas in which it is grown is so different that droughts that affect other crops would be less likely to strike squash-plants. Squash serves as a substitute staple during rainfall shortages and can be grown in gardens with less wetness.

Meat

In many Ethiopian traditions, it is absolutely acceptable to eat meatless meals. Yet there are occasional meals in which meat plays pivotal parts. The symbolic weight of meat is markedly greater than that accorded to most other F. Occasions for meat-consumption include Christian and Muslim holidays like ↗ *Fasika* and *ᶜId al-fiṭr*, initiation rites, life-circle events and visits of important guests. Flesh F. gets its symbolic power from this combination of utility and scarcity (Harris 1986:22).

Meat is considered as having quasi-medical and health-strengthening qualities. Thus, sick persons and women experiencing pregnancy and delivery are given a great deal of meat and such conditions become occasions for slaughtering and butchering. Beside such occasions, meat is frequently present more as a flavouring than as an ingredient significant by quantity. Communal and individual servings contain stews, but the pieces of meat are often gristle to be sucked, rather than actual morsels.

At present, game-meat is increasingly uncommon, and the vast majority do not have the sacred or secular occasion to eat them. In fact, game-meat such as that of an antelope or fowls like pheasant have fallen out of favour and partly became rare due to the damage of the environment. If affordable, beef, mutton, goat and chicken meat are preferred.

Various peoples of Ethiopia consume a small amount of lake and river ↗ fish by roasting or putting them into stews and soups. In the Eritrean coastal areas, sea-fish has an important role.

Lamb-stew is more commonly consumed in the highlands, while goat-meat is most commonly consumed in the lowlands- where families either butcher one of their own goats or purchase one for slaughtering. People do so when a goat is dying of natural causes or simply when it is felt that there has been too little meat for too long.

Many peoples, especially the Amhara and the Təgrayans, developed a variety of meat stews: meat stew with *bärbäre* (**ቀይ፡ ወጥ**, *qäyy wäṭ*), without *bärbäre* (**አልጫ**, *alləč̣a*); roasted meat (**ጥብስ**, *ṭəbs*); **መንጬ፡ ጥብስ**, *mänč̣e ṭəbs* (ground meat); **ዱለት**, *dulät* (gastro-intestinal sections sautéed with various ingredients and seasonings); different kinds of raw meat. The head, including the tongue and the mandible of a slaughtered animal, is eaten in the form of a broth or soup, while the rest of the body-parts are kept in pieces for later consumption. Sometimes meat can be dried and preserved in the form of sliced and thin linings (**ቋንጣ**, *qʷanṭa*). Inside the house it is hung on a rope or wire from one corner of the room to another. Unlike chicken, beef would never be chosen as a special-occasion F. or guest taste treat. A cow or an ox can be butchered for the sole purpose of selling the beef within the neighbourhood or the community. Even when a cow or an ox is dying unexpectedly and is butchered immediately by its owners, a great effort is frequently made to sell the meat rather than eat it. It is divided into equal portions (**ቅርጫ**, *qərč̣a*), comprising a package of every internal organ, muscle-meat and bone of the slaughtered animal. The size of a package is determined by the number of divisions. The greater the number of divisions, the smaller the size of a package of meat and the cheaper the cost (Pankhurst 1988: 178).

Chickens are supposedly raised within household courtyards, though in some cases they also tend to be inside the house together with humans. Chicken meat is used for special occasion meals and, normally, is not eaten on an everyday basis. Fowl-flesh F., for example, mark life-circle events such as births and marriages, and they are luxuries to sacrifice and serve during Christian and Muslim holidays or present to guests. They are softer and tastier than beef, mutton or goatmeat and they are also cheaper. To cook chicken for someone is an open declaration for deepening and formalizing relations between hosts and guests. Although chickens and eggs are also bought and sold in markets, and few families eat eggs on a day-to-day basis, families owning laying hens will cook those eggs not sold or used in redistributive networks and reciprocal exchanges or still toss them in meals as nutritional supplements or as a way of flavouring. By and large, the standard meal in a family is composed of *ənǧära* and some sort of lentil or vegetable relish, sometimes garnished with small chunks of meat.

Food, distinction and community

According to the pattern of F.-consumption traditionally seen as ideal in north and central Ethiopia, most people eat out of one common family dish, bowl or pot, which is placed first before the men; when they have finished, the women take what is left for themselves and their children. The shared meal represents the unity of the family that gathers to eat it, but the manner in which it is served and eaten also speaks of the division between more important and less important household members.

Men do not eat together with women unless they are familiar with each other. Owing to the etiquette of formal occasions and sometimes as family routines, women eat separately. Not only the order of serving but also the quantity and quality of what is served (controlled by women) emphasizes the social inequality. For example, if the meal is chicken stew, men get breasts, thighs and legs while women and children get necks, wings and skin pieces. If the wife is supposed to serve F. to her husband, he in turn is supposed to eat it. Otherwise she will have a perfectly legitimate ground for contest and protest. Thus, meals are not only among the most relaxing and enjoyable moments the family members spend together, but by the same token, they often also become expressions of conflicts and frustrations endemic to family life.

Great respect is shown for F. and people bless themselves before and after eating and, as best as possible, refrain from talking or laughing. They scoop small pieces of F. with three or four of their fingers and always chew, with their mouth closed, along one side of the jaw, because chewing on both sides of the jaw is considered gluttony. The size and composition of each portion of F. and the routine of scrupulously serving it are in many Ethiopian societies also highly ritualized, and respect is shown through sharing and the uttering of specific words of request and thanks. Hence Ethiopian peasant-homes may lack tables but have table manners.

Traditionally many F. avoidance-taboos exist and different socially and religiously influenced restrictions fall on both men and women (cp. Braukämper 1984:459). More widespread is, for example, the abomination of pork among Christians and Muslims, while the avoidance of fish by Cushitic-speaking people, although of cultural and historical importance, is less widespread (Simoons 1961:42).

Rules concerning commensality are important markers of status and purity that define hierarchy among many peoples of Ethiopia (Hamer 1994:132). For example, the Wäyṭo of Lake Ṭana gobble gastro-intestinal parts which many other peoples of Ethiopia would consider too vile to touch (Teclehaimanot Gebreselassie 1984:60). Avoidance of F.-sharing is one indication of the social distinction between peoples (Braukämper 1984). Similarly, the evil-eye (↗*buda*) belief involves the person causing the possession or "eating", the possessed or "eaten", and the person called upon to are the possessed (Reminick 1974: 284). The belief that the people accused of being *buda*-related offend dietary rules by eating carrion meat and other prohibited F. and that they transform themselves into ↗hyenas by night to "eat" people, strongly suggests that a good deal of symbolism is negotiated around F. In this respect, F. play an important part in the rituals and symbols that establish and polish social relations within a group and are an equally potent expression of relations between groups (Mintz 1985: 96) For example, the mutual affection between spouses and their interest in sustaining the conjugal union is among the Amhara metaphorically expressed as having "grain and water" (**እህል፡ ውሃ**, *əhəl wəha*); the marriage collapses when "grain and water" diminish (**እህል፡ ውሃ፡ ሲዘጋ**, *əhəl wəha sizzägga*). Food is thus so central to the concept of marriage that it often replaces or serves as a euphemism for sexual intercourse as the focus of discourse about marital relations.

F.-avoidance practices exist among the Christians and Muslims. For example, both find it difficult to eat meat together because of the differing religious rules of slaughtering. For Muslims it is forbidden by ↗*šarīʿa* dietary principles to consume flesh F. prepared by non-Muslims because what is forbidden (*ḥarām*) and permissible (*ḥalāl*) is related to the way of carrying out the slaughtering.

An example of the different tastes in Ethiopia is the perception of sweetness. For example, the Argobba prefer sweet F., like honey-marinated bread which to Amhara palates is considered sickly sweet. Again the Argobba and the Adäre have a tolerance for high sugar-levels, especially in tea and coffee, which among the Amhara, beyond a certain concentration, is commonly thought to be too sweet. Among some southern peoples, milk and other dairy products are not central features of their diet. Although the cuisine of diverse ethnic groups contains a large number of identical elements and dishes, the manner of combining, preparing and seasoning of meals out of these elements can be very different.

During the long centuries of conquest and migrations, many ethnic groups appropriated a whole variety of cultigens and cuisines and an enormous diversity of F. and culinary customs of "others". For example, Oromo butter-based F. such as ቃተኛ (*qatäññа*, i.e. *ənǧära* marinated with a mix of butter and *bärbäre*), ቅንጬ (*qənč̣e*, butter-soaked boiled barley), ጨጨብሳ (*č̣äč̣č̣äbsa*, bread mashed in butter) and ጭኮ (*č̣əkko*, flour mashed in butter) are today culinary practices central to Amhara indigenous F. and figure prominently in the flow of consumables that surround the cultural-cuisine categories of many other ethnic groups in Ethiopia. Just as Ethiopian culture is often described as a blend of Amhara, Oromo, Təgrayan, Gurage etc. influences, the "Ethiopian traditional F." is defined as consisting of Amhara chicken-stew (*doro wäṭ*), Oromo buttered flour (*č̣əkko*) or buttered boiled barley (ቅንጬ, *qənč̣e*), Təgrayan bread (ሕማሳ, *ḥəmmassa*) and Gurage butter-sautéed raw or cooked ground beef (ክትፎ, *kətfo*) accompanied by *ənsät* bread (ቆጮ, *qoč̣č̣o*), while minimal attention is paid to other indigenous dishes.

At present, many Ethiopians adopt new dietary patterns owing to their integration into a global economy. Pre-packed foreign F. such as bakery bread, wheat flour, rice, pasta and macaroni have, for example, been grafted on to the native peoples *doxa*, entailing new requirements in F.-preferences and eating habits from alien ecological systems. The ingredients and condiments of their F. have changed, largely owing to regional and international commercial contacts, which in turn has resulted in diversity in F.-types and mealtimes (Abbebe Kifleyesus 2002).

Cooked F. are no longer composed only of local products, but are also made of those products made available by way of cash-based market exchange. Many Ethiopian families are learning to combine new products with traditional F. For example, partly prepared or entirely processed F. such as powdered *šəro* and *bärbäre* that are available in shops are transformed into household tastes through the addition of home-made condiments and spices and careful cooking-processes.

Abbebe Kifleyesus

Forbes, Rosita

F. (née Joan Rosita Torr; b. 1893, Lincolnshire, d. 1967) was a British travel-writer. Educated at home, she developed an early interest in maps and foreign languages. Marrying a soldier, Colonel Ronald Forbes in 1911, she travelled with him to India and the East, but was soon divorced. During World War II she drove an ambulance in France and later became one of the first travel-writers in a then male-dominated profession.

In 1924, already familiar with Arabic, F. sailed to Djibouti, travelled to Dərre Dawa by rail and thence by mule to Harär, where she met *däǧǧazmač* ↗Ǝmməru Ḥaylä Śəllase, and on to Addis Abäba, where she was received by Empress ↗Zäwditu and *ras* Täfäri. She then proceeded to Däbrä Marqos, Lalibäla, Gondär, Aksum and ʿAdwa, and thence to Eritrea. She described her adventures, "serious and frivolous", in her book *From Red Sea to Blue Nile* (1925): the title also of a film she made with cameraman Harold Jones – one of the first such ever made.

Elected to several geographical societies, F. subsequently wrote travelogues of other eastern countries, lectured in the United States of America in support of World War II, wrote melodramatic film scripts and edited a periodical publication, *Women of All Lands*.

Richard Pankhurst

Forest(s)/Forestry

Forests

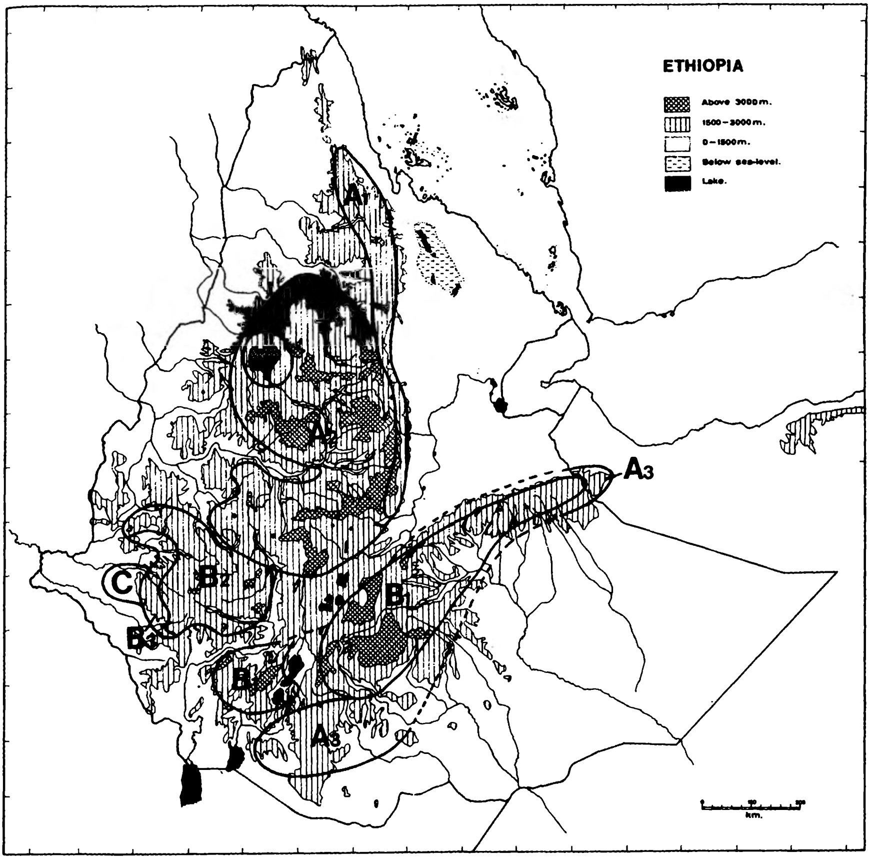
A commonly accepted definition for F. can be "a continuous stand of trees which may attain a height of 50 m or more, with crowns touching or intermingling, under which are often growing under-storeys (herbs, shrubs, lianas)" (White 1983). For the need of statistical assessments, the definition of the word F. can be more precise: for the Food and Agriculture Organization of the United Nations (FAO), it is an area of land over 0.5 ha containing a tree crown cover of at least 10 % (with trees that should reach a height of 5 m at maturity). In Amharic, the words used for F. are ዱር *dur*, ደን *dän*, ጫካ *č̣akka*: they all refer to wooded lands, more or less open, as opposed to cultivated lands. This semantic opposition to infield is also found in English as the word F. originally comes from the Latin *forestis* < *foris*, that is 'what is outside' (outside the village and the fields is understood).

One must distinguish primary *F.*, which are the climatic state of the vegetation after a long period of time without any human influence, and secondary F., which are the result of the evolution of vegetation after a recent human interference. In most places in Ethiopia, the F. are of the second type. When human and animal pressure is particularly high, these F. are replaced by bushlands. Another distinction must be made between natural F., constituted by indigenous species regenerating spontaneously, and artificial F., planted by humans (with species newly introduced or not). The second type is chiefly represented in Ethiopia by numerous ↗eucalyptus plantations, a genus introduced in Addis Abäba in the beginning of the 20th cent.

According to tradition, the highlands were once generally forest-covered and had gradually been cleared. The National Atlas of Ethiopia (Asfaw Fanta 1981) estimated that the past F.-coverage was higher than 30 % of the entire area of the country and stated that the present coverage is about 3 %. Logan (1946) estimated that high F. covered about 5 % of the area of the highlands, and a more recent estimation states that F. cover nowadays 3.6 % of the national territory (Wood, after Gascon 1998). But according to the FAO assessment, the F.-cover in Ethiopia would represent 13 % of the territory in 2000, i.e. 4,593,000 ha (s. FAO web-site). Various publications quote different figures, most of the time in favour of a heavy deforestation. But these pieces of evidence must be analysed very carefully, as any estimate of the past coverage is beyond our present possibilities of assessment, as it has so far to be based on rainfall-distribution and F.-relic-patches estimates. Furthermore, the measurement of the F. cover depends on the sense the word F. is given. Good statistics should clearly distinguish between primary F., secondary F., and other serial stages in F. re-growth.

The main reasons given to explain the presumed deforestation are uncontrolled exploitation (wood fuel and wood construction consumption, grazing), shifting cultivation, F. fires and expansion of permanently cultivated areas. Some old fields may be abandoned and progressively colonized by vegetation: they will be in most cases invaded by evergreen bushland and later species of ↗Acacia (*Acacia abyssinica*) or eventually more typical F. species e. g. *Albizia schimperiana*.

F. are not homogeneously distributed in Ethiopia: according to the United Nations Conference on Environment and Development (UNCED) estimates in 1992, 52 % are in the western regions of Illubabor (48 %), Käfa, Wälläga and Goǧǧam, and 38 % are in the southern regions of Bale (19 %), Sidamo and Gamo Gofa. Šäwa region is estimated to account for 3.1 %, Harärge only 0.6 % and the rest (Təgray, Wällo, Gondär, as well as the now-independent Eritrea) for only 4.1 %. (UNCED 1992). Yet in densely populated areas the remaining high F. still exist chiefly for cultural reasons, as they are either preserved areas (e.g., ↗Männagäša), woods surrounding churches or sacred F. (↗Sacred places; ↗Däbr). But the protection these F. are submitted to does not exclude any human management within them (s. the example of the Konso ↗juniper F. in Demeulenaere 2002).



Map of forests in Ethiopia and Eritrea outlining the general bioclimatic regions in which the forest types are distributed (from Friis 1986)

The natural F. of Ethiopia may be categorized into the following types of Greenway (1972, in Friis 1982, 1986): lowland rain-F., upland rain-F., upland dry evergreen F. and riverine F. Their spatial repartition depends mainly on the climate, which is in Ethiopia strongly correlated mostly to elevation but also to latitude and to exposure to the moist winds from the Sudan. Our description of the types of F. will be restricted to the characterization of the species in the higher storey (canopy).

Lowland F. are located in Illubabor, at an altitudinal range of 450–600 m A.S.L., with an annual rainfall approximately between 1,300 mm and 1,800 mm. The F. is semi-deciduous, with a 15–20 m tall, more or less continuous canopy of *Baphia abyssinica* (endemic to this region) mixed with less-common species such as *Celtis toka*, *Diospyros abyssinica*, *Lecaniodiscus fraxinifolius*, *Malacantha alnifolia*, *Trichilia prieuriana* and *Zanha golungensis*.

At elevations between 1,200 m and 2,600 m A.S.L. in the humid areas of southern Ethiopia, the natural vegetation is upland rain-F. (with the exception of rocky slopes and river valleys). In the southern part of the Rift Valley and in Harärge, the upper layer (10–30 m) is dominated by the conifer *Podocarpus gracilior* (*zəgba*), mixed with different broad-leaved trees (around 20 species), among them *Croton macrostachyus*

Forested hill where the enthronization of the *tato* of Hinnaro (Ǝnnarya) took place; Käfa Gawata, 1972/74; photo by Werner Lange; courtesy of the Frobenius Institut, Frankfurt am Main (ODT_1.02.12..01_0034)

(*bəsanna*), *Celtis africana*, *Schefflera abyssinica*, *Ilex mitis* and *Olea hochstetterii*. In the southwestern part of the plateau (southern Wälläga, Illubabor and Käfa) the humid broad-leaved F. is now characterized by an emerging species above the 20–30 m canopy: *Aningeria adolfi-friederici*. The 10–30 m-high canopy mainly consists of *Albizia spp.* (among them, *sisa*), *Celtis africana* (*amalaqa*), *Croton macrostachyus*, *Ficus spp*. (among them *šola*), *Ilex mitis* (*məsr gämfo*), *Macaranga kilimandscharica*, *Olea welwitschii* (*səgəda wäyra*), *Polyscias fulva* (*yäzənǧäro wänbär*), *Schefflera abyssinica* (*keṭema*), *Prunus africanus*, *Sapium ellipticum* (Oromiffa: *bosoqa*), *Syzygium guineense* ssp. *afromontanum* (*doqma*). Around Ǧimma, the F. are mostly transformed into semi-natural "coffee F." where the shrub layer has been cleared and replaced by coffee-plants (*Coffea arabica*).

The "upland dry evergreen F.", poor in species, which mainly grows on the plateau at altitudes from 2,200 m to 3,200 m with an annual rainfall between 500 m and 1,500 mm, is constituted by the typical association *Juniperus procera* (*ṭəd*) – *Olea europeae* ssp. *africana* (*wäyra*), mixed with a more-or-less high quantity of *Podocarpus gracilior.* The F. east of the Rift Valley are indeed often dominated by *Podocarpus gracilior*, whereas F. at higher elevations (between 2,200 and 3,200 m) are dominated by *Juniperus procera*. On yet-drier sites (in Sidamo, Bale and Harärge, for example), with rainfall not exceeding 1,100 mm, *Juniperus procera* F. is also dominant at lower altitudes. At the upper limit the F. are often mixed with *Hagenia abyssinica* (↗*kosso*) and woody species of *Hypericum*. *Arundinaria alpina* (*qärqäha*), the mountain bamboo, occurs on the wetter side of the mountains, almost pure or mixed with *Hagenia*, *Erica arborea* and other shrubs.

Riverine F., growing along the riverbanks, consist of a 10–20 m-high canopy which is rich in species. Some are restricted to riverine F.: *Ficus valis-choudea*, *Trichilia emetica*, *Salix subserrata*. *Albizia grandibracteata* is frequent at higher altitudes (1,200–1,600 m A.S.L.), while other species, e.g., *Mimusops kummel*, *Syzygium guineense* ssp. *guineense*, *Phoenix reclinata*, are common at most altitudes. The majority of the canopy-species are evergreens. In the shrub-layer, *Salix subserrata* frequently forms thickets.

Forestry

After the liberation of the country from Italy, the then government ordered the provisional governors to reserve the big F. that were in private hands. By 1965 the basic forestry acts were promulgated. These included proclamations concerning state F., private F. and protective F. The many objectives of these proclamations were: protection of the existing F. and development of highly productive sources of raw materials and fuel wood; and afforestation of lands in the protection areas and lands in the vicinity of settlements to ensure the availability of fuel wood and industrial raw materials (Abraham 1995).

Prior to the 1974 Revolution in Ethiopia a large portion of Ethiopia's natural F. was owned by the private sector. During this period, private individuals also played a key role in planting and maintaining eucalyptus species on their farm lands and homesteads, and along the roads under a system where commercial utilization was given priority and precedence over other management objectives.

The first reconnaissance of F. inventory of the Ethiopian F. was made during 1975–79. The inventory covered areas within a 400 km radius of the city of Addis Abäba and provided substantial information about the country's natural high F. This was followed by a three-pronged development approach based on reforestation, namely: a regular program (financed by the government and implemented throughout the community); priority project-areas development (financed by the Swedish International Development Cooperation Agency [SIDA] and implemented in a few selected natural F.); and planting degraded highland areas under the World Food Program.

In the 1980s the Forest and Wild Life Conservation and Development Authority (FWCDA) was created for the administration of State F. In 1985 further reorganization occurred and the Community Forest and Soil Conservation Development Department (CFSCDD) was set up in order to reach the doors of each spreading Community.

In 1986 a study conducted under the auspices of the Ministry of Agriculture resulted in the identification of the National Forest Priority Areas (NFPAs). They numbered 58 and their total area, including the disturbed and undisturbed F. as well as plantations and open lands, was 3.5 million ha. The main objectives of the identification of the NFPAs were to promote F. management practices and to implement an integrated management system with the ultimate goal of enabling each NFPA to locome a self-financing and sustainable enterprise.

However, due to financial constraints and shortage of professional manpower, the building-up of an improved forestry management system did not take place at the expected rate. By 1995 only 37 NFPAs, having a total area of about 2.1 million ha, were demarcated with boundary marks of concrete pillars. Furthermore, inventory has been carried out for a total F. area of about 0.45 million ha and a F. management plan has been prepared for only 6 NFPAs.

In accordance with the NFPA (1994), the following were the main types of forestry plantations: industrial-plantation F.; peri-urban plantation F.; community woodlots; community-protection F.; individual farm F.; and minor-products F.

The industrial-plantation F. is used for producing raw materials for industries. The aim is to increase the supply of industrial wood to a level that corresponds to the demand of the wood-processing industry. The largest area to be planted in any single year was 21,600 ha (i.e. in 1994) compared to the 33,100 ha planted in 1981/82. The main tree-species planted included: *Cupressus lusitanica* and *Pinus patula*, *Juniperus procera* planted on high elevations. *Eucalyptus globulus* and *Eucalyptus camaldulus* and *Eucalyptus camaldulensis* are also widely grown, mainly for construction-poles and fuel wood.

The second F. type is peri-urban plantation which is planted to solve the fuel-wood deficiency.

The third F. type is community woodlots, whose area has been estimated at 50,000 ha.

The fourth F. type is the protection forestry. Its purpose is the protection of environmentally fragile catchment-forestry, including the establishment of new F. cover, which is essential for conserving the organic matter of soils for: regulating stream-flows; enhancing water-quality and for controlling soil-erosion and run-off from steep hillsides, which would, among other benefits, also protect agricultural production downstream in the river basin.

The fifth F. type component is the farm-forestry, which is the centre-piece of the tree-F. production program. Its importance is to promote the integration of trees into farms to produce fuel wood, poles and fodder; to assist the availability of adequate arable land; and to increase total agricultural production.

The sixth F. type is the minor-products F. Ethiopia is a major producer of ↗honey in Africa. Gums, incense and myhrr are collected, respectively, from ↗*Acacia spp.* (notably *Acacia senegal*), *Boswellia spp.* and *Commiphora spp.* (notably *Commiphora myrrha*).

Currently a new Environmental Protection Authority has been established. It is empowered to manage and develop the country's environment, in general, and the F., in particular. To this effect this authority has issued an environmental policy, which is in the process of being implemented.

Mekete Belachew

Forts

Man-made F. were rare in Ethiopia. However several traditional defence-compounds, profiting from special features of the landscape, existed. Elevated and rocky hills (↗*Amba*) at various times played an important role, e.g., ↗Amba Gəšän and ↗Amba Sänayti. Often the natural features of the *amba* were reinforced with earth walls, palisades, ditches and look-out constructions to strengthen the fort's defensive capacity.

In many political entities different types of defence-constructions encircled the settlements or compounds of chiefs and ritual leaders. In the south-western Ethiopian kingdoms (Wällamo, Dawro, Konta, Käfa, Ǧimma, Ǝnnarya, Gera, Gomma and Guummaa), the territories were protected by earth walls and ditches along the borders. In the kingdom of ↗Ǧanǧäro, for instance, such fortifications with walls, fosses and three-metre-high palisades were only erected at the gates of the regional trade routes entering the territory. The way could be blocked by huge wooden doors and was overseen by guards on high platforms. Within the kingdom several fortification lines were also created. The courts of local kings, such as Angir, Amfal and Kanfoča were fortified with stone walls (VSAe III, 326f., 340f.).

It should be mentioned that fortifications sometimes could also have had a strong symbolic meaning, separating the sacral from the profane sphere (cp. the court of *aṣe* Śärṣä Dəngəl, HabKön 157 and 265).

In the Christian empire of Ethiopia the existence of temporary camps (↗*Kätäma*) militated against permanent fortification. The idea of modern F.-building in the region was apparently initiated by the Portuguese. During their conflict with the Ottoman Turks, they proposed to *aṣe* ↗Ləbnä Dəngəl in 1520 the establishment of F. on the Red Sea coast at ↗Massawa and ↗Sawākin; the monarch later urged the Portuguese to erect one at the Gulf of Aden port of Zaylaᶜ (BeckHuntAlvar 416, 478). Such ideas were not implemented. However, after their capture of Massawa in 1557, the Turks themselves constructed a F. there and two on the mainland: one at the port of Ḥərgigo and the other, further inland at ↗Dəbarwa. It consisted, according to an Ethiopian chronicler, of a "long wall and very high tower". *Aṣe* ↗Śärṣä Dəngəl captured it in 1580 and raised it to the ground, but found the F. at Ḥərgigo impregnable.

Śärṣä Dəngəl (whether or not influenced by his experience with the Turks is uncertain) later built a F. at ↗Ǝnfraz, also known as Gubaʾe or Guzara (CRHist 117) east of Lake ↗Ṭana. The structure, referred to in his chronicle as a fine *maḥfäd*, or fortress, was in existence in 1586. This building may have inspired the construction by *aṣe* ↗Fasilädäs, early in the following century, of the first of the ↗Gondär palaces or castles and indirectly Gondärine palace architecture generally.

During the reigns of Śärṣä Dəngəl and ↗Susənyos, the ↗Jesuit missionaries and the community of half-caste Ethio-Portuguese managed to make of ↗Fəremona a solid fortress. Probably with the help of European craftmanship, they erected there defensive walls, successfully protecting the population from several Oromo raids in the first quarter of the 17th cent. Once abbandoned, the strategic settlements was taken over by *däǧǧazmač* Kaśa Ṣəyon, who in 1919 erected there a F. and, following by the Italians, turning it into a fortress (Guida 243).

Some F.-building can later be discerned at many military settlements, built in strategically well-located mountains, notably *aṣe* Tewodros's camp at ↗Mäqdäla and *aṣe* Mənilək's establishments at Fəkkare Gəmb and Ǝnnäwari in Šäwa, and his *kätäma*, or camps, in southern Ethiopia. F. were likewise erected by the Egyptians during their occupation of ↗Harär and ↗Kärän in the 1870s, and later by the Italians, notably at ↗Asmära, ↗Ambalage, invested by *ras* Mäkʷännən's forces in 1895, and ↗Mäqälä (s. Berkeley 1935, ch. 6), whose successful siege paved the way for the Ethiopian victory at ᶜAdwa.

Richard Pankhurst

Four Power Commission

The 1947 Peace Treaty with ↗Italy stated that the four allied powers – Great Britain, France, the USA and the USSR – should settle the future status of her pre-fascist African colonies, ↗Eritrea, ↗Somalia and Libya. In the case of Eritrea, the Allies had different views. While Great Britain and France sought to protect their colonial interests in the area, the USA and the USSR – both anti-colonialists – aimed at becoming the most influential power in the Horn.

Great Britain, the occupying power (↗British Military Administration), believed that Eritrea could not constitute a viable independent State and, from 1943, was inclined to split the country, assigning the western Moslem-inhabited lowland to Anglo–Egyptian Sudan (which had been under Sudanese control already prior to the Italian colonization) and leaving the plateau, inhabited by Christian Təgrəñña-speakers, to Ethiopia. The latter, however, claimed the whole of Eritrea by virtue of her supposed rights over the territory – based on historical, geographical, ethnic and economic grounds – and on strategic issues, such as an outlet to the sea for the land-locked empire. The USSR opted for an individual trusteeship; the USA proposed a UN collective trusteeship for ten years followed by independence, while France backed Italy in her desire to prolong her control of Eritrea by the award of a UN trusteeship or calling for the independence of the country. The Allies decided to send a Commission of Enquiry to Eritrea with the task of acquainting themselves with the wishes of the inhabitants.

Although the relative strength of the political organizations was difficult to ascertain and the system adopted debatable, the following proved to be the most representative Eritrean parties: 1) the Unionist Party (↗Maḥbär fəqri ḥagär), which was mainly supported by the Təgrəñña-speakers of the Ḥamasen region, but also by Moslem aristocrats who counteracted the serf-emancipation movement promoted by the Moslem League; it stood for unconditional union with Ethiopia and was the largest single party in Eritrea (48 % of supporters); 2) The ↗Moslem League was the second largest party of E. (30 %); it mobilized the Moslem communities and demanded independence or, at least, a UN trusteeship; 3) the ↗Liberal Progressive Party, which was composed of Christian highlanders, was sponsored by the British Administration to favour the independence of E. together with the Təgrəñña districts of Ethiopia (Təgray); 4) the ↗Pro-Italy Party, composed of Italians, half-castes and natives who had gained privileges from colonialism, sought the maintenance of Italian political rule in the country.

The Four Power Commission of Enquiry (FPC) visited Eritrea from 8 November 1947 until 3 January 1948. The Commission received the platform of political parties, examined written petitions and interviewed the traditional *élite* of the population, but failed to reach agreement over a unified report. The British and the American delegates reported that 55 % of the Eritreans favoured independence and 44.8 % stood for union with Ethiopia, while the French and the Soviet delegates registered 52.17 % of pro-independence and 47.83 % of unionists. Both the Eritreans and the powers were divided regarding the future of the country. Therefore, the case was submitted to the international forum of the UN on September 1948.

Federica Guazzini

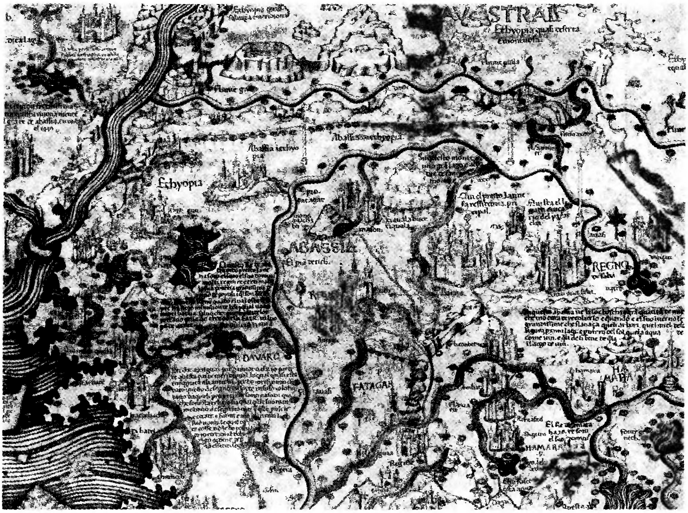
Fra Mauro

F.M. (Lat. Frater Maurus, no family name known; d. by October 1459) Camaldolese, was a famous cartographer. Very little is known about his life except that at least since 1433 he was a friar (hence Fra) at the Camaldulian monastery of San Michele di Murano, on the homonymous island near Venice, and that he was for some time residing in the Istrian monastery of San Michele al Leme, here drawing a map of its landed property (copy of it survives in a 1737 engraving). At Murano he was in charge of a ↗cartography workshop within which, *a contemplation di questa illustrissima Signoria*, i.e. 'in obeyance to [= "at the instigation of", rather than "in homage to"] the most illustrious Signoria (of Venice)', he produced the famous "Mappamondo", a comprehensive world map painted in the form of a circular *oikoumene* ("inhabited world"), the only extant exemplar of which is now kept at the Marciana Library in Venice. Such an important parchment map – showing remarkable similarities with the so called "Carta Borgiana" of the Vatican Library (Borg. v, s. Almagià 1944:32–40, no. 10; 1956:5ff., 10) – was achieved with the help of Andrea Bianco, who had already been working on a sea chart of the West African coast (1436) and a planisphere (1448). The original of the "Mappamondo" was fully laid out by 1448 (all relevant information being gathered by then), and however finished before 1453 or, less probably, by the beginning of 1459. The different termini for the work's final completion are depending, respectively, upon two significant circumstances at least: *co(n)stantinopoli* ("Constantinopolis") is still mentioned in a caption as the Byzantine capital; and a similar world map was sent to the king of Portugal ↗Alfonso V in the early months of 1459. Yet, this lost exemplar is not necessarily the original (made instead for the Signoria), as more often surmised; besides, it seems to have disappeared some time after 1494, if not 1779, from the Portuguese monastery of Alcobaça in which it was reportedly preserved (Almagià 1956:5f., 10).

Whatever its relationship with the previous one, the almost contemporary "Mappamondo" of the Marciana Library was achieved, as clearly written on the rev. of the parchment, "on 23 August 1460", after F.M.'s death. It is a magnificent slightly elliptical planisphere (with its major diameter, east-west, close to two metres), inscribed in a square frame and furnished with ornaments and elaborate vignettes around its margin and texts in the form of scrolls – simple labels or detailed captions – appended to the geographical units they are identifying or describing (s. Falchetta, in preparation, for full transcription, commentary and translation). Should one assume that in 1460 only a few more legends, indeed on fragments of different parchment, were eventually integrated by pasting them between the circular profile and the square frame of the map, this exemplar is even likely to be the original one.

A pioneering reproduction of the extant "Mappamondo", with neither texts nor most of the geographical names, was published by the then Abbot of San Michele, later Cardinal Placido Zurla (1816). The standard facsimile edition, by Gasparrini Leporace (1956), now implemented by Falchetta (in preparation, with important chronological and geographical issues), consists of 48 colour plates: no. x, covering modern ↗Eritrea and ↗Ethiopia, as well as some other zones of Africa (with ↗Nubia and the ↗Red Sea area), is reproduced here. The portion of Africa where Ethiopian names appear has been usefully redrawn and replotted on a modern basis by Crawford (CrawItin 19, figs. 3 and 4).

As to its orientation, the planisphere (like the "Carta Borgiana") is perfectly falling within the medieval framework of maps and sailing ("portolan") charts with south to the top, in the Ptolemaic tradition (Arentzen 1984:147ff., 302; Woodward 1987:378 n. 62), thus marking the culmination of late medieval cartography. Jerusalem has lost its customary central position, being now moved eastwards because of Asia's increased importance. For the African and Asian parts, the knowledge of the world displayed in the "Mappamondo" is relying upon information already found in Marco Polo (quoted extensively but silently) and other Arabic sources, as clearly indicated by the confusion of "Indian" and "Ethiopian" regions in plate no. IX, relevant to "Somali" countries (with *Mogodis*



Venice, Biblioteca Nazionale Marciana; "Mappamondo" by Fra Mauro: section corresponding to modern Eritrea and Ethiopia; from Gasparrini Leporace 1956, pl. x

= ↗Mogadishu on *Diab* = Madagascar, s. Cerulli 1935, 336f.; Fiaccadori 1992, 36ff. and n. 113f.). F.M. seems to convey all the more critical evaluations of the sources and to abandon traditional views as actual reports of the latest discoveries by "navigators send by the King of Portugal" become available – not before the 1460s, however, for the Venetian Alvise Ca' da Mosto.

Several new details are introduced with special reference to South Asia (India) and Japan, the latter appearing now for the first time on a European map. Remarkably enough, Africa is depicted as capable to be circumnavigable to the south – some 39 years at least before Vasco da ↗Gama rounded the Cape of Good Hope on his way to India (1498).

Central and southern Africa are called "Ethiopia", whereas "Abassia" means ↗Abyssinia (cp. ↗Aithiopía). For the first time the realm of ↗Prester John, the legendary priest and king, originally thought to be somewhere in Central Asia, is found in Abyssinia at *Berara* (= ↗Bärara), a place specifically styled as his chief residence (*Qui el presto Janne fa ressidentia pri*[*n*]*cipal*). This and other original evidence, providing invaluable information on the country (and later exploited by Alessandro ↗Zorzi, indirecly acquainted with F.M.'s preparatory materials), is explicitly drawn from local sources: namely, from Ethiopian monks passing by Venice – a mandatory halt on their way to other parts of Italy – and asked by F.M. to describe *tute q*(*ue*)*ste p*(*ro*)*ui*(*n*)*cie e citade e fiumi e monti cum li suo nomi* ('all these provinces and towns and rivers and mountains with their own names').

The "authenticity" of the Ethiopian section of the map is obvious from its agreement with the known geography of the country. In fact, apart from a few major designations – e.g., *Abassia Etiopia*, *Ethyopia* – appearing there more than once as traditionally spread over a great part of Africa (but cp. the expression *Abassia i*(*n*) *Ethyopia*), several Ethiopian and East African names (s. "Gazetteer" in CrawItin 194–204) can be easily identified with modern equivalents: e.g., *abaui* = ↗Abbay (the "Blue Nile"), *amasen* = ↗Ḥamasen, *auasi* = ↗Awaš, *bagamidre* = ↗Bägemdər, *hacsum* = ↗Aksum, *F*(*iume*) *Galla* = river (of the?) Galla (a tributary of the *xebe* or *vabi* = Wabi [Šäbälle]), *mons xiauala, ouer xiquala* = mount ↗Zəqʷala, *R*(*EGN*)*O HAMARA* = province ('kingdom') of ↗Amhara, *simi* = ↗Sämen; the *regno de saba* does not refer to the legendary realm of the Queen of Sheba (Ar. Sabaʾ; ↗Makədda), but to the actual kingdom of ↗Šäwa (s. CrawItin 201).

Rainer Voigt – Gianfranco Fiaccadori

France, relations with

French interest in Ethiopia dates back to medieval times. As early as 1313 a French Dominican monk, Guillaume Adam, advised the King of F. to seek an alliance with the Christians in the mountains south of Egypt, but nothing came of the idea (TadTChurch 252). In the 17th cent., however, the French consul in Cairo, Charles de Maillet, developed a keen interest in the far-off Christian country and King Louis XIV conceived the plan of opening relations with the Gondär-based Ethiopian kingdom. Charles ↗Poncet, a French physician in Cairo, was accordingly despatched in 1699 to treat *aṣe* ↗Iyasu I for a troublesome skin disease (Foster 1949:xxiii–xxxvii, 92–172). The Frenchman was virtually the first foreigner to visit Ethiopia since the expulsion of the ↗Jesuits over half a century earlier. Poncet's visit was secret, but led to some warming of relations between the two countries. When a French envoy, Lenoir du Roule, was subsequently seized by the ruler of Sinnār, *aṣe* ↗Täklä Haymanot I wrote a strong letter remonstrating with him in 1706 (Lobo 1735:359–469).

French interest in Ethiopia was resumed more effectively in the early 19th cent. during the last decades of the ↗*Zämänä mäsafənt*. Two Saint Simonian missionaries, Edmond ↗Combes and Maurice ↗Tamisier, abandoning their sect's bizarre interest in the women of the East, visited the country in 1833. They were followed by the scholarly brothers Antoine and Arnauld d'↗Abbadie in 1838–48, and by the more commercially-minded Louis-Rémy Aubert-Roche and Jean-Nicolas Dufey in 1837–38. Official French governmental missions, mainly interested in F.'s ties with the East, then followed briefly one after another: a scientific mission led by Charlemagne Théophile ↗Lefebvre in 1838–43, an abortive trading effort by the Société Nanto-Bordelaise in 1840–41 and the mission of two French naval officers, Pierre Victor A. ↗Ferret and Joseph Germain ↗Galinier in 1840–43. Another French traveller, Charles-François-Xavier ↗Rochet d'Héricourt, meanwhile made his way further south to Šäwa three times, in 1839, 1843 and 1847–48 (Malécot 1972). Some of these travellers and missions were primarily concerned with geographical investigations, but others had various other interests.

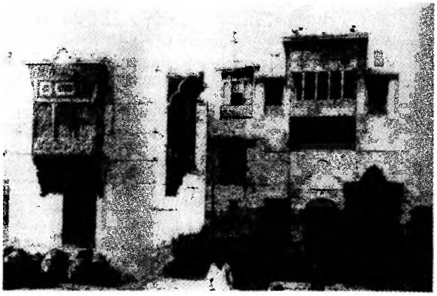
Some visitors sought to establish commercial or coaling-stations along the ↗Red Sea or Gulf of Aden coast; others attempted to recruit workers for the island of Bourbon (later Mauritius), where labour, after the abolition of slavery, was scarce. Other travellers again had a more apparent political agenda. Rochet d'Héricourt, though seeking to purchase supplies of ↗*kosso*, which he regarded as a valuable cure for tapeworm, also claimed to have signed a political and commercial treaty with ↗Šahlä Śəllase, *nəguś* of Šäwa, on 7 June 1843. Starting with the 1840s, F. entertained a regular vice-consulate in ↗Massawa in the Ottoman territory. Henry Lambert, a French consul in Aden in 1855–59, proposed the creation of a military and commercial establishment at ↗Tağūra, on the Gulf of Aden coast. Stanislas Russel, a French naval captain, purchased the more northerly Red Sea island of Dessey in Zula Bay in 1860 from *däğğazmač* ↗Nəguśe Wäldä Mikaʾel of Təgray, but the French failed to occupy it. Nəguśe also ceded Zula through his envoy, the Catholic convert ↗Əmnätu, but this was never realized on the ground. He had even offered the cession of the whole coastal province, in exchange with French support for his claim to the throne, which could not materialize due to his downfall soon afterwards (RubInd). Two years later the French Government purchased the Gulf of Aden port of ↗Obock, which was not, however, effectively occupied until 1884 when a French commandant, Léonce ↗Lagarde, was appointed.

In the mid-1860s French influence had increased considerably especially in regions near the coast due to the presence of the French-directed ↗Lazarist mission (↗Catholicism), who had erected the Vicariate Apostolic of Abyssinia by order of Rome. After the conversion of the Tәgrәñña-speaking ↗Ṣänᶜadäglä in ↗Akkälä Guzay and of important parts of the ↗Bilin, their leaders declared themselves subjects of F. – who had helped, similar to Great Britain, to reduce the danger of raids from Egyptian territory especially in Bogos (Bilin). As a consequence, Bogos became a weak French protectorate, under influence of the French vice-consul, and during a short period even governed by a French tax-collector in the services of the governor of Ḥamasen.

In Ethiopia itself, after the rise of *aṣe* ↗Tewodros II, Guillaume ↗Lejean, the French vice-consul at Massawa, started an unsuccessful attempt to open commercial relations with the new Ethiopian ruler. The latter's death in 1868 and the fall of the Second French Empire two years later marked the end of this phase of Franco-Ethiopian relations. From then on, any project of a French protectorate was de facto given up, even if F. continued to claim Zula formally.

F. had relatively little contact with *aṣe* ↗Yoḥannәs IV, who sought unsuccessfully to obtain the support of F. in gaining access to the sea at Massawa. A French archaeologist, Ernest Choequine de ↗Sarzec, was nevertheless appointed vice-consul in Massawa in 1872 as the successor of Werner ↗Munzinger, and a French gunsmith, Jean Baraglion, remained in the country for many years (Wylde 1888, vol. 1, 293ff.; Pankhurst 1968:58).

Several French traders were by then active in the Šäwan interior, most of them importing firearms for *nәguś* Mәnilәk (later *aṣe* ↗Mәnilәk II). Such merchants included Pierre Arnoux, C. Brémond, Léon ↗Chefneux, Labatut, Paul Soleillet, Tian and the former poet Arthur ↗Rimbaud, who settled in Harär in 1881 (Starkie 1937). A number of French Roman Catholic missionaries were also active in the latter area. Prominent among them were two ↗Capuchins, Taurin ↗Cahagne, who arrived in 1882, and his successor André ↗Jarosseau, who was largely responsible for the education of Täfäri Mäkʷännәn, the future *aṣe* ↗Ḫaylä Sәllase I (HSLIfe 18, 291; ZerEth 442ff.).



Building of the French Consulate in Massawa in 1886; photo by Firmin-André Sallès; courtesy of the Bibliothèque nationale de France

During the Italo-Ethiopian confrontation which culminated in the battle of ↗ᶜAdwa, the French Government was openly sympathetic to Mәnilәk. The latter, on his part, showed himself desirous of establishing close links with F. This was reflected in many ways. His coins and postage stamps, both instituted in 1894, were produced in Paris, and commercial links between his empire and the French Somali Protectorate (↗Djibouti) were foreshadowed in his railway concession of the same year. Granted to his Swiss advisor Alfred ↗Ilg and the latter's French partner Léon Chefneux, this agreement envisaged the construction and operation of a line to Djibouti, which would make the port Ethiopia's principal point of access to the sea. This was confirmed shortly after the battle of ↗ᶜAdwa when the French Government granted a corresponding concession for the construction of the railway line across the French Protectorate (Pankhurst 1968; ↗Railways). One effect of this was later even the use of French colonial money along the railway line (↗Currency). On 20 May of the following year Ethiopia and F. signed a Frontier Convention. This was followed by the Tripartite Treaty of 13 December 1906 signed by France, Italy and Britain, which provided for their establishment of spheres of influence in Ethiopia, and the subsequent Franco-Ethiopian Treaty of Friendship and Commerce of 10 January 1908, called after Anthony ↗Klobukowski,

A share of a French concession-holding company in Ethiopia, from a private collection

the French Minister in Addis Abäba. This gave the French extra-territorial rights and led to the establishment of French consular tribunals (ZerEth 435ff.).

The first years of the century witnessed the advent of three important French scientific missions, led by the Marquis Charles de Bonchamps (↗Fashoda), Jean ↗Duchesne-Fournet and the Visconte du ↗Bourg du Bozas, respectively. Other French travellers included Prince Henri d'↗Orléans, J. Gaston ↗Vanderheym, who accompanied Mənilək's army to Wällamo, and Hugues Le Roux, who produced (1914) a French version of the ↗*Kəbrä nägäśt* and did much to publicize Mənilək's state in F.

Though Mənilək never learnt French, he made use of a French adviser, the scholar François Marie Casimir ↗Mondon-Vidailhet, who became an Ethiopian Councillor of State; and appointed a Francophone physician from Guadeloupe, Joseph ↗Vitalien, who was also later involved in the railway project. The latter led to the employment on the line of many Frenchmen and a considerable expansion of foreign trade, part of it in French hands, and as well as the growth of the French port of Djibouti and of the Ethiopian railway-town of ↗Dərre Dawa. Addis Abäba's first pharmacist was likewise a French-oriented Georgian physician Paul ↗Mérab, while a veterinarian mission at the time of the major rinderpest epidemic of the 1890s was led by Repetto Wurtz of the Paris Faculty of Medicine. Three French traders were also prominent in early Addis Abäba, namely ↗Savouré, Trouillet and Stévenin, who, like other compatriots, had contacts with the French in ↗Djibouti (Pankhurst 1968; BZHist 97).

↗Ethiopian Studies in F. began in the late 19th and early 20th cent. with the works of Joseph ↗Halévy, who studied ↗Betä Ǝsraʾel literature; Hermann Zotenberg, who catalogued the Ethiopian manuscripts in the ↗Bibliothèque Nationale in Paris; René ↗Basset and Jules ↗Perruchon, who edited and translated important works of Gəʿəz historiography (e.g., the "short chronicles" [BassÉt] and the royal chronicles [PerrZarY]).

The study of ↗Ethio-Semitic languages later owed much to Marcel ↗Cohen, who conducted linguistic and cultural research in Addis Abäba in 1910–11 and was subsequently responsible for teaching a generation of European éthiopisants, among them Wolf Leslau, Stefan ↗Strelcyn, Joseph Tubiana and Roger ↗Schneider. France was also responsible later for the Dakar to Djibouti mission of 1931, which conducted considerable ethnographic and linguistic research, by Marcel ↗Griaule, Michel ↗Leiris, and others; and the archaeological mission of François ↗Azais and Roger ↗Chambard, which travelled in the southern provinces. ↗Gäbrä Śəllase's chronicle of Mənilək (GueCopMen) was edited and annotated by Maurice de ↗Coppet, a sometime French Minister to Ethiopia. An Amharic-French dictionary was published by a French Lazarist missionary Joseph ↗Baeteman (BaetDic) and the first Ethiopisant journal ↗*Aethiopica* was launched by another French scholar, Sylvain ↗Grébaut. French culture became increasingly important in the Mənilək period.

An Alliance Française school was established in Addis Abäba in 1907. The ↗MəniləkII School, founded in the following year, also employed French teachers and took the French certificate of education. Students sent abroad for further education largely went to F., as well as the Lebanon and other countries where French was widely used in modern educated circles. Ethiopia thus became a Francophone country and French became the foreign *lingua franca* for the Ethiopian intelligentsia. An important French weekly, ↗*Courrier d'Éthiopie*, ran for many years until the war of 1935/36. Government proclamations in the 1920s and early 1930s were published in French, too.

French influence increased in the pre-war years. The regent Täfäri Mäkʷännən was French-speaking. Trade was largely monopolized by the French firm of A. Besse. The Täfäri Mäkʷännən School, founded 1925, gave most of its instruction in French. Several Ministers had studied in F. and/or the Lebanon. Several leaders of the Imperial Bodyguard had been trained at Saint-

Cyr-l'École. Ethiopia's French community by 1935 numbered about 350, about the same as the Italians (BZHist 238).

After Ethiopia's liberation, in 1941, contacts with F., then under German occupation, and the employment of French teachers were virtually impossible. French thus dropped out of the Ethiopian educational system, which was thereafter geared to Britain and later the United States of America. A French Lycée, called after the Ethiopian patriot ↗Gäbrä Maryam, was, however, opened in 1948. The 1960 Ethiopian ↗Civil Code was drafted by French. In 1966 a French-Ethiopian agreement was signed to promote ↗French as a second foreign language in secondary schools. French Ethiopian studies were promoted, especially by the Maison des Études éthiopiennes established in Addis Abäba in 1991 and reorganized in 1997 as Centre français des Études éthiopiennes. Commercial ties with the French at Djibouti were likewise later resumed and the railway once more played an important role in Ethiopian economic life. The headquarters of the Economic Commission for Africa and the Organization of African Unity, both situated in Addis Abäba, employed many Francophone Africans.

Richard Pankhurst

Franchetti, Raimondo

F. (b. 31 January 1889, Treviso, d. 7 August 1935, Cairo) was an Italian explorer and a rather controversial figure, owing to both his involvement with Fascism and his anti-Ethiopian political action. Of noble origin (he held the title of baron), from 1910 to 1914 he travelled extensively to North America, south-east Asia and eastern Africa (the Sudan, Baḥr al-Ġazāl, Kenya). In 1928, with the permission of *ras* Täfäri Mäkʷännən (later *aṣe* ↗Ḫaylä Śəllase I) and of the colonial Eritrean Government, he organized a scientific expedition to Dancalia (↗Danakil) with Alberto ↗Pollera, Silvio Gilardi, Candido Maglione, Saverio Patrizi, Amedeo Moscatelli, Captain-Topographer Piero Veratti, Count Riccardo Rocca, film operator Mario Craveri, Ettore Nannoni, Erminio De Filippi and 90 *askari* and servants. The expedition left ↗ᶜAsäb on 3 February 1929 and visited Lake Afḏera (Giulietti) and the Teru sultanate. It crossed Danakil from the sea to the plateau, with special interest in oil prospecting. On theirreturn, F. amd his fellows passed bythe place where ↗Giulietti's expedition had been massacred by the ↗ᶜAfar in 1888 and brought the remains to ᶜAsäb on 2 June 1929. The findings of the expedition Dancalia were never made public. F. returned there several times, going on other journeys in Ethiopia under assignment of the government of the *Nəguś*. He died in an aircraft incident near Heliopolis (Cairo), while heading to ↗Asmära on a political mission to Dancalia.

Gian Carlo Stella

Franchini, Vincenzo

F. (b. 11 November 1911, Bologna, d. 7 October 1995, Massa), professionally a civil servant, started to serve in the ↗Africa Orientale Italiana in 1937. After the restoration of the Ethiopian state in 1941, F. remained in the country and in 1944 settled in Asmära, where he lived until 25 February 1980, the date of his return to Italy.

During his long stay in Asmära, he dedicated, as an amateur, his free time to archaeological research, mainly prehistoric and protohistoric, having its main field in the region of ↗Akkälä Guzay. At first he operated under the guidance of Carlo ↗Conti Rossini, who exchanged correspondance with F. until his death. With much energy,

F. travelled around the country, making a great number of discoveries, included rock-paintings, rock-drawings and rock-inscriptions (in ↗Epigraphic South Arabian and Ethiopic), all of them of paramount relevance. On his discoveries of rock-paintings and rock-drawings he gave several accounts in various publications. Some of the rock-inscriptions were published by Lanfranco Ricci, who is currently writing the final draft of the general edition of the inscriptions.

Lanfranco Ricci

Franciscans

F. is the term generically refering to the different communities observing the Rule of St. Francis of Assisi (1182–1226). This article focuses on the F. branches with a proper missionary vocation, the Observants and Reformed (both merged, in 1897, into the Friars Minor, Lat. Ordo Fratrum Minorum). Another F. family, the ↗Capuchins, is treated in a separate entry.

The F. were founded in Italy around 1209 by St. Francis and in 1223 the definitive rule of the Order or "Regula bullata" was approved. It incorporated monastic elements (obedience, chastity and poverty) and commitement to preaching "among the Saracens and other infidels". The F. also followed the ↗Dominicans in stressing theological learning, to which field they would contribute with such important figures as St. Bonaventure and the "Doctor subtilis", John Duns Scotus.

Medieval missions

Medieval F. missions to Ethiopia are, due to the unreliability of the accounts, difficult to prove, despite the enthusiasm showed by F. historians (Somigli 1928, vol. 1/1, XXIII; Golubovich 1906: 399). However, there are many references to friars (including Dominicans) in connection with the story of ↗Prester John, some of which undoubtedly concern the Ethiopian Christian kingdom. Likewise, the privileged position of the F. as holders of the Custodia Terrae Sanctae made them one of the earliest sources on Ethiopian Christianity available.

Vague references to F. in "Ethiopia" date back to the first half of the 13th cent. under Pope Gregory IX (1227–41; Musie Ghebreghiorghis 1984: 41–44; Richard 1976:324f.). To this century are dated also two anonymous tractates by minorites with a description of the Nile and references to "Ethyopi(a), unde fuit regina Saba" (Golubovich 1906:404).

Later, to respond to the fall of Acre in 1291, the Latin church enforced an expansion of the mendicant orders to the East. This, which was aimed also at challenging ↗Nestorianism in the East, gained momentum under Pope John XXII (1316–34). John of Montecorvino (1246–1328), head of the newly created F. archbishopric of Khanbaliq (today Beijing), then capital of the Mongol Yüan dinasty, attempted repeatedly to establish contacts with the Ethiopian Church (Golubovich 1919:93; Richard 1998:114, 145; Pavot 1990:156). Around 1323, two Irish friars issued an *Itinerary* identifying the Prester John with the Ethiopian ruler (Cerulli 1943:102–07). There were parallel attempts, in the same century, to introduce the Observance in Egypt. They were hindered by the opposition of the ↗Mamlūk sultans (Richard 1998:261ff.; Manfredi 1958: 14–18). Within this context, in 1348 the Minorite John of Winterthur wrote a *Chronicon* relating both of a Dominican mission to Egypt impeted by the sultan and of the wars between this country and Ethiopia (Golubovich 1913:145ff.).

The renewed unionist projects in the 15th cent. gave a new élan to the F. missions. The Observant Alberto da ↗Sarteano played an important role during the Council of ↗Florence (1438–45), bringing to Italy a Copt–Ethiopian delegation that included monks from the Ethiopian community in Jerusalem (↗Dayr as-Sulṭān; Richard 1998:268f.; Lefevre 1945:384f.). Around 1455, another friar, Ludovico da Bologna, was charged by the Popes Nicholas V and Calistus III with a failed mission to engage ↗Zärʾa Yaʿəqob in a crusade against the Turks (Richard 1998: 274f.; Lefevre 1945:392f.); in the 1470s, the friar Nicola da Oliveto would have managed to reach Ethiopia (Lefevre 1945:397). Later, the head of the F. community in Beirut, Francesco Suriano (1450–ca.1529), with his *Trattato di Terrassanta e dell'Oriente* (Suriano 1949) published the travels of the diplomat Giovanni Battista da ↗Imola to Ethiopia, in which a Fra Giovanni da Calabria was also involved (Richard 1998:398–401, 409ff., 432; CrawItin 45ff., 205–10, fig. 8).

Early modern missions

New opportunities for the F. to enter Ethiopia opened with the failure of the ↗Jesuit mission and the "Pax Ottomana" (Carobbio da Nembro 1971:628ff., 636). The ↗Sacra Congregatio de Propaganda Fide, handed then the Ethiopian "dossier" to such other orders as Capuchins, Carmelitans and F.), thus placing it de facto out of the reach of ↗Portugal, by then a minor player in the Indian Ocean. The attempts to reach Ethiopia would henceforth run through the Eastern Mediterranean and Egypt, most of them being sponsored by the new powerful France of Cardinal Richelieu and its influential consul in Cairo.

The F., who by the early 1620s served in Cairo as chaplains of the Catholic consuls, were entrusted in 1630 and 1633 with the newly founded prefectures of Egypt and Ethiopia. Several expeditions of Italian Reformed friars, who throughout the century contended with the Observants of the Custodia Terrae Santae for the control over the Ethiopian mission, followed. Initially targeting the Coptic Church and its well-disposed Patriarch John XV (1619–34), over time several F., along with their fellow Capuchins, made efforts to reach the Ethiopian highlands. Yet, none of these attempts was successful since most of the missionaries were decapitated in ↗Sawākin or kept in the ↗Funǧ kingdom and the Ethiopian highlands (Carobbio da Nembro 1971:640). An exception was an expedition including F. and French Jesuits who, at the turn of the 18th cent., managed to live and serve – mainly as doctors – at the courts of ↗Iyasu I and ↗Yosṭos (ibid. 645–68). In 1717, the Propaganda Congregation finally suppressed the costly and ill-fated mission (s. doc. summarized in BecRASO I, 175–224), although attempts by F. to reach the country continued up to the late 18th cent (ibid. 489–99).

The archives of the Congregation in Rome offer a wealth of correspondance from F. missionaries, with indications on the best ways to reach Ethiopia – including the most befitting fancy-dress costumes – but few ethnographic or historical accounts on the societies of the Ethiopian highlands and on the Christian realm (s. Fondo Scritture riferite nei Congressi, "Africa Centrale, Etiopia, Arabia", vol. 1, 1630–98).

French language

Expansion of the F. in the Horn of Africa began at the end of the 19th cent. Due to its imposition as a colonial language, F. spread rapidly along the French Somali coast, penetrating into independent Ethiopia.

Several factors caused this rapid diffusion of F. within Ethiopia, an independent country without proper colonial links with France. First, there was the establishment of the new railway (↗Railways) connection between the port of ↗Djibouti and the new capital of *aṣe* Mənilək II, Addis Abäba. As a consequence, F. was adopted by all the railway workers; F. involvement in that project can still be seen nowadays in the names of the stations and locomotives. At the same time, it became the *lingua franca* of merchants and traders who used the railway to trade inland. Second, the organization of the school system, including the technical schools such as those in ↗Dərre Dawa, that hosted the headquarters of the Compagnie du chemin de fer franco-éthiopienne (C.F.E.). Teaching played a fundamental role in the success of the language. Until the 1950s, the colonial administration in Djibouti entrusted teaching to the ↗Franciscan sisters of Calais and the brothers of the Institut Saint Gabriel.

In Ethiopia, the work of the Capuchin missionaries and teachers of the schools opened by l'Alliance Française at Dərre Dawa and Addis Abäba helped F. penetrate Ethiopian society (↗Capuchins). These private schools had the financial support of the C.F.E., who in turn received from them its future F.-speaking technicians. Furthermore, the various institutions run by the missionaries – schools, seminaries, hospitals - provided important numbers of trained personnel for the administration. In addition to this, F. also appealed to members of the court and the Imperial family.

The third important factor was the F.-speaking press. The first F. newspapers in the Horn were edited either by the Compagnie Impériale des Chemins de Fer Éthiopiens (C.I.É.) – like *Le Djibouti* which appeared between 1899 and 1903 – or by the ↗Capuchins, and thus were printed in F. In 1905, the Capuchins moved the Saint Lazare printing-house from Harär to Dərre Dawa. Their press produced not only cathechisms, but also the *Journal officiel de la Côte française des Somalis*, *Le ↗Semeur d'Ethiopie* and *Le ↗Courrier d'Ethiopie*. These were, however, papers with a very small readership (less than 2,000 subscribers), modest in comparison to the readers of the Amharic press.

After World War II, F. became the main language in the territory under F. suzerainty. With the Republic of Djibouti's independence, F. became one of the official languages. Nowadays it plays a prominent role in schools with the younger generations mastering both the written and the oral form. It is also widely used in the press, e.g. the main newspaper *La Nation*, heir of the *Réveil de Djibouti*. In the national television it is broadcast alongside ᶜAfar, Arab and Somali-speaking programmes.

Unlike in Djibouti, in Ethiopia the cultural influence of France has always been heavily influenced by the diplomatic relations between the two nations. Under ↗Ḫaylä Śəllase I there were some important steps forward for F. culture in Ethiopian society. Founded in 1948, the Lycée Franco-Éthiopien Guebre-Mariam offered a full-F. curriculum, from infants to high school. The Alliance Française, very active from Addis Abäba to Dərre Dawa, opened schools for children and adults and also organized exhibitions and film presentations. The veterinary mission at ↗Däbrä Zäyt, the Technical College of the Municipalities, which opened in 1970 in Addis Abäba, and the activities of the Archaeological Mission since 1952 are other examples of F. activities that helped propagate the language within Ethiopia. Additionally, F. remained the most frequently used language among the Ethiopian railway technicians, who often attend professional internships organized by the Société Nationale des Chemins de Fer Français. With the arrival in power of Mängəśtu Ḫaylä Maryam (↗Revolution), F. expansion suffered a major setback. The civilian and military personnel (volunteers of the National Service) working in the schools were forced to leave and the missionary schools and those of the Alliance Française were closed. Little by little F. lost ground to English, the last French stronghold being the railway staff.

Frobenius, Leo Viktor

F. (b. 29 June 1873, Berlin, d. 9 August 1938, Biganzolo, Italy) was an ethnologist and cultural historian with an autodidactic background who became one of the most famous researchers on Africa during the first half of the 20th cent. Between 1904 and 1935 he carried out twelve expeditions to various African countries to collect ethnographic data, oral traditions, material objects, folk tales and documentation of ↗rock-art. As a theoretician, he developed the idea of "cultural morphology" which conceives of cultures as living organisms, i.e. they are born, undergo their childhood, their youth, their manhood, their old age and finally their death. They are dominated by "Paideuma", a kind of cultural soul which is considered to act more or less independently of men.

Irrationalist ideas of this type have temporarily exerted a certain fascination, but they have always met scepticism and have been mostly discarded by modern research. However, many data of F.'s field research proved to be of lasting value.

In World War I F. was appointed by the Supreme Command of imperial Germany to carry out a mission to north-eastern Africa aiming at provoking counterinsurgency actions against the entente powers in this region. However, this enterprise (1914–15) totally failed and the Italian colonial administration of Eritrea forced F. to return to Europe. The only scientific result of this journey was the documentation of some sites of prehistoric rock-paintings in the ↗Ḥamasen region. Although he never personally resumed field research in this area, F. preserved a vivid interest in north-eastern Africa and later initiated the expedition of his collaborator Adolf ↗Jensen to southern Ethiopia in 1934–35. The institute named after him, the ↗Frobenius Institut, in 1946 became an important centre of ethnological/anthropological studies on Ethiopia from the 1950s onwards.

Ulrich Braukämper

Frobenius-Institut

The F.I. traces its origin back to the *Afrika-Archiv* ('African Archive') founded by Leo ↗Frobenius in Berlin in 1898. After World War I, this institution was transferred to Munich and was renamed *Forschungsinstitut für Kulturmorphologie*. In 1925 it moved to Frankfurt am Main and in 1946 adopted the name of its founder. The F.I. devoted itself to the advancement of cultural historical research, with a particular interest in Africa. From 1904 onwards, the F.I. organized numerous scientific expeditions.

The first mission to Ethiopia in 1914–15, lead by Frobenius himself, aimed at provoking political counterinsurgency in accord with the German military interests in north-eastern Africa. The expedition, however, failed completely since the Italian administration of the ↗Colonia Eritrea became suspicious and forced its participants to return to Europe. The researchers just had time to carry out minor explorations on prehistoric ↗rock-art sites in the ↗Ḥamasen region. The first expedition of the F.I. to southern Ethiopia (↗Konso, ↗Gideᵓo/Därasa and ↗Gurage) was carried out by Adolf ↗Jensen, Hellmut Wohlenberg and Alf Bayrle 1934–35. Among the data collected, some is worth mentioning: substantial documentation of age-grade systems of the ↗*gadaa* type; information on important carving production, especially stone monuments and wooden grave-effigies and collections of folk tales.

After World War II, Jensen, who by then had become director of the F.I., resumed the tradition of ethnological field research in southern Ethiopia with two more expeditions, in 1950–52 and 1954–56. During the first journey he was accompanied by Eike ↗Haberland, Willy Schulz-Weidner and Elisabeth Pauli. Haberland and Pauli again, along with Helmut ↗Straube and Wolfgang Kuls, followed him on the second journey. During the first expedition of 1950–52 the researchers worked mainly among the *Altvölkers* ('culturally archaic peoples') west of the Rift Valley, such as the Baka, ↗Šangama, ↗Ubamär, ↗Basketo, ↗Dime, Male, ↗Banna and ↗Hamär. Between 1954 and 1956 they extended their field research eastwards and visited groups such as the ↗Koorete, ↗Burği, ↗Wälaytta, ↗Sidaama and, within the Oromo cluster, the subgroups ↗Guğği and ↗Arsi. With Haberland as director since 1967, new expeditions of ethno-anthropological fieldwork in southern Ethiopia were initiated. Two further missions were organized for 1970–71 and 1972–74, where Haberland himself, along with Siegfried Seyfarth, Werner Lange and Ul-

Frobenius-Expedition in southern Ethiopia; Eike Haberland with Boorana men; 1950/52; photo courtesy of the Frobenius-Institut, Frankfurt am Main (no. 23–Ha222–04)

rich Braukämper participated. Information was collected among the Wälaytta, ↗Dawro, ↗Gofa, ↗Dizi, ↗Gimira, Hinnario (↗Ǝnnarya), ↗Boša, Šeka, ↗Käfa, ↗Hadiyya and ↗Kambaata.

The surveying and thorough investigation of the hitherto least-documented ethnic groups of Ethiopia had been a central goal of the F.I. Such a research-oriented tradition ended in the mid-1970s due to shifts in the interests of the Institute and was only resumed after Haberland's death in 1992.

Fruits

In Ethiopia, a large number of wild and cultivated F. are cherished by the society. In botany a F. is the organ of angiospermous plants containing the seeds; it develops from the ovary of the flower. In common use, the term connotes conventional F., i.e. a horticultural category of useful plants in which the F.-pulp, juice, skin or other parts are consumed by humans. Life of early humans who largely led a nomadic life relied on wild F. With the development of agriculture, many F.- trees began to be cultivated. In Ethiopia, monks, hermits and nuns in monasteries and secluded churches have traditionally largely depend on F. Modern F. were first introduced into church gardens (the earliest record of introduced F.-trees comes from a monastery in Eritrea) and then into palaces and homes of the privileged members of society. Having F. trees in the garden and around the house (homegarden, *yäg^{w}aro ərša*) has generally been a sign of prestige.

There are many wild indigenous fruits in Ethiopia, the most common including *ənkoy* (monkey-guava), *agam* (Carissa plum), *qäga* (Abyssinian rose), *košəm* (wild key-apple), *yäʾəräñña qolo*, *šola*, *ənğorri*, *awəṭ* (cape gooseberry), *q^{w}əlq^{w}al* ↗*bäläs* (prickly pear), *ğäğğäba*, *wanza*, *q^{w}ərq^{w}əra/gäba* (Christ-thorn/ jujube).

The most commonly cultivated F. include citruses (orange lime/lemon, citron, grapefruit and mandarin), avocado, papaya, banana cherimoya, tree-tomato, mango, fig, strawberry, passion-fruit, pomegranate, egg-plant, loquat, pineapple, guava, grapes, and peach.

Fuga

The term F. (or Fuga'a) indicates an endogamous social group in ↗Gurage, ↗Kambaata, ↗Yäm and ↗Hadiyya. The F. can be categorized as ↗marginalized people to whom the dominating majority of society traditionally accorded the lowest rank among all social strata. Only slaves had a lesser status. Although the term F. is considered to be derogatory, it is still used in unofficial public discourse and even in academic literature. To prevent discrimination, the F., like other marginalized groups in Ethiopia, are designated according to their traditional occupations as "potters", "tanners", "artisans" or "hunters". Under the *Därg* regime, they were also called "workers", and in Gurage the name "Amarika" ('American') was introduced (Freeman — Pankhurst 2003:28ff., 32). As another positive name, "Betä Ǝsraʾel" is sometimes used because some F. claim connection to the ↗Betä Ǝsraʾel.

There are different explanations concerning the origin of the F. While they themselves frequently claim to have migrated from the north

Fuga in Hossäyna, 1970/71; photo courtesy of the Frobenius Institut, Frankfurt am Main (1.02.09.06)

("Gondär") together with certain clans of commoners, they are often seen as indigenous to the region by the peasant population. Braukämper (1983:38) calls Kambaata an "old centre of the Fuga", from where they spread to Hadiyya and other places. The F. are heterogeneous in descent and also have genealogical linkages to other marginalized groups.

The F. are traditionally engaged in woodworking, pottery and tanning (in Gurage the tanners build a separate, less marginalized, but also discriminated group, the Buda or Geze). A division of labour between women and men can be observed: women work as potters, while men work as tanners or woodworkers. Before the number of game animals in the region was severely reduced in the 20th cent., the F. had supplemented their food supply by hunting with bow and (poisoned) arrow and with the help of dogs. Some F. groups are engaged as musicians and jesters at burial feasts, where they beat drums and entertain the participants, e.g., by imitating monkeys. F. also work as cirumcizers, but this occupation is also carried out by commoners.

The dominating majority, before the 1975 land reform, did not allow the F. to own land. The F. had to honour the commoners with degrading forms of greeting. They had to eat apart from the commoners and were given the "F.'s share" from slaughtered animals, i.e. the entrails or the lower back and feet, which were considered as impure by the commoners. This, and the consumption of the "polluted" meat of hippopotamus and other animals hunted by the F., as well as their "unclean" occupations as potters and tanners qualified the F. as impure in a ritual sense. Consequently, they were considered to have the "evil eye" (↗*Buda*) and were not allowed to work in the *ənsät* gardens or with the cattle, because they were accused of destroying the fertility of the soil and of the livestock (ShGurage 10).

The F. should not be reduced to their marginalized status. They do have their own history, their own clan system(s) and their own customs, including their own legal code (Braukämper 1983: 188; ShGurage 10). For the commoners and the whole socio-economic system, the F. played an indispensable role and their craft products and technologies were vital. Their despised status did not hinder the F. from participating in the wars of the commoners and to serve as guardians. Additionally important were their ritual and symbolic functions. In the Kambaata kingdom, e.g., F. served as heralds of the king who beat drums and blew bamboo trumpets to announce important events (Braukämper 1983:140, 159, 188).

The F. traditionally shared the religious systems of the societies of which they formed part of, but they also had their own locally diversified cults. In Kambaata and Hadiyya, for instance, the F. followed the possession cults of the spirits/deities *Funna* and *Ğihon* (Braukämper 1983:259). In Gurage a deity called *Kusiye* and in Yäm *Kitnitsi* were venerated. Especially in Gurage, the F. served as ritual experts in the autochtonous folk-religion. Thus, the leader of the *mʷəyät* associations of women connected with the cult of ↗*Dämʷamʷit* was a F. (Freeman – Pankhurst 2004:31; ShGurage 133ff.).

Dirk Bustorf

Fuguug

According to Haberland (VSAe II), the original home of the ↗Oromo was located in the highlands of Bali. In one Oromo tradition, there is a reference to F. – a far away land, which is consistently claimed as the first home of the Oromo, the birthplace of the nation.

Oromo tradition places F. in the south-eastern region. However neither the eastern or western Oromo remember today the exact whereabouts of the land of F. For the Oromo in the ↗Gibe region, F. was located in the east. For the Oromo in ↗Harärge, it was located in the west in the direction of the administrative region of Bale. Accordingly, Oromo pilgrims from Harärge, chanted F. in their prayers on their way to and from the land of ↗*abbaa muudaa* in Mormor in Bale. As late as 1875, the ↗*abbaa gadaa* of Afran Qallu *Čaffee* Assembly was known as *abbaa fuguug* ('the father of F.'), meaning the defender of the sacred land and the protector of traditional Oromo religion that was centered on *abbaa muudaa*.

Among other Oromo, only two things are remembered about the land of F. The first is that the Oromo had common ancestors who had lived in F., long before they moved to Waallaabu. The second is that if someone stayed away from his or her village for a long time and returned, people ask him or her "Have you been to F.?", meaning that the time the person spent away would be enough to go as far as F. This reflects the belief that F. is a far away land, and, perhaps the time at which the ancestors of Oromo, who were engaged in mixed economy, had lived there. Today we find a land of F. and Mount F. in the northern part of the administrative region of ↗Bale, the heartland of historical Bali.

Mohammed Hassen

Fukkära

F. (ፉከራ, 'boasting, war song or heroic recital') is one of the most deeply rooted and widely appreciated poetic genres in Amharic oral tradition (for the etymology, s. Leslau 1979:230). Under different names, heroic recitals similar to F. are used in many ethnic groups of the Horn of Africa.

F. is the favourite poetic form for peasants, soldiers, hunters and warriors. The skills of composing, improvizing, singing and reciting F. and ቀረርቶ (*qärärto*, 'war cries', 'war songs' or 'heroic recitals' – a closely related genre) are widespread among adolescents and young men. F. are performed at weddings, harvests, funerals, religious feasts and other important social events. Both *qärärto* and F. are performed inside a house and in front of a gathering after plenty of food and alcoholic drinks have been consumed. In the past, F. and *qärärto* were recited mainly by warriors on the battlefield and by hunters when returning from hunting expeditions. Later, in rural society, these genres of Amharic oral poetry have also been employed as a major medium of protest to mediate in cases of social tension and to debate political issues.

The two poetic forms, F. and *qärärto*, are traditionally performed together, whereas they differ in size (F. are shorter than *qärärto*) and style (rhyme, rhythm and versification). First, *qärärto* poems are recited. Their performer is expected to have a pleasant voice, to walk rhythmically and recite his poems repeatedly in order to rouse the attention of others and inspire them to join in the F. Then the performer of F. appears, looking aggressive, heated and militant. He shivers, turns around and shouts loudly. He repeatedly praises himself, his personality and character, the kinds of weapons he has etc.; he mentions the deeds he has already accomplished or what he intends to do in the future. These "heroic deeds" include burning houses, chasing cattle, or killing enemies or adversaries. He then praises his parents, his wife, his friends, his close relatives and his ancestors; and his oxen, his harvest and his birthplace. He also mentions major historical events, names of renowned persons and their adventures. Importantly, the recital of each verse will be confirmed and approved by his agemates and friends and by the crowd at large.

In Goǧǧam, while reciting F., the performer usually brandishes a hand gun or rifle, a spear, sword and shield or a hand stick (ሽመል, *šəmäl*) and begins by uttering repeatedly the most widely used and established exclamatory expressions, such as እምቢ (*əmbi*!, lit. 'no!' or 'one who refuses'), ዘራፍ (*zärraf*!, lit. 'one who slays with a sword', 'killer', 'combatant') or የኮስትር፡ አሽከር (*yäkostər aškär*!, 'the servant of Kostər [the "horse-name" of *däǧǧazmač* ↗Bälay Zälläqä]) etc.

It has been a common tradition for Ethiopian royalty and nobility to watch *qärärto* and F. performed by their soldiers and followers after lavish banquets, or during war campaigns and other important religious and social events, whereby the performers would receive a variety of rewards. At such occasions, kings or nobles would often join in and perform F. themselves or would give poems to their favourite singers; the reciters of F. would praise the rulers, referring to them by their horse-names. Speedy, a British officer who visited Ethiopia in 1861–62, had the opportunity to hear F. sung by soldiers after victories at the court of *aṣe* TewodrosII: "On such occasions the men would utter war cries calling themselves *yätewodros barya* ['slave of Tewodros'] and would boast of the numbers they had slain. Horsemen who had distinguished themselves in battle would dash up at full gallop before the king's tent, suddenly reining in their horses, while foot-soldiers, brandishing their swords or quivering their lances, would go through a war dance and as each time in a turn recounts his deeds of prowess, his comrades would confirm his boast by crying out *əwnät*, *əwnä* ['(it is) true]" (quoted after Pankhurst 1985:51). One of the most famous F. praising Tewodros is the following recital (*ibid.* 60):

የቴዎድሮስ፡ ፈረስ፡ ትልቁ፡ ታጠቅ፡ ትንሹ፡ ጉሎ፡
ጅራቱ፡ ትግሬ፡ ግምባሩ፡ ወሎ።

'Tewodros's big horse is Taṭäq, the small one Gullo.
Its tail is in Təgre, its forehead in Wällo.'

Another popular F. poem praises *däǧǧazmač* ↗Balča Safo "Abba Näfso", one of the prominent officers of *aṣe* Mənilək II at the battle of ↗ᶜAdwa; it is said to have been recited after *fitawrari* Gäbäyyähu, another prominent commander, died in the fighting (TSTarik IV, 117; Bairu Tafla 1969:15f.; MahZekr 886):

ገበየሁ፡ ቢሞት፡ ተተካ፡ ባልቻ፡
መድፍ፡ አገላባጭ፡ ብቻ፡ ለብቻ።

'At the death of Gäbäyyähu, Balča took his place,
He [who] operates the artillery alone [and alone]'.

A well-known F. is said to have been recited by the Patriot *däǧǧazmač* Bälay Zälläqä, during a military parade in front of *aṣe* ↗Ḫaylä Śəllase I in Däbrä Marqos on 6 April 1941, when the Emperor had just entered Ethiopia on returning from the exile:

ባንዲራው፡ የዘለቀ፡ ልጅ
ጣሊያንን፡ ደምሳሽ፡
የኢትዮጵያ፡ ደም፡ መላሽ።

'The son of Zälläqä, the flag.
He who defeats Italy,
He who avenges Ethiopia.'

F. recitals are colourfully performed by the Ethiopian veterans at important national holidays, such as the commemoration of the victory at ᶜAdwa (2 March) and Independence Day (5 April). Over the past few decades, the government has used *qärärto* and F. on radio and television during times of war as an important medium of propaganda to inspire the people and rouse their courage or to recruit soldiers.

Fulḍo

F. is the commonly used short form for *toola fulḍo* (family/association of the F.), an organization of artisans and merchants in south-western Ethiopia centred in ↗Konso.

Around 1910, in order to resist oppression, some of the pre-existing local craftsmen's associations formed an alliance. Its position was strengthened in the 1940s under the leadership of Kuyo Fulḍo (his lineage-name stands today for

Fulḍo assembly hall; photo courtesy of the author

the whole institution). He introduced several innovations, e.g., promoting interactions across ethnic boundaries and allowing persons who did not belong to the group of hereditary artisans (*ṭawḍa*) to join the association if they were willing to fulfil certain obligations. The primary aim was to assure production and distribution of the products made by artisans, including the procuring of raw materials and of cattle for meat and hides.

Since the death of Kuyo Fulḍo in 1974, elected committees are responsible for the internal and external affairs of this guild-like organization. They create their own laws and structure their organization by themselves.

F. reacted flexibly to recent political and economic changes, albeit by using their own cultural capital and that of their neighbours as well. Outside Konso they interact with local networks of bond-friendships or with local ↗*əqqub*. It is due to the F. associations with their complex network of contacts that peaceful interaction on an inter-ethnic level is possible, even in times of unsafe political conditions. The F. built step by step a new and powerful form of co-operation that controlled craft and trade. Nowadays they are able to guarantee a secure and fair exchange of local and foreign goods in the area between the Omo River in the west, Moyaḷe on the Kenyan border in the south-east and Šašämänne in the north. There are 38 subcommittees in different places and a great number of accredited persons in towns as far as Addis Abäba (2003).

The strength of the *toola fulḍo* is their reliability. Mutual help, confidence and solidarity are its ethical pillars. Persons who violate these principles are summoned to an assembly, where they must then admit their fault, show remorse and agree to the nature of the punishment. Otherwise, they are expelled from the association. The threat of expulsion is the only power the guild has, but it a very effective one. Actual problems are immediately discussed in the committees until they find a consensus. Cases that cannot be solved on a local level, as well as matters concerning the whole guild-network are discussed in the assembly hall (*tiga fulḍo*) in Konso. It is here, at the centre of the organization, that a supra-regional committee consisting of a limited number of elected representatives meets.

The F. organization was able, without any foreign help or aid from the government, to develop into the most influential indigenous co-operation system in southern Ethiopia.

Hermann Amborn

Fumagalli, Giuseppe

F. (b. 1863, Florence, d. 1939, Florence) worked as a librarian since 1880 (Florence, Lucca, Padua and, since 1884, at the National Library in Rome) and promptly acquired an extraordinary competence in the cataloguing of printed books and in all aspects of bibliography and library science. Soon he reached positions of high responsibility (despite the lack of a university degree, due to family reasons): assistant director of the National Library of Brera, Milan, then in Rome (Biblioteca Alessandrina), Naples (University Library) and in 1896 again in Milan as director till 1910, then in Modena and in 1913 at the University Library of Bologna. F. retired in 1921 in Florence. His ideas, clearly exposed in a series of frequently reprinted handbooks and other contributions (cf. Vian 1940), were to shape the organization of Italian libraries for decades. F.'s bibliographical masterpiece is the *Lexicon typographicum Italiae* (Florence 1905). In 1893 (but actually in 1892) F. published his main contribution to ↗Ethiopian Studies, the famous *Bibliografia etiopica* (later resumed by Silvio ↗Zanutto; for some corrections and additions cf. Stella 1984), a comprehensive survey and catalogue of all printed works on Ethiopia, Eritrea and Somalia up to 1891 (2,722 and 36 additional entries). Also a writer, F. was influential on various aspects of the cultural life of his time: a member of the "Dante Alighieri" Society and a fervent nationalist, F. belonged since 1888 to the "Società Coloniale Italiana"; in 1906, on the occasion of the exhibition on communications, travels and transportation (Milan), F. sponsored the Eritrean section and, in 1931, organized an exhibition of the colonial book at the first Conference of Colonial Studies (Florence).

Funduroo

F. (Oromo lit. 'close-in', Amh. ፉንዱሮ, Funduro, also Fulduro) is the smallest of the five inhabited islands in Lake ↗Zʷay. Its ancient name, still used by the ↗Zay, is Famat. It lies close to the Arsi shore on the east side of the lake at the east end of the channel separating ↗Tulluu Guddoo from Ṭädačča. F. has been inhabited since at least the 13th cent. and as of 2002 retains a small population of weavers and fishermen. The northern half of the island is occupied by cotton and grain fields and house sites; the southern half is a papyrus swamp. Its modest church is Arbaᶜətu Ənsəsa, dedicated to the Four Living Beings of the Revelation of St. John. According to tradition, it was founded in the 13th cent., the same time as the other Zʷay island churches.

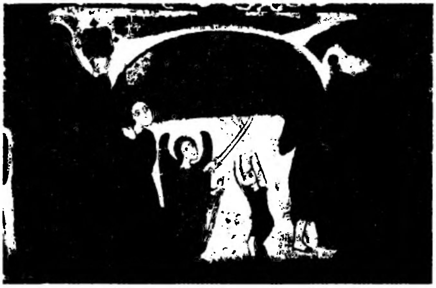
Funerals

In the Christian part of Ethiopia (for ceremonies related to mourning in other regions of Ethiopia s. also ↗Burials) F. were governed, through the Orthodox Church, by the *Mäṣḥafä* ↗*gənzät* which comprised prayers, sermons and benedictions. The dead, according to the early 16th-cent. author Alvares (BeckHuntAlvar 111), were first washed with water, and then wrapped in a shroud. They were buried the day they expired, with incense and holy water, and with the priests reciting from the Gospel of St. John. Mourners would shave their heads, allow their beards to grow and dress in black.

Mourning for the dead took place, according to the 17th-cent. Jesuit observer de Almeida (BeckHuntAlm 66f.), for several days. Lament started during night and lasted well into daylight. All the deceased's relatives and friends assembled with professional female mourners. The latter to the sound of the drum, clapped their palms together, beat their breasts and uttered "heart-breaking lamentations".

Another Portuguese Jesuit, Barradas, writing on Təgray in 1634, describes a variety of ways of mourning - far wider than earlier authorities suggest. The "chief expression of sorrow" was for mourners to shave their heads. Persons of low rank wishing to show their deep grief went "unclothed above the waist". Close relatives, when learning of a death, hurled themselves to the ground, even if on horseback.

Many women mourners wore leather skirts, and played small drums as they made their way to the church. A widespread sign of mourning was the wearing of "black" clothes. These were so coloured with clay or earth, or dirtied by excessive use (later observers hold that clothes were covered with earth to emulate the corpse which was so covered in the grave). Yet another practice mentioned by Barradas, but by no other observer, was for men and women mourners to tie ribbons of white cloth round their heads, the points hanging down the back of the head. These ribbons, a finger wide, were allegedly worn on the F. day and for several days thereafter.



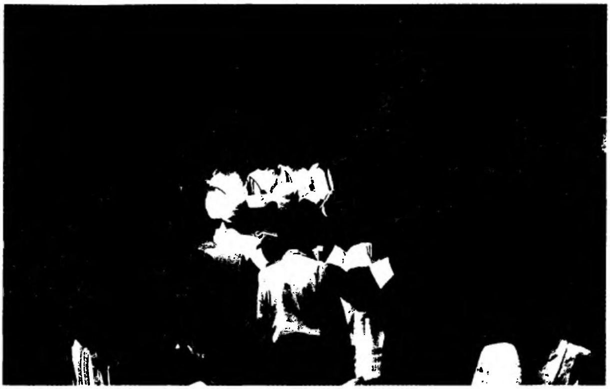
Funerary procession with the remains of St. Mary; cloth mural; Amanuʾel Church, Balči, Sankora, eastern Šäwa; *mäqdäs* south wall; second half of the 19th cent.; photo 1993, courtesy of Michael Gervers

Barradas reports that it was customary to display such personal possessions as the deceased held in highest esteem: his horse and mule, as well as sword, shield and spear. Once the body was placed in the ground, friends and relatives would sit in a circle around the grave, after which professional women mourners would perform their lamentations (Barradas 1996:65, 87-90).

Further precision on early F. was provided by *abba* Gorgoryos (Ludolf 1693:441), who explained that the dead were buried in the church or in its precinct. Hymns and prayers were read and when the corpse is carried out, a cross is borne in front. It was also customary at an early time to bury ↗magical scrolls with the deceased (Parkyns 1853, vol. 1, 52; Walker 1933: 53; Mercier 1997:44–61).

Confirmation of most of the above reports was provided by Poncet. Reporting on the death of the *abun*, in 1699, he states that *aṣe* Iyasu I was "inconsolable", bewailed twice a day for two weeks, and put on purple clothes of mourning for six weeks (Foster 1948:124). The death of Iyasu I's son Fasilädas in the following year likewise led to great mourning. Poncet, then in the country of the *baḥr nägaš*, states that the news was "made public with the sound of trumpet". People shaved their heads and women with tabors, and men without, then placed themselves in the middle of the hall, and began to sing songs in honour of the deceased. Many people in the hall displayed their sorrow by tearing their faces, till they were covered in blood, or burnt their temples with flaming candles, while the common people outside uttered moving lamentations (Poncet in Foster 1948:149f.). The tearing of people's temples was confirmed in the 18th cent. by Bruce (BruNile, vol. 3, 350), who tells of women leaving their index fingers for that purpose uncut.

The mourning ceremony, according to Poncet, lasted for three full days. In the house of the deceased all neighbours gathered and joined the kindred in their bewailing. The washed and wrapped corpse is placed in a coffin in the middle of the hall with flambeaux of wax. After this the weeping and crying increases and little tabors are beaten. Some of the participants pray for the soul of the deceased while others recite praising, tear



Reburial of Ḫaylä Śəllase I, 5 November 2000, courtyard of the Holy Trinity Cathedral in Addis Abäba; photo courtesy of Thomas Rave

their hair, scratch their faces or burn their flesh with flambeaus. This ceremony is followed by the procession to take away the corpse. It starts with the singing of psalms and the burning of incense. The head of the procession holds an iron cross and a prayer book, then the body is carried while psalms are sung. The body is followed by relatives and friends of the deceased who continue their cries and use the tabors. At the place of burial the oblations of incense are renewed and psalms are sung while the body is put into the ground. Poncet reports that prestigious persons have their graves in the church while the others are buried in the common churchyards. After the burial the participants return to the house of the deceased. There, for a period of three days, night and morning, they stay and wail. State mourning was also extensive, for, when a prince or person of eminence died, the emperor withdrew himself from business unless it was very pressing (Foster 1948:150f.).

The establishment of Gondär, in the 17th cent., was followed by the erection of a **ቤተ፡ ተዝካሮ** (*betä täzkaro*), building allocated for F. celebrations (GuiIyas 224 [tr.]). That of *aṣe* Bäkaffa in 1730 was not equalled, the royal chronicle claims, by that of Josef for his son Yaᶜəqob (GuiIyas 33). It was by then customary at Gondär royal F. to parade not only the deceased's mules and horses, but also an effigy of the deceased (GuiIyas 32, 162f., 178f. [tr.]). Several royal mausolea were likewise constructed in late 18th- and early 19th-cent. Šäwa, notably at Ankobär by *märədazmač* ↗Ammǝḫa Iyäsus and *ras* ↗Wäsän Sägäd (Pankhurst 1982:188–91).

On the death of the *nəburä əd*, the governor of Aksum, in 1811, Pearce (1831, vol. 1, 85) reports that there was "great crying" throughout Təgray, and that its governor, *ras* Wäldä Śəllase, gave the priests the 100 Maria Theresia thalers' worth of cloth. The priests, Pearce comments, "always get well paid when any great man dies, and from the poor they get part of what property they may leave behind". On the subsequent death of the *ras's* brother, Däbäb, the mourners scratched their faces, with the result that "there was not an individual to be seen but with his face torn, and scratched, and covered with blood" (Pearce 1831, vol. 1, 264). The death in battle of *däǧǧazmač* Säbägadis of Təgray in 1831 likewise moved the populace to such sadness that they sung a dirge (quoted by Gobat 1847:250f.), "every evening, weeping, in all the Amhara country". Such songs were traditional (Plowden 1847:54f.; for other dirges s. De Castro 1915:314–18).

F. in early 19th-cent. Gondär were no less extensive. Gobat (1847:155), reporting the death of the Emperor's wife there in 1830, states that there was a "great crowd of people around the palace, who wept, singing to the doleful sound of the tabor", and that on the previous day nearly all inhabitants of the city assembled round the palace to mourn.

Gobat describes a mourning period of eight days, where all friends of the deceased's nearest relatives come to his family's home to sit there for a while to console and for condolence. The mourners stay in silence, some weep or pretend to weep and when one of them stands up to leave he says in low voice: **እግዚአብሔር፡ የጥናህ** (*Əgziʾabəḥer yäṭnah*!, 'God comfort you!'). The presence at such occasions is obligatory for nearly the whole social network of the deceased.

F. at ᶜAdwa were at that time mainly carried out in the large market place. Mourners seated themselves, according to Parkyns (1853, vol. 2, 63ff.), near a couch, on which was laid "an artificial figure, to represent a corpse, frequently made of cushions and covered with a white garment".

According to Parkyns the custom of scratching the temples was typical only for Təgre while it was considered unlawful by the Amhara. He also reports of professional mourning women at F. of important persons. Turn by turn praises are improvized. They include details of the deceased's ancestry, his deeds, his personality and even his property. At the end of each verse the mourners start sobbing lamentation again. Parkyns gives also an example of exclamations made by a son or daughter of a deceased: "Oh father, who fed and clothed me, whom have I now to supply your place!"

The price for a 40 days' F. mass had to be bargained with the priests. According to the wealth of a family the costs could be six to twelve Maria Theresia thalers or more. Additionally the priests and *däbtära* expected a provision, including a sheep, on the 30th day, the donation of two cows and other items on the 40th day, and on the 80th day they feast and perform a mass at night (Parkyns 1853, vol. 1, 65f.).

The large number of people attending F. was thus an historically on-going aspect of Ethiopian life. To mourn alone was considered a disgrace, and great importance was attached to the መርዶ *(märdo)*, or tidings of death. These could not, however, be imparted freely, for relatives of the deceased had always to be delicately informed, and with extreme caution, prepared for such news (Walker 1933:59–62).

Notwithstanding the importance of F. ceremonies the deaths of important political figures were sometimes kept secret for political reasons, with the result that the F. ceremonial was restricted. When *ras* Wäldä Śəllase died in 1816, the news was thus kept secret, in the interests of public order (Pearce 1831, vol. 2, 83ff.). The deceased body of *nəguś* Śahlä Śəllase of Šäwa in 1847 was likewise transported in the hidden for burial (CecZeila vol. 1, 248).

Despite the fact that wars of later times often interfered with F., ceremonies on traditional lines continued to be held. Though *aṣe* Tewodros II's suicide at Mäqdäla in 1868, and the British seizure of the citadel, resulted in a restricted F. ceremony, that of his widow Ṭərunäš at Č̣äläqot later in the year was a major event. Presided over by priests with processional crosses and ceremonial umbrellas, it was the subject of an engraving published in the *Illustrated London News* (Simpson 1868:119–23). Though Yoḥannəs IV's body was captured by the dervishes at Mätämma in 1889, and beheaded, a traditional-style F. was held for him. It is the subject of an Ethiopian popular painting, depicting *ras* Alula leading the Emperor's favourite horse in a F. procession (BudHist vol. 2, 524). *Aṣe* Mənilək's death in 1913, like that of some earlier rulers, was, on the other hand, kept strictly secret for political reasons, with the result that no public F. for the founder of modern Ethiopia took place until over three years after his death. His bones were, however, moved from his palace to a fine new mausoleum, erected by his daughter Empress Zäwditu in 1928 (Marcus 1975:250, 261; Berhanou Abebe 1998:142; GebMolIyas 343, 388f., 402–19). Impressive F. were later staged for *abunä* Matewos in 1926 and Zäwditu in 1930 (GebMolIyas 493–96, 546–49). *Ləǧ* Iyasu was on the other hand afforded no known F. at all.

Traditional F. customs over the centuries were modified as a result of technological innovation. The advent of ↗fire-arms led to the popularization of fusillades, which, by the mid-19th cent., were fired at many F., a practice which was, however, later abandoned (Pearce 1831, vol. 2, 264; Parkyns 1853, vol. 2, 63; Walker 1933:53). The coming of photography was likewise significant. Photographic portraits, often displayed in tents, replaced the effigies of earlier times, as noted at *ras* Mäkʷännən's F. in 1906, and *ətege* Ṭaytu's in 1918 (GueCopMen 521f.; GebMolIyas 547). The improvement of the roads in the early 20th cent. led to the increasing importance of the old monasteries of Däbrä Libanos and Zəqʷäla as burial sites for Addis Abäba residents. *Ras* Täsämma Nadäw was one of the first nobles to be buried at the former site, in 1911. The place grew further in importance after the establishment of hostel facilities in 1925. Persons of substance were interred near the monastery in private mausolea built of stone, while the poor were crammed into caves (GueCopMen 524, 564, 523f.; GebMolIyas 394, 479f.; Walker 1933:58, 63). Tomb-stones, which had scarcely been produced prior to the World War II, likewise began to be introduced. Though most people continued to be buried within a few hours of death some F. of the nobility tended to be delayed, though still effected within the day (Rey 1923:79f.).

Early 20th-cent. evidence tells of other, not previously recorded, aspects of mourning. People might thus be summoned to a F. by the ringing of a large bell, or in lieu thereof the beating of a piece of iron. Probably influenced by the European practice of wearing black the usage of black cloth increased around this time. A more widespread F. dress reported prior to the Fascist invasion included the *šämma* or wrap, trousers and shirt in a single colour, black, yellow, red or blue; and the inversion of the barnos, or cloak, with the red leather part exposed (Walker 1933: 55, 58, 60). After 1941 it likewise became common also for women mourners to invert their *näṭäla*, or wrap, thus raising the *ṭäbäb*, or border, round the neck. The use of black European-style mourning clothes became increasingly widespread after the Liberation, when the ↗Qəddəst Śəllase Cathedral in Addis Abäba was designated as the burial site of both the Emperor's family and of the Ethiopian Patriots of the occupation period.

Richard Pankhurst

Funǧ

The F. were nomadic pastoralists from southern ↗Nubia who, in a longer process, migrated to ↗Sinnār. Led by ᶜAmāra Dūnqas in the early 16th cent. they entered the area. After defeating the Arabs of the ᶜAbdallāb dynasty at Arbaǧī they established the sultanate of Sinnār. The ᶜAbdallāb *šayḫ* was integrated by accepting his authority over the northern part of the territory.

The F. dynasty of Sinnār dominated the northern Nile-valley in the Sudan from about 1500 to 1821; for Ethiopia, the rise of this powerful new Islamic neighbour presented both opportunities and problems. For example, a strong lowland government could facilitate the overland passage of emissaries and traders to the Mediterranean world via the Nile route, yet the same government could also, and sometimes did, block the passage of travellers to Ethiopia. But the two lands shared a north-east African tradition of statecraft which assured that although they did not always agree, they understood each other well.

During most of the 16th cent. the two African kingdoms cooperated cautiously in resisting the ambitions of the Ottoman Turks. But as the inability of the Turks to sustain their advance inland from the Red Sea coast (↗Habeš) gradually became apparent, *sulṭān* Dakīn b. Nāyil (r. ca. 1568/9–85/6) and his successors sought to fill the vacuum by extending F. authority over the Islamic lowland peoples of Eritrea. As the 17th cent. dawned, a serious revolt within Sinnār brought armies of the powerful northern conqueror ᶜAǧīb "the Great" into the Ethiopian borderlands between the Atbara and the Blue Nile. *Aṣe* ↗Susənyos moved to restore Ethiopian authority over the lowlands by launching a sustained series of campaigns that escalated to major warfare in 1618–19. Thereafter, rivalry between the two kingdoms shifted south and west as they struggled for half a century to dominate the gold-producing realm of Fazuġli, centred in the ↗Bärta country west of the Blue Nile; there the F. enjoyed rather greater success. Relations between Ethiopia and Sinnār stabilized after about 1675, except for *aṣe* Iyasu II's unexpected and unsuccessful invasion of the Sudan in 1744. Thereafter, official relations became ever more tenuous as both lands entered a time of troubles.

At the end of the 17th cent. the unity of the F. kingdom was increasingly challenged by different competing groups. Under *sulṭān* Bādī b. Nūl (r. 1724–62) the dynasty lost its power to the non-F. Abū Liyalik while the hereditary line continued till 1762.

Furra

The origin of F., the legendary queen of the ↗Sidaama, is not clear. According to Gasparini (1983:v), she was the wife of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ", known as Diingamo Koyya among the Sidaama). Others claim that F.'s father was an honourable clan-leader during the 14th or 15th cent. and when he passed away, people made her a queen because she was the eldest daughter.

According to some legends, F. was a brutal ruler who, in particular, harshly repressed the men. Thus the males were required to do all household jobs which were customarily done by women. These included preparing food, scraping the *ənsät*, fetching water, cleaning the house etc. Women, on the other hand, seemed to have fared better. F. is said to have advised them not to show the amount of butter which they collect after shaking the milk and never openly to express an affection for men.

F. made some impossible demands, such as bringing fresh milk from Aläta Wändo to her palace in Malgä Wändo (a distance of ca. 80 km), slaughtering for her a bull without chyme, building her a house between the sky and the earth.

A wise old man, *hayyičča*, who escaped F.'s murder of all elder Sidaama, provided ingenious solutions to her challenges. F.'s death was hastened when she demanded a faster means of transport. Thus, according to the ploy of the wise old man, she was put on a hartebeest, to which her legs and hands were tightly bound. Her body-parts started to disintegrate when the hartebeest started to gallop. It is claimed that some present-day place names in Sidaama refer to the body-parts of F. which disintegrated and fell off during her final fatal ride. Thus we have: Dase (*dasa*, 'forearm'), Qege (*qeho*, 'shoulder blade'), Hallo (*hallo*, 'hip'), Qubbe (*qubbe*, 'fingers') etc. Sidaama women have a fond memory of her and she still is mentioned in their lullabies.

A non-governmental institution established in ↗Yərga ʿAläm, Sidaama, in 1997 – the Furra Institute of Development Studies – bears the queen's name.

Fusella, Luigi

F. (b. 16 March 1914, Naples, d. 12 July 1992, Naples), son of a renowned musician and an acclaimed violinist, was a professional lawyer and followed his legal career until the end of his life. Besides this commitment, he was passionately devoted to Amharic language and literature, a branch of Oriental studies in which he achieved a deepened proficiency at the school of Francesco ↗Gallina, then teaching in the ↗Istituto Orientale of Naples, where F., too, was later to hold a chair of ↗Gəʿəz language and literature.

F. was widely reputed on account of his noteworthy literary production on the Amharic language and literature. Among his many essays, memorable are his edition and Italian translation, with a commentary, of an unedited, historically remarkable, Chronicle of *aṣe* ↗Tewodros II of Ethiopia, his abstract and commentary of *Ləbb wälläd tarik*, the first novel in Amharic by ↗Afäwärq Gäbrä Iyäsus, and his commented translation of the vivid, politically minded, biographical narration on *aṣe* Mənilək II by the same author (↗*Dagmawi Mənilək*).

F.'s translations remain a scholarly and effective western contribution to the knowledge and evaluation of the historical trends that marked the flourishing of modern Ethiopia's literature.

Futūḥ al-Ḥabaša

The chronicle F.Ḥ. (فتوح الحبشة, ‘the Conquests of Ethiopia’) is a detailed account of the Muslim conquests made in southern, central and northern Ethiopia by the army commanded by *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (“Grañ”), in the second third of the 16th cent. It was compiled by an eye-witness, Šihābaddīn Aḥmad b. ᶜAbdalqādir b. Sālim b. ᶜUṯmān (“ᶜArabfaqīh”, the ‘Arab doctor’; d. after 1559; s. Brockelmann 1944:539f. and 1938:569). He was a Yemeni volunteer who joined the army of the *imām* some time after 1530. The Arabic text of the F.Ḥ. begins with a prolegomenon on the Muslim rule of the progenies of ↗Saᶜdaddīn Abu l-Barakāt in Ethiopia and then proceeds to record the events of the rise of Aḥmad Grañ as *imām*, who swept across Ethiopia in successive battles and campaigns and subjected large parts to fire and sword. The Muslim occupation of Ethiopia and the highlands ended in disaster with heavy losses of manpower and with the death of Aḥmad Grañ himself at Zäntära, near Lake Ṭana (↗Wäyna Däga) on 22 February 1543. The chronicler of Grañ's deeds, ᶜArabfaqīh, relies on various traditions that circulated in Ethiopia. The sources for his detailed, although not entirely systematically arranged, reports are eye-witnesses, e.g. Aḥmad Grañ, *amīr* Ḥusayn b. Abī Bakr al-Ǧātirī and Aḥmaddīn b. Ḫālid b. Muḥammad b. Ḫayraddīn; the author also relies on his own observations and, for the events concerning the Christian armies, on the accounts of various renegades. The detailed narration usually consists of a series of short, detached statements, mostly not preceded by an *isnād*, or chain of authority.

Besides the Ethiopian chronicles, that often pay less attention to the events, the F.Ḥ. represents the only Arabic source of Grañ's campaigns. The Arabic chronicle, covering about two-thirds of the conquest of Ethiopia and ending with the burning of the convent of ↗Gälila in Lake Ṭana invaded with rafts on 18 May 1537, is not extant in full, only the first part being preserved in manuscripts. The concluding part was probably never written, since the author, who had the intention to add a second part, died shortly after 1559 in the Yemenite town of Ǧīzān before he could realize his plan.

The text of the F.Ḥ. is preserved in several manuscripts. One of the oldest, dating from the end of the 17th cent., and also being one of the most valuable, is no. 1628 of the Bibliothèque Nationale in Algiers. René ↗Basset used this manuscript along with a later copy (no. 1629, dated 1883) for his edition and annotated French translation, which appeared in Paris 1897–1911 (s. BassHist). He also consulted the partial edition of the first 40 pages issued by Arthur Strong, according to the ms. BritLib Orient. 2409 (19th cent.; Strong 1894). Further, one should consult mss. in Paris: BN, no. 6118 (Collection Mondon-Vidailhet, dated 1193 H. [1779 A.D.]), no. 6628 (ibid., dated 1310 H. [1892 A.D]) and no. 104 (Collection Antoine d'Abbadie, dated 19th cent.), as well as a shortened version kept now in Addis Abäba, IES, no. 2069.

The F.Ḥ. was to some extent summarized in the Arabic Chronicle of Gujarat *Ẓafar al-wālih bi-muẓaffar wa-ālihī fī taʾrīḫ Kuǧarāt*, written by al-Uluġḫānī (d. after 1620/1611; Brockelmann 1938:599f.).

Franz-Christoph Muth

G

Ǧaarso

Ǧ. is one of the ↗Oromo clan segments with several settlement areas in Ethiopia. The most notable Ǧ. segments reside in northern Šäwa and southern Wällo, eastern Wälläga and in eastern Harärge. Huntingford (HuntGal 1955: 13, 15) notes Ǧ. as part of the eastern branch of the Oromo, the ↗Baarentuu branch, although there are also Ǧ. groups amongst the ↗Tuulama in Wälläga. Arnesen (1996:218, 222) also notes that there are Baarentuu (or "Wällo") Ǧ., as well as Tuulama Ǧ. The precise description of Ǧ. segments in eastern Wälläga, northern Šäwa and southern Wällo is complicated by the long history of migrations and assimilation of populations in the region (Arnesen 1996; EgeClass 47f., 71).

All of the three main Ǧ. segments are settled agricultural peoples and the characteristic Oromo ↗*gadaa* system is considerably modified to accommodate forms of "chiefship" (Arnesen 1996:224). In eastern Wälläga, northern Šäwa and southern Wällo, the Ǧ. groups are Christian and Muslim, but the Ǧ. of eastern Harärge are wholly Islamic in their faith.

The Ǧ. Oromo of eastern Harärge are descended from the Baarentuu branch and are described as part of the confederacy known as the Afran Qallu (↗Qottu). The Afran Qallu segment itself is made up of six Oromo segments: the Ǧ., Noole, Humme (who, counted together, are known as the Daga), Oborra, Baabbiilee, and Alo (Badri Kabir Mohammed 1995; Burton 1987). The Ǧ. of Harärge, however, are connected with the Gerr, a Somali (Daarood) clan who "hosted" the Ǧ. (and also the Baabbiilee Oromo) as these groups expanded eastwards in the 16th and 17th cent. (Lewis 1994:23). Thus, in Harärge Ǧ. are often known as Garre-Ǧ., indicating the "hosting" relationship known as *sadqo*, although it was the ↗Garre Somalis who became the traditional leaders or *garaad*. After the Ethiopian conquest, a policy of divide and rule developed which favoured the Ǧ. to the detriment of the Garre. According to the local tradition, the Garre-Ǧ. rebelled against Ethiopian rule in 1942 and 1951/52 due to the return of "Amhara" settlers and the re-imposition of taxation. In recent years, due to the rise of the politics of ethnicity, there have been tensions between the Garre and Ǧ. sections.

Ǧaarso ↗Qottu

Ǧaawee Ončo

Ǧ.O. (r. 1840–54; b. 1820?) was King of ↗Gomma. His father, Ončo Ǧilča, the second king of Gomma, completed the process of the formation of the state of Gomma around 1810, having conducted numerous wars against his neighbours for political, economic and strategic motives. A leader with a vigorous mind and an agile body and a reputation of a cruel tyrant in the ↗Gibe region (Beke 1843:259; CecZeila vol. 2, 541f.), he infused his people, including his son and successor Ǧ.O., with his own intrepid spirit (MHasOr 109), earning them renown as famous warriors (CerFolk 18f., 40, 154). Ǧ.O. gained considerable experience in wars beside his father. He became himself a brave warrior and showed military abilities by resisting ↗Abbaa Bagiboo, the King of ↗Limmu Ǝnnarya, who had the ambition of expanding his kingdom at the expense of Gomma. He also displayed political wisdom, ruling by his head and patience rather than by his hand and passion, unlike his father, who had killed or enslaved people for minor offences (Beke 1843:259; Guidi 1907:181). Ǧ.O., thus, profitably replaced his father's image of cruelty with that of a caring king who left his name to posterity as the first Muslim king of Gomma.

It was during the reign of Ǧ.O. that Islam consolidated itself in his state, the first in the ↗Gibe region to have declared a ↗*ǧihād* in the name of Islam. Ǧ.O. abolished the ↗Buttaa festival lying at the heart of the traditional Oromo religion that each clan should celebrate every eight years (CerFolk 61, 154; MHasOr 159) and thus created a favorable climate for the spread of ↗Islam among his people and, more importantly, showed both to the nobility and the common people that the traditional religion lacked the literate class, organized body of preachers and ideological strength of Islam. In the struggle between the traditional Oromo religion and Islam in Gomma, Ǧ.O. placed the full support of the state behind Islam. It was in this spirit that Ǧ.O. encouraged the *Qādirīya* order to spread Islam in Gomma. The order established schools and mosques, completing the process of proselytization.

Ǧ.O.'s son and successor, Abbaa Dulaa (r. 1845–79), was the most fervent Muslim king of Gomma. He received a letter from the custodian of the tomb of the Prophet ↗Muḥammad at Medina in 1866 urging upon all believers that the "end" of the world was coming and that they should fortify themselves in their faith (CecZeila, vol. 2, 268f.; TrIslam 202). Perhaps as a response to this letter, Abbaa Dulaa and his successor declared a *ǧihād* in the Gibe region.

Mohammed Hassen

Gäb

The name G. (ገብ) is first mentioned in the Chronicle of *aṣe* ↗Zärʾa Yaʿəqob in connection with the traditional ↗Hadiyya title *garaad* (↗*gärad*; PerrZarY 18). By then Hadiyya was a member-state of the Muslim-dominated ↗ʿAdal federation and, at the same time, tributary to the Christian empire. One of the Hadiyya leaders, Mahiko, son of Mehmad *garaad* (Bimaddo in the oral tradition), led a conspiracy against the Emperor and was supported by a number of the Hadiyya leaders, including *Gab garaad*. According to the Chronicle, the revolt was revealed by another Hadiyya leader, Gadayto *garaad*, who advised Zärʾa Yaʿəqob to hand over the command in Hadiyya to Bamo *garaad* (Boyaamo of the oral tradition), Mehmad's brother, who had instead proved to be loyal. Bamo, supported by troops from ↗Damot province, defeated the rebellious Hadiyya, including *Gab garaad*.

From the oral traditions of the Hadiyya, G. can be identified as ↗Gädäb, a region on the upper Wabi Šäbälle river in the ↗Arsi and northern ↗Bale provinces (particularly the district of Asasa). It was kept as a historical denomination by those groups that either had been driven out from this region or incorporated by the Arsi Oromo during the 18th cent.

The present Hadiyya subgroups of the Sooro, the Šaašoogo and the Urusso claim to be *Gadabiččo* (i.e. of G. descent) and still use the designation *gadab garaad* as an honorary title. Until the beginning of the 20th cent. the G. Hadiyya preserved the custom of surrounding the graves of their chiefs with a wall of earth called *gadab garaadella*. This name also refers to a natural formation caused by a meteorite in the Asasa region which is associated with legends concerning G.

Gabaro

The ↗Mäččᶜa Oromo gave the general name G. (in contemporary Oromo 'commoner', 'plebean') to the different peoples they overran during the second half of the 16th cent. It has been assumed that the name derives from ↗*gäbbar*, meaning tribute-paying peasant (BeckHuntAlm 116). G. were allowed to keep their land and livestock, adopted into the Mäčča clan and ↗*gadaa* system and required to perform military service. Some known as *yäḥabäta* served as feared self-mounted cavalry. Nevertheless, the rights of the G. were not always respected and in the first quarter of the 17th cent. some, probably led by the *yäḥabäta*, revolted. When the ↗Mäčča and Tulama united against them, the G. allied themselves with the Christian governor of Goǧǧam. Later, *aṣe* ↗Susənyos settled them across the Abbay to serve there as defensive shields against a likely resurgent Oromo alliance. Some G. later returned to Mäčča.

G. was probably never a self-appellation, and no single group by such name exists, though Knutsson (1967:181) noted the "existence today of numerous *gabaro* clans". Tablino (1999:299) notes that "the word [...] in one sense or another, is the most probable origin of the name Gabra".

Paul T.W. Baxter

Ǧäbärti

In its wider sense the term Ǧ. (ጀበርቲ) refers to all Muslim people living in Eritrea and Ethiopia or the Horn of Africa in general. By the Christian highlanders the term was even used for the Muslims of the Arabian peninsula (Ullendorff in EI^2; Muḥammad Sa^{c}īd Nawed 1991:98). In a narrow sense it is used to indicate the Muslims living in small groups which descend from different ethnic and linguistic groups (e.g., ↗Agäw, ↗Saho, ↗Oromo, ↗Təgre and ↗Təgreñña-speakers) and are scattered throughout the Eritrean and Ethiopian Christian highland provinces. The Ǧ. live among different ethnic and linguistic groups sharing their language and most of their culture with the surrounding Christian population.

There is a number of (folk-)etymologies to explain the name Ǧ. E.g., it is said to be the corruption of the Arab word *ǧabbār*, 'strong' or 'strong warrior'. Another explanation says that it originates in a sentence of the Prophet: after one of the victorious battles against the Qurayš in which the Abyssinian volunteers had particularly distinguished themselves, Muḥammad supposedly exclaimed, *Ḥabaša ǧabaranī* 'Abyssinia strengthened me' (Pollera 1999:90). A tradition says that the name Ǧ. comes from Gə^{c}əz አግብርት (*agbərt*, 'servants [of God]'), while another explains it as a corruption of the Təgrəñña word *gäbari* (pl. *gäbärti*) meaning 'tenants' or 'servants' and referring to the socio-economical limited status they had in the Christian environment. In the derogatory sense of 'serfs' the term Ǧ. is sometimes used by the Christian highlanders.

Muslim historians and geographers generally used the term Ǧ. to distinguish the Muslims of Abyssinia from the Christians, while they used terms such as *al-Ḥabaša* for all people of the Horn, regardless of whether they were Christian, Muslim or "pagan". However, the term was extended to all Muslim kingdoms of Southern Ethiopia and, finally, to Ethiopian and Eritrean Muslims in general (TrIslam 58, 60, 150f.).

Most of the Ǧ. claim descent from ^{c}Uṯmān b. ^{c}Affān, the third caliph, and his wife Ruqayya, who were amongst the refugees to Abyssinia during the first ↗*hiǧra*. Their son remained with his mother in Abyssinia. The Ǧ. refer to the founder of the ↗Ifat sultanate ^{c}Umar b. Walašma^c al-Ǧabartī as an important common ancestor (s. TrIslam 58f.). The ↗Walašma^c dynasty claimed an Arab ancestry from ↗Ḥiǧāz and settled in the "land of Ǧabarta" (Ǧabara, Ǧabart), originally the name of a region in the territories of ↗Zayla^c and Ifat. Many Somali people claim descent from Darood Ismā^{c}īl Ǧabartī and the ↗Zayla^c sultanate, which was called also "land of Ǧabarta" by the Muslim historians.

In the 15th cent. a *riwāq* (a section for scholarly Islamic learning) was established at al-Azhar University in Cairo. At the beginning, the centre was named as Riwāq az-Zayla^c, but later the name was changed into Riwāq al-Ǧabarta to include all Muslim students from Ethiopia and Somalia. In the 18th cent. the centre was chaired by a famous Islamic scholar, ^{c}Abdarraḥmān b. Ḥasan b. ^{c}Alī b. Muḥammad al-Ǧabartī, born in Cairo in 1752, who wrote on Egyptian history; at his death, his family was to chair the Riwāq al-Ǧabarta for almost seven generations. Later the centre was chaired by *Šayḫ* Bušrā ^{c}Abdal-qādir and after him by *Šayḫ* Aḥmaddīn Muḥammad ^{c}Īsā at-Taro^{c}awī, from the tribe of Taro^{c}a-Sāho.

The Ǧ., as Muslims in general, had a somehow discriminated status in the Christian state, e.g., they were excluded from the possibility to gain hereditary land-rights (↗*rəst*; s. TrIslam; Cerulli 1925; Nadel 1946). Moreover, the Ǧ. were subject, like other ethnic groups, to persecutions. For instance, during the time of *aṣe* ↗Yohannəs IV the Muslims were forced, under menace of serious punishment, to accept baptism (Nadel 1946:15ff.; Pollera 1999:90). Due to prevention of land-rights the highland Muslims held their land as tenants and had to engage in different economical niches. They mostly dwelled in market centres, were active as traders and earned their living through artisan occupations, particularly weaving. Still today the Ǧ. are mostly active in commercial and artisanal sectors.

Ǧäbärti

The name Ǧ. was reportedly used in Aden also as a collective designation for the ↗Digil, the ↗Raḥanween and the ↗Hawiye Somali during the second half of the 19th cent., especially for those occupied in the humblest jobs (von Tiling 1921-22:20f.). The German ethnologist and Arabist Wilhelm Hein used it for the southern variety of Somali that he heard during his journey to Aden and Šayḫ ᶜOsmān in 1901–02, and Reinisch (1904) retained it when he published Hein's data after his death. Maria von Tiling, too, used the name Ǧ. for the quite different language of her informant Osman Abdi, with whom she worked in Hamburg in 1919 (von Tiling 1921–22, 1924–25). Yet she stated clearly that this designation was not used in the country where that language was spoken.

Hein, and Reinisch's dialect is a variety of Benaadir Somali that preserves *ḥ* and *ᶜ*, has 3rd pers. pl. *uyyunka*, "they" and the indefinite article *-koo*/*-too*. But it also has many features of ↗May Somali such as the interrogative *may*, 'what?', the 2nd pers. sg./3rd pers. sg. fem. ending *-aasa* and 1st pers. pl. *-aana* in the present continuous tense, and the verbs *aam-*, 'to eat', and *koy-*, 'to come'. It also has some features of more northern dialects, such as the infinitive in *-in* from causative verbs. What von Tiling described is instead definitely a variety of May spoken by the Elaay in the area of Buur Hakaba, with *l* + *t* > *ll*, *h* + *t* > *tt*, the 2nd pers. sg./3rd pers. sg. fem. ending *-aasə* and 1st pers. pl. *-aanə* in the present continuous tense and *šeen-*, "to bring".

Gäbäṭa

G. (ገበጣ) is the Amharic and Təgrəñña name for Ethiopia's principal board-game. Played, with regional variations, throughout the country, as well as in other parts of Africa and Asia, it has different local names, including its Oromo designation *saddeeqa*, widely used in southern Ethiopia. Foreign scholars, however, often refer to the game by its Arabic name *manqala*.

Ethiopian G., one variant of which has similarities with a version played in India, is undoubtedly of great antiquity. A board-game of this kind was known to the ancient Egyptians. Rocks carved with holes for playing G. have been found at a site at ↗Mäṭära dating from around the 7th cent. A.D. and the game is mentioned in a 14th-cent. Gəᶜəz text (Perruchon 1903:23; cp. Pankhurst 1971:154).

G. in the Ethiopian region was traditionally played by persons of all ages and classes, including the nobility, who had their own special

Playing *gäbäṭa*; photo 1950/52 by W. Schulz-Weidner, courtesy of the Frobenius-Institut, Frankfurt am Main (23–Wd082–02) three-row version of the game. It is generally conceived of as a game played by two opponents dropping and picking up pebbles from holes carved in a board or in the ground. The game is, however, subject to many regional variations. These are seen in relation to 1) the number of rows of holes, which may consist of two, three or even four rows; 2) the number of holes per row, usually six, but in some cases as few as four or as many as ten, twelve or, rarely, even 24; 3) the number of balls per hole, generally three or four, but sometimes one, two or five. There are also major differences in the methods of play. In some games the objective is primarily the capture of balls in a series of unconnected moves. In others, the emphasis is mainly on the capture of holes and the almost incidental capture of balls.

Gäbäyyähu Gora

Fitawrari G.G. (**ገበየሁ፡ ጎራ**; d. 1 March 1896) was an intrepid warrior in *aṣe* ↗Mənilək II's army. He won lasting fame through his exploits at the battle of ↗Ambalage (7 December 1895).

As befitted his title, *fitawrari*, G.G. was in the vanguard of the Ethiopian forces that had proceeded to Təgray in the wake of Mənilək's mobilization edict of September 1895. Although G. was technically under the command of *ras* ↗Mäkʷännən, he appears to have acted unilaterally when he stormed with his troops the apparently impregnable fortress of Ambalage. Heeding local advice about the futility of such an assault, G.G. was going to be left to his own devices. But two other valiant commanders in Mäkʷännən's contingent, *qäññazmač* Taffäsä Abaynäh and *fitawrari* Täkle, rushed to G.G.'s assistance, shouting that they would not leave the imperial commander alone and thereby precipitated a general engagement by Mäkʷännən's troops.

The Italian vanguard force, led by the equally irrepressible Major Pietro Toselli, had ensconced itself on top of Ambalage. Against all odds, G.G.'s force was able to defeat the Italians, resulting in the death of many of them, including Toselli, and precipitating an Italian retreat to Mäqälä, which became the next theatre of war. G.G. was reportedly censured or even briefly detained for what was regarded as a reckless act.

G.G. was also one of the Ethiopian commanders at the battle of ↗ᶜAdwa on 1 March 1896. His force engaged at the Abba Gärima front, facing the Italian brigade led by General ↗Albertone. Despite his illness, G.G. sought to inspire his troops by heading into the fray, courting death with the words: "Those who return to Šäwa, let them tell how the victor of Ambalage died!" As he fell, the whole Ethiopian line reportedly wavered and Albertone thought that victory was in sight. Mənilək was deeply moved by G.G.'s death, breaking into tears when he saw his riderless horse paraded after victory.

Gäbäz

The term G. (**ገበዝ**) seems to be connected to the Gəᶜəz word *gäbäz*, 'riverbank' (cp. **ገበዘ፡ ተከዚ**, *gäbäzä täkkäzi* in Ex 7:15) and means 'guard, protector, tutor, custodian, keeper' (DillmLex 1174; LesCDic 180; KWK 296), in both secular and religious contexts.

As an ecclesiastical term, G. already appears in the 6th-cent. royal inscription of the Aksumite king ↗Kaleb (RIE no. 191.36f.). It possibly refers to the ancient cathedral of ↗Aksum Ṣəyon, Kaleb's sanctuary (MHAksum 9, 209; MHAlex 98f.; Fiaccadori 2003:204), Gäbäzä Aksum being one of its designations in later times (CRAxum 3). The element G. in the name of Princess ↗Tərdaᵓ Gäbäz, traditionally responsible for handing over the authority to the ↗Zagʷe dynasty, could have the same implication if interpreted as 'May the cathedral [of Aksum] help' (Conti Rossini 1923:374f.). Besides, one should recall King Zägäbäzä Aksum (or ↗Ǝllä Gäbäz), appearing in the ancient hagiographic tradition of *abba* ↗Libanos (Bausi 2003:15; Getatchew Haile 1990:38f.) and many of the "king lists". The term G. was later applied to other churches as well: e.g., Gäbäzä Taᶜəka and Gäbäzä Mäsqäl (s. CRAxum 3; CRStor 158; Monneret de Villard

1938:40, 42). By extension, the name G. passed on to the person/priest in charge of these (important) churches and, later on, of a church in general. It was also employed to designate the clergyman entrusted with the administration of the cathedral at Aksum, upon whom the title of *gäbäzä Aksum* (administrator [sacristan], treasurer of the same cathedral) was bestowed.

Currently, the G. is the officer who (a) manages the internal affairs of the church and is custodian of vestments and vessels for church ceremonies, of what is useful for the eucharistic celebration; (b) takes care of the weekly celebrants of the divine liturgy; (c) controls the offerings and alms of the church; (d) ensures the celebration of the divine liturgy, the Liturgy of the Hours, the incense office and other religious functions carried out in the church (↗Churches and church administration).

The G. used to be second rank to the ↗*aläqa*, except in some churches where he acted as superior. Being normally a priest, the G. was called **ቀይስ፡ ገበዝ** (*qäysä gäbäz*) or **ቄስ፡ ገበዝ** (*qesä gäbäz*). In principle, anyone wishing to attain the office of G. must have been a native of the place where he was to serve in order to gain access to the ↗*gʷəlt* given by rulers over the centuries for the office maintenance. The situation changed with *aṣe* Mənilək II's decree of 2 August 1892, chiefly aimed at reorganizing the churches of Šäwa: instituting the office of G. (*gäbäzənna*), he gave it the central place in the church administration. Mənilək invested members of the noble families and his relatives with the *gäbäzənna* of some important churches, entrusting them also with special *gäbäzənna* estates (Haile Gabriel Dagne 1972). The office was downgraded by Ḫaylä Śəllase I with the 1942 Regulations for the Administration of all Church Land (↗Ethiopian Orthodox Täwaḥədo Church).

Nowadays, still if the G. is a layman, he delegates a priest called **ውስጠ፡ ገበዝ** (*wəsṭä gäbäz*, lit. 'inner G.') to tend to the needs of the innermost part of the church (↗*Mäqdäs*). The G. is rewarded either in natural produces or in money. In the event that he performs his duty, with payment, in a church not in his native place, but is dwelling there permanently, he is called **አዳሪ፡ ገበዝ** (*adari gäbäz*, 'resident G.', Tgn. **ኅዱር፡ ገበዝ**, *ḫədur gäbäz*). After the creation of the Parish Council system, in many parishes it is preferred that the *qesä gäbäz* have two lay co-operators, so as to give them the opportunity, not only of participating in parish life, but also of exerting control over the latter's financial aspects.

Habtemichael Kidane – Red.

Gäbäz(a)

The name G. seems to refer to two things: 1) a historical customs-post or shore station directly on the coast of the gulf of Adulis near the Aksumite port-city of ↗Adulis itself; 2) a kingdom that became one of the sub-kingdoms tributary to ↗Aksum and may be identical with the area assigned by ancient authors to the "Adulites".

1. Already in the 1st cent. A.D., the ↗*Periplus of the Erythrean Sea* notes that the anchorage for Adulis was subject to raids by "Barbarians dwelling roundabout", the ships having therefore to moore at Oreinē Island (§ 4, Frisk 1927: 2; Casson 1989:52f., cp. *ibid.* 102f.). This secure anchorage was, perhaps, the future G. Neither the *Periplus* nor Procopius of Caesarea in the 6th cent. name G., but mention that from the harbour to Adulis was a distance of 20 stades (Procopius, *Bella* I, 19, 22, in: Haury 1905 [1965], vol. 1, 103; Dewing 1914, vol. 1, 182). ↗Cosmas Indicopleustes situates Adulis two miles from the coast (Wolska-Conus 1968, vol. 1, 364f.), and in one of the most authoritative manuscripts of his work, the *Christian Topography*, with a more detailed map, "the custom of G." (ΤΕΛѠΝΙΟΝ ΓΑΒΑΖΑC) and the place called "Samidi" are indicated south and, respectively, north of Adulis

by the coast. The name G. (Γαβαζά) also occurs, for the naval station of Adulis, in the 6th-cent. Greek Martyrdom of ↗Arethas of Nağrān (ch. VII [§ 29], in Carpentier 1861:747).

2. In an Aksumite inscription to be perhaps attributed to King ↗Ousanas, Bisi Gisene, the monarch, is recorded as receiving submission from SWŚWT "king of the Ag^{w}ezat" and SBL "king of GBZ" (Gäbäz, Gäbäza/Gäbäzä?), and then at ḤMŚ he met "all the tribes of M(e)ṭ(i)n" (RIE no. 186.13f.). If the same place as the aforesaid coastal installation, GBZ seems then to be identifiable with the area of the "Adulites" referred to in classical texts from the 1st cent. A.D. onwards and apparently differentiated from the Aksumites themselves up to the 6th cent.

In the late 4th cent., ↗Epiphanius listed "nine kingdoms of the Indians", among which the Coptic version of the lost Greek original text has the "Aksumites (and) Adoulites", the latter being, however, subsumed with the former in the Latin version: "Aksumites with Adulites" (s. Epiphanius, *De XII gemmis* 20, in Blake 1924: 242f.; Guenther 1898:748f.; cp. Cerulli in PICES 1, 16f.). In the 6th cent., ↗Nonnosus, discussing climatic zones, wrote that between Aue and Aksum there was one sort of climate, while "from the Adulitae to Aue" there was another (s. Photius, *Bibliotheca* [III 2a], in: Henry 1959.4ff.; Freese 1920:17ff.). Procopius, too, notes the five days and nights were needed to cross the Red Sea from a place called Boulikas in Ḥimyar: "... and at the end of the sail across the sea they [i.e., the Ḥimyarites] always put in at the harbour of the Adulites" (Procopius, *Bella* I, 19, 21, in Haury 1905 [1962], vol. 1, 103; Dewing 1914, vol. 1, 182).

As a part of a toponym, the word *gäbäz* appears also in Ḥamäd Gäbäz (**ሐመድ፡ ገበዝ**), which applies to an archaeological site and possibly an ancient settlement near ↗Aksum (Fattovich 2000:63), but ↗*gäbäz* here is most probably an ecclesiastical term and may be linked to St. Mary Cathedral of Aksum (↗Aksum Ṣəyon).

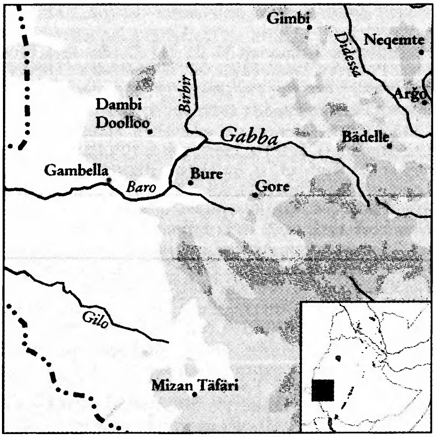
Gabba

The G. (Gaba, Geba) is a river (35' 18° N, 8' 5° E) that forms the border between Wälläga and ↗Illubabor. Rising west of the town of Bädelle, it runs westwards and is joined by the Birbir, combining finally with the Baro into the Akobo of Gambella. During the 19th cent., G. was also the name for a region and an Oromo polity (also Gabba Illuu) between the rivers G. and Baro.

G. is related to the Oromo peopling of the region since the 18th cent., which marginalized other inhabitants, such as the ↗Šakačo and ↗Mağangir. Populated by the Tuume-Illuu clans, at that time it was considered a fertile but lawless periphery of Wälläga. The Oromo have a saying: *Baaroo nama boreečisa, Gabba nama gabbisa* ('The Baro makes a man beautiful, the G. makes a man fat'); fatness alluded to trophy-hunting (buffalos, elephants) in the river lowlands towards the "Yambo" (↗Añwaa). The successful hunter was anointed with butter (AbbGeogr 88). Metaphoric use of "fatness" related also to the abundance of wild ↗coffee (*coffea arabica L.*) in G. (CerFolk 26).

From the middle of the 19th cent., a centralized policy among the Illuu is attributed to Čali Šone, popularly known as Abbaa Boora ('Lord



of the light-bay'; hence Illuu Abbaa Booraa = Illubabor). The *gadaa* system of the Illuu shifted to kingship (Oromo: *mootii*; Yasin Mohammed 1990:111–15). Political centralization of G. Illuu, with Gečinai-Gomboči as the capital, fostered security for traders (in ivory, cotton and honey), but contributed also to internal and external conflict.

Internally, Abbaa Boora's attempt to form a dynasty was successfully challenged by one of his warriors, ↗Fatansa Illuu (Yasin Mohammed 1990:116). The capital of G. shifted to Bure. Externally, G. was threatened from the south-east by the Muslim Oromo kingdom of ↗Guummaa.

From 1882–83 onwards, Mənilək's troops under *ras* ↗Gobäna Dač̣i and *ras* ↗Täsämma Asmärom occupied G. (s. Bulatovich 2000). To keep G. Illuu autonomous, direct confrontation was avoided (CerFolk 77). The town of Gore became the seat for the Ethiopian administration of Illubabor, whilst Bure and its vicinity maintained a distinctive self-rule until the late days of *aṣe* Mənilək (Pick 1909:73).

Thomas Zitelmann

Gäbbar

The term G. (**ገባር**, 'tributary') is derived from the Gəʿəz root *gäbrä*, the primary meaning of which is 'to work' or 'to serve' (DillmLex 1159ff.). In Amharic, whence its broad application throughout Ethiopia from the late 19th through much of the 20th cent., the root *gäbbärä* means 'to pay tribute' (d'Abbadie 1881:846; Isenberg 1841:174; GuiVoc 742f.; BaetDic 986f.; Amsalu Aklilu 1979 A.M.:275; THMDic 1175). G., then, is a tax- or tribute-payer. Closely related words in Amharic, derived from the same root, are ↗*gəbər*, *gäbbäre* (**ገበሬ**, 'farmer'), the latter taking its sense from the fact that most forms of tax and tribute derived from agricultural lands; and, with meaning extended from the previous, *gəbərənna* (**ግብርና**, 'agriculture', s. Amsalu Aklilu 1979 A.M.:276). This closely associated complex of meanings defies the fact that pastoralists, as well as farmers, were assigned this status by Ethiopian state authorities. In 20th-cent. usage the term frequently had a pejorative connotation of social subjugation and was often rendered "serf", but this meaning covered only a portion of G.'s full semantic range and reflected, however imperfectly, social conditions imposed in southern Ethiopia in the later 19th and early 20th cent.

Historically, the term appears in a famous aphorism or proverb, **ሰብእ፡ ሐራ፡ ወገባር፡ ምድር** (*säbʾa ḥara wägäbbar mədər*, 'Man is free [or soldier] and land is tributary'), for the first time early in the 17th cent. (Perruchon 1896:359, 361; Conti Rossini 1893:807, 811; BegCron 1901:41). The aphorism recurs during the latter part of the century and at several points in the 19th cent. (CrummLand 62-67; GuiVoc 190, 201; Conti Rossini 1917:714; Nadel 1946:11). Its meaning has been much, although inconclusively, debated, from Conti Rossini (1893:807, 811) and Merid Wolde Aregay (1971:376ff.) to Toubkis (2004: 589-601), the sources agreeing that G. means 'tributary', but disagreeing as to whether its primary reference is to the relationship between the farmer and the land or between a social superior and inferior with further disagreement about the relationship between land and military service. Prominent amongst the 20th-cent. sources on G. are the contributions of *blatta* Maḫtämä Śəllase Wäldä Mäsqäl (1957:284, 287f., 290, 293, 299f.) and by Gäbrä Wäld Ǝngəda Wärq (1962:306f., 316, 323ff.), who provide numerous examples of the differing usages of the term and obligations to which G. might be subject. Both works underpin the subsequent analysis by Mantel-Niecko (1980:82–85).

One definition of G. that reflects common usage, but which can be rejected as incomplete and misleading, is provided by Amsalu Aklilu (1979 A.M.:275): 'tenant farmer'. On the contrary, G. were frequently claimants of land in their own right. Hoben (1973) has provided the classical exploration of the ↗*rəst* system of inherited access to agricultural land, on the basis of field research carried out in Goǧǧam province in the 1960s. This system prevailed throughout much of the Amharic and Təgrəñña-speaking regions of Ethiopia. Farmers holding their land as *rəst* claimed inalienable rights to farm it and in no sense could be construed as tenants. However, at the same time as they viewed themselves as *rəstäñña*, and fiercely asserted their independence, they also perceived themselves as G., or tribute payers, the two identities being closely linked in that farmers recognized their rights were inalienable only so long as they paid tribute or tax on it, the former more appropriately describing payments to social overlords, the latter more appropriately describing payments directly to the government. The distinction became of importance only in the 1950s and 1960s (Hoben 1973:4 n. 14, 77). Hoben's perception of the relationship between *rəst* land-holding and G. status is seconded by Berhanou Abbebe (1971:94f.) in his study of land tenure in Šäwa province during the reign of *aṣe* Mənilək II (r. 1889-1913).

The pejorative view of G. as denoting a status of social subordination analogous to that of 'serf' derives from common perceptions of arrangements instituted in southern Ethiopia following the region's subordination, or re-subordination, to the Ethiopian state during the reign of Mənilək II. The term typically appears as part of the couple ↗*näfṭäñña*-G., where the *näfṭäñña* is the social superior. The most detailed study of this system has been carried out by McClellan (1988:57–79), who, with reference to the ↗Gideʾo of Sidamo region, confirms the general understanding that, following the conquest of differing parts of southern Ethiopia, Mənilək's government required the local population to support the conquering garrisons by providing their individual members with labour and tribute. These tributaries became G. attached to individual *näfṭäñña*. They viewed their obligations as onerous and resented their status. Their obligations entailed payment of land tax or rent, payment of tithe, the provisioning of government officials and government-recognized travellers, supplying firewood to their overlord, "gifts" on various occasions, working on land of the state or lord for as much as 1/3 of their total working time, grinding grain and construction of granaries and fences for overlords, and providing transport for their overlord (BZHist 87–92). However, McClellan also makes clear that, for some time, the G. retained their pre-conquest rights to farming and grazing land, *näfṭäñña*, for the most part, lacking such rights. So, as part of this relationship, the G. were not tenants. Nevertheless, the conspicuous degree of social subordination led contemporary European observers, as cited by McClellan, to describe the status as one equivalent to slavery, and Ethiopian intellectuals of the 1920s to deplore the pitiful state of the G. (Bahru Zewde 2002:124f.). McClellan (1988:73) concludes that this system "kept the Gedeo economically impoverished". Many of these same G., following the measurement of land in Gideʾo, which began in 1917, and the alienation of extensive tracts of it, lost their pre-conquest rights to land and did, indeed, become tenants, but not necessarily to the *näfṭäñña*, whom previously they had served, but, more frequently, to a later wave of government servants and settlers.

The apparently divergent understandings of G. may be reconciled by noting that the G. is a tributary, frequently a land-holder by right, but subject to widely varying tributary conditions and relationships.

Gabra

The G. (also Gabbra) are an Oromo group, speaking the ↗Boorana dialect, who probably number about 50,000. The great majority still subsist as nomadic pastoralists in the vast, arid borderlands of Ethiopia and Kenya: in harsh times they and their camels and smallstock may range as far as Agärä Maryam in the north, the Uaso Nyiro River in the south, Lake Turkana in the west and Wajir in the east. Insecurity and loss of stock have forced some to settle around relief and trade centres, but even the most impoverished G. still strive to maintain active pastoral connections. The G. consist of two distinct clusters known as the Miigo and the Malbe. The less numerous Miigo profess ↗Islam, but, away from the towns, maintain traditional ways and values. The Malbe, though some have converted to Islam or to ↗Christianity, mostly follow their traditional religion. Miigo data are sparse (but see the many scattered references in Schlee 1989), whereas the Malbe data, on which this entry is based, are plentiful.

Schlee (1989) argues that the distant ancestors of the G. were members of a proto-Rendille-Somali (PRS) culture who acquired the Boorana language as, from the 16th cent. onwards, they became incorporated into the Boorana hegemony. Aneesa Kassam (1986) argues that the G. were Boorana who adopted some Rendille-Somali cultural elements when they took to camel pastoralism. Either way, ethnic identities, especially among pastoralists who must either maintain continuous access to grazing, browsing and water or perish, are often mutable and multiple. Identity-switching is a characteristic of the region, as is the adoption of cultural items singly or in sets; names of descent groups, styles of house-building, items of material culture and stock-markings often span ethnic groups (Schlee 1989; Prussin 1989). The G. and Boraana certainly share deep ritual and cultural bonds as well as their language, but the G. also have their own distinctive rituals, prayers, sacred sites and calendars (Tablino 1999, ch. 2). The G. appear to see themselves as "at once distinct from their neighbours and yet also related to them" and to use "the cultural means at hand to play up different or common origins as the need arises" (Wood 1999:64). In recent years, as ethnic allegiances have become national issues, attempts have been made by politicians and religious proselytizers to bind the G. exclusively to either the Ethiopian or the Somali or the ↗Oromo nationalist causes; some bloody, and sometimes deathly, affrays have ensued (Tablino 1999, ch. 8; Arero 2002, chs. 6–8).

The G. form a cultural unity, but are not a centrally organized political unit. An individual is born into one of five effectively autonomous sets of associated patriclans or phratries (↗*gosa*), named Algaana, Gaara, Galbo, Šaarbana and Odoola. Each phratry has its own distinctive history and customary grazing area. Clans (*balbala*) are made up of patrilineages (*miilo*), the members of which recognize and share the obligations of close agnatic kinship. A phratry has its own hereditary bestowers of blessings (↗*qaallu*), and own traditional holy sites (except the small Šaarbana, which shares with the much larger Algaana) to which a pilgrimage is made every seventh year. Each phratry also has its own nomadic "ritual capital" (*yaa*) in which the sacred objects integral to its well-being, a drum, ivory trumpet and fire-sticks, are each cared for by their resident custodians. Members of each *yaa* are also responsible for the maintenance of its *naabo*, an enclosure of thorn-branches, in which a sacred fire must be kindled and kept alight during important phratry rituals. The *yaa* is the source of moral authority for its phratry and all major decisions and judgements should be made there. A binary division underlies the five phratries, in each of which the clans are grouped into the exogamous moieties – Čilbo and Lossa – (except for the atypical Odoola, among whom they have the names Guba Dera and Guba Gababa). Moieties stand in opposition to each other in some contexts, but are united in others. Moiety affiliation is most obvious in religious contexts: the custodian of the sacred drum must belong to one moiety and the custodian of the horn to its opposite; one moiety sacrifices goats and the other sheep; moieties use separate gateways to the *naabo* and perform their ceremonies on different days (Schlee 1989; Tablino 1999).

The G., like the Boorana, have a great wealth of memorized imaginative and poetic blessings, hymns, prayers, songs, histories, fables, myths and legends, in which traditional modes of thought are elaborated and explored (Tablino 1998, chs. 5–6; Aneesa Kassam 1984, 1986). The ambivalences and ambiguities of life are expressed in the language and imagery used, which often abounds with "binary oppositions" that complement each other and are combined and recombined to form conceptual "unities". The list of possible oppositions is almost endless, but frequent pairs are: Earth and Sky, mundane and sacred, masculine and feminine, the division of families between main and satellite camps, right and left. "They say binaries make unities: *Lammi tokko*, 'Two are one'" (Wood 1999:15); as occurs, to take simple examples, when marriage partners from opposite moieties are joined, though retaining their identities, or when revered and sacred ritual elders (*ḍabeela*) appear to behave like women.

Tablino (1999, ch. 9) suggests that there are "six basic concepts" in G. culture. These are: 1. ↗*aadaa*, custom and tradition as learned by experience and participation: 2. *luba*, the cyclical system of generation-sets and grades which regulate the flow of each man's life, ensure that elders enter the sacred grade of *ḍabeela* at the proper time and are bulwarks of the social, ritual and moral orders; 3. *ğüla*, festivals, feasts, ceremonies "of an incomparable richness" that are performed with appropriate rituals and sacrifice; 4. *nagaya*, the peace, harmony and order of both the G. as a whole and of its components. Peace is God's great gift, the most "common formula of prayer" and an essential part of every ↗greeting and blessing; 5. *rooba*, rain which brings abundance and is crucial for life in the desert; 6. ↗*Waaqa*, which means both the Sky and God, on which the other five must all depend. Similar basic concepts are held by the ↗Boorana, but there are significant differences in the details of their application. For example, the G. generally use *luba* as the general descriptive term for their systems of generation-sets, whereas the Boraana use ↗*gadaa*. The Boraana have a general system with regular eight-year intervals between transition ceremonies, whereas the G. systems differ between phratries, and the intervals between sets may be 14 or 21 years. The Boraana have an interval of five sets between those of father and son, but the G. may have an interval of one or two or three sets. Whatever their ages, all the sons of a Boraana belong to the same set, but the sons of a G. may belong to different sets (Tablino 1999, appendix 1h; Torry 1978). There are also considerable differences in ritual, regalia and symbolism (Wood 1999).

Gäbrä Amlak

G.A. (**ገብረ፡ አምላክ**), a holy monk and one of the *Šäwᶜattä däqiqä Ewosṭatewos* (↗Ewosṭateans), lived in the 14th cent. The only available information about him is a short hint in the Vita of his master ↗Ewosṭatewos of Däbrä Ṣärabi (Turaiev 1905:80). G.A. was probably the eponymous founder of Ǝndä Abba Gäramlak (i.e. Ǝndä Abba Gäbrä Amlak; "End'Abba Gheramlàch" in the 20th-cent. Italian sources) at Qʷäyaṣa, a nowadays completely ruined monastery of Šire. A few local reflections of his cult can be detected in the onomastics: an Ayte Gäbrä Amlak of ↗ᶜAddi K̠ʷala (between ᶜAdwa and Asmära) is mentioned, for instance, in the so-called *Liber gentium* of Təgrəñña-speaking Eritrea (Conti Rossini 1942:171f., § XXIIf.).

Gianfranco Fiaccadori

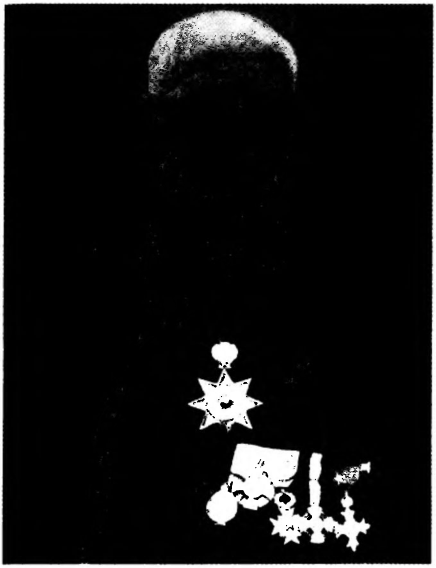
Gäbrä Ǝgziʾabəḥer Dästa

Käntiba G.Ǝ.D. (**ገብረ፡ እግዚአብሔር፡ ደስታ**, in earlier records called **ጎበው፡ ደስታ**, Gobbäw Dästa, later widely known as Gäbru Dästa; b. ca. 1855, Gäžge, Aläfa Ṭaqussa; d. 1950, Addis Abäba) was a versatile intellectual who acted as an educator, administrator and interpreter within and outside Ethiopia in the late 19th and first half of the 20th cent. His father appears to have died while G.Ǝ.D. was still a child; but his mother, whose name has not been recorded in the available sources, and his sister, Dästa, survived at least to the last decade of the 19th cent.

G.Ǝ.D. was taken in by the Chrischona missionaries in the 1860s and, starting from 1868, was educated in Gobat's School in Jerusalem and, subsequently, at the ↗St. Chrischona-Pilgermission near Basel, where he arrived in 1872. From 1874 to 1877 he followed theological and missionary courses. He also helped in the translation and publication of the Amharic Bible in Korntal near Stuttgart. On the initiative of ↗Flad, he was sent to Ethiopia as a Protestant missionary by the ↗London Society for Promoting Christianity among the Jews in 1878, to teach and preach among the ↗Betä Ǝsraʾel, at the missionary station of ↗Ǧända directed by ↗Mikaʾel Arägawi. In 1883 he was sent to the Oromo of Šäwa and worked as a teacher at the new missionary school of Bali together with Greiner and Johannes ↗Mayer until the expulsion of the missionaries in 1886. He then left Ethiopia and entered into the services of the Berliner Ostafrikanische Missionsgesellschaft. First he was sent to Aden and later to German East-Africa to teach slaves rescued by the British from Arab boats and entrusted to the Protestant and Catholic missions in the region. In 1888 he married the daughter of a former colleague, Marta Bender, in Jerusalem (d. 1889).

In 1889 G.Ǝ.D. entered the service of the Ethiopian government and was assigned to Harär where he is said to have attempted to modernize the customs and the police. After the Battle of ↗ᶜAdwa (1896), G.Ǝ.D. was appointed mayor of Gondär, and received the title ↗*käntiba*. But he did not hold this office long, as he was sent to Khartoum to the Mahdīya state on a diplomatic mission and was kept in custody upon his return for some obscure reason. This was probably due to demands of the British fearing a secret alliance of Ethiopia with the ↗Mahdists. Being one of the very few Ethiopians who had a good command of English, German and Arabic, his services were always needed; he was appointed the court's interpreter. He thus accompanied high delegations to England (participating in the coronation of King Edward VII), Germany and the United States in 1902, 1919 and 1930 respectively. He also acted as an interpreter of diverse German travellers and envoys in Ethiopia.

When *aṣe* ↗Mənilək II restructured the administration of his ministries in 1907, G.Ǝ.D. was appointed Director in the Ministry of the Interior. Shortly thereafter he was employed as an interpreter at the new German Legation. In the 1920s he worked as a teacher in the newly



Gäbrä Ǝgziʾabəḥer Dästa; from Huyn – Kalmer 1935:96

established school which bore the name of the Crown Prince. It was at this time that he published the first Amharic grammar with his *Short Guide for Practical Amharic Grammar.*

In 1927 he gave his land at Ayra in Wälläga, with the consent of Empress ↗Zäwditu, to the newly arrived ↗Hermannsburger Mission. In 1931–35 G.Ǝ.D. was a member of the Senate, and again after 1941, becoming its President. After the ↗Graziani incident of 1937, he was imprisoned on the island of Asinara, Italy, where he wrote his autobiography, which remained unpublished. He died of illness at the beginning of 1950. G.Ǝ.D. was survived by three daughters and a son. They played significant roles in the social, cultural and educational areas.

Gäbrä Ǝgziʾabəḥer Elyas

G.Ǝ. (ገብረ፡ እግዚአብሔር፡ ኤልያስ; b. 12 February 1892, Ǝnṭoṭṭo, d. 6 October 1969, Nazret) was a painter, poet, polemicist and historian. He was a son of the well-known painter *aläqa* Elyas Ḫaylu and ʿAmätä Mikaʾel.

G.Ǝ. started his ↗traditional church education at the age of five at ↗Ǝnṭoṭṭo Raguʾel church, learning the *fidäl* and the Psalms of David. Then he studied royal etiquette, painting and book-illumination (ሐረግ, *ḥaräg*), calligraphy (ቁም፡ ጽሕፈት, *qum ṣəḥfät*) and book-making (ድጕሰት, *dəgʷəsät*). At the age of 20 he went to study *qəne* at ↗Sälla Dəngay (Šäwa), ↗Däbrä Marqos and ↗Bəčäna (Goǧǧam) and was qualified as a *qəne* teacher. He studied the Old Testament for some time at ↗Däbrä Ṣəyon.

Upon returning to Addis Abäba, G.Ǝ. worked as assistant head in the customs and later as calligrapher and illustrator at the Ministry of the Pen. He was also the principal secretary of a committee for a translation of the New Testament from Gəʿəz into Amharic.

On a special order of *ətege* ↗Zäwditu, G.Ǝ. prepared in 1917 A.M. [1924/25 A.D.] an edition of the ↗*Haymanotä abäw* for the scriptorium of Kidanä Məḥrät (the chapel in the palace compound) on fine parchment (vellum) with illuminations, finely bound.

In the course of the dispute about the Monophysite faith (↗*Täwaḥədo*), G.Ǝ. became front figure for one of the parties, writing poems and making cartoons of the opponents. For this he was brought before the Regent Täfäri Mäkʷännən (↗Ḫaylä Śəllase I), who passed the matter to *abunä* ↗Matewos. However, after much discussion, G.Ǝ.'s party came out victorious and he was given praise and honour and a high position in the church (s. GebMolIyas ch. 62).

In 1921 G.Ǝ. involved himself by writing in the press in the cause of securing for the Ethiopian Church the right of having Ethiopian bishops (↗Ethiopian Orthodox Täwaḥədo Church; cf. GebMolIyas chs. 81, 94). Thereupon, he was appointed court historian and wrote the royal chronicle for the period 1908/09 to 1931/32, covering the rules of *ləǧ* ↗Iyasu and *ətege* Zäwditu. After that, he worked at the Ministry of Education from 1931/32 to 1935/36 on the expansion of education in Wälläga.

When Italy invaded Ethiopia in 1935, G.Ǝ. wrote many patriotic poems and a play to encourage the resistance. As the Italians came to Wälläga, he put on a monk's habit and lived among the tombs for six months, until his godfather *mämhər* Akalu Kidanä Maryam, recently appointed bishop of Wälläga with headquarters at Neqemte, called him to be his deputy (**እንደራሴ**, *əndärase*). For his activities and cooperation with the freedom fighters, G.Ǝ.E. was honoured upon the return of the Emperor Ḫaylä Śəllase I.

After the occupation, G.Ǝ. returned to his task of teaching and establishing new schools. He also rewrote in 1944 the chronicle about Iyasu and Zäwditu, which had been destroyed by the Italians. This work, published in Germany in 1994, marks the end of over six centuries of Ethiopian royal chronicle writing.

G.Ǝ. was pensioned in 1965 and lived for some years at (Ambo) Hagärä Ḥəywät, west of the capital. He died at the age of 78. He had married three times and was survived by 11 children.

Gäbrä Ǝgziʾabəḥer Moroda

G.Ǝ. (**ገብረ፡ እግዚአብሔር፡ ሞሮዳ**, originally Kumsaa Moroda; b. 1871, Neqemte, d. 1923) was a direct descendant of the Oromo ruling house of Neqemte. His father, Moroda Bakaree, submitted at first to the rule of ↗Goǧǧam and was Christened by its army commander *ras* ↗Däräso in the late 1870s. Later he acquiesced in Šäwan rule over the Leeqaa region in exchange for local autonomy and a direct link with the Šäwan court. Moroda was granted the title of *däǧǧazmač* by *nəguś* Mənilək (later *aṣe* ↗Mənilək II) in recompense for his not joining the forces of the army of *nəguś* ↗Täklä Haymanot of Goǧǧam during the battle of Ǝmbabo (1882). Kumsaa was raised in Neqemte where he received a church education; he was Christened as G.Ǝ. by *aṣe* Mənilək II and confirmed Governor of ↗Wälläga on the death of his father in 1889.

Under his governorate, Wälläga flourished both economically and politically. G.Ǝ. stayed aloof from national politics and remained loyal to his sovereign throughout, although he defended his own vested interests and those of the region he ruled with shrewd and subtle diplomacy. He was rewarded with political consideration from the centre and respect from his subjects. He was open to innovations and took an active part in the economic development of his region. He welcomed foreign traders and missionaries.

In 1898 G.Ǝ. accompanied *ras* ↗Mäkʷännən to ↗Beni Šangul, which he helped to subdue, and was later (1903–08) entrusted with its administration. He introduced the planting of coffee in Wälläga, ordered the building of a bridge over the Didessa River and facilitated trade and communications with the outside world. By favouring trade and commerce, by encouraging his subjects to grow coffee and by extending his own possession, particularly over the Sibuu lands across the Didessa River, he derived considerable wealth

Gäbrä Ǝgziʾabəḥer Moroda; estate of Maurice de Coppet, Finland, Helsinki National Library, no. 110

through taxes and other dues, which the central government coveted and in turn tried to tax. The country was subjected to a yearly tribute of 500 *wäqet* of gold and 500 *färäsulla* of ivory, later converted to 1,000 *wäqet* of gold when ivory became scarce. A further tribute of 17,000 Maria Theresia thalers was imposed on the Wälläga ruler to feed the Gondärine troops of *ras* Dämisäw, who were then stationed at Arǧo but in fact to keep them away from Neqemte. The feud with the central government over taxation rights within his domains remained a source of friction till G.Ǝ. died of diabetes. He was succeeded by his son, ↗Habtä Maryam, who governed the region till the Italian occupation.

Alessandro Triulzi

Gäbrä Ǝndrəyas

G.Ǝ. (ገብረ፡ እንድርያስ), a late 13th–14th cent. saintly monk, was abbot of ↗Däbrä Qozät, a monastery in Ç̣aqata (historical Amhara, later Wällo). The main source on G.Ǝ.'s life appears in his comparatively short Vita (↗*Gädl*), known so far in only two manuscripts (18th-cent. BritLib Orient. 702, the recent EMML 654); there is also a collection of ↗*mälkəʾ* in honour of G.Ǝ. According to the *Gädlä Gäbrä Ǝndrəyas* (s. Turaiev 1902, cp. Derat 2001:251f.), his father was Tənśaʾe Krəstos from Dämbəge, and his mother, Arsima. The saint's baptismal name was Nəftalem. G.Ǝ. was sent to learn under a certain *abba* Sälama, but, following his father's will, he got married and had five children. However, after a vision, he left his family and went to *abba* Gäbrä Krəstos, who gave him the monastic habit (↗*Askema*) and a new name: G.Ǝ. As Gäbrä Krəstos, the head of the community, was dying, he appointed G.Ǝ. his successor. In the rest of the Vita, other episodes, typical for this kind of source, are reported: the Virgin Mary visits G.Ǝ. and gives him "three chalices of the water of life", he heals the sick and vanquishes a demon, he is suddenly lifted to heaven by the angels and prophets, to see "the throne of the Trinity" etc. His commemoration day is on 4 *Taḫśaś*. The partition of the known text of his Vita into several miracles (all of which were completed during the Saint's life) may be the result of later reworking into a coherent original narrative.

The *Gädl* stresses the connection of the Saint to the somewhat remote Lake ↗Ḥayq: the text describes twice how the saint prayed standing in its waters; on another occasion, the lake blames G.Ǝ. because he baptized in its waters a certain "woman from the land of Sen", not knowing that she was in the midst of her menses. However, most of the other places where the activities of G.Ǝ. took place can be located around Däbrä Qozät: Däbrä Sina, (Däbrä) Qʷəsqʷam, Däbrä Zämogä/Zämosa, Bäsəqa, Bäqʷəlo Säbbärä, Däbrä Aläskur and Däbrä Ḥagʷa (Derat 2001:244f.).

Yoḥannəs of Dämbəge, who visited G.Ǝ., is mentioned in the spiritual genealogy of the followers of *abba* Täklä Haymanot (Getatchew Haile 1982–83:34); the same source indicates that Gäbrä Krəstos of Dəmbi was one of twelve "teachers" appointed by the 14th-cent. metropolitan *abunä* ↗Yaʿəqob (*ibid.* 29).

In spite of the local scale of his cult, G.Ǝ. appears in hagiographies of some other saints: he visits *abba* ↗Yoḥannəs Məśraqawi before his death; he witnesses the death of the great *abba* ↗Gäbrä Mänfäs Qəddus (according to the Vita of the latter), this motif being also present in the Vita of G.Ǝ. himself, for he attends there the deaths of a certain *abba* Mikyas and *abba* Fiqtor. The Vita of *abba* ↗Iyasus Moʾa argues that he was the spiritual father of G.Ǝ., a claim that may reflect the fall of Däbrä Qozät into the sphere of influence of ↗Däbrä Ḥayq Ǝsṭifanos.

Gäbra Giyorgis Wäldä Ṣadəq ↗Basəlyos

Gäbrä Ḥanna

Aläqa G.Ḥ. (ገብረ፡ ሐና; fl. 19th cent) was a traditional scholar, the popular hero of innumerable Amharic jokes and humorous stories. In his biography, legend and historical data have merged. Oral tradition reports that he was a native of the province of Gondär, born in a place named Nabäga Giyorgis in ↗Fogära, Bägemdər. The data on the years of his birth and death differ considerably: according to Arräfä ᶜAyne Ḥagos (1979:9, 81) G.Ḥ. was born in 1814 A.M. [1821/22 A.D.] and died at the age of 84, i.e. in 1898 A.M.; Elsabeṭ Gässäsä (1974:1, 13) gives the same year of birth but has 1908 A.M. as the year of his death. According to Molvaer (MolLit 167, 172) G.Ḥ. lived from 1797 A.M. to 1894 A.M. The information on his father's name also varies: Gäbrä Maryam according to Molvaer, Dästa Tägäññä according to Arräfä ᶜAyne Ḥagos and Elsabeṭ Gässäsä. G.Ḥ. had two daughters and one son by his wife Mazängiya. It is not sure, when and whether he received the title *aläqa*.

As far as is known, G.Ḥ. received a thorough church ↗education, partly at the Bäᶜata church in Gondär. Subsequently he held different positions as church administrator, expert in ↗chronology and traditional law (↗*Fəṭḥa nägäśt*), teacher and adviser. He spent several years in the service of *aṣe* Tewodros II, but he was to reach his greatest fame at the court of *aṣe* ↗Mənilək II.

G.Ḥ. is said to have penned several religious books; however, none of them has ever been published. Tradition claims that his best-known contribution to church culture was the invention of a new style of liturgical dance (↗*Aq^{w}aq^{w}am*; ↗*Däbtära*), for which he took inspiration from the waves on Lake Ṭana and the sideways movement of the bamboo reed. This style of dance was strongly disapproved of and rejected by the clergy. However, G.Ḥ.'s son Täkle continued to teach it, with it eventually spreading over the country and being called የተክሌ፡ አቋቋም, *yätäkle aq^{w}aq^{w}am*, 'the [liturgical] dance of Täkle' (or, popularly, ዕብድ፡ ተክሌ, *ᶜəbd Täkle*, 'crazy Täkle', probably hinting at the clergy's perception).

Despite a lack of documents on his life, G.Ḥ.'s name and stories around him are well remembered by all social groups. The fictional hero G.Ḥ. combines the proverbial pride and wit of the traditional "Gondäre", having the status of a religious scholar with a certain amount of native slyness, impudence and a special weakness for "carnal pleasures". Many jokes and puns ascribed to him are of a sexual or scatological nature (cp. Pankhurst – Pankhurst 1982), newly invented ones often being set in the context of modern Ethiopia. Many stories and anecdotes reflect issues of everyday life in his rural neighbourhood or at the court of Mənilək, where G.Ḥ. is found teasing the Emperor and his wife by subtle remarks, or annoying the nobility by quick-witted verbal attacks. But he is neither a court jester nor a rebel against the established social order. Rather he mocks petrified forms and human weaknesses. Permanently suffering from homesickness and often falling into temporary disgrace, he repeatedly returns to his beloved native Gondär until things have calmed down, playing tricks on robbing outlaws (↗*Šəfta*). Back home he is found cheating on his wife and ridiculing his neighbours in hidden allusions.

One of the best-known stories about G.Ḥ. tells that one morning he met a peasant with his donkey and greeted him: እንደምን፡ አደራችሁ (*əndämən addäraččəhu*?, 'How did you (pl.) spend the night?'). The peasant, boasting of being politely greeted by the famous man, only later realizes the veiled insult: G.H. used the plural form in his greeting, thus putting him and his donkey on the same level or implying that the poor peasant has spent the night with his donkey (s. Messing 1957:70; LevWax 250; Molvaer 1995:302; Amharic text s. Abbäbä Ayəččeh 1948 A.M.:101).

G.Ḥ.'s reputation is based on his verbal dexterity and subtle wit, his mastery of Amharic and Gəᶜəz grammar in using words with hidden or double meanings and different forms of the traditional poetic device "wax and gold" (↗*Sämənna wärq*). Due to the ambiguity and volatility of the spoken word, the hearer has to listen carefully in order not to miss some slight shift in the pronunciation, otherwise he may fail to grasp the deeper sense and become himself the object of ridicule and amusement. G.Ḥ.'s verbal ability is still greatly admired and a great number of newly invented witticisms, *qəne* epigrams and humorous remarks are ascribed to him.

Gäbrä Ḥanna Ǧimma

G.Ḥ. (ገብረ፡ ሐና፡ ጂማ, b. 1889 or 1895, Harär, d. 7 *Taḫśaś* 1953 A.M. [16 December 1960 A.D.], Addis Abäba), generally known as *abba* Ḥanna, was the son of an Amhara woman from Goǧǧam and an Oromo father from Sälale who became *fitawrari* and was posted to Harär. After some preliminary church education, at the age of eleven G.Ḥ. was sent to the court of *aṣe* ↗Mənilək II. In 1916, he was sent to the monastery of ↗Däbrä Libanos of Šäwa for further education. He became a monk, spent twelve years in the monastery and was ordained priest.

In 1928, G.Ḥ. returned to Addis Abäba. He became eventually Palace Chaplain, private confessor to Emperor ↗Ḫaylä Śəllase I (cp. ↗*Näfs abbat*), and also holder of the Emperor's privy purse. This latter position should contribute to his unpopularity and bad reputation among Ethiopians, as he was suspected of putting some of the money meant for charity into his own pockets. This harmed not only his, but also the Church's reputation.

G.Ḥ. was also put in charge of the deposed *ləǧ* ↗Iyasu during his imprisonment in the village of Grawa in ↗Gara Mulläta in Harärge. He served as the link between Iyasu and the Emperor and assisted in bringing Iyasu to the capital late in 1936. Iyasu was murdered there in November, when *däǧǧazmač* Yəggäzu Bähabte was in charge of him. Some put the blame for the murder on G.Ḥ., others on his brother Gässäsä. The latter was shot (probably by an Ethiopian) when he was riding beside the Emperor after the battle of ↗Mayčäw. Many think that the bullet was meant for Ḫaylä Śəllase and that Gässäsä was shot by mistake.

Ḫaylä Śəllase took G.Ḥ. with him almost everywhere he went, to Däse in 1936 and then to England the same year (where he also witnessed the death of *blatten geta* ↗Ḫəruy Wäldä Śəllase in 1938). G.Ḥ. accompanied him to the League of Nations' 17th session in September 1936, where the Emperor gave his famous speech. Later G.Ḥ. was with the Emperor when he met President Roosevelt and then Winston Churchill in February 1945. G.Ḥ.'s power gradually increased and many considered him scheming and too much in the Emperor's confidence, ascribing this to his knowledge of state secrets the Emperor did not want divulged (perhaps related to the fate of Iyasu). When Ḫaylä Śəllase was abroad in December 1960, on the day the Imperial Bodyguard staged a ↗Coup d'etat G.Ḥ. was dining with the royal family and high officials when the coup leader, Brigadier-General ↗Mängəśtu Nəway, set a trap for him and others to put them in detention. G.Ḥ. was shot, together with a number of high officials, on 7 *Taḫśaś* at the age of either 65 or 71.

Gäbrä Ḥəywät Baykädañ

Näggadras G.Ḥ.B. (ገብረ፡ ሕይወት፡ ባይከዳኝ; b. 30 July 1886, ᶜAdwa district, d. 1 July 1919) was quite clearly the most incisive and profound of the Ethiopian reformist intellectuals of the early 20th cent. He fled to Eritrea at the age of seven to escape the depredations of post-Mätämma Təgray. He then stowed away on a ship that had anchored at Massawa and found himself in Austria, where he was adopted by a family and got medical education in Germany.

Returning to Ethiopia, he served as interpreter, in which capacity he accompanied the Ethiopian mission to Germany in 1907, led by *däǧǧazmač* ↗Mäšäša Wärqe, and physician to the ailing *aṣe* ↗Mənilək II. Running foul of *ətege* Ṭaytu, he sought asylum in the neighbouring Anglo-Egyptian Sudan. He could not fail to be struck by the contrast between the progress achieved in British-ruled Sudan (as well as Italian-ruled Eritrea) and the backwardness of independent Ethiopia. This contrast became a central theme of his later writings.

Unimpressed by the general adulation of Mənilək in post-ᶜAdwa Ethiopia, G.Ḥ.B. pinned his hopes for Ethiopia's progress rather on the heir to the throne, *ləǧ* ↗Iyasu, and his powerful tract, **አጤ፡ ምኒልክና፡ ኢትዮጵያ** (*Aṭe Məniləkənna Ityoṗya*, 'Emperor Mənilək and Ethiopia'), was partly intended as a recipe for reform that the young prince would adopt. Disappointed by Iyasu's lack of constancy, G.Ḥ.B., like many other fellow intellectuals, shifted his allegiance to Täfäri Mäkʷännən (later *aṣe* ↗Ḫaylä Śəllase I), who, after he rose to power in 1916, made him successively inspector of the Addis Abäba-Djibouti railway (1916) and ↗*näggadras* of Dərre Dawa.

G.Ḥ.B.'s second major work, **መንግሥትና፡ የሕዝብ፡ አስተዳደር** (*Mängəśtənna yäḥəzb astädadär*, 'Government and Public Administration'), was published posthumously. A treatise on the political economy of Ethiopia, adapting liberal economic theory to the Ethiopian reality, it was anchored in the labour theory of value and underscored agriculture as the foundation of Ethiopia's prosperity. At the same time, it contained a scathing critique of the sort of monopoly enjoyed by the Bank of Abyssinia and an exposé of the unequal commercial exchange between the industrialized and non-industralized world.

Gäbrä Ḥəywät Goššu

Fitawrari G.Ḥ. (**ገብረ፡ ሕይወት፡ ጎሹ**, also known as **ገብርዬ**, Gäbrəyye; d. 10 April 1868, Aroge) was one of the closest friends and comrades-in-arms of *aṣe* ↗Tewodros II, beginning with the latter's time as *ləǧ* Kaśa Ḫaylu. A *balabbat* of Gayənt, he is first mentioned successfully fighting together with Kaśa in 1855 against Agäw Nəguśe (↗Nəguśe Wäldä Mikaʾel; FusTeod 26).

His most notable appearance was, however, during the battle of Aroge (↗Fala), one of the decisive battles between the troops of *aṣe* Tewodros and those of the ↗Napier expedition. In this clash, the Ethiopian army was led by G.Ḥ. – a sign of trust imposed upon him by the Emperor, who during the battle remained in his headquarters at Fala, superintending the artillery. Even though the manpower of the two armies was nearly equal (Markham 1869:315), the English had a huge advantage in terms of ↗firearms and in spite of G.Ḥ.'s bravery, commented on even by the antagonists (s. Markham 1869:324: "the bravest and most trusted of the King's generals"), the Ethiopians had little chance to resist.

G.Ḥ. was mortally wounded in the battle. His death had a considerable effect on the morale of the army (MonVidTheo 55f.) and upon that of the Emperor himself, who wept on hearing the news of his closest comrade's death.

Däğğazmač G.Ḥ. (ገብረ፡ ሕይወት፡ መሸሻ; b. Ḥaḥayle, ᶜAdwa, d. February 1964, ᶜAdwa) was an important political and military figure in recent Ethiopian history.

The beginning of G.Ḥ.'s military career coincided with Italy's invasion of Ethiopia in 1935 (↗Italian war 1935–36). By then he was a district governor with the title of *däğğazmač*. In October 1935, G.Ḥ. was one of the lieutenants of ↗Śəyyum Mängäša, the commander of the Təgrayan army. *Aṣe* ↗Ḫaylä Śəllase I issued orders not to start fighting, but to retreat towards the rugged mountainous terrains in the interior and to wait for further instructions from the centre. Accordingly, G.Ḥ. and his peasant warriors moved south of ᶜAdwa and camped in the territories adjacent to the Tämben massifs. When Italian forces pushed inland and reached the Wärʾe valley, G.Ḥ. opened fire and inflicted casualties on the enemy. Śəyyum Mängäša pardoned this violation of the order, since that action slowed down the movement of the enemy to the interior.

In the meantime G.Ḥ. joined forces with Śəyyum Mängäša and *ras* ↗Kaśa Ḫaylu, the commander-in-chief of the Ethiopian forces in the northern front. G.H. fought bravely at the battles of Tämben (February 1936) and ↗Mayč̣äw (March 1936).

From 1936 to 1941 G.Ḥ. emerged as the most distinguished Təgrayan patriotic leader and fighter. Soon after the battle of Mayč̣äw, Śəyyum Mängäša entered the Täkkäze forests and formed resistance formations of his own, threatening Italian movements, particularly along the eastern and southern parts of Təgray. G.Ḥ. took an active part in the guerrilla war until Ethiopia was liberated in 1941. He was awarded several medals by the Emperor for his patriotic deeds and loyalty.

In the post-liberation period, G.Ḥ. worked in various capacities. While he was the governor of ↗ᶜAdwa district from 1956 to 1964, he marked his tenure with remarkable achievements, giving to the town its modern urban features: a new town plan was prepared, new buildings, roads and pedestrian roads were constructed and an enterprise for the processing of incense was established. He also laid the foundation stone for the construction of a high school in ᶜAdwa, now called the Queen of Sheba Secondary School.

G.Ḥ. died of illness and was buried in Aksum. He remained in the memory of people as a patriot and is commonly called Abba Fänqəl Gäbrä, thus compared to *aṣe* ↗Yoḥannəs IV (whose horse name was Abba Fänqəl) for his determination and courage.

Gäbrä Ḥəywät Mikaʾel

Ras G.Ḥ. (ገብረ፡ ሕይወት፡ ሚካኤል; b. 1868, Amba Mäqdäla, Wärrä Himäno, d. 28 March 1963, Addis Abäba) was a high dignitary at the court of Emperor ↗Ḫaylä Śəllase I. As the elder brother of *ləğ* ↗Iyasu, the deposed ruler of Ethiopia, and uncle of the later Empress ↗Mänän Asfaw, his submission to *ras* Täfäri after the coup d'état of 1916 had been of great symbolic importance for the reorganization of the power structure within the Empire.

His parents were the ruler of Wällo, *nəguś* ↗Mikaʾel Ali, recently converted to Christianity, and *wäyzäro* Ağäbä Wärqe, according to court tradition a direct descendant of the 14th-cent. *aṣe* ↗ᶜAmdä Ṣəyon I. After receiving a traditional education in Gəᶜəz and having been trained in warfare, G.Ḥ. was made *däğğazmač* by his father in the 1880s and received the government of the ↗Dälanta, ↗Wadla and Mäkyät subprovinces, under his father's rule. Later he was raised to the rank of *wag šum* and then, *ras*. Tradition considers him as an important factor in the stability of these regions, whose government he kept for decades, including under the rule of his brother *ləğ* Iyasu starting from 1910/11. Together with his father, he participated in the 1916 battle of ↗Sägäle to defend his brother's rule. Defeated, however, he submitted to the new government. Unlike his father, who was imprisoned, G.Ḥ. got a new province and became governor of Wärrä Himäno in Wällo. During the 1935 Italian invasion, his troops fought in the ranks of the Minister of War *ras* ↗Mulugeta Yəggäzu. Under the command of both, the troops fought in the battle of ↗Čäläqot, which for some time stopped the advance of the Italian troops. Arrested by the Italians, G.M. was deported to the island of Asinara, Italy, where he stayed imprisoned for two years.

As the heir of his father, after the liberation of 1941 G.Ḥ. was nominated governor per interim of Wällo. In his later years – though with reduced influence – he was made a member of the ↗Crown Council and of the Senate and took up permanent residence in Addis Abäba. He died at the age of 95 in the Military Hospital of the capital. His body was transferred to Däse and buried in the church of Mädḫane ᶜAläm, attended by the highest dignitaries of the state, including the Emperor and his family.

Gäbrä Iyäsus

G.I. (**ገብረ፡ ኢየሱስ**) was a 14th-cent. holy monk belonging to the ↗Ewosṭateans. He lived under the reigns of *aṣe* Säyfä Arᶜad (1344–72) and his successor *aṣe* ↗Dawit II. G.I.'s Vita, still unpublished, has nothing about his childhood, apart from the fact that he was a native of ↗Wag. It seems that G.I. devoted himself to studies and meditation; when he learned about the fame of *abba* ↗Ewosṭatewos, he went to see him, thus receiving the monastic habit (yet, in the beginning of the Vita a certain Arsanyos is mentioned as G.I.'s spiritual father). He also followed him to Egypt (ca. 1338), where they met Patriarch Benjamin (1327–39) in Alexandria and visited the monasteries of Scetis; later, they left for the Holy Land and Armenia, all in all spending some 14 years out of Ethiopia. Before dying, Ewosṭatewos gave him both the ↗*tabot* consecrated in the name of Our Lady Mary and his own chair and sent him to ↗Ǝnfraz, where he arrived after a period of wandering. There he founded the monastery of ↗Däbrä San (Däbsan or Dəbsan) to house his disciples and built the church of Ṣäwänä Maryam. He successfully converted many people and baptized many ↗Betä Ǝsraᵓel, the first of whom was a dignitary Zane Gabo, renamed Habtä Ǝgziᵓ: his daughter, first healed and then baptized by G.I., was named Ṣäbälä Ewosṭatewos. As his Vita reports further on, on hearing the story of this young girl, the king fell in love with her and married her; several of their sons became priests in the church of Däbrä San (which may conceal an allusion to *aṣe* ↗Yaᶜəqob, who married a woman from Səmen and stayed in Ǝnfraz).

When he felt his death approach, he gathered his disciples and confirmed them in faith, bestowing special distinctions on three of them who had been with him since their childhood: to Matewos he gave his cross and his chair; Ǝndrəyas he sent to another region to preach the Gospel; and Fiqṭor was ordered to lead a hermitic life in Gäda[mä] Bäres. After making his last will, G.I. died at an advanced age on 20 *Ḥamle* (the day of his commemoration in the ↗*Sənkəssar*) and was buried in the church he had built and dedicated to the Virgin Mary.

G.I. (**ገብረ፡ ኢየሱስ**; second half of the 15th cent.) was *bale gärad* (governor of the ↗Bale region) and ↗*bitwäddäd* during the reign of *aṣe* ↗Bäᵓədä Maryam I. G.I. probably succeeded *gärad* Žan Zəg, who was killed in a military campaign in Gam, in the office of governor of Bale after the region, a former Islamic state, was conquered by the Christian ruler.

The Chronicle of Bäᵓədä Maryam mentions G.I. three times. In the first passage, the *bale gärad* took part in a plot against the Emperor by allying with groups of Šäwans quartered in Bale and called Tänač. Bäᵓədä Maryam repressed the attempt at revolt.

In the second passage, G.I., who is given the two titles of *bale gärad* and *bitwäddäd* (here *bəḥtwäddäd*), was sent by Bäʾədä Maryam to ʿAdal with a group from Šäwa, Däwaro and Bale to fight the Muslims there. According to the text, the Muslims were preparing an invasion of the Christian state, but they were overwhelmingly defeated by Bäʾədä Maryam's troops, who took many prisoners, among them many high-ranking persons.

In the third and last mention of the governor, the Chronicle tells us that G.I. and Māḥari Krəstos unwillingly went once again to ʿAdal at the head of an army to make war. However, as their military morale was at its lowest, they were compelled to make a rapid withdrawal by the inhabitants of ʿAdal and eventually killed in battle. It is said that Bäʾədä Maryam was very sad at the news of his governors' deaths.

Gäbrä Krəstos

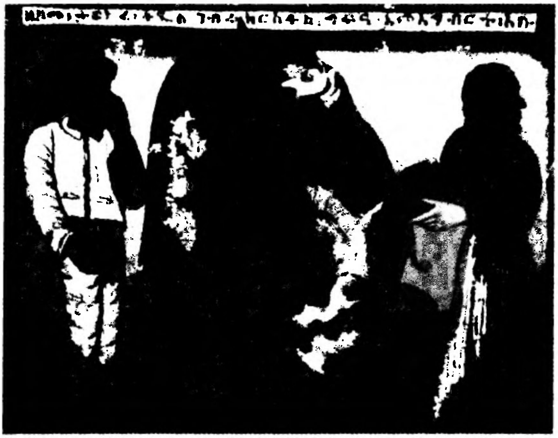
G.K. (ገብረ፡ ክርስቶስ, lit. 'The Servant of Christ'), commemorated on the 14th of *Ṭəqəmt*, is the Ethiopic name of the Saint widely renowned in the Christian hagiographical tradition as "St. Alexis" or "the Man of God" (cf. Storey 1987). The first, quasi-historical, nucleus of Alexis's legend dates to the 6th cent. at last and is attested in Syriac (Amiaud 1889). A later, more developed form of the legend is found, along with in Ethiopic and Syriac, in Greek (cf. Esteves Pereira 1900; Halkin 1980), Armenian (BHO 10f., nos. 36–44) and Arabic (early and modern tr., cf. GrafLit vol. 1, 497f., and vol. 5, 10 *sub voce* "Alexius, hl."); it is also widely spread in all the Romance, German and Slavonic literatures (on the Latin traditions, and for general information on the subject, cf. Josi 1961).

The legend (probably influenced by that of John "the Calybite") tells how St. Alexis, the long-awaited son of a Roman nobleman, abandoned his wife on the wedding night in order to lead an ascetic life (a very well-known hagiographical motif, cf. de Gaiffier 1947), sold his luxurious vestments and, after a short stay in ↗Edessa, went back to Rome, where he spent the rest of his life as a beggar at the door of his father's palace; it is only after his death, that thanks to a document found in his hand, he is recognized and venerated as a saint (cf. Cerulli 1968:31ff.). In the Ethiopic version of the longer legend, the scene moves to Constantinople and the Saint, known only as G.K., becomes the son of Emperor Theodosius II.

All the motifs of the story of G.K. find a strong echo in Ethiopic ↗hagiography (cp. Marrassini 1981:lxxxviiff.). In the first edition of the Ethiopic text by Budge (1898:110–44 [tr.], 35–63 [text], criticized by Charles 1899), both Nöldeke (1899: 256) and an anonymous reviewer (1899:178) recognized a version of St. Alexis's legend. This edition, also including a hymn in honour of Gäbrä Krəstos from the ↗*Mäwaśəʾt* (Budge 1898:64f.), was based on both the no-longer-available ms. Lady Meux 1 (cf. ZanBibl 73, no. 141*A*; Cerulli 1965:290f.) and a ms. from the British Library. In his critical edition of the Acts, Cerulli (1969) has considered the testimonies of the longer version (in several recensions, and even in some copies of the ↗*Gädlä sämaʿətat*), the narratives in the ↗*Sənkəssar*, and some related tales of the *Miracles of Mary* (↗*Täʾammərä Maryam*).

As far as the Acts are concerned, besides the 15 mss. used by Cerulli (1969:iif. [text]; cf. also StrANL 18; Raineri 1986:176), additional mss. may now be listed. First and foremost, three *Gädlä sämaʿətat* mss. are by far older than the oldest ms. (16th cent.) used by him: EMML 2796 (14th cent.), fol. 52va–b, 54ra–58vb, 62ra–63vb, 66ra–71vb, 64ra–65vb and 72va–74va; 7602, fol. 90ra–95va (1382–1413, with a miniature of G.K. on fol. 89vb–c; cf. Bausi 2002:6, n. 13); and a *Gädlä sämaʿətat* from ↗Däbrä Maryam, Qʷäḥayn, Eritrea (1453, with a miniature of G.K.; cf. Bausi 1994:58, 65f., pl. VI). Other mss.: ANLin Conti Rossini 84 (20th cent.), fols. 40r–55v and 134 (16th cent., fragment), fol. 1 (cf. StrANL 220, 330); Staatsbibliothek zu Berlin, Preußischer Kulturbesitz, Orient. oct. 1270 (14th cent.?), fols. 2ra–16vb and 19ra–24va, and Orient. oct. 1305 (18th cent.?), fols. 66ra–102va (cf. HamSixBerl 109, 163); Kloster Andechs, Kodex Rehm 87 (now lost, cf. SixDeu 62); Ṭānāsee 164 [= Dāgā Esṭifānos 53] (18th cent.), fol. 2ra–18vb, which is a copy of Ṭānāsee 170 [= Dāgā Esṭifānos 59] (15th–16th cent.), fols. 1ra–17ra, and Witzenhausen, Völkerkundliches Museum 1219, 1244 (17th cent.?), fols. 116ra–33vb and 136ra–vb (cp. SixTana III, 208, 220, 410); EMML 208 (20th cent.), fols. 45v–73v; 4002 (18th–19th cent.), fols. 26r–46r; 4280 (19th cent.), fols. 150r–164r.

As to the *Vorlage* of the Ethiopic Acts, Nöldeke (1899:257) plead for an Arabic one,



St. Alexis (Gäbrä Krəstos) recognized by his father's dogs only; cloth mural by *aläqa* Əsṭäzya; early 20th cent.; Ruba Kʷəsa, church of St. George, western wall of the *mäqdäs*; photo 2002, courtesy of Michael Gervers

whereas Cerulli (1969:iiiff. [tr.]) noticed that the form ᶜAbdal Masiḥ (from Ar. ᶜAbd al-Masīḥ) for the Saint's name occurs only in the later Ethiopic manuscript tradition; nor does he exclude a direct translation from Greek into Ethiopic of a Byzantine text in which Rome and Edessa (the first dwelling-place of the Saint after his flight) had been replaced by Constantinople and Armenia respectively – also a clue for a post-639 dating of this form of the legend. On the other side, the year 1425 had already been set as a *terminus ante quem* by Cerulli (1969:i [text]) on account of a doted list of manuscripts (cf. Bausi 2002:2, n. 2) with the Acts of G.K. Owing to the different recensions of the same Alexis's legend, in the *Sənkəssar* two saints with similar stories are commemorated on 14 *Ṭəqəmt*: "Muse, the Man of God" and G.K. (also called ᶜAbdal Masiḥ; cf. BudSaint 148–55; ColSyn VII, 72–85). There may be Islamic parallels to the legend of Alexis (cf. Nöldeke 1899:258; Cerulli 1968:34f. and 1969:vi, n. 14 [tr.]).

G.K. (ገብረ፡ ክርስቶስ) was a monk and a disciple of ↗Zena Marqos. According to the Acts of the latter, he sent G.K. to preach in ↗Damot; yet one spiritual genealogy of Zena Marqos's disciples, attached to his *Acts* in a 19th-cent. manuscript, reports that Zena Marqos appointed a certain G.K. "of (the country) of Wahəya" head of ↗Däbrä Bəśrat. Since G.K. lived in the first half of the 14th cent., he may also be the same G.K. appointed ↗*nəburä əd* of Dəmbi by the Metropolitan *abunä* ↗Yaᶜəqob, at the same time as he appointed eleven other monks to other districts. The location of Dəmbi is not certain, although it probably lay south of Šäwa. At least one copy of the *Acts* of G.K. is known to exist, but it has not been published yet.

Gäbrä Krəstos

G.K. (ገብረ፡ ክርስቶስ; d. 3 July 1832) was one of several Ethiopian puppet-kings created by the mighty Yäǧǧu ruler ↗Ali Alula, who dominated central Ethiopia during 1830–53. In March 1832, Ali Alula visited the island of Məṣraḥa in Lake Ṭana, where G.K. lived in a small monastery, the burial-vault of Ethiopian emprerors. There, Ali Alula made G.K. king on the fifth Saturday of Lent. Shortly afterwards G.K. died, poisoned by ↗Gigar, and was buried in Täklä Haymanot Cathedral at Adäbabay square in Gondär.

Gäbrä Krəstos Dästa

G.K. (ገብረ፡ ክርስቶስ፡ ደስታ; b. 1932, Harär, d. 1981, Lawton OK), a painter and poet, received his training as an artist at the Academy of Arts in Cologne, Germany, from 1958 to 1961 where he became interested in abstract and expressionistic painting.

G.K. returned to Ethiopia in 1962 and one year later held his first independent exhibition in Addis Abäba. His non-figurative art was met with criticism, the artist being accused of distancing himself from the tradition and experience of his people and of not speaking their language any more. Nevertheless, G.K. was awarded the Ḫaylä Śəllase I Prize Trust Award for Fine Arts, because he was largely responsible for introducing non-figurative art into his country and for his outstanding contribution to the growth and evolution of Ethiopian art.

As a poet, G.K. also broke with the tradition of Amharic poems (↗Poetry) and his critics questioned whether his poems were poems at all. As an admired and a much-appreciated teacher, G.K. taught at the School of Fine Arts from 1962 to 1974, when the revolution erupted. In 1976 he was invited by the Municipality of Addis Abäba to start the first National Gallery of Ethopia; he became the founder and director of what became known as the City Hall Gallery. In 1978 he left

Gäbrä Krəstos Dästa at work in his atelier; photo courtesy of the IES (no. 23 G2/G3)

Ethiopia and lived at first in Germany. In 1980 he went to Lawton, Oklahoma, in the USA. About 30 of his works had been deposited in the Staatliches Museum für Völkerkunde in Munich; they were moved to Ethiopia in 2005 to form part of the permanent exhibition of his German paintings in the newly inaugurated "Gebre Kristos Desta Centre". The Centre, housed in the former palace of *alga wäraš* ↗Asfa Wäsän (in the Səddəst Kilo compound of ↗Addis Abäba University) is now the seat of the German Cultural Institute (Goethe-Institut).

Gäbrä Krəstos Habśəllus

Däǧǧazmač G.K. (ገብረ፡ ክርስቶስ፡ ሃብሥሉስ, also *däggəyat* Gäräk̲əstos; d. 8 November 1713) was a late 17th-cent. ↗Ḥamasen ruler who was invested into this role as a co-governor and successor of his father, *däǧǧazmač* ↗Hab Śəllus of ↗Märäb Məllaš, by *aṣe* Iyasu I. G.K. was the second son of his father's legitimate wife Əḫtä Mälaʾəkt (KolTrad III, A67) from Aräza.

When his elder brother, according to oral tradition, refused to represent his father at the Emperor's court in Gondär, the younger G.K. went in his stead to deliver the tribute of the ↗Märäb Məllaš. Using this chance, he became the Emperor's guardian (ሸቃ, *šäqa*) and was finally, after years of service, enhanced in rank to *däǧǧazmač*. In about 1675, the Emperor gave him his relative *əmmäbet* Säbänä Giyorgis (KolTrad II, 54) as his wife, in view of the power and the merits of his father (she was not the Emperor's daughter, as suggested by Hamasen oral tradition; this was already questioned in KolTrad I, A18, cp. also the oral tradition of ʿAgamä and Əndärta). She was a descendant of *aṣe* Fasilädäs through a female line and "sister" of Krəstosawit, the wife of the governor of Təgray, *däggəyat* ↗Kəflä Waḥid of ʿAgamä. He was additionally made governor of the ↗Bambolo Məllaš, which meant that he was set over all governors of the northern provinces (probably excluding Wälqayt) and thus also became the co-governor of his father over the Märäb Məllaš. He assumed his government at the side of his father (d. 1704), according to tradition, sitting at his feet while rendering justice or receiving officials. The greatest achievement of their government was the creation of a lawcode for Ḥamasen, the ↗*Ḥəggi Hab Səllus Gärä K̲əstos*, issued by them on the basis of consultation of the assembly of the elders of Ḥamasen.

Tradition reports that the Emperor had declared that all territories where Säbänä Giyorgis would spend her night would be given to him as ↗*gʷəlt*. For several generations the "family of the *däggəyat*" thus possessed a number of territories as additional sources of income between Gondär and Ṣäʿazzäga and in the latter's environs (KolTrad II, 55; for the so-called *gʷəlti Säbänä Giyorgis*, s. KolTrad I, 72). He and his royal wife were the most important donors of books, some of them most elegant and luxurious, to the church of Qəddus Giyorgis of Ṣäʿazzäga, at least a dozen of them containing their names (KolTrad III, A66). The church's መንበረ፡ ታቦት (*mänbärä tabot*, meaning 'covered altar in which the *tabot* is kept'), made of ivory, is attributed to G.K.

The government of G.K. is known in tradition as a period of enhancement of trade, with new regular markets appearing in his time in Ḥamasen, e.g., in ↗Dəbarwa.

G.K.'s legitimite children were *däǧǧazmač* Täsfa Ṣəyon (Täsfa Ṣen), *däǧǧazmač* Mammo (who in his father's lifetime got a governorate in Oromo territories at the borders of the Emperor's realm), *däǧǧazmač* Rəʾəsä Haymanot, *däǧǧazmač* ↗ʿAndä Haymanot and *wäyzäro* Muzit (wife of *aytä* Kəflet of ʿAddi K̠ʷala); several of his sons of a second, illegitimate, wife received the minor title of ↗*baḥər nägaš*, together with *gʷəlti*–possessions of their father's family.

G.K. was suceeded in the office of governor of the Bambolo Məllaš by his son Mammo. Mammo's representative while he was absent in Oromo territories was Rəʾəsä Haymanot. The governor's office was occupied later by another of G.K.'s sons, ʿAndä Haymanot. The first son, Täsfa Ṣəyon, had governed at the side of his father, but usurped his power, until dying about a month before G.K. In order to save Täsfa Ṣəyon, a magical human sacrifice had been carried out on the initiative of his mother, which, however, did not prevent his death. A heriditary disease regularly breaking out among the male descendants of the "family of the *däggəyat*" is explained in oral tradition as the revenge of the sacrificed person (KolTrad II, 57f.).

Gäbrä Mädḫ̮ən

G.M. (ገብረ፡ መድኅን, *wag šum*. ca. 1840s–58), a grandson of *wag šum* ↗Kənfu, came to power in ca. 1842 by overthrowing and imprisoning his nephew *wag šum* ↗Täfäri Wäsän, who began his office whilst still young.

G.M. was a supporter of *ras* ↗Ali Alula (Ali II), the Yäǧǧu kingmaker in Gondär, when he fought against *däǧǧazmač* Kaśa Ḫaylu (later *aṣe* ↗Tewodros II) at the battle of ↗Ayšal in 1853. Though G.M. was captured on the battlefield, Kaśa Ḫaylu pardoned him and sent him back to his region. Relations between G.M. and *aṣe* Tewodros, however, were strained because of G.M.'s support of ↗Nəguśe Wäldä Mikaʾel from Səmen, who had rebelled against Tewodros. The Emperor led a campaign into Wag with a vanguard led by *wag šum* Täfäri Wäsän, who had earlier escaped from prison in Wag and submitted to Tewodros. Täfäri captured and presented G.M. to the Emperor and allowed Gobäze (later *aṣe* ↗Täklä Giyorgis II), G.M.'s son, to escape. The Emperor took his captive to the region of Mäqet with eight other local rebels, cut off their hands and legs, and hanged them in May 1858.

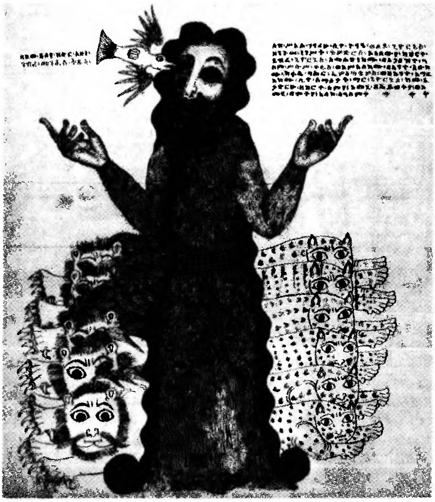
Gäbrä Mänfäs Qəddus

G.M.Q. (ገብረ፡ መንፈስ፡ ቅዱስ) is one of the most venerated Saints in Ethiopia, beside ↗Täklä Haymanot. Although the centre of his cult is at mount ↗Zəqʷala, south of Addis Abäba, he is venerated throughout the country, sometimes under the names of Abbo or Gabər. The short summary by Bezold (1916), the miracles published by Nollet (1931–35) and the long excerpt in the ↗*Sənkəssar* on 30 *Mäggabit* do not give a clear idea of his Vita, and are based on too few and recent manuscripts. The edition (Gəʿəz text with parallel Amharic translation) printed in 1954 in Addis Abäba by Täsfa Gäbrä Səllase has no critical value. A critical edition based on the existing collection of 15 pre–18th cent. manuscripts has been recently published (Marrassini 2003).

The Acts (↗*Gädl*) of G.M.Q. have at least two versions, with many parts in common, but



Gäbrä Mänfäs Qəddus, coloured drawing by Wäldä Giyorgis; second half of the 19th cent.; Oxford, Bodleian Library; Ms. Aeth. b. 2; courtesy of the Bodleian Library

also with other passages peculiar to every version. The first (A in the edition), most widely known (it is the same version that appears in the *Sənkəssar* and in the Addis Abäba edition), is rich in fabulous hagiographical motifs, including the classical one of the 60 lions and 60 leopards. The second one (B) is completely devoid of these motifs, and essentially based on reflections on monasticism and theology. The third version (C) is a simple conflation of the preceding two, with no independent value. Because of its very character, and because of a series of contradictions in version A, it seems that the original version is B.

The date of composition of the *Gädl* (normally examined by scholars in its A version) is uncertain; the various dates proposed the reign of *aṣe* ↗Dawit I, 14th cent. and 15th cent., are without foundation in the text (Conti Rossini 1900:215; Guidi 1832:39; RicLett 820; Cerulli 1961:100).

To the *Gädl* of the Saint (in each of the versions) 13 miracles are usually added, clearly posterior in language and style. They present always the same form, but some kind of disturbed tradition must be supposed with miracle no. 8 (performed "at the time of King Naᶜod"), since some manuscripts place it at the end, others eliminate it. The stemma of these miracles is different according to various groups of them; in its turn, the stemma of each group is different from that of the *Gädl*.

In addition to the *Gädl* and the usual miracles, some manuscripts contain a ↗*Dərsan* on the early childhood of the saint and his escape into the desert, where he meets Jesus and Mary, composed by a certain Zena Gäbrəᵓel as well as four miracles accomplished immediately after. 1st miracle: Satan, disguised as a monk, tries to convince the child to go back home; 2nd miracle: first education of G.M.Q., still in Nehisa, and the first of his frequent trips to Jerusalem; 3rd miracle: God orders G.M.Q., still in Jerusalem, to go and convert the inhabitants of Gäbaᶜon, but on his way there he is attacked by the animals of the desert, as in the *Gädl* of Yoḥannəs Məsraqawi (John the Oriental); the Gäbaᶜonites treat him very badly, but part of them are nevertheless forgiven; then G.M.Q. goes to the "Country of the Blessed", whose inhabitants are already Christian, although in origin they were a tribe of Israel; 4th miracle: at his arrival in Ethiopia G.M.Q. meets ↗Gärima and ↗Guba, who consider him as their relative, and ↗Lalibäla, who declares to prefer a heavenly kingdom to a worldly one. These miracles "in life" form a clear unity with the *Dərsan* because they explicitly refer to many situations of the former. In the codices they are united to it and clearly separated from the *Gädl* and the usual 13 miracles after death. The manuscripts with the *Dərsan* and the four miracles are different from those used for the edition of the *Gädl* and the 13 miracles since they are more recent (18th–19th cent.), except the Vatican ms. aeth. 232 (16th cent., used for both purposes) and the BN ms. eth. 116 (which contains only the *Dərsan* and the four miracles and of which all the others are a simple summary without significant variants).

All these texts are devoid even of the slightest reference to historically relevant facts. The story is very simple: G.M.Q. was born in Nehisa, in Lower Egypt (Coptic Nahsi in the nome [Province] of Nimesoti, today Bahbit al-Hagara, and therefore not in Behnesa, Coptic Pemg [= Oxyrinchus], as it is usually thought). This was also the place of origin of *abba* Nob, in the *Dərsan* a future brother of G.M.Q., who will console his parents for his loss. After 300 years of anachoresis in Egypt (where he receives his education and the monastic habit by a certain Zämädä Bərhan, unknown to the date, and the priesthood by the Bishop Abraham, maybe Abraham Bishop of Manuf in the *Acts* of Julius of Aqfahs), and after saving from damnation the people of Gabota, God orders him to go to Ethiopia, where he arrives on a chariot of wind and lives in the neighbourhood of Zəqʷala and Käbd for 262 years more, always as a hermit (a total of 562 years is already indicated at the beginning of his *Gädl*).

The most relevant elements in the life of G.M.Q. are the following. His parents, as usual in a *gädl*, were noble and very pious; his mother Aqlesya came from the tribe of Benjamin. This makes of G.M.Q. a descendant not only of Israel (cp., e.g., Täklä Haymanot, ↗ʿƎzra, John the Oriental, ↗Abrəha and Aṣbəḥa), but also of St. Paul; this is one of the reasons for him being called by the apostles in many passages "their relative" and for his hability with Hebrew. According to the Homily his father, Səmʿon, was "of roman origin" (like ↗Gäbrä Krəstos [Alexis], the ↗Nine Saints, ↗Buruk Amlak and others) and a counsellor of the king (cp. ↗Päntälewon). Only the version A and the *Dərsan* refer to a long period of sterility; in the *Dərsan* Aqlesya, the Saint's mother, whilst on her way to the church, encounters a dove and a snake with their young, as in the Life of John the Oriental, where also the great banquet (in which the king of Rome takes part) after the birth is found. The baby does not take the milk of his mother, a typical premise for chastity in Ethiopian hagiography; in the Homily it is Mary herself who suckles him.

For G.M.Q.'s adult life only a selection of motifs can be given here. Common to all versions and frequently repeated is the motif, rare in Ethiopian hagiography, of the hair which grows on his face and on his whole body, as requested by the saint himself, because of his nudity (already in his childhood in the *Dərsan*, in the 1st and in the 2nd miracle). This is connected with the life in the desert (very characteristic of G.M.Q. as well as of other Egyptian saints and devoid of any form of coenobitism) as well as with his rule over the wild beasts. What also frequently appears is the intercession for Ethiopia, mainly as **ዐሥራተ፡ ምሕረት** (*ʿaśratä məḥrät* 'tithes of mercy'), which God grants him, and his visits to different unnamed hermits, in particular to one who in two manuscripts is regularly named Yoḥannəs of Däbrä Wifat. The three annual trips to Jerusalem are also described. Starting from the staircase of Jacob on Gen 28:12 (quoted only in the B version), the purity of G.M.Q. is compared to a staircase which from Käbd reaches heaven, bringing his prayers above and the angels down. This in turn brings in version B a comparison with the Tower of Babel, enriched with quotations from the Book of ↗Jubilees, and, in both versions, an important *excursus* on the linguistic capacities of G.M.Q.

The last parts of his life are more or less common to both versions: after the mass, on Thursday before Easter, in which the saint himself is the celebrating priest, with the help of two personages, Fəre Qəddus who previously had accompanied G.M.Q. to Arabia together with Bənyam and Zärʾa Buruk, an unknown figure, G.M.Q. goes and visits many times the "Country of the Living", where Enoch and Elijah stay. After the usual pact, on Friday 3 *Mäggabit*, the saint falls ill. He was then assisted by monks already mentioned and two other persons, Yaʿəqob and Yosef. The former is probably the same quoted in the 2nd miracle as a member of the community in which G.M.Q. is educated; the second is Yosef of Saf Amba, quoted together with Bənyam in the list of disciples of Täklä Haymanot and blessed by ↗Iyäsus Moʾa. On Saturday they call for help from another saint, Gäbrä Ǝndrəyas, but G.M.Q. dies on Sunday, at night on the seventh hour. He is taken into heaven, whereas his body is buried in Jerusalem by the 30 "hidden" and 30 anchorites, coming from Ethiopia, Egypt, and Scetis.

Other motifs are found only in version A of the *Gädl*: his retinue of 60 lions and 60 leopards; Satan with the appearance of a raven which picks his eyes out; three old men (who afterwards prove to be the Trinity) whom he carries for one mile; the visit of three saints, ↗Samuʾel of Waldebba, ↗Anbäs of Hazalo, and Bənyam of the Lower Bägemdər (quoted in the *Gädl* of ↗Zena Marqos, in a list of disciples of *abba* Täklä Haymanot blessed by Iyäsus Moʾa, and in this latter's *Gädl* as his successor), whose lions are devoured and successively resuscitated by those of G.M.Q.; God's mercy for Ethiopia obtained by weighting her sins, represented by straw and weed, and her penances, represented by honey, milk, and wheat; a picturesque story of G.M.Q. in Arabia ("Persia", which existed only in one of his recent mss., in the summary by Bezold; Conti Rossini 1926:345 also proposed the islamicized region near Zəqʷala, and Cerulli 1941:41, n. 3, a part of the Šäwa sultanate; but the text clearly says that G.M.Q. goes back from there to Ethiopia and vice versa), where after being persecuted by its wicked king he obtains forgiveness for those people by suspending himself on a precipice, and leaving his flesh to be devoured by the birds for 30 years. Even after the saint's death and before his assumption into heaven, in A he has a long excursus on his encounter with seven "spiritual kings": four "Egyptian" (David, Solomon, Constantine, Onorius) and three Ethiopians (Kaleb, Gäbrä Mäsqäl, Lalibäla).

Gäbrä Maryam

Baḥər nägaš G.M. (ገብረ፡ ማርያም) was a prominent nobleman of ↗Təgray province at the turn of the 17th cent. His name is mentioned for the first time in *aṣe* ↗Susənyos's chronicle for 1608, when the Emperor's step-brother ↗Səᶜəlä Krestos was *təgre mäkʷännən* and *baḥər nägaš* "up to the Eritrean Sea". The latter was a cruel and clumsy administrator. The people of Təgray rebelled, and G.M. was among the few who maintained loyalty both to Səᶜəlä Krestos and Susənyos (PerChron ch. 35). The Emperor considered it better to dismiss Səᶜəlä Krestos from his office in Təgray and to appoint G.M. as *baḥər nägaš*. It was in this function that G.M. was ordered in 1619 to go to the "country of Arom" in the southern Sudan and to bring to submission the local Queen Fāṭima. He did this and served his overlord loyally (PerChron ch. 55), in spite of the fact that Susənyos embraced the Catholic faith and appointed his son-in-law ↗Täklä Giyorgis as *baḥər nägaš* instead of G.M. However, in September 1628 Täklä Giyorgis rebelled against Susənyos, relying, according to the report of Bruce (BruNile vol. 3, 376ff.), on local noblemen, including G.M. The rebel not only proclaimed himself a champion of the national ("Alexandian") faith and Church, but killed the Jesuit missionary who had been assigned as his chaplain. It was too much for G.M., who withdrew his support for fear of royal revenge. It followed indeed, and Täklä Giyorgis was captured and executed, but nothing is known about the later fate of G.M.

Gäbrä Maryam

G.M. (ገብረ፡ ማርያም), the 49th *əč̣č̣äge* of Däbrä Libanos of Šäwa, in office from the late 1830s to 1842, was a native of Šäwa (or of Gonğ, in Goğğam, according to *blatta* ↗Märsəᶜe Ḥazän Wäldä Qirqos [1951 A.M.:131]). In the history of Ethiopian foreign relations G.M. is remembered as a pilgrim to ↗Jerusalem and a messenger who brought in 1848 a letter from a ruler of Bägemdər *ras* ↗Ali Alula to Samuel ↗Gobat, at that time Anglican Bishop in Jerusalem, with a request to protect Ethiopian pilgrims there (RubActa I, 153).

Rubenson (ibid. 194) believes that G.M. was also responsible for the delivery in 1852 of another letter of Ali Alula addressed to Queen Victoria and pleading with her to protect Ethiopian interests in Palestine and to return Ethiopian landed property there, taken away by local authorities. The letter reveals the attitude which was typical and characteristic for all Ethiopian rulers concerning Ethiopian rights in Palestine: "I have been uprooted from my land, the portion belonging to Abyssinia. To be uprooted from one's inherited land is a serious matter. Because inheritance on earth is like inheritance in heaven".

Gäbrä Maryam Gari

Däğğazmač G.M. (ገብረ፡ ማርያም፡ ጋሪ; b. ca. 1875, d. 20 February 1937) was a prominent government official during ↗Ḫaylä Śəllase I's reign. He originated from the Gurage area. After receiving a church education, G.M. joined the court of *däǧǧazmač* ↗Balča Śafo (Abba Näfso) as a retainer (s. MahHorse).

In 1916, G.M. entered Ḫaylä Śəllase's service and became an ↗*aggafari*. In June 1930, the Emperor promoted G.M. to ↗*däǧǧazmač* and named him ↗*əndarase* of Harär. In September 1931, G.M. departed for the ↗Ogaden in command of a 12,000-man force, while *fitawrari* Šəfärra left Ǧiǧǧiga with 3,000 soldiers. Both armies unsuccessfully sought to reassert Ethiopian authority over Italian-occupied territories in the Ogaden.

In the aftermath of the ↗Wälwäl incident, Italy demanded that G.M. apologize for Ethiopia's alleged aggression at Wälwäl and pay compensation to the Italian legation in Addis Abäba. The Emperor refused to accede to these demands, thus laying the groundwork for the ↗Italian war (1935–36).

During that war, G.M., who had been appointed Minister of Interior in 1934, was sent to Sidamo as the head of an army, where he was wounded on 20 October 1936. He then sought refuge in the mountains on the Bale border, but continued to resist Italian aggression. On 19 February 1937, when the last remnant of the troops of Bäyyänä Märed and of himself were encircled at Gogiti in Gurageland, they fought bitterly. They were defeated and Gäbrä Maryam was mortally wounded. He asked one of his comrades, an Eritrean, to finish him off so he would not become a prisoner of war. This was done, but Bäyyänä was taken prisoner and shot (MockWar 172).

In 1948 the Emperor honoured G.M.'s memory by authorizing the creation of the Lycée Guebre Mariam, which is managed by the Mission Laïque Française in Addis Abäba.

Gäbrä Mäśiḥ [I]

G.M. (ገብረ፡ መሢሕ; b. ca. 1419, Təgray, d. 1522) was a disciple of *abba* ↗Abäkäräzun, the leader of the ↗Stephanites, whom he succeeded as the head of the monastery of ↗Gundä Gunde on 2 July 1476. He held this position during the reigns of *aṣe* Əskəndər, *aṣe* Naᶜod and *aṣe* Ləbnä Dəngəl and the Metropolitans ↗Yəsḥaq (who ordained him a priest) and ↗Marqos. During a persecution ca. 1482 G.M. fled to the desert where he was saved by a Fälaša man (↗Betä Əsraᵓel). He was succeeded at his death on 3 *Mäskäräm* [13 September] 1522 by *abba* ↗Habtä Śəllase. His Acts (↗*Gädl*) have not yet been published.

Gäbrä Mäśiḥ [II]

G.M. (ገብረ፡ መሢሕ; d. ca. 1650) was the tenth leader of the Stephanite monastery of ↗Gundä Gunde. He assumed the position about 1644, following the death of his predecessor, *abunä* ↗Yosab. G.M. led the monastery until his death, when he was succeeded by Samuᵓel. At least one manuscript containing his Acts is known to exist, but it has not been published.

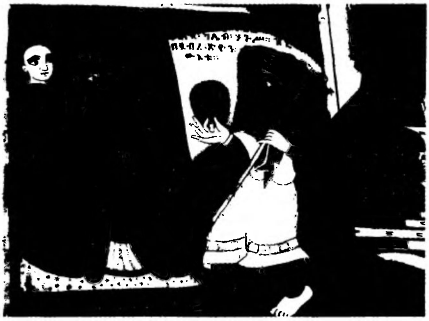
Gäbrä Mäsqäl

G.M. (ገብረ፡ መስቀል), the younger son of King ↗Kaleb, was a half-legendary holy king of ↗Aksum (r. ca. 534–48), inscribed as such in the ↗*Sənkəssar* on 30 *Ḫədar*. He is presented as Kaleb's successor in the "king lists", sometimes with the throne name of Qʷäsṭanṭinos (CRList, list A), sometimes with Qʷäsṭanṭinos as his successor (CRList, lists A, B, D, G) and sometimes



Gäbrä Mäsqäl and Yared, mural, pronaos of the old Aksum Ṣəyon cathedral (right of the entrance); photo 2004, courtesy of Wolbert Smidt

with both (list P). Lists C and E are exceptional: list C has Yaʿəqob, Q^{w}äsṭanṭinos, Betä Əsraʾel and G.M., the latter ruling for 14 years; list E mentions Kaleb and G.M. both on tenure of 40 years, and Yəsḥaq "whose royal name was Q^{w}äsṭanṭinos". List F places G.M. after Sahəl Iyəkalʾ and before Baḥra Iyəkalʾ. In the Acts of ↗Libanos he is instead the successor of Zägäbäzä Aksum or ↗Əllä Gäbäz (Bausi 2003, §§135, 136, 154, 157) – possibly his brother ↗Əsraʾel, with whom he had a long struggle. They are both introduced in the apocalyptic context of ch. 117 of the ↗*Kəbrä nägäśt*: G.M. would openly reign on the earth "with Zion" (the ↗Ark of the Covenant).

G.M.'s life is obscure. He is frequently referred to in oral traditions relating, e.g., that in the seventh year of his reign he went on pilgrimage to ↗Jerusalem, in commemoration of which he built a palace in Samaria at Nablus; and that he was killed while waging war in eastern Təgray: his body, first buried in the nearby church of ↗Däbrä Sälam Mikaʾel in Aṣbi, was later translated to Däbrä Damo, where it is still found (Sergew Hable Selassie 1970:34f.; SerHist 163f.; Fiaccadori 1992:441, 444). He also encouraged the work of ↗Yared, according to the latter's Acts, giving rise to the famous scene where the King gets so enraptured by Yared's singing that drives the spear on which he is leaning into the saint's foot without any of the two noticing (Conti Rossini 1904:11f.; cp. SerHist 166).

A complex stone structure said to be G.M.'s tomb, with that of Kaleb (↗Enda Kaleb), is still visible in Aksum (DAE II, 127-34). Described by the *Mäṣḥafä* ↗*Aksum* as "treasury" (CRAxum 6), it is loosely connected by ↗Alvares to "the treasure of the Queen of Sheba" (BeckHuntAlvar 158, n.3).

G.M. also appears in many hagiographies of the ↗Nine Saints, as a supporter of their work, sometimes as a patron of secular and religious buildings in and near Aksum. The most famous church attributed to him is the one of ↗Däbrä Damo monastery (Guidi 1895:73f.). G.M.'s land charter to Däbrä Damo is preserved in the Vita of ↗Zämikaʾel Arägawi, Däbrä Damo's founder (Guidi 1895:84, 93), and also found in the *Mäṣḥafä Aksum* (s. CRAxum no. 5). He is also said to have endowed the church of abba ↗P̣änṭälewon (Ənda Abba P̣änṭälewon) near Aksum (Villari 1938:14; cp. CRAxum no. 34). A land grant of G.M. to the monastery of ↗Ənda Abba Gärima of Mädära is recorded in the *Mäṣḥafä Aksum* (CRAxum no. 3, cp. no. 31; HuntLand no. 3, 30). Other similar deeds are preserved in the "Golden Gospel" book of ↗Däbrä Libanos of Šəmäzana (CRDLib no. 1-5), founded by *abunä* ↗Mättaʿ.

Neither epigraphic nor numismatic evidence exists for an Aksumite king called G.M., but he can be identified with WʿZB who is "king of Aksum" and "son of Əllä Aṣbəḥa" in an inscription from ↗Aksum Ṣəyon cathedral (RIE 192; for discussion of this matter s. ↗Əsraʾel). The name G.M. was a popular one in mediaeval times as a throne name of emperors Lalibäla (e.g., in the "Golden Gospel" and the colophon of the *Kəbrä nägäśt*), Wədəm Räʿad, ʿAmdä Ṣəyon I and Yəsḥaq – which produced a certain confusion in hagiographical and other traditional sources (cp., e.g., ↗Ənda Maryam), more often inclined toward emphasising the role of the son of Kaleb at the expenses of his more recent namesakes.

Gäbrä Mäsqäl of Gutämala

G.M. of Gutämala or Gutəman (ገብረ፡ መስቀል; b. Zoga, Təgray, 14th cent.) founded the hermitage of Gutämala (Ṣəmbəla) at Lägaso in Təgray. He was a disciple of ↗Samu'el of Däbrä Halleluya during the reigns of *aṣe* Nəwayä Maryam (r. 1371–79/80) and Dawit II (1379/80–1412). He is known to have written a letter to Dawit. His Vita (↗*Gädl*) still awaits publication and is followed by a narrative which recounts five of his miracles: 1) an obscure miraculous event which transpired at the Saint's funeral banquet; 2) a jar used to carry water for the celebrations in honour of the Saint, broke and miraculously was put back together; 3) a monk turned robber was wounded and blinded but restored to health by the Saint; 4) the miraculous healing of an infirm monk; 5) a furious storm annihilated a band which had organized an attack on the monastery of Lägaso. The evil-doers wished to force the monks to pay tribute to a warlord of Təgray, who alone was able to save himself by begging the Saint's pardon. G.M. was renowned as a wonder-worker.

Gäbrä Mäsqäl Wäldu

Fitawrari G.M. (ገብረ፡ መስቀል፡ ወልዱ; b. 1907, Aḵrur, d. 1963, Asmära) was one of Eritrea's leading politicians during the 1940s. Born and raised in Aḵrur (Akkälä Guzay), he received his education at Catholic seminaries in Kärän and in the Sudan. After this he worked with the Italian colonial administration in Eritrea. G.M. is said to have held the highest office possible for Eritreans within the administration. He also attained high administrative positions under the British Military Administration in Eritrea as an arbitrator of communal conflicts, an administrator and a judge.

G.M. was known as a diligent worker and persuasive speaker. In the early 1940s, he became one of the founders of the ↗*Maḥbär fəqri hagär Erətra* and served as the organisation's first president. His unanimous re-elections were repeated until 1946 when dissensions among Eritrean politicians prevailed. G.M. was demoralized by his opponents at the Bet Giyorgis convention in November 1946, after which he sunk into obscurity for a number of years. He re-emerged in 1958 when he was appointed president of the High Court in Asmära.

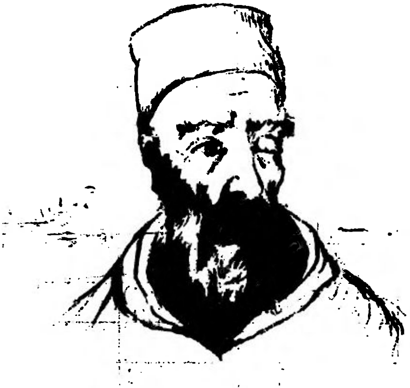
Gäbrä Mika'el

Abba G.M. (ገብረ፡ ሚካኤል; b. 1791, Dibo, Goğğam, d. 29 August 1855, Ligʷama, Wällo) was a renowned church scholar and Catholic convert. At the age of 25 he was professed as a monk in the monastery of ↗Märṭulä Maryam. He was educated there and soon obtained fame as a scholar. As his scholarly reputation spread, he was invited to teach in many monasteries. In 1841 he accompanied Giustino De ↗Jacobis to Cairo as a member of the delegation seeking a patriarch for Ethiopia. Before returning to Ethiopia he visited Rome and Jerusalem. Only in February 1844 did De Jacobis accept G.M.'s repeated requests to become a Catholic. From 1845 to 1851 he taught in the Catholic seminaries of ↗Gʷalᶜa and ↗ᶜAlitena. On 1 January 1851, at the age of 59, he was ordained a priest by de Jacobis at ᶜAlitena.

G.M. was in Gondär when the persecution of the Catholics began in 1854, initiated by the metropolitan *abunä* ↗Sälama. In an attempt to make him renounce his faith G.M. was put in the stocks (*gʷənd*) for 33 days. After that, he was confined



The only authentic portrait of *abba* Gäbrä Mika'el; drawing by Jean-Baptiste Coulbeaux (?), ca. 1875; photo courtesy of the ᶜAddigrat Diocesan Archives to prison. A further attempt to break his spirit was made in March 1855. For two hours, as *abba* G.M. was lying tied to the floor alternating soldiers viciously whipped him. The Orthodox abbot of the monastery of ↗Däbrä Damo, *mämhər* Askal, testified as an eyewitness that when G.M. was allowed to stand up all traces of the lashing had vanished from his body. He was later tied to a post facing a firing squad. Only at the last moment was his life spared owing to the intervention of Walter ↗Plowden, a visiting emissary of Queen Victoria. But G.M. was then condemned to trudge in chains behind the soldiers on the march. During a halt, he announced his forthcoming death to the soldiers. And that night, 29 August, he serenely died at Ligʷama. Altogether he had endured 13 months and 14 days of imprisonment and torture. On 3 October 1926, Pope Pius XI beatified G.M. as martyr of the faith.

Kevin O'Mahoney

Gäbrä Nazrawi

G.N. (**ገብረ፡ ናዝራዊ**) was a late 14th-cent. lesser-known holy monk. His ↗*gädl* has not been yet identified; his life is so far only known from local legends of ↗Wälqayt, collected by Ellero in the late 1930s (who mentions the existence of a ↗*mälkə᾿* in the saint's honour; s. Ellero 1948: 101ff.). G.N. was one of the eight pupils of *abunä* ↗Ewosṭatewos from ↗Ṣällämt who came to Ṣərella, a district of Wälqayt, during the reign of *aṣe* Wədəm Asfäre (↗Wədəm Räʿad). They stayed at Məqram Gobay (Ṣälolo), where they founded the church of Kidanä Məḥrät (identified by tradition with the ruins of Qʷalqʷala Giyorgis), and at Qäbbay. Fearing persecution, they hid themselves in a forest (↗Ewosṭateans), but after some time they separated. G.N. stayed by himself and spent 175 years in prayer. He was accidentally killed by a Fälaša (↗Betä Ǝsra᾿el) from Ṣälolo, whose birth G.N. had foreseen. G.N.'s death was accompanied by miracles: milk and honey poured from his nostrils; vine-plants sprang from the ground where his teeth fell. Later a holy spring appeared at the site, called May Däbri, which exists even now. As local tradition reports, *aṣe* ↗Śärṣä Dəngəl endowed the church of Ǝnda Gäbrä Nazrawi, which was built on the place of G.N.'s death, with numerous villages as *ʿəṭan zore*-lands (s. ↗Land tenure) and granted *ʿaśrat* rights on the lands of Wälqayt. However, the monastery (also said to be the place of G.N.'s tomb) went into decline and in the 1930s it only had a few monks, though it still was considered to be the main cloister (*rə᾿əsä gädam*) of Wälqayt.

There could be other prominent monks bearing the name G.N. It seems that G.N. of Wälqayt was visited by *abunä* ↗Zena Marqos who, according to the latter's Vita, was wandering in northern Ethiopia (s. Cerulli 1962:197). Yet, in a monastic genealogy attached to a manuscript of the *Gädlä Zena Marqos*, a certain G.N. appears as the spiritual son of *abunä* ↗Täklä Haymanot and the spiritual father of Zena Marqos (EMML 3987, fol. 140a; cp. also the tradition of Däbrä Ḥayq Ǝsṭifanos, EMML 1942, fol 74a). A certain G.N. of Bäläsa is mentioned among the disciples of ↗Iyäsus Moa in the latter's Vita. In the Vita of *abunä* ↗Aron of Däbrä Daret a certain G.N. appears as a disciple of Aron. The Vita of *abba* ↗Bäṣälotä Mika᾿el reports that he visited "his beloved" G.N. at a place called Gäfe near Mäqälä, in Təgray. The historical identity of all these persons is difficult to establish; however, a comprehensive monastic ↗genealogy (**ታሪክ፡ ትውልደ፡ መነኮሳት**, *Tarikä təwləddä mänäkosat* 'The History of the Generations of the Monks') seems to connect the different traditions, making (an Ewosṭatean) Yoḥannəs "brother of ʿƎbnä Sänbät" spiritual father of G.N. of Qäwət (mentioned in the *Sənkəssar* under 10 *Ṭəqəmt* and 29 *Ṭərr*), who appears in turn to be spiritual father of Aron of Däbrä Daret (s. Conti Rossini 1943:339; cp. KinBibl no. 67 [?]).

Denis Nosnitsin

Gäbrä Śəllase

Əč̣č̣äge G.Ś. (ገብረ፡ ሥላሴ, d. 3 November 1906) was a native of ↗Ḥamasen. He took his monastic vow in a monastery in Təgray, and received his theological education and honorific title of ↗*mämhər* probably at ↗Aksum Ṣəyon. In 1841, when the newly consecrated Metropolitan *abunä* ↗Sälama was passing through Təgray on his way to Bägemdər to the court of *däǧǧazmač* ↗Wəbe Ḫaylä Maryam, G.Ś. joined the *abun* and remained as his "spiritual son" in his retinue at Gondär during the rest of the ↗*Zämänä mäsafənt*. During the reign of *aṣe* ↗Tewodros II G.Ś. was also with the *abun* and followed him to the place of his detention at the royal fortress (turned into state prison) of ↗Mäqdäla in 1867. There Sälama decided to send with G.Ś. a secret letter to *nəguś* Mənilək, who had previously fled from Mäqdäla to Šäwa. The Metropolitan's secretary *aläqa* ↗Wäldä Maryam advised him to use invisible ink for the sake of security. However, the *abun* refused and G.Ś. was sent with a message written in ordinary black ink (MonVidTheo 41f.).

Abunä Sälama died of illness at Mäqdäla in October 1867 and G.Ś. remained at the court of Mənilək of Šäwa and was made father-confessor (↗*Näfs abbat*) of both Mənilək and his wife ↗Bafäna. Thus, he became a prominent figure at Mənilək's court and as such tried in 1876, with some other dignitaries, to solve the differences between the spouses, but in vain. Finally, Mənilək divorced Bafäna and married ↗Ṭaytu in 1883.

After the death of *aṣe* ↗Yoḥannəs IV in 1889, Mənilək proclaimed himself Emperor and began to appoint his own men to various offices, secular and ecclesiastical. Thus he made diocesan bishop of Šäwa, *abunä* ↗Matewos, the Metropolitan of Ethiopia and dismissed *əč̣č̣äge* ↗Tewoflos, the favourite of *aṣe* Yoḥannəs IV. Tewoflos, like Yoḥannəs IV, was an adherent of the *Täwaḥədo* (or ↗*Karra*) doctrine. Therefore, the Emperor had made Tewoflos in 1878 *əč̣č̣äge*, i.e. the head of ↗Däbrä Libanos of Šäwa, whose monks were for the most part the adherents of the opposite ↗*Ṣägga* or "Grace" doctrine and believed in the doctrine of "Three Births" (↗*Sost lədät*). To strengthen the position of *əč̣č̣äge* Tewoflos as a supervisor over the true faith, *aṣe* Yoḥannəs IV had appointed him also ↗*liqä kahənat*.

Əč̣č̣äge Gäbrä Śəllase's seal; from GueCopMen 334, pl. 52

On 9 November 1889, *aṣe* Mənilək dismissed Tewoflos and appointed in his place G.Ś., who was solemnly blessed as *əč̣č̣äge* by *abunä* Matewos. However, Mənilək, true to his idea of centralization of both the state and the Church, bestowed Tewoflos's title of *liqä kahənat* on *abunä* Matewos. G.Ś. considered it as a serious infringement of the age-long rights of the *əč̣č̣äge* (believed to have been established since the 14th cent. *əč̣č̣äge* ↗Filəppos). This darkened G.Ś.'s relations both with Mənilək and *abunä* Matewos. G.Ś. died while still in the office of *əč̣č̣äge* and was buried in Däbrä Libanos.

Sevir Chernetsov

Gäbrä Śəllase Anno

G.Ś.A. (ገብረ፡ ሥላሴ፡ አኖ, birth name Biiftuu, locally also known as Abbaa Oboo, after his eldest son, Oboo) was the first *qoroo* (governor) of Wänbära, west of the Šar River, appointed in

1898 by *nəguś* ↗Täklä Haymanot of Goǧǧam. According to tradition, he was a favourite godson of the *nəguś*.

By origin G.Ś.A. was from western Wälläga. It was his grandfather, Bako, who first settled in Wänbära at a place called Kittar. His son, Anno, later emerged as a strong chief in the area. In the early resistance against the Goǧǧami raiders, Anno was said to have been killed, with his wife and G.Ś.A. taken into captivity to Goǧǧam. There, G.Ś.A. could learn Amharic and get familiar with the Goǧǧam court structure. Even after he returned to Wänbära with his mother, he continued to have close connections with the court at ↗Däbrä Marqos and cultivated friendship with the Goǧǧami settlers in Wänbära.

Täkla Haymänot used G.Ś.A. to convince local people to submit peacefully to his rule, so that when the *nəguś* arrived, he met little or no resistance. G.Ś.A. became his first *qoroo* of Wänbära (region and town, now ↗Däbrä Zäyt) with the title of ↗*fitawrari* and ↗*gäbaz* of the new church.

G.Ś.A.'s power base was in Kittar. All the other *qoroo* in their respective areas where directly responsible to him. He was actually considered as *mooti* (king) in the same way as the rulers of Leeqaa Neqemte, with who he had strong relationships.

Gäbrä Śəllase Barya Gabər

G.Ś. (ገብረ ፡ ሥላሴ ፡ ባርያ ፡ ጋብር; d. 1931, Mittaq Emanuel) was one of the trusted counsellors of ↗Mənilək II. The son of *däǧǧazmač* Barya Gabər Farus (ca. 1810–89), he was related to Yoḥannəs IV through his mother and, distantly, his father.

G.Ś. went to study at the International Institute in Turin. In 1904, after an earlier failed marriage, he married *wäyzäro* Amarätäčč Walu, daughter of *qäññazmač* Walu and sister of Wäldä Giyorgis, hence the cousin of *ras* ↗Mäkʷännən Wäldä Mikaʾel. A political arrangement and a sign of the preference of G.Ś. over the two other Təgrayan chiefs, ras ↗Śəyyum Mängäša Yoḥannəs and ↗Səbḥat Arägawi, with whom he shared the governorship of Təgray since 1902 (G.Ś.'s sphere of influence including ↗Šire and ↗Adyabo), the marriage brought no children. The same year, he was assigned by Mənilək II to visit the Italian authorities in Eritrea on an official visit acknowledging the colony. Later, he was appointed governor of ↗ʿAdwa and, after Mənilək's death, was part of the group supporting ↗Iyasu against ↗Ṭaytu.

On 25 February 1914, G.Ś. fought with *ras* Səbḥat Arägawi, who was bribed by *ras* Mikaʾel and turned against him. In the meantime, G.Ś. was involved in a bloody six-hour battle with *ras* ↗Śəyyum Mängäša, a strong opponent of his power in Təgray. Overwhelmed by the approaching forces of ↗Wäldä Giyorgis and ordered by Iyasu to intervene, he fled to the Danakil desert, where he remained till the latter was deposed. He only made a lasting alliance with Śəyyum by marrying his daughter *wäyzäro* ↗Wälättä Ǝsraʾel, by whom he had a son, *däǧǧazmač* Zäwde. Back in a position of honour under the government of ↗Zäwditu, he supported her struggle in the 1920s against the pressure from *ras* Täfäri (↗Ḫaylä Śəllase I), who demanded full power. As a result he was banished to Mäčča and prevented form entering the court. Later he was given the position of *nəburä əd* of Aksum and considerable power within Təgray.

Gäbrä Śəllase Wäldä Arägay

Ṣäḥafe təʾəzaz G.Ś. (ገብረ፡ ሥላሴ፡ ወልደ፡ አረጋይ; b. ca. 1844, Däbrä Bərhan, d. 1912, Addis Abäba), usually identified by the title of *aläqa*, was *aṣe* ↗Mənilək II's private secretary and Minister of the Pen. He also served as the dean of the churches of ↗Ǝnṭoṭṭo Raguʾel near Addis Abäba and Däbrä Ṣəyon in Addis ʿAläm.

Both G.Ś.'s parents – *ato* Wäldä Arägay of Wägda and *wäyzäro* Wälättä Giyorgis of Gurage – worked in the royal palace and he received a church education at Näčč Gädäl and Miṭaq (eastern Šäwa). He began his career as a clerk in the court of *wäyzäro* Bafäna, a former wife of *nəguś* Mənilək, and was transferred to the service of the *nəguś* in the late 1870s. In 1889, he was promoted to the position of ↗*ṣäḥafe təʾəzaz* and was thereafter regarded as one of the most influential officials of the Mənilək era. He was in charge of all scribes at the royal court and assumed responsibility for state correspondence, including that concerning foreigners and foreign states, in spite of the fact that he could not speak any foreign languages. In 1907, he was appointed Minister of the Pen and three years later was transferred to Addis ʿAläm with the title ↗*nəburä əd*. After his death, he was buried at the church cemetery of Ǝnṭoṭṭo Raguʾel, whose patron he had been since the late 1880s.

Gäbrä Wäld Ǝngəda Wärq

G.W. (**ገብረ፡ ወልድ፡ እንግዳ፡ ወርቅ**; b. 1901, d. 15 December 1960) was born in the vicinity of Addis Abäba. He was sent to a church school, where he learnt the rudiments of rote-reading and recitation of various ↗Gəʿəz religious texts up to the completion of the Psalter, but did not attend any "modern" school (↗Education). As G.W. became versed in reading and writing Amharic, he was employed in the Ministry of the Pen (↗*Ṣäḥafe təʾəzaz*) at a relatively early age for such an important Ministry in that period.

His rise to positions of responsibility was gradual but steady, and by the beginning of the ↗Italian war of 1935 G.W. was Secretary-General of the Ministry of the Pen and became a key link, during that war, in the communication between *aṣe* ↗Ḫaylä Śəllase I and his front commanders. He went on secret errands for the Emperor, whenever the latter wished to communicate matters of great importance to his senior officers. After the defeat in ↗Mayčäw, G.W. escaped to the rural areas.

Gäbrä Wäld Ǝngəda Wärq; photo courtesy of the IES (no. 19 G4, 21)

He rejoined government service after the war in 1941 and served in the Ministries of Finance and the Interior, before he went back to the Ministry of the Pen as its Director-General in 1947 to remain there for the rest of his life, attaining the title of *məkəttəl* ('deputy') *ṣäḥafe təʾəzaz* (1955) and the rank of Minister of State in the Ministry of the Pen (July 1960). But, both the title and rank belied his actual influence and authority due to his longstanding proximity to the Emperor.

G.W. published two books that have great importance for students of modern Ethiopian history: *Yämayčäw zämäčanna yäguzow tarik* (1948/49), devoted to the Italian-Ethiopian war of 1936, and *Yäʾityopya märetənna gəbər səm* (1955/56), dealing with the land-tenure system and land taxation based on his first hand experience at the Ministries of Finance (Head of the Land Tax Department) and of the Interior (as *awrağğa* governor and in the Šäwa Regional Head Office). His third work, dealing with the Emperor's second visit to the Gondär Region in 1951, remains unpublished.

G.W. was one of the senior government officials killed in the Green Salon of the Gännätä Ləʿul palace during the abortive ↗Coup d'état of 1960.

Asfaw Damte

Gäbrä Yäsus Ḫaylu

Abba G. (ገብረ፡ የሱስ፡ ኀይሉ; b. 7 June 1906, Afälba, Ǝngana district, Akkälä Guzay, d. 5 July 1993, Addis Abäba) was a prestigious religious scholar and intellectual and author of what is considered to be the first genuine Təgrəñña novel (Ghirmai Negash 1999:132).

G. learnt reading and writing from the parish priest of Afälba, *qäšši* Täsfaṣəyon Fəśśəḥa, managing to memorise the Psalter. Still young, he was selected by the Italian *commissariato* to go to Zəban ᶜUna (Säraye region) to study agriculture. The invitation was not, however, taken up and instead he was sent to San Michele school in Sägänäyti, where he spent the following two years. In 1923 he joined the Catholic Seminary of Kärän, where beside the ordinary studies he learned Təgre.

In 1924 G. was sent to the Ethiopian College in the Vatican (↗Santo Stefano dei Mori) where he obtained the licenza ginnasiale in a record time (three years instead of five). In 1929 he began studies in philosophy, successfully completed three years later by the earning of a degree. The following five years were spent studying theology, crowned with a doctoral dissertation presented at the Pontificia Universitas Urbaniana. Written in Latin with the title *De Maria corredemptrice iuxta documenta aethiopica*, the work was based on a 17th-cent. text. Deacon G. was ordained priest by *abunä* ↗Kidanä Maryam Kaśa, bishop of Asmära, on 1 October 1933. During his stay at the Ethiopian College, he served as dean of the students, helping the newcomers to adjust themselves to their new setting.

Back home, from 1935 to 1942 G. served with generous dedication as secretary to *abunä* Kidanä Maryam Kaśa. In 1941, after the defeat of the Italians, most of the Italian missionaries were forced to leave the country. As a consequence, the See of Rome asked the Catholic clergy from Eritrea to fill the vacancies left by the missionaries. *Abunä* Kidanä Maryam Kaśa led a group of priests, including *abba* G., who were to cover the places left vacant. They reached Addis Abäba in July 1942. From 1944 to 1948 *abba* G. held the rank of Vicarius generalis and was active in reopening churches which had been shut down, in reviving Christian communities and in recovering lost properties. He moved to Jerusalem in April 1950 and remained there until September of that year, from where he continued on to Rome.

In Rome G. was involved in helping to revise Ethiopian liturgical texts. From September 1952, he worked as cultural attaché at the Ethiopian Embassy. In 1960 he was called again to Addis Abäba and was assigned to the Ministry of Information with responsibility in the fields of research and literature. He served in that capacity until his retirement in July 1974. From 1975 onward, he was active in the National Amharic Language Academy, of which he was president for many years.

It was during the Italian years – around 1927 – that G. started composing in Təgrəñña ንዝተዓስከረ፡ ንሐደ፡ መንእሰይ፡ ዚርኢ፡ ሐደ ፡ዛንታ (*Nəzətäᶜaskärä nəḥadä mänʾəsäy zirəʾi ḥadä zanta*, shortened form ሐደ፡ ዛንታ, *Ḥadä zanta*) (Ghirmai Negash 1999:132). The book was, however, only published in the 1940's under the British administration because of his scathing criticism of Italian colonialism and thanks to the funds of the ↗*Maḥbär fəqri hagär*. The narrative depicts a group of Eritrean conscript soldiers who die fighting in 1912 as auxiliaries for the Italians in Libya. Təkkʷabo, the protagonist, however, survives the many skurmishes and dangers. During various military engagements the Eritreans gradually become aware that their support for Italy is at the same time contributing to the consolidation of Italian colonial rule over Eritrea. When after three years Təkkʷabo returns home unhurt to Eritrea he is confronted with the news that his mother has died.

Called by Hailu Habtu (1981:131) the most impressive of all historical novels, it can be viewed in three ways: as a political manifesto intent on strengthening the national feelings of the Eritreans; as an exeptional literary work; and, finally, as an historical document depicting the colonial period with its debasing and ultimately destructive entanglements. The novel found due appreciation and was given extensive and thorough reviewing (Ricci 1951; RicLett 888ff.; Hailu Habtu 1981:131–47; Ghirmai Negash 1999:132–36; a text excerpt is available in Ullendorff 1985:93–103). It was also the only literary work in Təgrəñña to be translated into a Western language, published under the title "The Black Train" (Amanuel Sahle 1988).

G.'s other published work, ናይ፡ ፊደላትና፡ ምርመራን፡ ሐዲስ፡ አመሃህራን፡ ከሎ፡ ንባባትን፡ ጽውጽዋያትን (*Nay fidälatna mərmäran ḥaddis amähahəran källo nəbabatən ṣəwṣəwayatən* (1941 A.M.), deals with the spiritual character and the secret meaning of the letters of the Ethiopic alphabet (s. Ricci 1951). Entangled in endless polemics that drained his time and energy, G. did not produce other comparable literary works. Among his unpublished works there is a youthful text of dramatic poetry, ናይ፡ ሃፀይ፡ ቴድሮስ፡ ትራጀዲ፤ ቅትለት፡ ርእሱ (*Nay haṣ́äy Tedros tragădi – qətlät rəʾsu*, 'The Tragedy of [His Majesty] *aṣe* Tewodros; His Suicide'); a translation from Italian of "Le Glorie di Maria" by St. Alphonsus de Liguori (1696–1787), ናይ፡ እግዝእትነ፡ ማርያም፡ ስብሓታት (*Nay ʾəgzəʾətənä Maryam səbḥatat*, 'The Praise of Our Lady Mary'), consisting of five books with a total of 620 pages and produced during his stay in Rome; and a biography of the Blessed ↗Gäbrä Mikaʾel. These manuscripts are kept in the custody of Brother Ezio Tonini at the Pavoni Centre in Asmära, their publication being a desideratum.

G. was an articulate and outstanding personality, well travelled by the standards of his time, and a vibrant intellectual with a wide range of interests and an amazingly rich culture. With an absolute command of Gəʿəz and Latin, he also spoke a refined Italian and was fluent in French and English. Mainly known for his outspoken stand on his own "Ethiopian identity", he fought for recognition of equal citizenship of the Gəʿəz rite in the Catholic Church, which often put him at loggerheads with missionary followers of the Latin rite. For years he was a fervent unionist and fierce – sometimes aggressive – opponent of "secession", even though it seems that by the time of the Referendum for or against Independence in 1993 he had had a change of heart.

G.'s role in the field of his vernacular literature is pivotal, with his contribution clearly being the mainspring; for whatever other merits he may have, his novel ሓደ፡ ዛንታ (*Ḥadä zanta*) stands out as the starting-point and a lasting inspiration for all subsequent Təgrəñña literature, which has since thrived and greatly expanded.

Tedros Abraha – Rainer Voigt

Gäbre Täsfa

Ras G.T. (ገብሬ፡ ተስፋ; d. 10 April 1816) was a hereditary and practically independent ruler of ↗Səmen province. For the first time he was mentioned in Ethiopian annals under the year 1791 (BlunChr 418) as *däǧǧazmač* Gäbre, though the title had been never officially granted to him by any Ethiopian sovereign. However, this became a common practice in the "Era of the Princes" (↗*Zämänä mäsafənt*), when Gondärine rulers were mere puppets in the hands of mighty feudal lords and any provincial ruler was called *däǧǧazmač* without being appointed by the nominal king.

Səmen was not a great province and G.T. was by no means one of those mighty lords, the king-makers, who chose and changed Ethiopian monarchs at will. Paradoxically, precisely this factor made Gondärine rulers, uneasy with their dependent position, seek the support of such minor lords to counterbalance the influence of the mighty ones. Thus, in September 1793 *aṣe* ↗Həzqəyas (1788–94) appointed G.T. *ras*, even in the absence of the nominee, "while he was in his country". In 1795 another ruler, *aṣe* ↗Täklä Giyorgis (1779–84, 1789, 1795, 1796, 1799, 1800), who at the moment had been for the third time driven out of the capital city of ↗Gondär, resorted to G.T.'s help and the latter indeed took Täklä Giyorgis' side, fought for him and returned him to the capital. *Aṣe* Täklä Giyorgis, who had been enthroned and deposed many times, indignant with the situation, once even refused to be returned on the throne, saying: መጺእየ፡ እከውንኑ፡ ከም፡ ምስል፡ ወጣዖት? (*mäṣiʾəyä əkäwwənnu kämä məsl wäṭaʿot*?, 'If I come, shall I become an image or figure [of a king]?'; BlunChr 418). But in fact he returned and became precisely this.

Under the circumstances G.T. (like all other provincial rulers) preferred to care not so much for these "images and figures" as for himself and his own local power base (Səmen) and in his everyday politics to mind not impotent kings, but mighty king-makers. So, when in 1796 *aṣe* Täklä Giyorgis again appealed to G.T. for military assistance, he preferred to take sides with a new ruler *aṣe* ↗Sälomon II (1796–97, 1799).

G.T. was cautious in his alliances, but his life (like all of his contemporaries) remained stormy and dangerous. Thus, in 1799 he was besieged on his ↗*amba* in Səmen by the mighty *ras* ↗Wäldä Śəllase and in 1802 *aṣe* ↗Ǝgʷalä Ṣəyon prepared to attack him. His main and most dangerous opponent, however, was *ras* ↗Gugsa Märsa (d. in May 1825). Still, G.T. was lucky enough to preserve his authority over Səmen until he died a natural death at the age of 80 and was succeeded by his son *däǧǧazmač* ↗Ḫaylä Maryam Gäbre.

Gäbrəʾel and Mikaʾel

In 1438 *aṣe* ↗Zärʾa Yaᶜəqob received for Ethiopia two metropolitans from Egypt, Gäbrəʾel (**ገብርኤል**) and Mikaʾel (**ሚካኤል**). It was the first occasion when two Egyptian bishops were sent at one time. This produced a public effect that was used by the Emperor to his own ends and purposes, i.e. for reforming the Ethiopian Church and establishing his own leading role there.

Zärʾa Yaᶜəqob received both bishops at Aksum and then separated them (thus dividing and diminishing their ecclesiastical authority in the country): he settled *abunä* Mikaʾel in Amhara and *abunä* Gäbrəʾel in Šäwa, while the province of Təgray, always pregnant with dissent, was left under his own vigilant supervision.

This approach brought the desired results. In 1450, at the Council at ↗Däbrä Məṭmaq on the question of the ↗Sabbath, attended by the followers of ↗Ewosṭaṭewos, the abbots of the leading monasteries and the two bishops, the latter meekly accepted Zärʾa Yaᶜəqob's ideas, which obviously contradicted the views of the Patriarchate of Alexandria (↗Alexandrian theology).

On another occasion *abunä* Gäbrəʾel also took the Emperor's side against local rebels (TadTChurch 241). He died, probably, in 1458.

Metropolitans Mikaʾel and Gäbrəʾel became famous in Ethiopia first and foremost due to the fact they had been the first two Metropolitans who arrived in Ethiopia simultaneously.

Gäbrəyye ↗Gäbrä Ḫəywät Goššu

Gabriel, João

G. (b. ca. 1554, d. after 1626) was a prominent member of the Luso-Ethiopian community. His mother was an Ethiopian woman converted to Catholicism whose name and ethnic roots have not been recorded, and his father an Italian soldier who went to Ethiopia with Christovão da ↗Gama, presumably the Francisco Jacome (Francesco Giacomo), who for many years (1559–ca. 1577) had been commander of the Portuguese troop.

G. was first educated for three years by the Orthodox monks at ↗Däbrä Libanos (Pais 1945, vol. 2, 229). Later, when he was ca. 12–14 years old, he learnt to read and write in Gəᶜəz, Latin and Portuguese with the Jesuits at ↗Fəremona. He married – probably a Luso-Ethiopian – and had offspring, of whom the sources report a Basílio and a Dionísio. The first died in 1628/29 supporting the viceroy ↗Qəbᶜa Krəstos against the rebel *təgre mäkʷännən* Täklä Giyorgis (BecRASO XIII, 432f.). Dionísio remained in the country and, after the ban of Catholicism, was persecuted because of his faith (BecRASO XIII, 266). An unnamed son of G. acted as an interpreter for the Jesuits at Susənyos' court and became in 1619 commander of the Luso-Ethiopian cavalry, receiving a ↗*gʷəlt*, as his father had before (BecRASO XI, 424).

G. served emperors Śärṣä Dəngəl, Yaᶜəqob, Zädəngəl and Susənyos as captain of the "Portuguese" military corps in Təgray (until ca. 1607–08) and became the head of the Portuguese community in Fəremona. He led a group to welcome the Jesuit fathers, who considered him a "valiant, trustworthy and well learned man" (BecRASO XI, 126), and introduced them to various aspects of nature and social customs in Ethiopia. Besides being a privileged informant, he was able to help the missionaries in translating some Catholic liturgical and catechetic works, such as the *Cartilha* (a catechism booklet) into Gəʿəz or Amharic, and taking part in the theological disputes between Catholics and supporters of Orthodoxy. At the request of the priests, he also translated into Portuguese some doctrinal beliefs of the Ethiopian Church. He is supposed to have written an account entitled *Comentários do Império de Etiópia*, today lost.

Isabel Boavida

Gäbru

G. (ገብሩ, hypocoristic of Gäbrä Krəstos; ↗*wag šum* in 1877–82, d. 1888) was a Təgrayan, who was appointed by *aṣe* ↗Yoḥannəs IV over Wag in 1877. He replaced *wagšum* ↗Käbbädä Täfäri, who was removed from office for not accompanying the Emperor in his wars against the Egyptians. This was because Käbbädä Täfäri was so young at the time that his regent did not find it appropriate to take the young *wag šum* to the battlefield. G. did not belong to the legitimate family of the *wag šums* and his appointment soon after the Battle of ↗ʿAsäm, where their kinsmen *aṣe* ↗Täklä Giyorgis II was defeated by Yoḥannəs IV, angered the people of Wag and Lasta, and they could not accept it with grace.

Shortly after his appointment, there was a rebellion led by the relatives of *aṣe* Täklä Giyorgis II. The rebellion occurred in 1878 when *wag šum* G. had accompanied Yoḥannəs IV into Šäwa, but it was easily suppressed. G. was then transferred to Dämbəya in 1882. He fought and defeated the Mahdist forces near ↗Gallabat in July 1885 and died three years later.

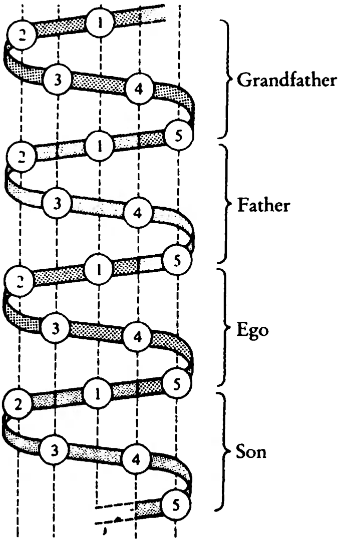
Wudu Tafete

Gadaa

G., usually accompanied by the word "system", has become the accepted name for the cyclical generation-set systems through which, in traditional ↗Oromo societies, most non-inheritable ritual and social responsibilities were transmitted in an orderly way. Local G. systems have developed varying organizations, but the essential principles and values have remained constant (Hallpike 1976:48). G. has become one of the "key words" of Oromo culture, which, though it "cannot be given a univocal interpretation, [...] stands for several related ideas" and a "whole way of life" (Asmarom Legesse 1973:81). The enduring ubiquity of G. as a "social ideology" (Aguilar 1998:258) is clear from Tamene Bitima's recent definitions: "1) Oromo social system in which the Oromo organized their economic, political, military and spiritual life; 2) democratic system in which the Oromo elected their leaders every eight years" (Tamene Bitima 2000:117). G., with good reasons, has become an emotive and powerful symbol for the Oromo of their democratic heritage, cultural distinctiveness, political aspirations and, especially, their proud, independent past (Asafa Jalata 1998:18–28, 39–50).

↗Bahrey argued that in the 16th cent. the *luuba* (*luba*) organization (which later came to be known as the G. system) provided the organizational and ideological impetus for Oromo military successes. Later both indigenous despots and outside conquerors also perceived G.'s democratic form as a political threat and regularly forbade it to function openly (MHasOr). It was also opposed and often threatened by proselytizing Christians and Muslims. Nevertheless, the values which G. represented continued to be central to Oromo ideas of well-being and of peace (↗*nagaa*). The ↗Mäčča, for example, mourned the apparent disintegration of G. under central domination as marking the end of the natural and social orders: "When G. was destroyed [...] The bull refused to mount the cow, men no longer respected justice [...] There were no longer any real elders, and few children were born. The cows gave birth to deformed calves. [...] everything else was also destroyed" (Knutsson 1967:180). But G., in an "attenuated" form and as "a religious system", has proved resilient at local levels as, for example, among Christian ↗Tuulama settlers in Muslim Bale, a simple version of the "five grade structure and eight year G. period" was still working in the early 1970s



Boorana age sets and generation sets (*gadaa* system), adapted from Baxter – Almagor 1978:157

and great efforts were put into the performance of transition rites. Members of the third grade *folle* had duty to shame, publicly and dramatically, men who breached moral standards and those who had passed through the fifth grade "*huba* or *yuba*" had the duty to work hard at maintaining cooperative relationships within the local community (Blackhurst 1978:245–67). Similarly, Hultin (2003:418) records that "the most exciting moment" at a local political rally during the *Därg* "proved to be its finale, a blessing performed by two […] men who had performed the most important ritual in the [↗]Wälläga version of *gada*". Among the ↗Boorana and ↗Guǧǧi, though sometimes harassed by administrators and the increasing consumption of alcohol by participants, G. continues to be active and adaptive (Aguilar 1998; Aneesa Kassam 1995, 1999; Van de Loo 1991).

G. has caught the attention of almost everyone who has written anything at all about the Oromo, though it has "been especially maltreated by European ethnologists" (CerFolk 167) because they did not grasp its complexity and subtlety. It has also been used as a convenient generic term for all generation-set systems, including those of the neighbouring ↗Sidaama, ↗Diraašša, ↗Burǧi, ↗Gidole and ↗Konso. Jensen's title *Im Lande des Gada* (1936) suggests "that there is a '*gada* country', a continuous geographical area marked by the presence or former presence of *gada* systems" (Schlee 1998:121).

Cyclical generation-set systems are unusual and must be distinguished from the more commonly found age-set systems (↗Age group systems), with which, as in the Boraana ↗*hariyyaa*, they may coexist. Age-systems group men into sets of age peers who advance together through the different stages of life, such as warrior and elder. Age is ignored in generation systems and the set to which an individual must belong is determined by his genealogical generation; all a man's sons must enter the set which follows his in the designated sequence of sets, and so on through successive generations. Each set must pass in succession and at fixed intervals through a designated series of named grades, each with specified rituals, rights and obligations. The rigid rules of generational succession make no allowance for the span of time during which men may father sons, so discrepancies can soon occur between genealogical and biological generations: some men will be born before their set has come into existence and others after their set has completed its course. Different Oromo societies have devised secondary rules, such as abandoning babies whose birth does not synchronise with the system, to manage these problems of "underaging" and "overaging". Nevertheless the number of sets with living members in Boorana well exceeds the number of grades and Asmarom Legesse (1972:129), in a census of 350 males, found representatives of more than 20 sets.

The most fully described G. system is that of the Boorana which is generally regarded as paradigmatic. For centuries a new set has been formed every eight years. In the early 1960s Asmarom Legesse (1973:190f.) was able to compile, with the assistance of expert oral historians, a chronology of G. sets which: 1) accurately forecast the names and order of until 2008; 2) back listed the names and order of succession of sets since 1674; 3) even suggested the possible names and order of 15 sets prior to the date. This chronology, though not identical, is very close to those which Haberland (VSAe II, 189–92) compiled in the mid-fifties and Bassi (1996:59) in the early 90s.

There is general agreement about the adaptability, organisation and ritual purposes of the Boorana G. system but not about why it has survived in such vigour when other systems have not. Baxter (1978:152f.) suggests that it has endured because, over time, it has shed its economic, military and political responsibilities while maintaining its religious obligations. So that while sets and their office holders continue to be honoured, respected and influential they do not wield any exploitable power over political or economic resources. Asmarom Legesse (1972:85–88; 2000:41–45, 66–69, 72–82) argues that Boorana G., in interaction with ↗*qaalluu*, the moiety and clan organisation, age-sets *hariyya* and the general assembly *Gumii Gaayoo*, continues to be essential component of Oromo democracy. But, whatever their current political and economic importance, all observers agree that G., plays "a key role in integrating" clans, promoting ↗*nagaa* and mediating between the human and divine worlds (Bassi 1996:156).

G. is extremely complex and penetrates into almost every aspect of life and must necessarily be presented here in an extremely abridged form (Aguilar 1998; 1998; Bassi 1994; 1996; 1996; Baxter 1978; VSAe II; Hultin 1975; Pecci 1941; Asmarom Legesse 1973; 2000). In the diagram the helical broad band represents the passage of time and each of the circled numbers which lay along it represents a single set *luuba*. Members of the same *luuba* may range from infancy to senility, belong to different moieties and clans and come from different customary grazing areas but they become bonded through their participation in a life long sequence of shared rituals and responsibilities. Members address and speak of each other as *luuba*. Their sense of mutuality is expressed in the proverb "*Luubi luubuu wal ulata*" ('members of the same generation set breathe in each other's breath' [Leus n.d.:204]); that is members of the same generation set form one body and soul. Each word carries poetic resonances: *luubu* ('throat') also has the meaning of 'life spirit' or 'life force' which, as believed, resides in the throat; *wal* or *wol* is the pre-verbal particle used to indicate reciprocal action (as *wal ǧaalaču* 'love one another'); *ulaata* ('to fumigate, make clean') refers to the purifying, aromatic wood smoke used to cleanse and refresh milk pots or to give fragrance to a woman's dress and body. The proverb suggests the warmth of feeling, trust and "belonging" generated by shared hearth, milk and hospitality.

Members of a generation set after a *gadaa* ceremony (sons of *gadaamooǧǧi*) in Boorana; photo 1950/52 by Joy Adamson; courtesy of the Frobenius-Institut, Frankfurt am Main (23–Ad184–09 M–Kat)

Each of the five vertical lines in the diagram of the G. system, that is those which pass through a series of circles containing the same number, represents a patriline of sets *gogeesa* (Asmarom Legesse 1972:131 uses "patriclass") in which the generations of grandfather, father, Ego and son succeed each other at 40 year intervals. These time spans are inflexible. Membership of patriclan ↗*gosa* and patriline *gogeesa* are quite distinct; each *gogeesa* would appear to span all clans and comprise around one fifth of the population. Great efforts are made to ensure that set offices are distributed evenly across clans.

Each newly created set takes the name "Sons of X", "X" being the name of the ↗*abbaa gadaa* of their father's set. Each set, and ideally each individual, passes through a series of grades or stages.

For simplicity of exposition let us follow an individual whose birth coincides with the formation of the set to which he is consigned; so that his individual progress through the life cycle is in harmony with the developmental stages of his generation set. Most transitions from one stage to the next are marked by periods of seclusion and meditation for the initiates, large assemblies of families, lavish sacrifices of stock and coffee beans ↗*buuna qallaa* accompanied by streams of prayers and blessings. A constant theme is the complementary interdependence of men and women and changes in the ritual and social statuses of initiates are often demonstrated by the adoption of hair styles which represent the reversal of sex roles. Progress through the grades, until a set reaches the plateau of retirement, is associated with increasingly mature and responsible ritual and social behaviour. The following summary of the G., cycle and its rituals is based primarily on Asmarom Legesse (1972:50–107); Bassi (1996:56–69) and Leus (1995:81f).

The progress of generation class through the grades "The prevailing model" (according to Bassi 1996:152 figure 1):

8 years	*dabballee*
16 years	*gamme*
8 years	*kuusa*
13 years	*raaba* (bureaucracy)
8 years	*gadaa*= government (juridical, executive, legislative power)
27 years	*yuuba*
8 years	*gadaamoǧǧi*

For simplicity of exposition, while remembering that such individuals are a minority, let us follow an individual whose birth coincides with the formation of the set to which he is consigned. The identity of each grade in the cycle is "relativistic" and only identifiable "in terms of another class", so that the cycle can be seen as a continuity that, "having no beginning", must constantly and regularly repeat itself. Every "grade and every set is moving in relation to the others: the position of each part of the system is only explicable in relation to the position of other parts [...] it is distorting to represent G. on a "flat surface" because in essence it is three dimensional, but there is no alternative" (Baxter 1978:170).

The first grade *dabballe* is made up of the infant sons of the set "in power" (Asmarom Legesse 1972:52). The boys are dressed and addressed as girls; their hair is anointed with butter and cow dung and allowed to grow (VSAe II, table 57, no. 1). The infants are treated with great care because they are mediators between man and God and the unconscious transmitters of blessings. A mother of a *dabballe* is similarly respected and wears a copper or brass cylinder *gulmaha* in her hair as a mark of distinction. *Dabballe* should be fostered by ↗Waaṭa during their infancy.

The second stage, that of childhood, is *gamme didiiqo. Gamme* is a tonsure similar to that which girls keep shaven until they marry and *didiiqo* is small or junior. The transition is marked by two rites at which the boy's hair is shaved by his father and he is given a boy's name and blessed. From then on he is treated as a boy. The third stage *gamme gugurdo* (large or senior) is an extension of the second and is not marked by public rituals. As they grow up the lads join in the normal harsh life of young men herding the dry stock, raiding and hunting for trophy game.

Transition into the fourth stage *kuusa* [*cusa*] (junior warriors) is one of the most important events of the G. system. For the series of transition rituals which Asmarom Legesse (1973: 61–65) witnessed about four hundred families gathered over several weeks to celebrate. The ↗*abbaa gadaa* of the set of the fathers of the participants played a crucial role. The rituals themselves lasted for over two weeks and many families stayed for longer. The fathers shaved the heads of their sons and presented each of them with a cow and calf. After the initiates had spent a period in seclusion together an *abbaa gadaa* and a council of ↗*hayyuu* were elected from amongst them. This marked the formal public recognition of the set. The boys were now recognized as being responsible enough to take lovers and also, in preparation for the next stage when they are not only permitted but encouraged to marry, start the search for a suitable bride. Whenever a group of *kuusa* visit a village a sacrificial ox is slaughtered for them (Leus 1995:627).

The next grade ↗*raaba* lasts 13 years, eight as *raaba didikka* (junior) and five as *raaba gugurda* (senior) and men should spend time as warriors. It is said that all *raaba* who are old enough to marry should do so but in practice very few do, except for office holders whose marriages are perceived as constituting a rite of passage for all the members. Although they are urged to marry *raaba* are not allowed to bring up any children they may have until, during the 40th year of the cycle, they come together to perform the elaborate and exhausting fatherhood ceremony *dannisa* (the name of a tree which provides their ritual staffs). The ceremony "brings to a conclusion forty years of development of the G. class" and the *raaba* undergo "ritual changes suggesting they had momentarily switched sex roles". Initiates must put away their spears and remain in a condition of ritual purity for seven

Generation-set-initiation ceremony: a *gadaamooǧǧi* places a *kalačča* on his son's forehead; photo 1950/52 by Joy Adamson; courtesy of the Frobenius-Institut, Frankfurt am Main (23–Ad184–14 M–Kat)

days, during which they build a ceremonial enclosure in which they reside. Set members, especially the elected officers, spend several days meditating, praying and singing. The rituals conclude with the ↗*abbaa bokkuu* shaving a small tuft of hair from each of the *raaba*. This is followed by "four days of singing and feasting", after which each participant goes through a ritual of simulated (re)-marriage with his wife, followed by further sacrifices (Asmarom Legesse 1972:70–74).

The sixth stage G., from which the system has derived its name, is the most important. Elders in this grade are said to 'have all the laws of the Boorana in their hands' *nama seera Boorana čufa harka gabu* (Leus 1995:320). The transition should take place in the 45th year of the set during the ↗calendar month *Gurrandala*. It centres around the transfer or exchange of ritual authority from the set of the "fathers" to that of the "sons" ; from the *abbaa gadaa* of the retiring set to the *abbaa gadaa* of the *raaba*. Henceforth the new set "imparts its name and its ritual attributes to the period of history when it was G." (Asmarom Legesse 1972:83). The initial rituals are similar to those performed at the transition to the fourth grade *kusa*, but are only the first in a complex and dramatic sequence of ceremonies and sacrifices. Asmarom Legesse (1972:89) lists nine prescribed sets of rituals, i.e. more than one a year, in addition to the rituals at handover and takeover. These rituals have national significance because the G. set represents all Boorana. Most conspicously the *Gumi Gaayoo* ('the crowd at the place Gaayoo'), which is held during the fourth year, is a national assembly which involves the participation of representatives of every segment of Boorana society. It is the forum at which laws ↗*seera* and ↗*aadaa* are formally promulgated (Bassi 1996:153–58). At this stage a man's wife and family actively participate in the rituals which, along with the ritual artifacts of G. have myriad symbolic associations. For example, "they are circumcised and have their ears pierced" (Asmarom Legesse 1973:90), though the operations may be token because the actual operations had been carried out years before. In the fifth year they visit the *qaalluu* and perform the rituals of anointment ↗*muuda*. The *kallaačča* (↗*kallačča*), a phallic shaped metal horn and symbol of activity, which is worn on the forehead, is particularly important (VSAe II, table 77, nos. 1–3) and lies at the core of G. After completing G. the elders start the stage of *yuuba*, partial and progressive retirement, which covers 27 years. The final, culminating stage is the highly honoured "terminal sacred grade" of ↗*gadaamoǧǧi* during which the participants pass through a series of rituals including that of *mata buufata*, when they shave their elaborately decorated *hair*at the same time and again become sources of blessing and mediators between man and God. In 1995 Anessa Kassam (1995:24) reports that around 1400 initiants and their families attended the rituals at the principal sacred site at Mio.

Paul T.W. Baxter

Gadaamooǧǧi

G. is the eleventh and final grade in the ↗Oromo ↗*gadaa* system of generation-classes and is entered through a formal ritual. The fullest accounts that we have of the system and its rituals and symbolism are drawn from the ↗Boorana. G. also denotes both the ritual condition and title of an elder who, along with the other members of his *luba*, has completed that grade and entered terminal and sacred retirement.

Members of this grade are greatly respected by all members of society, including spiritual leaders. The G. class does not carry arms, they are not permitted to kill any living creatures and are required to use a ritual argot. People seek their blessing and wherever they go they are given food and shelter. Men and women come to them for protection against misfortune, enemies or angry kinsmen. Pledges are made to the G. whereby people promise to anoint them with incense, butter and coffee if their hopes and wishes are fulfilled (Asmarom Legesse 1973:105).

The G. class ends its sacred grade at the retirement ritual, ca. 88 years after the individuals have entered the *gadaa* cycle. The final rite is called *Qumbii wal-irraa-fuudhu*, 'the ritual of exchange of incense'. The exchange of incense occurs between those entering the G. grade and those who leave it to enter into complete retirement, *ǧarsa* (old men). At this ritual the G. stay for two months in a specially constructed house and an interlinked arc of ceremonial houses (*galma*). The doorway of each house faces towards Liiban, the spiritual centre of the Boorana. Each G. is accompanied by his family and sufficient stock to sustain them and provide sacrifices for two months. This period is one of intense ritual activity, prayers and blessings. More people gather for the ceremonies than could be maintained at one site, so *galma* are constructed at several sacred sites. A noticeable feature is the recitation by each G. of his accomplishments as a warrior in front of their sons, peers, well-wishers and visitors, who come from all over the region to participate. The accuracy of the recitations is monitored by their peers and praised by the listeners. This ceremony is accompanied by dancing and singing that lasts throughout the night. Groups of men sing peace- and praise-songs in honour of their clans and the founding fathers of the Oromo nation (Aneesa Kassam 1995:24). The ceremony constitutes the formal end of the *gadaa* life cycle. After the ritual is performed, the elders have no political, economic or ritual authority and all their responsibilities are passed on to their children (Asmarom Legesse 1973: 99–105; Aneesa Kassam 1995:23–34).

Gädäb

A short distance downstream from its sources, the ↗Wabi Šäbälle river meanders through a high plain which stretches out at an altitude between 2,500 to 2,300 m A.S.L. Bordered to the north by Mount Qäča/Kaka (4,139 m) and to the south by Mount Batu (4,307 m), this depression, called the G. (**ገደብ**), is covered with cereal fields and grazing-land while its surrounding slopes are forested. This region is a part of the Oromiyaa *kəlləl* with the right bank of the Wabi Šäbälle belonging to the ↗Bale Zone and the left bank to the ↗Arsi Zone. The G. remained isolated for a long period, but is now crossed from east to west by the road from ↗Šašämänne, which winds through the Zutän Mälka gorges before it reaches ↗Goba. Adaba (18,616 inhabitants) and Dodola (13,436 inhabitants) at the end of the track from ↗Asälla, which were tiny *kätämas* in 1938, have become sizeable market-towns and administrative centres. The *wärädas* of G. (125 inhabitants/km²), Dodola (94 inhabitants/km²) and Adaba (53.7 inhabitants/km²) are densely populated with Arsi Oromo, who are sedentary farmers.

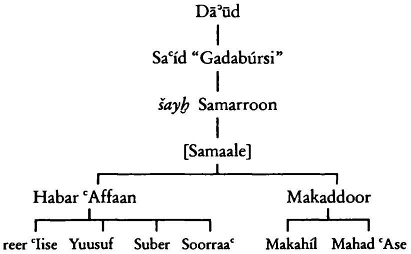
Gadabuursi

Gadabuursi ethnography

G. (Northern Somali: Gadabbuursi) is the nickname of the Samarroon, a Northern Somali tribe, part of the so-called ↗Dir family, which includes the ᶜIise (↗ᶜIssa) tribe. The G. occupy a continuous territory east of Harär, from the well of El-Bahay, east of ↗Ğiğğiga, to Gəbiley, Tog Wağaale (Täfäri Bär) and Boorama, in Somaliland. Numerous toponyms here are of Oromo origin, as Qabri-Nonno, Dudde-Hiddi, Garba-Ğirri. The G. are agriculturalists, a sedentary activity which constitutes an important socio-historical difference with other Northern Somalis. Cultivation of cereals is accompanied by cattle husbandry.

Genealogically, all G. recognize as their ancestor *šayḫ* Samarroon, son of Saᶜid Gadabuursi, son of Dāʾūd, whose grave is at Dirgaaḥ, near Maiḍ, on the northern coast. Ferrand (1903: 102) was the first to suggest a plausible link with *gadāʾ búrti* 'mountain dwellers', which fits the location of this sedentary Somali tribe in the vicinity of Oromo (↗Ğaarso, Akiššo and ↗Garre, now Somalized). All these groups still differentiate their people according to their location 'on the hill' (*búr*) or in the 'plain' (*baanka*). E.g., the Garre are divided between Kabaal ᶜAd (those with white camel-saddle), upwards, and Kabaal Maadoow (those with black camel-saddle) in the plain of ↗Ğiğğiga. As a whole, the two names G. and Samarroon show the "Somalization" of an alleged Arab ancestor, Saᶜid Gadabuursi and of his son, *šayḫ* Samarroon. One should here make a difference between the legendary genealogy in relation with the Arab/Qurayšite claim and the historical (still-living) one, which takes into account the aggregation (mainly through marriages) of neighbouring groups.

The G. are divided into two main sub-clans: Habar ᶜAffaan and Makaddoor, the last being divided into two sub-clans: Makahíl "the one who supported Makka" and Maḥad ᶜAse (for Madaḥ ᶜAse) 'Red Head'. In some genealogies, a "Samaale" generation is given as Samarroon's son. This appears as a parallel to the division (s. before) which opposes Sab and *ilma* Samaale, Samaale's sons, the "noble" Somali. This Somalization of the names has its counterpart in a modern tendency to Arabization (e.g., Maḥad ᶜAse explained as Maḥammad ᶜase). The following table shows the genealogy of the Samarroon (G.): lineage genealogies show that ᶜIise and



Genealogy of the Samarroon (G.). The lineages of Suber are 1. Ḍega-Wéyne, 2. Makahíl, 3. Ḥasan Saʿad, 4. Mūsa "Fín", 5. Ḥamūd, 6. Adan Faroole; the lineages of Soorraaᶜ are 1. Ḥeb Ğire, 2. Gobe, 3. Ğibrayn, 4. Ğibrayn, 5. ᶜAli Gaduun; the lineages of Makahíl are 1. *reer* ʿIye, 2. ʿEli, 3. Bah Habar Ḥasan, 4. Mūsa, 5. ᶜAbdalle; the lineages of Maḥad ᶜAse are 1. Adan, 2. Abbokor, 3. Bah Habar ʿEli, 4. Mūse.

Yuusuf were of the same mother, while Suber and Makaddoor were of a second marriage. But Suber joined his other brothers ᶜIise and Yuusuf. Aggregating foreign "followers" (*soo-[r]raa*ᶜ), their descent was called "Habar ᶜAffaan", 'the sons of [a woman named] ᶜAffaan' (or ᶜArfaan).

The patrilinear representation of the Somali society focuses on male descent and on the clan location according to patrilinearity. A Nuur Yuunis man will mention Dilá or Kallabayḍ as his *degmo*, the ancestral land. But in the context of a sedentary community, the situation appears more complex. If each G. sub-clan and lineage has a fixed territory (*degmo*), in the case of a woman, a subtle relation exists between her paternal *degmo*, her husband's one, and their home (*rug*), which is not necessarily located in the *degmo* of the latter. Thus, an Aden Yuunis woman (*reer* Maḥammūd Ḥasan/*reer* Sáhal) says Ḥaasaadin to be her paternal *degmo* and Muḥuufti her husband's one. But for both of them, and for their children, their *rug* is Ğiğğiga (Morin 1995:140f.). The power among the G. has been traditionally represented by the *ugaas*, chosen for his sense of justice and equilibrium. The appointment was made by one hundred elders, who also decided for the new regulations to be introduced. The ceremony was celebrated in the Harraawe valley (Lewis 1961:211f.), west of Boorama, the G. "capital". The corpus of law was known as *ḥeerka boqorka iyo boqol nin* 'the law of the Sultan and the hundred men'. It is they who dismissed *ugaas* Nuur Rooble for having signed a treaty with the French governor ↗Lagarde. The title of *suldaan* has been divided according to the division of the G. in Ethiopia and in British Somaliland. The last *suldaan* in Ethiopia in the 70s was of Aden Yuunis descent.

Gadabuursi history

Taking into account the location of clan ancestor's graves, one can affirm that the G. are, at least since the 17th cent., in the same area east of Harär. The G. are also scattered among the ᶜIise in the villages along the road to Zaylaᶜ. Historically, the area from ᶜAbdulqādir to Geerisa and Zaylaᶜ was gained by the ᶜIise after decades of fighting. The name of Lafa-ᶜIise, "the bones of the ᶜIise", north of ᶜAbdulqādir, recalls one of these battles. A popular hero for this heroic period is Rooble "Afdeeb" (Ğibrir Yuunis), 'Roble with a mouth like fire', at the beginning of the 20th cent., whose violent *gabay* are still recalled (Morin 1999: 137f.). The coast to the south-east of Zaylaᶜ, from Lughaya to the vicinity of Bullaḥaar is still a G. (Maḥad-ᶜAse) grazing-area in winter.

The G. have been present in ↗Djibouti since the foundation of the town (mainly in the "Quartier 5") and rapidly adapted to town life. The first mosque in Djibouti (Ğāmiᶜ ar-Raḥma, Quartier 2) was built in 1891 by *ḥāğğī* Diideh (Maḥad-ᶜAse, d. 1928), a prosperous merchant of Zaylaᶜ. The name of "Côte française des Somalis" itself is said to have been proposed by *ḥāğğī* Diideh to the French administration in imitation of British Somaliland. During the two World Wars, the French "Bataillon Somali" was mainly composed of G. and Isaaq. The "Milice Indigène" in French Somaliland was also an almost-entirely G. military unit. Many G. went overseas with the colonial troops, as ᶜAli Mūse Hārūn (sub-clan Gobe/Soorraaᶜ), who served in Madagascar under General Galliéni. Many also embarked with the Messageries Maritimes and settled as far afield Nouvelle-Calédonie, Indochina, and Europe (Marseilles). Many G. former civil servants in Djibouti have retired to Boorama, where their pensions are a major income for Northern Somaliland. French administrative sources (1966) indicate 4,500 G. in Djibouti out of a total of around 36,000 Somali. Hunter (1951: 122) mentions 45,000 G. in Somaliland. Today, a global figure of 300,000 can be considered as a realistic, if not scientific, estimate of the G. living in Ethiopia, Somaliland and Djibouti.

In the economic sector, the G. have always been active. The meat supply of Djibouti has been and is still dependent on cattle importation, mainly from the Boorama area. This was of vital importance during the British blockade in Djibouti (1941/43). After the nomination of Ǧããma^c ^{c}Ali, a G., as the Djibouti deputy to the French Conseil de la République (December 1946), then of Said Ali Coubèche (an Arab) as a deputy to the French Assemblée de l'Union française, riots burst out between G. and ^{c}Iise in Djibouti (1949) with nearly 100 dead. The preponderance of G. and of the other "Somalis allogènes" began to decline in the colony. Despite these events, which were largely monitored by the French administration, the G. live together with other Somalis, with whom they frequently marry in the neighbouring towns, mainly in Dərre Däwa, Hargeisa, Zayla^c etc. Also, since the Ethio-Somali war (1977), many impoverished G. have gathered in refugee camps in Täfäri Bär, Ḍeer-Wanaaǧi, Qabri-Bayaaḥ and Harta-Šayḫ on the border with Somaliland.

Due to their geographical location, the G. have been part of the colonial struggle. The French consul Henry signed with *ugaas* Nuur Rooble a Treaty of Friendship (25 March 1885) in Zayla^c, the day before ↗Lagarde signed also with 19 ^{c}Iise chiefs. He was replaced by his tribe soon after for having alienated the ancestral land. After the conquest of Harär, in a letter to the French and British powers (1891), *aṣe* Mənilək II claimed "the province of Ogaden, the ↗Habar Awal, the G. and the ^{c}Issa". In fact, the G. land stayed largely autonomous, most of its inhabitants refusing to pay taxes to the Imperial Government. In 1930 an Ethiopian force raided the Protectorate and seized livestock.

The 1894 Anglo-Italian Protocol discussed a possible surrender of the G. and ^{c}Iise tribes to the Italians, with the port of Zayla^c, in exchange for territories in the Italian protectorate. This project was abandoned and the G. remained divided between Ethiopia and British Somaliland. This led to conflicts among the G. for the nomination of the *sulṭān*. After the Italian withdrawal, under the British Administration, the creation of the "*gulub*" (the Somali Youth Club) in Mogadishu, but also in Hargeisa (1943), exactly under the tree at Geed-Deeble, gave the signal for the emancipation of the Somali. In Ǧiǧǧiga, a Christian G. (of Aden Yuunis lineage), Aḥmed Warsama, known as Aḥmed Kottéli, along with *ḥāǧǧī* Doodi Rooble (G. ^{c}Ali Yuunis) and Ḥuseen Giirre (Akiššo), were the prominent figures. The flag of the Somali Youth League (S.Y.L) was raised during a demonstration (1949) quelled by British troops under Captain MacDonald (personal communication with Kane Spitler, Sudan Interior Mission in Ǧiǧǧiga).

Gadabuursi dialect

The difference drawn by Lamberti (1983:166) between "Northern Somali in the proper sense" (the ^{c}Iise, Isaaq and G. area) and "Western Somali" in the Ǧiǧǧiga area, according to kinship must be reconsidered on strictly linguistic criteria (s. ↗Dir). Ǧiǧǧiga, which is "historically" an Absame (Bartire) land, includes, as said, communities of various (some of them formerly Oromo) origins which all speak the same Northern dialect of "common Somali", like the other Daarood-Absame (Yabarré, Bartíre, Abaskuul, Bursúg) of the Harär-Fiyaambiro area. The differences found are more socio-linguistic than linguistic, as they are shared by the former Oromo-speaking Ǧaarso and Géri-Baabile (s. Morin 1995:129–220; 307–53). Before the adoption of the Somali orthography (1972), a non-alphabetic "G. script", also known as "Boorama script", had been initiated by *šayḫ* ^{c}Abdaraḥmān, *šayḫ* Nur (Lewis 1958). Another prominent literary figure is Ḥassan *šayḫ* Mumin (Ǧibrír Yuunis), playwriter (*Šabeelnaagood*, tr. by Andrzejewski 1974) and oral source of the *Contes de Djibouti* (Morin 1980).

Didier Morin

Gädam

G. (**ገዳም**, pl. *gädamat*) means literally a wilderness, plain, desert or other uninhabited place, and by association a ↗monastery. Although the

G., like a ↗*däbr*, usually had close ties to the emperor and his representatives, it was at the same time more autonomous. Imperial control over the selection of the abbot of a G. was usually limited to confirming a candidate elected by the monastic community itself. While the G. was usually located in a comparatively isolated area, it often had major influence within its region. G. were often endowed with large tracts of land. While they did not always have the imposing buildings or reputation for learning which characterized the *däbr*, they provided the clergy who filled ranks of the ↗Ethiopian Orthodox (Täwaḥədo) Church.

Gädl

G. (**ገድል**, pl. *gädlat*) literally means 'contending, [spiritual] struggle'; it corresponds to Greek ἀγών, ἀθλησις, but comprises also the meaning of βίος – 'Vita, biography [of a holy person]'. G. is the most popular genre of Ethiopian ↗hagiography, which is, in turn, one of the most important constituents of ↗Gəᶜəz literature.

The known G. can be divided into two major categories: (1) the translated passions of the martyrs and lives of ↗saints of other, particularly Eastern, Churches (↗*Gädlä sämaᶜətat*); (2) lives of local saints. Some of the translations were made from Greek in the Aksumite period, many more from Arabic in later periods, and obtained wide circulation in Ethiopia. It is presumed that these works exercised strong influence on the works of the second category, yet the issue has never been systematically studied. As to the second category, a preliminary bibliography lists almost two hundred indigenous works – G. of Ethiopian saints (KinBibl; Huntingford 1979), and there is little doubt that many more as yet uncatalogued G. exist. Though the number of the individual G. is considerable, most of them are presented in a relatively small number of manuscripts, due to the local character of the veneration of most of the saints. Most of the G. remain unpublished, and hence generalisations regarding these works must be made with caution.

The G. of a saint was usually written by a monk from the saint's own monastery, to be read, in the first line, at the commemoration feast of the saint (↗*Täzkar*). His goal was not to write a biography in the historical sense of that word, but rather to produce "hagiobiography", elevating both the saint and his monastery. Accordingly, he weighted his sources to create a work which suited his purposes. The manuscript evidence vindicates such a choice, for when two versions of a hagiography exist, it is usually the more imaginative and elaborate account which is represented in most manuscripts.

Although less sophisticated in language than theological works, hagiographic literature – in the first place G. – was no less central to the mission and purpose of the ↗Ethiopian Orthodox (Täwaḥədo) Church. In the G. the eternal truths of ↗Christianity were expressed not in the form of abstract discourse or scriptural citations, but through stories in which the saint lived these truths and demonstrated his worthiness by reliving – in the Ethiopian context – the deeds of great Biblical and ecclesiastical figures. Indeed, the invocation of scriptural precedents and of themes and *topoi* found in the lives of other saints is one of the defining characteristics of the G.

Despite its saintly subject matter, hagiographic literature did not partake of the exalted status of canonical literature. The monk writing a G. might shape and supplement his material, whereas the scribe copying a G. manuscript did not necessarily follow the same rules as one copying a canonical text. One may speak of the "perpetual renewal" of hagiographic texts, and as consequence the concept of a G.'s date of composition is imprecise and can refer to either the time it was first committed to writing or to the date at which a particular version was completed. Yet the "perpetual renewal" was not uncontrolled; apart from the textual alterations which emerged in the text of the G. during its circulation, cases of serious changes or complete reshaping of G. – and the saint's biography – are not very frequent. The examples of the Acts of ↗Täklä Haymanot and ↗Ewosṭatewos indicate that behind every such case there was a complex set of religious, political and literary reasons, which led monks to the idea of rewriting the G. of a saint.

Although the archetypal hagiographic work, Athanasius's Vita of St. ↗Anthony was already translated into Gəᶜəz from Greek during the Aksumite period, the indigenous composition of G. did not develop in Ethiopia until much later. The circumstances behind and the catalyst for this development, which apparently took place during the last decades of the 14th cent., are not clear. Yet, given the monastic milieu of the hagiographic literature, one can assume that the composition of the saints's lives was often coincided with the rise of the respective monastic community. E.g., only when ↗Däbrä Libanos of Šäwa assumed major importance during the first half of the 15th cent. were the lives of its leading figures – Täklä Haymanot, ↗Filəppos, ↗Märḥa Krəstos, ↗ᶜƎnbaqom, ↗Yoḥannəs – committed to writing. In some cases the existing G. of a saint may be an evidence of the change of the historical role of the monastery (cp. ↗Iyäsus Moᵓa), or a valuable testimony which persists long after the monastic community has declined or even disappeared (↗Samuᵓel of Däbrä Halleluya).

It is important to note that G. were usually composed many years and even decades or centuries after the death of their saintly protagonists. Thus the G. of ↗Lalibäla, ↗Yəmrəḥannä Krəstos, ↗Näᵓakʷəto Läᵓab were composed in the late 14th or 15th cent. long after the time of these rulers of the ↗Zagʷe dynasty, who lived in the 12th and 13th cent. Even a greater gap lies between the period of the ↗Nine Saints and the ↗Ṣadqan and the composition of their G. The lives of ↗Libanos (Mäṭṭaᶜ), ↗Gärima (Yəsḥaq) and ↗Päntälewon appear to date to the 15th cent., although some confusion persists regarding the precise date; the G. of ↗Zämikaᵓel Arägawi, as well as those of ↗Afṣe, and ↗ᶜOṣ all appear to have been composed many centuries after the events they recount.

As the examples given above indicate, there is a tendency for some G. to be produced in "clusters" and to share themes. Although not necessarily the product of the same period or authors, such works appear interconnected and it appears probable that later authors were familiar with the works of their predecessors. This is undoubtedly the case with the G. of the saints of the ↗Ewosṭateans and the ↗Stephanites. It also appears to be the case with the G. of the saints led by Filəppos of Däbrä Libanos, such as ↗Qäwəsṭos, ↗Anorewos the Elder, ↗Tadewos of Däbrä Maryam.

Most G. describe the exploits of saintly monks. Generally, some of them are described as leading rather contemplative ascetic life and concentrating more on their own salvation, while some others (this type prevailed in, e.g., in the hagiography of Šäwa, but was presented also elsewhere) tend to perform "active" contending, usually connected with intensive social and missionary activities. Typologically, the biographies of Ethiopian saints are shaped after different "types of sanctity". G. of the "righteous ones" from Baraknaha (Ṣadqan) – presumably an early hagiographic work – describe the deeds of the impersonal groups of saints of non-Ethiopian origin. Most of the G. depict the lives and exploits of the founders of monastic communities – (sometimes half-legendary) charismatic workers of miracles, and their successors – prominent superiors of the monasteries (with the activities pivoting not only on the spiritual and ascetic, but more on the social and political life). Unusually, the G. of the kings from the Zagʷe dynasty (believed to originate from ↗Lasta), while crediting them with many attributes of a monk, describe lives of the saintly rulers from the line that was considered "illegitimate". There are a few examples of G. of saintly persons considered "martyrs" (of *aṣe* ↗Iyasu I killed by his political enemies; of ↗Ananya of Däbrä Ṣärabi killed by a pagan ↗Oromo). There are a few G., composed most probably in the court milieu, which describe the life of "court saints" (like ↗Giyorgis of Sägla; ↗Yosṭinos). There is even at least one example of the G. of "repented sinner" – ↗Bäggəᶜu of Däbrä Ḥayq Ǝsṭifanos. While the G. of men greatly outnumber those of women, the latter are also subjects of G.; among the prominent ones who are commemorated are ↗Wälättä Peṭros, ↗Krəstos Sämra and the saintly Zagʷe queen ↗Mäsqäl Kəbra.

There was no single standard form for a G., yet every G. begins with an introduction (frequently rhymed or written in an elevated style) and ends with the formalised conclusion. Some G. are divided into chapters. Names of the authors of most G. remain unknown (more usual are indications of those who committed the composition of a G. or the creation of its copy). In many cases, the G. is followed by Miracles of the saint (↗*Täᵓammər*) and ↗*mälkəᵓ* in his honour. A few G. gave subjects for church murals and series of illuminations. Since G. were frequently read aloud in a church, their writers often shaped the material to present the story in as interesting a manner as possible, to instruct and educate their readers, yet G. greatly differ in their language and style; they range from brief and simple works to extensive and elaborate compositions.

Though very different in their literary form, many G. can be said to follow a similar set of common *topoi.* E.g., in case of the G. of a saintly monk, the account begins with the saint's parents, who are often said to have been either ecclesiastics or of noble lineage (sometimes of royal family). Following a period of bareness, his mother conceives (this event being often announced by the appearance of an angel). The saint's birth and ↗baptism are also frequently described against the background of remarkable events. The future saint's holiness usually manifests while still a child as he speaks precociously and even performs miracles. While some saints are given to a monastery to be raised by their parents, others depart against their family's wishes in order to avoid marriage and secular life. After a period as a novice, the saint becomes a monk and in most cases travels to the metropolitan to be consecrated as a priest. Struggles with the forces of evil represented in the first place by ↗demons and magicians are a common theme in the G. as is the conversion of non-believers. G. of many saints recount their battles with secular rulers, in particular Ethiopian emperors (e.g. ↗ᶜAmdä Ṣəyon I), in great details, while others stress their warm relations with the court. G. frequently report of saint's pilgrimages to ↗Jerusalem, the Scetis and holy sites and prominent monasteries in Ethiopia; another common place is encounter with other saints and holy monks.

Whatever its circumstances, the death of the saint is depicted as a blessed event. One of the distinctive elements in a G. is the "covenant" or "pact" between the saint and Christ, or ↗*kidan*. In the *kidan*, the Lord promises to forgive the sins of those who pray or give charity in the name of the saint. The *kidan* usually appears in a G. shortly before the saint's death. The saint's burial is often accompanied by miracles, which are also related in the G.; in many cases, the initial site of a saint's burial differs from his final resting-place and the subsequent translation of his remains could become the subject of another account, incorporated into his G. (in a few cases, such accounts became independent works).

Episodes and stories related in the G. of some Oriental and the most known Ethiopian saints (e.g., the martyrdom of the people of ↗Naǧrān; the conversion of ↗Motäläme by Täklä Haymanot; the ascension of Zämikaᵓel Arägawi on ↗Däbrä Dammo) were widely known and vividly remembered; they circulated in the form of oral legends and exercised a strong influence, reaching as far as the works of the modern Ethiopian writers.

To this day, published editions of G. (not all of them following the criteria of the textual criticism, aimed at the reconstruction of the archetype of the whole tradition) have continued to outnumber greatly critical studies or attempts at synthesis; there is still no general scholarly overview of this literature. As yet, we are unable to reconstruct in full the history behind the composition of a G., lacking a systematic chronological survey of the genre.

Gädlä NN ↗NN: Gädlä NN

Gädlä sämaᶜətat

G.s. (**ገድለ፡ ሰማዕታት**, '[Spiritual] Contendings of the Martyrs') is a traditional title for different collections – virtually, taken together, the main extant *corpus* in Gəᶜəz – of the Acts of the non-Ethiopian martyrs and saints venerated by the ↗Ethiopian Orthodox (Täwaḥədo) Church. The name G.s. is found as early as in a book-list from ↗Däbrä Ḥayq Ǝsṭifanos dating to 1292 (cf. Sergew Hable-Selassie in OrbAethChoj 246f.), although it is difficult to know exactly what sort of work is meant there. On the whole, the Acts of the extant collections amount to 140, less than one third of which have been edited or studied, and belong to various hagiographic genres: *acta* (↗*Gädl*), *confessio*, *martyrium* or *passio*, *epistula*, as well as dialogue, homily (↗*Dərsan*), miracles (↗*Täᵓammər*) etc. They mostly concern Egyptian martyrs, but also saints venerated in both eastern and western Christian traditions: e.g., legendary figures and historical personalities, such as Phileas, Bishop of Thmuis in the early 4th cent. (the majority of the saints of the G.s. are to be found in the *Bibliotheca sanctorum* 1961–70, and *Bibliotheca sanctorum orientalium* [= EncSan]; for the Oriental tradition cf. BHO, though now outdated). So far, there is no complete bibliography on all the texts of the G.s.

In the manuscripts of the G.s. the individual texts are usually distributed according to the commemoration days of the saints, but neither the occurrence nor the sequence of the pieces is fixed. The result is that the title G.s. can refer to manuscripts very different in arrangement and contents and easily overlap with such other titles as that of the *Gädlä qəddusan* ('[Spiritual] Contendings of the Saints'). In fact, a comprehensive work by the name G.s. can hardly be said to have ever existed, nor can it be identified with the few, though important, Gəᶜəz texts published as *Acta martyrum* by Esteves Pereira (1907). Yet, the Acts of Fasilädäs (*ibid.*, 3–64 [text]) are one of the most famous pieces of the G.s., their authorship being attributed to "Kələstyanos [Celestin] Pope of Rome"; and Fasilädäs appears in turn as the central character of a hagiographical cycle of its own, based upon his fabulous relations with other martyrs and emperors: Yosṭos, Aboli and Tawkəlya; Tewodros, Bänadəlewos, Theodore "the Oriental", Abadir, ↗Gälawdewos, Fiqṭor, ↗Susənyos.

The texts found in the G.s. were chiefly translated from the Arabic, starting at least from the second half of the 13th cent., as can be argued on the basis of both the aforesaid inventory from Däbrä Ḥayq, listing a number of texts later included in the G.s. manuscripts (on Aron; Bärbara and Yolyana; Martyrs of ↗Nağrān; Qirqos; Giyorgis; Ṗänṭälewon "the magician", not one of the ↗Nine Saints), and of a colophon dating to 1292 as well. This could also be the *terminus ante quem* for some other texts in the G.s. (on Ewosṭatewos; Qozmos and Dəmyanos; Märqorewos; Minas; Yaᶜəqob "who was cut to pieces", cf. Bausi 2002:7ff.). A number of scribal subscriptions from the 14th cent. attribute a more or less explicit role in the translation to ↗Sälama "the Translator", Metropolitan of Ethiopia in ca. 1348–86 (texts on Abäkəräzun; Abuqer and Yoḥannəs; Arsanyos; Gälawdewos; Nob; Yəsḥaq of Difra; Yosṭos, Aboli and Tawkəlya; Miracles of Tewodros of Awqiṭos; Orni; Abraham "the stone-cutter", cf. *ibid.*, 10f.). The possibility of a direct Coptic *Vorlage*, explicitly stated for Fasilädäs's hagiography (cf. Esteves Pereira 1907:3–64 [text]), allegedly translated into Gəᶜəz in 1396/97 by the Egyptian monk Səmᶜon of the monastery of St. Anthony (↗*Sənkəssar*), has not yet been critically evaluated. A certain number of texts translated from the Greek, probably in the Aksumite age, are likely to represent an older layer of the Gəᶜəz literary tradition (e.g., on Arsenofis; Euphemia; Tewoflos, Ṗaṭroqya and Dämalis; Filəyas, "Phileas" Bishop of Thmuis; possibly Ǝmrayəs, and ↗Cyprian and Justa; cf. Conti Rossini 1938; Ricci 1947; Bausi 2002: 15ff.).

In a number of cases the Gəᶜəz version of a G.s. text is the only extant, or the most important witness of texts otherwise lost or only fragmentarily preserved in the languages of the Christian Egyptian tradition: Greek, Coptic and Arabic (cf. Conti Rossini 1899:210 on the hagiography of Julius of Aqfahs, the pretended author of a number of texts in the G.s.; cf. Cerulli 1959).

Great collections of Acts of the Martyrs must have emerged little by little, while in the manuscript tradition many of the individual texts, having entered homogeneous selections of hagiographic materials, can also appear isolated or within books which are of not purely hagiographic content. Among the manuscripts with a more or less fixed collection and readings for a number of months variable from two up to twelve (which should properly be styled as *Menologion*), one can mention mss. BritLib Orient. 686–90; BN Éth. 131 and d'Abbadie 110 and 179; VatLib Et. 264 and Comboni et. 202 and 212; EMML 1479, 1766, 1824, 1826, 1827, 2514, 2796, 6244, 6694, 6834, 6903, 6951; Ṭānāsee 121 = Dāgā Esṭifānos 10, Ṭānāsee 122 = Dāgā Esṭifānos 11. Other manuscript collections of hagiographic interest focusing on monastic personalities could better be termed *Gädlä qəddusan*, but are indeed comparable with that of the G.s.: e.g., mss. EMML 141, 1834, 1844, 1939, 7602, and also 1763, a very peculiar archaic collection, the importance of which goes far beyond its importance for the hagiographic genre (cf. Bausi in PICES 14, with further references).

Some manuscripts offer several readings for the same month, among which hagiographic texts are otherwise frequent in the general G.s. collections: e.g., ms. BritLib Orient. 691, 692; BN d'Abbadie 92; EMML 1840, Staatsbibliothek zu Berlin, Ms. or. fol. 117.

The chronological distribution of the G.s. manuscripts (to a greater extent dating to the 14th–15th cent.) is a clear mark both of the importance of the collection before the emergence of the "first recension" of the Gəᶜəz *Sənkəssar* at the dawn of the 15th cent., which in turn absorbed short texts from the G.s. in the course of time (cf. Colin 1988:311f.), on the one hand, and of the composition of hagiographies concerning Ethiopian saints, on the other. In a different perspective, the hagiographic literary tradition collected and expressed in the texts of the G.s. had a pivotal role in the development of both the indigenous Ethiopian ↗hagiography and its iconographic patterns (cf., e.g., Balicka-Witakowska 1996; ↗Equestrian Saints). For Ethiopian Christians it was also one of the main opportunities to have a share in a heritage common to other Churches of the Christian Orient.

Alessandro Bausi

Gaᶜəwa

G. (ጋዕዋ) was a 16th-cent. female ruler in northern Ethiopia. In the *Futūḥ al-Ḥabaša* she appears as a sister of Makattar (Mäkättər), *sulṭān* of Mazağa (↗Mäzäga). During the *ğihād* of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"), Makattar, eager to rid himself of his dependence upon the Christian monarch, allied with the *imām*, but died only three days after he was personally visited by Aḥmad Grañ – who was thereby able to reach the northernmost point in his Ethiopian campaign. G. kept the death of Makattar secret for three days.

After the defeat of Grañ's army, G. seems to have continued to resist; the Chronicle of *aṣe* ↗Gälawdewos reports that there was fighting between G. and the *baḥər nägaš* ↗Yəsḥaq. According to the autobiographical sketch by the monk ↗Ṗawlos, it took place in 1557, but nothing is said about the outcome of this clash. In fact, it seems to have followed the Turkish landing at ↗Massawa in March 1557 (a few days after the new Catholic "patriarch" Andrés de ↗Oviedo), occupied ↗Ḥərgigo and seized ↗Dəbarwa. G.'s nephew, Habem [Ibn] Dilado, collaborating with the Turks, invaded the territory of *baḥər nägaš* ↗Yəsḥaq, but was defeated and captured (Couto 1777–88; cp. Conti Rossini 1918:292, no. 2). As the Turks tried to penetrate further inland, Yəsḥaq beat them back to Dəbarwa. Then he returned to Mäzäga, fighting G., and defeated her. She fled to Dəbarwa and stayed there. After a short period of Turkish military successes (the seizure of ↗Däbrä Damo in 1558), ↗Özdemir *paša*, seeking territorial gains, allied with G., who had offered help in exchange for Turkish support. He left a garrison in Dəbarwa (G.'s soldiers are reported to have joined it, guarding G.'s property) and headed to Mäzäga with a large detachment. But, many of the Turks, including Özdemir, fell ill due to the bad climate there. In the meantime, Dəbarwa's garrison was in difficulty. The Turks, together with G., decided to flee to Massawa, but on their way they were attacked and massacred by the locals, who captured G. and all her possessions. According to Ṗawlos, G. died in 1559 (elsewhere her death is placed in the same year as *aṣe* ↗Minas – 1562/63, s. Ellero 1948:114). Nothing is reported about her successors.

The Chronicle of Gälawdewos calls G. "the queen of Säläwa", but the *Futūḥ al-Ḥabaša* reports that, after Makattar's death, G. became his son Nāfiʿ's regent and ruled over Mäzäga and the neighbouring areas. These regions, later to form ↗Wälqayt, and Mäzäga in particular, were predominantly Muslim. The change in the distribution of the population in favour of Christian Təgrəñña- and Amharic-speakers took place long after Aḥmad Grañ's wars. It is remarkable that Portuguese sources (Barros 1563) refer to G. as "the queen of the Nubians" (the *Futūḥ al-Ḥabaša* also reports that Makattar had 15,000 "Nubians" under his command), whereas the traditions of Wälqayt record that she was of ↗Bäläw origin.

G. is vividly remembered as an invincible and powerful queen. The Wälqayt tradition speaks of her coming from ↗Arabia, as well as of the places where she "stayed", fought etc. Her name is preserved in a number of local toponyms (ʿAddi Gaʿəwa, Qəṣri Gaʿəwa, Məʿəraf Gaʿəwa, s. Ellero 1948:114). Other traditions have it that she was much feared in the neighbouring regions (e.g., in ↗Ǝndärta), point to her "death place" (↗Ǝnč̣ät Käb) and even make her a wife of *imām* Aḥmad Grañ (Ellero 1941:68, no. 7).

Ǧaʿfar Bukko

Šayḫ Ǧ. (جعفر بكو, b. 1793, d. 1860) was a renowned Muslim mystic, preacher and reformer from Gattira in Laga Gora, a chiefdom in the western highlands of ↗Wällo. He inherited the "tradition of sanctity" from his father, Ṣiddīq (d. 1800/01). According to both oral traditions and written sources, Ǧ.'s birth and future greatness were revealed to Ṣiddīq by al-Ḫiḍr, an enigmatic figure in popular *Ṣūfī* lore.

Like his father, Ǧ. had an encounter with al-Ḫiḍr, who subsequently granted him the authority to propagate Islam. After acquiring an Islamic education in various parts of Wällo under the supervision of the prominent scholars of his time, he taught and preached in many centres of Islamic learning in the region.

Ǧ. is particularly remembered for the vigour with which he fought against corrupt Islamic institutions, offices and practices. He insisted on the abolition of rituals associated with the consumption of ↗*č̣at* (Arab. *qāt*) and condemned the activities of the officiators of *č̣at* ceremonies (the *abba gar*). He perceived their practices as being incompatible with Islam, especially their claim to be intermediaries between God and the faithful. He was vehemently opposed to the idea that *abba gars* were capable of foretelling the future. Not only did Ǧ. reject these claims, but he also took practical steps to stop their activity by destroying the centres for their ritual ceremonies.

The traditional *ʿulamāʾ* were another target of Ǧ.'s attacks because they turned a blind eye to the transgressions committed by the local chiefs. With respect to funerals, the chiefs would appropriate the alms and contributions made by the relatives of the deceased and use them to prepare a feast for those attending the funeral, instead of distributing the funds among the poor. Ǧ. additionally waged a perpetual struggle against Muslim traditional office-holders who failed to govern in accordance with Islamic law. This brought him into direct confrontation with rulers like ↗Adära Bille, the hereditary chief of ↗Laga Gora.

In addition to his reputation for condemning evil practices, Ǧ. was also known as a peacemaker. His reputation as an arbitrator in local conflicts is exemplified by his successful efforts to bring about a reconciliation between *al-Ḥāǧǧī* ↗Bušrā āy Muḥammad and Madanī. His commitment to, and upholding of, justice earned him the sobriquet of *sayf al-ḥaqq* ('the sword of truth'), which was given to him by Bušrā.

Hussein Ahmed

Ǧaᶜfar b. Abī Ṭālib

Ǧ., the Prophet ↗Muḥammad's cousin, was the third son of Abū Ṭālib, the uncle of the Prophet. He was ten years older than his brother ᶜAlī who was to become the fourth Caliph. Since Abū Ṭālib was very poor, he grew up with his uncle, al-ᶜAbbās. Ǧ. was among the very first inhabitants of ↗Mecca to believe in the prophethood of Muḥammad and to embrace ↗Islam. He took part in the ↗*hiǧra* to al-Ḥabaša (↗Abyssinia). Ǧ. and his wife, Asmāʾ bint ᶜUmays, left ↗Mecca for Ethiopia in the second group of Muslims, who sought refuge in the country of the Christian ↗*nəguś* (Arab.: *naǧāšī*) from the persecution of the pagan Arabs.

According to Islamic tradition, when a delegation of Meccan polytheists led by ᶜAbdallāh b. Abī Rabīᶜa and ᶜAmr b. al-ᶜĀṣ came to the King of Ethiopia to claim the emigrants back, he stood up as the leader of the Muslim refugees and spoke on their behalf in the presence of the *nəguś*, the Christian Ethiopian clergy and the two pagan emissaries. In a first audience, he recited some verses of the 19th *sūra* of the ↗Qurʾān (*sūrat Maryam*), which mention the reverence to the Virgin ↗Mary. On a second occasion, when ᶜAmr b. al-ᶜĀṣ told the *naǧāšī* that Muslims blaspheme Christ by calling him a slave, Ǧ. successfully rebutted the charge with a quotation from the fourth *sūra* (*sūrat an-nisāʾ*), that explain the Islamic views about Jesus. The Ethiopian king was so favourably impressed by the content of these passages of the Islamic holy book that he decided to grant the Muslim refugees a secure shelter in his land and to reject the request of the Arab pagans to expel them back to the Arabian Peninsula. Islamic tradition further maintains that the *naǧāšī* converted to Islam, thanks to the preaching of Ǧ.

During his stay in Abyssinia, Ǧ. begot from his wife a son, called ᶜAbdallāh, who was the first Muslim born in Abyssinia. Sources are not unanimous about the other sons of Ǧ.: al-Nawawī speaks of three sons (ᶜAbdallāh, Muḥammad and ᶜAwn), Ibn ᶜInaba gives the names of eight sons (ᶜAbdallāh, ᶜAwn, Muḥammad al-Akbar, Muḥammad al-Aṣġar, Ḥamīd Ḥusayn, ᶜAbdallāh al-Akbar, ᶜAbdallāh al-Aṣġar), all born from Asmāʾ.

Ǧ. came back to ↗Arabia and once again met the Prophet on the day of the conquest of the town of Ḫaybar (A.D. 628). According to Islamic traditional sources, Ǧ. kissed Muḥammad between the eyes, the Prophet embraced him and said: "I do not know what makes me feel happier, the conquest of Ḫaybar or the arrival of Ǧaᶜfar?"

In September 629 A.D. (*ǧumādā al-ūlā* of the year 8 H.) Muḥammad organized a military expedition across the Byzantine (↗Byzantine Empire) border. The Prophet appointed Zayd b. Ḥāriṯa as the first commander of the Islamic troops. In case Zayd should die, Muḥammad ordered that Ǧ. should replace him as the head of the army and, if Ǧ. should fall as well, ᶜAbdallāh b. Rawāḥa should be there to take his post. When Zayd died, Ǧ. took command of the Islamic army and fought bravely. He cut his horse's hocks so that it was impossible for him to turn back and flee from the enemy. It is said that he was the first in the history of Islam to do that. His two hands were cut off but he managed to keep the Islamic flag by clasping it to his breast with the stumps. He finally fell dead as a martyr of the faith, at Muʾta in the Byzantine territory when he was almost 40 years old. His successor as the commander of the Islamic troops, ᶜAbdallāh, also died after him. Ǧ. was buried at Muʾta in a common tomb which he shared with the two other commanders of the Muslim expeditionary force.

Islamic tradition portrays Ǧ. as being physically and morally similar to his cousin Muḥammad. The Prophet himself said: "You look like me, physically and morally". Thanks to his generosity, he acquired the nickname Abū l-Masākīn ('the father of the poor people'). After G.'s ↗martyrdom, Muḥammad stated that he saw him in a vision while flying in paradise with two bloodstained wings, together with angels: hence he came to be called Ǧaᶜfar ḏū l-Ǧanāḥayn ('G. the one with the two wings') and Ǧaᶜfar aṭ-Ṭayyār ('G. the flyer'). In some Islamic traditional sources Ǧ. is also called "ḏū l-hiǧratayn" ('the one who took part in the two *hiǧras*', i.e. to Abyssinia and to Medina), but this has no historical support.

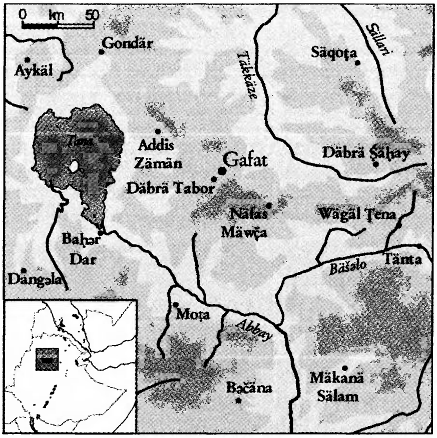
Alessandro Gori

Gafat

G. (ጋፋት, in European sources Gefat) is a small locale north-east of ↗Däbrä Tabor, in historic Bägemdər, near ↗Ǧan Meda. In June 1860 *aṣe* ↗Tewodros II designated it a permanent settlement for a group of Protestant missionary artisans – Theophil ↗Waldmeier and Karl ↗Saalmüller among others – who were associated with the ↗St. Chrischona-Pilgermission Institute at Basle, Switzerland. A number of other Europeans, who were not associated with the mission, also joined the community. At G. the artisans built a number of European-style houses, a large workshop and a school, which taught both literacy and technical skills. The workshop included a foundry where the craftsmen repaired muskets and manufactured light weaponry. At the beginning of 1861, the workers began making mortars, an activity which increasingly dominated their time and efforts as Tewodros's desire for bigger and more powerful weaponry increased. In 1863 Protestant missions to the ↗Betä Ǝsraʾel, who had been active in Dämbəya, were suspended and their agents sent to G. The community grew again in 1864 when, following a crisis with the British consul, Charles Duncan ↗Cameron, Tewodros sent the Germans detained in the royal camp to G. In addition to the Europeans who settled there, ca. 1,000 Ethiopians also came to the settlement to work and learn technical gun-making skills.



Aṣe Tewodros was deeply committed to military reform. Consequently, he tried to accrue as much weaponry and artillery as possible – rifles, guns, cannons etc. More importantly, he also sought to acquire knowledge about weapons and artillery production and pass this skill on to his people. In the course of time, G. became the principal site at which Tewodros's desire for military reform came into being and, according to Bahru Zewde (BZHist 34), "... more than any other place, [G.] symbolised Tewodros's modernizing drive".

In April 1867, the G. workshops and houses were destroyed by royal order and its resident European colony was moved to Däbrä Tabor, and then to ↗Mäqdäla the following October, where they were freed by the British expeditionary force of 1868.

Gafat

Gafat language

G., a South ↗Ethio-Semitic language, was formerly spoken in the district of Wämbärma, south-west of ↗Goğğam in the region of the Blue Nile (↗Abbay), west of ↗Däbrä Marqos.

G. was already mentioned in three short sentences by Hiob ↗Ludolf in his *Historia Aethiopica* (1681, vol. 1, chs. 10, 60), where he compared it with Gə^{c}əz and Amharic. An 18th-cent. translation of the Song of Songs (*yäsälomon əğäwat əğä-əğä*) in G. (on the suggestion of James ↗Bruce) was published and annotated by Leslau (1945). In 1845 Beke noticed the decline of the language and spoke about its imminent disappearance. Nevertheless, a hundred years later (in 1947) Leslau was able to produce a comprehensive description of the language (published in 1956). It shows the G. language already partly Amharicized, and probably all former G. speakers now speak Amharic. Even as late as in the 1980s a few words were still remembered by an informant (Taddesse Tamrat 1988:152).

The G. are occasionally mentioned in Ethiopian chronicles and remembered by local traditions (Leslau 1966); Taddesse Tamrat (1988) provides a useful overview of available historical information (s. also the sub-entry on G. history). Their language shows links to the Northern and Western ↗Gurage idioms, dubbed Outer South Ethiopic by Hetzron (1972:8). E.g., the imperfect in a relative clause does not reveal any specific relative morpheme: G. *yəfätər säwwä* 'the man who will die (*yəfätər*)', as in Western Gurage (↗Čaha, ↗Ǝnnämor, ↗Muḫər, ↗Mäsqan, ↗Gogot) and ↗Soddo (Northern Gurage); the infinitive marker is *wä-* (*wa-*) prefixed to the kernel morpheme of the jussive-imperative: (0$_1$) *wäftär*, 'to die' (jussive *yäftär*), (0$_2$) *wäkämmər*, 'to pile' (jussive *yäkämmər*), as in Muḫər, Mäsqan, Gogot and ↗Zay (Eastern Gurage); the B type of the verb has *i* after the first radical: (0$_2$) *kimmärä*, 'he piled', *mizzänä*, 'he weighed', as in Soddo (*mizzäno*) and Zay (*mizänä*, without lengthening) – here all other Ethio-Semitic languages have either *e* (most of Gurage, e.g., *mezzänä*) or *ä* (Amh. *mäzzänä*).

A peculiarity of G. phonology is that labialization (as known from the labiovelars *k*^{w}, *q*^{w}, *g*^{w}, *h*^{w}) is extended to the labials (*b*^{w}, *m*^{w}, *f*^{w}): *rib*^{w}*ä* 'Wednesday', *zaf*^{w}*ä* 'tree', *dəm*^{w}*ä* 'head'.

The personal pronouns in G. are: sg.: 1st pers. *anät*(*ti*), 2nd pers. masc. *ant*, fem. *anči*, 3rd pers. masc. *wət*, fem. *yət* (cp. Gə^{c}əz *wəˀətu*, *yəˀəti*), pl.: 1st pers. *ənni*, 2nd pers. *ənnantum*, 3rd pers. *əlläwm*, *ənnälläwm*. The 3rd pers. sg. suffix pronouns to the noun are also archaic in that they still show an *h* (as in Gə^{c}əz): masc. -(*ə*)*ho*, fem. -(*ə*)*hä*. Unique is the 1st pers. sg. suffix -(*ə*)*ğğä*, e.g., *gäğğ-əğğä*, 'my house (*gäğğä*)'. A 3rd pers. sg. object suffix pronoun to the verb *-i* besides *-ni* is rather rare in Ethio-Semitic: *əb*^{w}*-i*, 'I (will) give him', *wabhu-ni*, 'I gave him'. The copula is based on a morpheme *n-* (as in Ethio-Semitic in general): *-n*, 'he is', -*nähä*, 'you (m. sg.) are', *-näwm* 'they are' (e.g., *əññə əmmuna-n*, 'this is big [*əmmunä*]'), but *-y*, 'she is'. With nouns and pronouns as predicates, another copula with **ttä-* plus object pronoun suffixes is used: sg. 3rd pers. masc. *-tto*, 2nd pers. *-ttähä*, 3rd pers. pl. *-ttäwm*, e.g. *wət al-əğğä-tto*, 'he is my brother (*alä*)'. The definite article is *-š*, e.g., *gäğğə-š*, 'the house (*gäğğä*)', *zafu-š* (*zaf*^{w}*ə-š*), 'the tree (*zaf*^{w}*ä*)'. In general, nouns show a final *-ä* element, but *mossay*, 'child' is an exception.

The 3rd pers. pl. affix in perfect, imperfect, jussive and imperative is *-i*^{w}*m*, e.g., (0$_3$) *dakkäm-i*^{w}*m*, 'they repeated', (0$_1$) *t-ifärk-im*^{w}*-am*, 'they are not (*t-…-am*) able'. The derived verb stems are A, T and At. The At$_3$ stem is the causative of the reflexive (as in Amh.). The At$_2$ stem is the simple causative to 0$_1$ and 0$_2$ (as in Soddo and Zay): (At$_2$) *at-riggäṣä* caus. of (0$_2$) *riggäṣä*, 'he danced'. The weak verb classes are (all 0$_1$): *bällä*, 'he ate' – *yəbälä*, 'he eats' (Amh. *bälla – yəbäla*), *bäššä*, 'he sucked' – *yəbäš* (Amh. *qärrä*, 'he remained' – *yəqär*), *maṣä*, 'he beat' – *yəmiṣ* (Amh. *lakä*, 'he sent' – *yələk*), *qomä*, 'he stood' – *yəq*^{w}*im* (Amh. *qomä – yəqom*), *räṣä*, 'he ran' – *yəriṣ*.

The word order is Subject-Object-Verb. Specifying elements such as adjectives, relative clauses, and adverbs precede the elements to be specified.

G. vocabulary can be illustrated by the following ten-word list: *əğğä* 'one'; *ələttä* 'two'; *sostä* 'three'; *əsatä* 'fire'; *ägä* 'water'; *aymərä*, *ç̣äbärä* 'sun'; *ṣäräqä* 'moon'; *sənä* 'tooth'; *däm*^{w}*ä* 'blood'; *məlasä* 'tongue'.

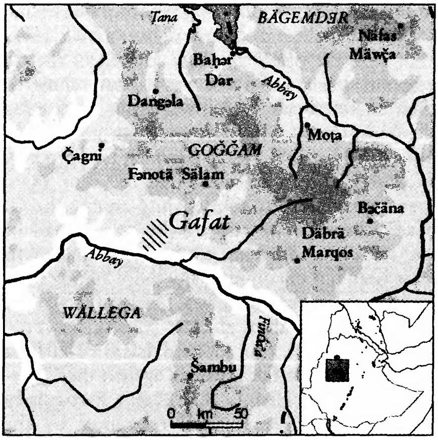
Rainer Voigt

Gafat history

Before the 16th cent., documentation on the G. is scant, being limited to occasional references in the hagiographic literature and in the Old Amharic praise songs for victorious emperors. It is only from the 1520s onward that we possess somewhat richer data: in the accounts of some Portuguese visitors to Ethiopia, on the one hand (↗Alvares, ↗Bermudez, ↗Almeida), in the indigenous chronicles, rapidly evolving in the 16th cent., on the other. The window on G. life and history thus opened is, however, virtually closed again in the early 1600s. At that time the G. began to suffer the full impact of the Oromo expansion and hence ceased to be important partners or adversaries of the Christian empire in their own right. Therefore, they are little mentioned in the later Gəʿəz sources.

In the 16th cent. the G. inhabited a long stretch of territory on the left bank of the ↗Abbay, extending from the Wäläqa river in northern Šäwa well into eastern Wälläga (historical ↗Damot), probably up to the ↗Didessa river, and perhaps even beyond. Southwards their area of settlement extended as far as the headwaters of the ↗Awaš. The few available earlier data indicate that the G. had inhabited at least substantial portions of this territory already in the previous two centuries.

While possessing a sense of ethnic unity, the different G. subgroups apparently never developed a set of common institutions and hence lacked political cohesion. This enabled the Christian monarchs largely to deal with those subgroups separately: an obvious strategic advantage. Despite this, many G. fiercely (though only intermittently) resisted the extension of the Christian empire's control over their ancestral lands, which earned them a solidly bad reputation in the former. Thus, ↗Särṣä Dəngəl's chronicle, e.g., on two occasions, characterizes the G. as insubordinate barbarians, thieves, waylayers, and merciless murderers (CRHist 11, 119f.). This negative Christian attitude influenced the early Portuguese authors, who equally mostly present the G., overwhelmingly based on hearsay, in a somewhat unfavourable light (BeckHuntAlvar 458; Bermudez in Whiteway 1902:217, 232f., 242). Against this background of collective denunciation, it comes as a surprise that the Gəʿəz chronicles on a number of occasions show individual G., or even whole G. groups, acting as loyal supporters of Christian monarchs (CRHist 11, 22 [text]; PerChron 12, 23, 25f. [text]). This clearly demonstrates that the generalizing negative statements to be found in the extant sources are one-sided at best. Moreover, a hostile G. attitude to the Christian kingdom, where it was in fact displayed, likely often stemmed from the experience of being harassed, raided or even killed by its representatives. The sources, at any rate, unabashedly mention quite a few such events (CRHist 119f., 162–65 [text]; PerChron 25ff., 28f., 30 [text]; Bermudez in Whiteway 1902: 233).



With respect to their physical appearance, both Alvares and Almeida independently describe the G. as generally rather tall in build and of a comparably light complexion.

In terms of religious outlook and affiliation, the G. during their observable history present no homogeneous picture. While traditionally, for obvious reasons, they followed their own "indigenous" religion, in the period under observation they were increasingly exposed to influences from Ethiopian Orthodox Christianity, on the one hand, and, to a lesser extent, from Islam, on the other. To these influences the G. responded in a variety of ways. Many clung to their ancestral cult, which was again a cause for denunciation in Christian and Muslim sources alike (CRHist 119f. [text]; BassHist I, 304 [text]). However, at least since the mid-15th cent. there were conversions to Christianity among the G. (TadTChurch 237), and by the second half of the 16th cent. adherence to this faith appears to have been not uncommon any more among their eastern and central branches. During the wars of ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ), however, some G. groups also adopted Islam or at least fought alongside the Muslims against the Christian state (BassHist I, 185, 304f.). Particularly interesting are some casual references by the early 16th-cent. Portuguese authors to a Jewish identity of some (apparently mostly central and western) G. (BeckHuntAlvar 458; Bermudez in Whiteway 1902:232). Perhaps these intriguing remarks can tentatively be interpreted as evidence of considerable Christian influence on the concerned G., to which, however, they responded, not by an all-out adoption of Christianity, but, due to the existing political antagonism, by opting for a variant within the same overall religious matrix. It is tempting to draw analogies with the emergence of the ↗Betä Ǝsraʾel from among Agäw populations further north. When the G. later were assimilated into the Amhara of Goǧǧam and Oromo of Šäwa and Wälläga, they shared the religious histories of these peoples.

The G. practised a mixed economy, cultivating the land as well as raising livestock. In Šäwa, outside the traditional area of ↗*ənsät* cultivation, the G. presumably planted the same cereals (mostly *ṭef* and wheat) as their Amhara and Agäw neighbours, but further south and west *ənsät* must have figured prominently in their agriculture, as Śärṣä Dəngəl's chronicle on one occasion characterizes this crop as the staple of the (western) G. (*hənsät zä-wəʾətu sisayomu lä-Gafat*: CRHist I, 140). In the 17th cent. Almeida noted their considerable cattle herds. According to the ↗*Futūḥ al-Ḥabaša*, the (western) G. in the 1530s did not possess any horses (BassHist I, 304f.). If they acquired them later in the century, they certainly did not do so in large numbers.

The Gəʿəz sources unambiguously provide the names of quite a few G. subgroups, such as the Abädray, Ašmän, Beräbabo, Dən, Harbakäl, Harbäwaš, Śat, Wänge, Yäsubli and Yäzämbäl. On account of the context in which they occur, as well as their phonotactics, we can further infer that the ethnonyms of Azär, Fätägäm, Mägdämu, Mälägʷ, Yäbadi and Yäqumbäl likely equally refer to G. subgroups, even though this is never explicitly stated in the sources. With regard to the Boṭ and the ↗Gämbo, however, which in the literature are occasionally counted among the G., there is reason for scepticism. A thorough sifting of the sources may well reveal the names of yet more G. subgroups.

From the late 16th cent. onwards the G. were increasingly exposed to the pressure of the northwards-migrating Oromo. Unable to resist their onslaught decisively, large numbers of G. left their ancestral homelands and migrated across the Abbay into Goǧǧam, taking with them many of their old place names (including the term Damot, which now came to designate a region north of the Abbay). Once in Goǧǧam, these G. were no longer capable of challenging the Christian monarchs, but instead looked towards them for protection. Over time they thus became loyal and inconspicuous subjects of the Christian empire. This development culminated in their linguistic and cultural Amharization, which was virtually complete by the mid-20th cent. Those G., on the other hand, who did not take part in the trans-Abbay exodus, but remained in their erstwhile homes and were fortunate enough there to survive the Oromo invasion, were rather quickly assimilated by the latter, thus equally disappearing from history as an independent ethnic group.

Gaki Šeročo

G.Š. (ጋኪ፡ ሼሮቾ, also known as Çinito, r. 1890–97), was the last ↗*tato* of the kingdom of ↗Käfa before it was incorporated into *aṣe* ↗Mənilək II's empire in 1897. He ascended the Käfa throne after a period of uncertainty on the question of succession to his predecessor, ↗Galli Šeročo (r. 1870–87). G.Š. successfully repulsed incursions from his powerful northern neighbours, Goǧǧam and Šäwa, first in 1890 and then in 1893. But his despotic rule undermined his power and popularity in his kingdom and thus made him vulnerable to the final assault in 1897. *Aṣe* Mənilək's forces opened a five-pronged offensive against the proud ancient kingdom. *Ras* ↗Wäldä Giyorgis Abboyyä, who was in overall command, was assisted by *daǧǧazmač* (later *ras*) ↗Täsämma, *daǧǧazmač* (later *ras*) Dämes, as well as ↗Abbaa Ǧifaar of Ǧimma, who had already submitted to Mənilək. After a nine-month-long resistance, G.Š.'s force was finally defeated on 9 September 1897. The victors returned to Addis Abäba with the subdued king, who was fastened with a silver chain that had been reportedly kept for this purpose. He spent the rest of his life in captivity. *Ras* Wäldä Giyorgis became the governor of Käfa.

Gälämso

G. (Amh. ገለምሶ, Oromo sp. Galamssoo) is a town in western ↗Harärge with an important symbolic and historical meaning for the birth of Oromo nationalism.

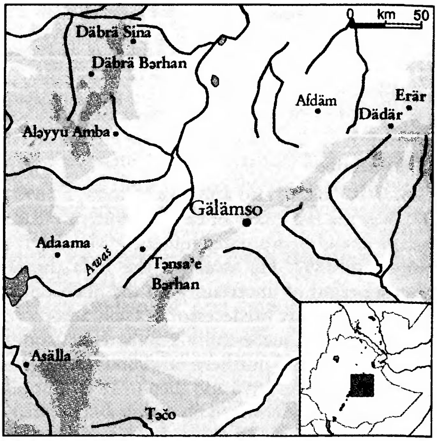
Located at the foot of Aw Šarīf Mountain, which is part of a mountain-chain that extends from ↗Çärçär to Gaara Guguu Mountain in ↗Arsi, G. has a population of around 10,000 inhabitants. Originally part of the Çärçär *awrağğa*, after 1974 it became capital of the Habro *awrağğa*. As resource-base of Habro, G. is an important commercial centre in the region. Habro, with its over 200,000 inhabitants, has a very rich economic base, both actual and potential, ranging from food to cash-crops and to animal-husbandry and is one of the most productive agricultural regions in Harärge. The town has one high school, four elementary schools, one Qurʾānic school, three mosques and one church, a health centre and a hospital. Muslim religious leaders have shown strong resistance against the spread of modern western education – American missions were unsuccessful in educating or converting Muslim Oromo – a factor which delayed the birth of an educated class in G.

According to local tradition, the town received its name from Galama Aw Saiid. The word *galama* has three interconnected meanings in Oromiffa: it can mean the ritual house of a traditional Oromo religious leader, a common word for ritual house in general, or a shrine. In the name Galama Aw Saiid, the term combines all three meanings. *Āw* Saᶜīd ('Father Saᶜīd') is universally regarded as a saint and as the first bearer of Islam among the ↗Ittuu Oromo. In the south-western corner of the town, there is still a mosque, a river and a village bearing his name, reflecting his importance for the history of G. As a historical figure, he probably lived during the second half of the 16th cent., when the Ittuu Oromo settled in Č̣ärč̣är, and, consequently, may not have converted many Oromo to Islam. His shrine appears, however, to have served two purposes. The Oromo may have used it as a neutral ground for settling disputes among themselves and with their enemies – Ittuu Oromo traditions regard him as an Oromo religious leader whose duty was to preach peace among Oromo groups. The shrine also served as a centre for the spread of Islam among the Ittuu Oromo during the 18th and 19th cent. Hence, the Oromo absorbed *āw* Saᶜīd into their cultural heritage and elevated him to the exalted status of a saint.

G.'s pre-eminence for Oromo nationalism came with the Odaa Bultum celebration, General ↗Taddässä Bərru and Ṭiroo. Odaa Bultum, near G., was the central ↗*čaffee* of the Oromo in Harärge. There the traditional ↗*gadaa* government took place, celebrated every eight years with traditional ritual activities and the proclamation of laws. More than three centuries after being abandoned, wealthy citizens of G. revived Odaa Bultum as a symbolic attempt to recover Oromo traditional democracy.

Taddässä Bərru, one of the leaders of the ↗Mäč̣č̣a and Tulama Association, transformed G. into the centre of the Oromo nationalists. Among those who secretly visited him in G. were ↗Baro Tumsa, an intellectual who played a decisive role in the formation of the ↗Oromo Liberation Front in early 1974; Ahmad Taqi, a wealthy businessman who financed Oromo nationalist activities in G. and through whom Taddässä Bərru contacted the Oromo in and beyond G.; and ↗Elemo Qilḥuu, a businessman living in Aden, who, after his visit to Taddässä Bərru in G., organized the first guerrilla army for the liberation of the Oromo nation at Ṭiroo.

Gälämso, cattle market; photo 1972/74, courtesy of the Frobenius Institut, Frankfurt am Main (no. 1.02.16.03)



Although the three were martyred, they left a lasting legacy in the history of G., etching it in the mind of a new generation of Oromo youth as the birthplace of Oromo nationalism. Today, their memory is well preserved by a beautiful Oromo song first heard in G. glorifying the names of the fallen heroes.

Mohammed Hassen

Gälanäš Ḥaddis

Ǝmmahoy G.Ḥ. (ገላነሽ፡ ሐዲስ; b. 1889 A.M. [1896/97 A.D.], Ṣəlalo Amanuᵓel, Yəlmanna Densa *awrağğa*, Goğğam, d. 12 *Ḥamle* 1978 A.M. [19 July 1986 A.D.], Ṣəlalo Amanuᵓel) was a famous ↗*qəne*-teacher. Her mother, *wäyzäro* Wärqənäš Ǝngəda, was a housewife and her father, *qesä gäbäz* Ḥaddis Kidan, was an outstanding church scholar and a *qəne*-teacher in the local church of Ṣəlalo Amanuᵓel. G.Ḥ. lost her eyesight at the age of eight years after a smallpox infection. Her father, however, provided her with a thorough church ↗education. G.Ḥ. perfectly mastered composition of *qəne*-poetry and studied the interpretation of the Old and the New Testaments (↗*Andəmta*), pursuing her education to the highest level.

Having graduated, G.Ḥ. assisted her father in teaching *qəne*. She married Ṭərunäh Bälay; the couple had two children, Addam and Mäsärät (a third child died at an early age). In 1936, when the Italians invaded Ethiopia, the majority of the population of Ṣəlalo fled. Ḥaddis Kidan and other church scholars and priests and the monks of Ṣəlalo Amanuʾel, who stayed behind to pray and safeguard the church, were executed by the Italians. The blind G.Ḥ. survived and, after the Liberation, she continued teaching.

G.H. became one of the distinguished *qəne*-teachers in Goǧǧam. She taught *qəne* for over 50 years and bestowed titles upon 150 *qəne*-teachers who came to her from different regions of Goǧǧam, Gondär, Təgray, Eritrea, Šäwa, Lasta and Lalibäla. In the 1970s she had over 150 students at a time; it has been reported that, all in all, during her life G.Ḥ. taught over 1,750 students. In the history of the Ethiopian Orthodox Täwaḥədo Church, G.Ḥ. was one of the very few female traditional scholars and the Church considers her one of the most celebrated *qəne* teachers and traditional scholars of the 20th cent.

In 1998, on the initiative of G.Ḥ.'s cousin, Täšomä Ḥaddis, the Synod of western Goǧǧam set up a memorial museum in Baḥər Dar, where records of some of her *qəne* are displayed. Only a few of her *qəne* have been collected and published. A scientific study of G.Ḥ.'s biography, her works and a complete collection and analysis of her *qəne* remain a desideratum.

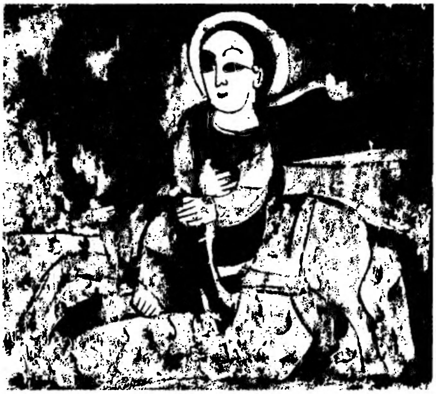
Gälawdewos

G. (ገላውዴዎስ) is the Ethiopian form of the name of Claudius, a Roman saint and a martyr during the Diocletian persecution (3rd/4th cent. A.D.). His Vita was first written in Coptic, but only some fragments have been preserved. According to the Ethiopic ms. London, BritLib, Orient. 700 (fol. 60v), the Acts of G. were translated into Arabic by the bishop of Asyūṭ (Likopolis), probably Constantine, in the 7th cent. Later, in the 14th cent., during the tenure of *abunä* ↗Sälama "the Translator", this text was translated into Gəʿəz.



St. Claudius (Gälawdewos) on horseback; detail from a tryptich; early 16th cent.; treasury of Däbrä Mäʿar Giyorgis Church; photo 2000, courtesy of Michael Gervers

Iconographically, G. is usually represented riding a horse. In the Ethiopian calendar he is commemorated on 11 *Säne*; according to the ↗*Sənkəssar*, G. was the son of the brother of the Emperor Numerian and lived in Antioch, where his figure was painted on the gates of the town. With his friend Fiqṭor (Victor), G. opposed the successor of Numerian, Diocletian, regarding his policy towards Christianity. For that reason, Diocletian exiled them to Egypt where both were killed. They are buried in Antioch.

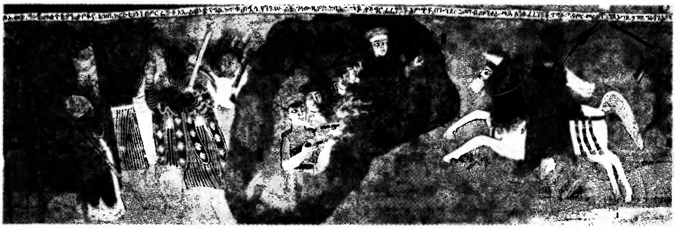
Gälawdewos

Aṣe G. (**ገላውዴዎስ** [after Claudius, the Roman-Antiochian martyr], regnal name **አጽናፍ፡ ሰገድ**, Aṣnaf Sägäd, 'The remotest regions submit [to him]'; b. 1521/22, d. 23 March 1559) ruled Ethiopia from 3 September 1540 until his death. When G. succeeded his father *aṣe* ↗Ləbnä Dəngəl on the throne, the state of which he took charge was on the verge of disappearance: by 1540 *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī's (Grañ's) decade-long *ǧihād* against the Christian empire had left little more than highland Eritrea and parts of Təgray under the Emperor's effective control. During the first decade of G.'s rule, however, the Muslim threat was successfully checked, initially with the aid of a Portuguese expeditionary force (Christovão da ↗Gama), and the Christian empire by and large restored territorially. The second half of G.'s reign saw the first stirrings of new challenges which only over the following generations were to reveal their full impact: the ↗Oromo migrations, the Ottoman establishment in parts of Eritrea (↗Ottoman empire) and the ↗Jesuit mission to Ethiopia.

G. was the second son of *aṣe* Ləbnä Dəngəl and *ətege* ↗Säblä Wängel. He followed his father on the throne after his elder brother ↗Fiqṭor, the natural successor, had been killed in battle by the Muslims in 1539. Besides Fiqṭor, G.'s known siblings were his younger brothers ↗Minas and Ya^{c}əqob, as well as his sisters Amätä Giyorgis, Säbänä Giyorgis and Wälättä Qəddusan. G. received a good education, which comprised training in martial skills as well as instruction in the literary heritage of Christian Ethiopia.

After G. had been installed as the new monarch in [Däbrä?] Damo (northern Təgray) in 1540, he did not seek to confront the Muslim forces in all-out war, but withdrew with his few remaining troops to the Šäwan hinterland. There, it appears, he wanted to assemble new forces and then harass the Muslims through guerrilla warfare. Since mid-1541, however, the arrival in Eritrea of about 400 Portuguese soldiers equipped with firearms strengthened the Christian side. While the Portuguese, too, suffered painful losses, they were able to inflict heavy casualties on the Muslim enemies. Late in 1542, the surviving Portuguese and G.'s fighters joined forces north of Lake Ṭana and, in February 1543, met Grañ's army in pitched battle at Zäntära (↗Wäyna Däga). The Christians scored a decisive victory and Grañ himself was killed. Without his charismatic leadership, the Muslim troops disbanded and scattered in all directions. At one stroke the Muslim threat to the Christian empire had been effectively averted; the occasional clashes that took place over the following two decades were of no strategic significance.

After the "Great War" G. considered it necessary to reassert the Christian empire's authority in the southern border-regions outside its Semitic-speaking heartland. For this purpose he conducted military campaigns against the ↗Gämbo, ↗Gumär, ↗Hadiyya and Wägäm peoples. On several occasions he already had to contend with Oromo forces. Under G. the Christian empire's centre of gravity moved to the south again. The monarch frequently stayed in ↗Däwaro and ↗Wäǧ, which appears to have been motivated by personal preference as much as by strategic necessity. He even had two permanent residences for himself built there, thereby giving up the old practice of the itinerant court. The last years of his reign, from 1557 onwards, were troubled by the establishment of an Ottoman foothold



Aṣe Ləbnä Dəngəl, his son *aṣe* Gälawdewos, the Portuguese and Ahmad Grañ; cloth mural; 19th cent.; Säqoṭa, church of Mädḫane ^{c}Aläm; photo 1993, courtesy of Michael Gervers in Eritrea (↗Özdemir *paša*) and especially by an Ottoman raid on ↗Däbrä Damo where his father lay buried. G. did not, however, deal with that new threat in person, but left this task to the local leaders and even popular resistance.

G. was a pious Christian, even though the attempts of his chronicle to portray him as a virtual (warrior-) saint appear exaggerated. Nonetheless, he found his way into the ↗*Sənkəssar*, where he is commemorated on 27 *Mäggabit*. G.'s faith found its most visible expression in the construction of the richly endowed church of ↗Tädbabä Maryam in Amhara, an enterprise in which he took a strong personal interest. This building-project served also to reaffirm the explicitly Christian character of the state after a time of unprecedented tribulation. Within the Christian sphere, the missionary endeavours of the Jesuits in Ethiopia from 1555 onwards had the potential to disrupt the traditional near-symbiosis of the state and the Orthodox Church. The mostly Portuguese Jesuits could build on the gratitude earned by their fellow-countrymen's crucial support in the fight against Grañ. The sources provide conflicting indications as to whether or not G. personally had sympathies for the Catholic teachings. *Raison d'état*, at any rate, made him firmly reject them and back the indigenous Orthodoxy. This stance is epitomized in the famous confession of faith associated with his name, the *Confessio Claudii* (1555).

Ethiopian and Portuguese sources agree that G. was of an unusually fine character. Even if one discounts the easily discernible panegyric elements, he emerges from the texts as almost a model ruler: a kind, courteous and generous person, endowed with a keen mind, genuinely interested in the welfare of his subjects, inclined toward clemency, but also determined and with a firm sense of purpose. The sources mention no wife of G. Instead, some manuscripts of the "short chronicle" speak of a much-beloved mistress that the Emperor had taken away from her lawful husband (by which his conscience later was deeply troubled). Without (legitimate) sons, we only know of two daughters, Säbänä Giyorgis and Mäsiḥawit. When G. died in battle against ↗Nūr b. Muǧāhid in 1559, he was consequently succeeded by his younger brother Minas.

Gälawdewos

G. (ገላውዴዎስ, b. ca. 1608, d. 1648) was the fourth son of *aṣe* ↗Susənyos and *wäyzäro* ↗Wäld Säᶜala, after Känäfrä Krəstos (d. 1614), *aṣe* ↗Fasilädäs and Marqos (d. 1626). During the last years of Susənyos's reign, the royal Chronicle mentions G. fighting aside Fasilädäs to maintain the Emperor's policy throughout the empire and after his death G. was closely associated with his brother's reign. In 1635 he seems to have been *däǧǧäzmač* of Bägemdər and/or of Damo and Səmen. However, sources from the monastery of Qoma Fasilädäs, founded by Wäld Säᶜala, considered him a rebel and according to oral traditions, G. was a challenger to the throne. The "short chronicles" briefly mention that in 1646 he was arrested and killed, together with his son Elfyos, in 1648. This story is also reported by ↗Ḥasan b. Aḥmad al-Ḥaymī, the Yemenite ambassador present in Gondär at the time. The Jesuits were also aware of the conflict opposing Wäld Säᶜala and G. to Fasilädäs, describing G. as a fierce supporter and a martyr for the Catholic cause. This claim, however, should not be considered real as it served their own purposes. G. may have been a quite powerful figure, since, according to a version of the "short chronicle", of the two metropolitans who arrived in 1649/50, one, Yoḥannəs, had been requested by him. The other, Mikaʾel, Fasilädäs's favourite, was finally accepted.

Gälawdewos

Abeto G. (ገላውዴዎስ) was the son of *ras* ↗Wäldä Giyorgis, a prominent figure at the court of *aṣe* ↗Iyasu I of Gondär. Sometime before his death in 1706 Wäldä Giyorgis made G. his heir, appointing him as *aläqa* of Wäldä Giyorgis's legacy. G. married *wäyzäro* Wälättä Ṣəyon, granddaughter of *aṣe* Iyasu I's queen, *əmmabet* Wälättä Ṣəyon, after whom she had been named. The young couple had at least one son, whom they named after his paternal grandfather, Wäldä Giyorgis.

During his lifetime, G. appeared as a witness for a number of social transactions. His principal distinction, however, was to become the first holder of what later generations, down into the 19th cent., would refer to as the *aläqənnät* of G., an estate consisting of rights to secular and church lands and entailing military responsibilities. G. last appears in the record bestowing the *aläqənnät* on *däǧǧazmač* Əšäte, the husband of his granddaughter. Əšäte was a prominent member of the court of *ətege* Məntəwwab (↗Bərhan Mogäsa), of whom he was a first cousin. The *aläqənnät* passed to Əšäte's son, Ḫaylu (*däǧǧazmač* ↗Ḫaylä Mikaʾel Əšäte) and on to Ḫaylu's daughter, Märṣit, with whom it ended when her descendants divided it among themselves. The story of G. is really the story of an Ethiopian noble family and of how it transmitted its property-holdings over the space of five generations.

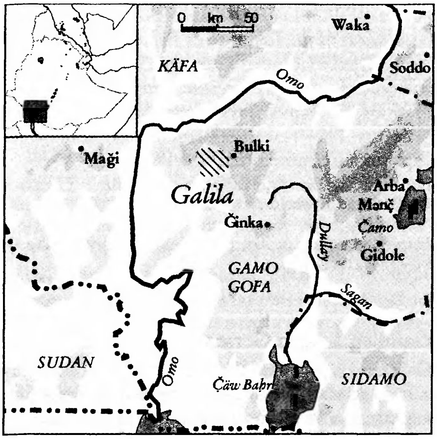
Galila

G. (ጋሊላ) is the name of two groups in southern Ethiopia. The first (also sometimes referred to as Gayla) forms part of the South Ometo-speaking ↗Aari-cluster (within Omotic) in southern Ethiopia. The name "G.", which also designates the main village, here refers to a territorial rather than an ethno-linguistic unit, although a dialectal difference does exist. G. was a "sacred kingdom" with a *bábi* ('king') line. Like its neighbours, G. was conquered in 1894 during Mənilək's military campaign; his imperial troops defeated G.'s *bábi* Ardaro. Due to the isolated and inhospitable terrain of G., however, it was not popular as a settlement-area for the northern conquerors; consequently, they never successfully implemented the ↗*gäbbar* system.

G. is a cold and windy highland area with altitudes of up to 2,500 m A.S.L. Its inhabitants raise sheep and cultivate *ənsät*, taro, beans, vegetables, barley and wheat. The G. also produce craftwork such as pottery, plates made from bamboo, which grows abundantly in the area, and leather-decorated flutes and horns. Such items are sold to neighbouring groups such as the ↗Basketo. Though the area is not conducive to cattle-raising, a small number are kept for ploughing the fields. Similarly to other Ometo groups, the G. used iron bars (*marǧǧo*) as a currency for exchanging goods. As in many other Aari areas, agricultural work is performed with collective work-parties, whose participants are provided with a measure of the local beer.

Like people in other parts of Aari and Basketo, the G. are organized in patrilineal clans – descent groups from the male line – whose members cannot intermarry. Many clan-names are also common among neighbouring groups. The Goirinṣi are the leading clan in the G. area – also related to the Basketo Goirinaa – and from this clan all chiefs and kings are descended.

According to Haberland (VSAe I, 186), the G. religious world-view recognized a pair of gods (the male *Sabi* and the female *Berri*), in addition to a third deity called *Čoiši* (which recalls the Wälaytta and Gamo *Ṭosi*). Sheep were sacrificed for various rituals, including the purification of transgressions (*ébi*). Though the office of *bábi* effectively disappeared after 1894, the G. kept their priests (the *godimi* and *godi*) and some other minor ritual specialists. The G. have undergone a substantial cultural influence from the neighbouring Ometo-speaking peoples, such as the ↗Gofa



(with whom they often fought), ↗Gamo, ↗Oyda and ↗Wälaytta. In recent decades the influence of Basketo on G. has also notably increased.

Another group called G. was first mentioned by Haberland (1960) and consists of a few hundred North Gurage-speaking people, living as cultivators (of *ənsät*, grains, vegetables and potatoes) on an island in the ↗Wänči crater lake, and on the slopes of the mountain located between the towns of Wäliso and Ambo. This Christian population is related to the Aymällal ↗Gurage (↗Soddo) and became isolated from other Gurage-speakers during the Oromo expansion (16th cent. onwards). Information on this group is lacking, but their assimilation of Oromo culture seems to be an ongoing process.

Jon Abbink

Gälila

G. (ገሊላ) is an island in the northern part of Lake ↗Ṭana, which was uninhabited when the saint ↗Yafqərännä Ǝgzi', founder of the communities of Məṣle and Gʷəgʷəben, spent three years there (Wajnberg 1936:28). This retreat took place before the ↗*nəburä əd* of Ṭana Qirqos was sent by *aṣe* ↗ʿAmdä Ṣəyon I to Egypt to look for a metropolitan, who arrived in Ethiopia in 1337 (Cornuau 1991:13). After this, the monk Zäkaryas founded a monastery there with a church devoted to Christ (Gälila Iyäsus, sometimes called from the name of its founder G. Zäkaryas). Two manuscripts of the *Gädlä Zäkaryas* in Dämbəya's churches have been identified, but are still unpublished (KinBibl no. 191). According to the "short chronicle", the foundation took place during the reign of *aṣe* ʿAmdä Ṣəyon (BassÉt 100) – certainly after 1341–42, when Zäkaryas would have followed *abba* ↗Filəppos into his first exile to Dämbəya (Derat 1993:23).

The church was burnt by the troops of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī between March and May 1537 (with some differences between the chronicles' versions: BassÉt 106; Kropp 1988:15; s. also Perruchon 1893:282) and is said to have been restored by *aṣe* ↗Śärṣä Dəngəl and then rebuilt by *aṣe* Fasilädäs (ChTana 203f.). *Aṣe* Iyasu I also visited the church and, on 13 December 1687, ordered the official celebration of its founder Zäkaryas in Gondär (GuiIohan 114 [tr.]).

The present circular church is built of red square stones (s. the map by Angelini 1971, annex 7, ill. 50) and seems still to be adorned by some murals, painted by a certain Gäbrä Maryam at an unknown time (Yosef Libsekal 1990, vol. 2, 212f.). Some manuscripts and religious items from G. were shown in an exhibition in Essen, Germany, in 1963 (*Koptische Kunst* no. 507, 539, 540, 580, s. also the information, unchecked, in ChTana 205).

Gälila

G. (ገሊላ) is a long, rocky island lying about 1 km off the western ↗Zʷay shore opposite to the town of Zʷay. Originally fully terraced, cultivated and inhabited by peasants and fisherman until the end of the 19th cent., it is now thickly forested and has only one resident ↗Zay family and a priest. It continued to be inhabited by a few families of fishermen and weavers until the early 1970s when shore areas remained cleared for pasture and a few terraces were used for gardens. Its church, a solid round masonry structure painted in bright green, is dedicated to *abba* Täklä Haymanot and according to tradition was founded in the 13th cent. It occupies a walled compound on the highest section of the island (ca. 50 m) and originally possessed illuminated manuscripts; a few folios in possession of the Institute of Ethiopian Studies in Addis Abäba are attributed to G. The church is still (2001) served by a resident priest whose celebrations, on festival days, attract large numbers of believers. They reach the island in both traditional papyrus and (more often) steel boats.

Galinier, Joseph Germain

Captain G. (b. 1814, Bepech, Aude, d. 1888) was a French staff officer who undertook scientific exploration in Ethiopia in 1840–42. A graduate of the military academy of St. Cyr, he accompanied his friend and fellow officer Captain Pierre Victor ↗Ferret, whose career he mirrored. Co-author with Ferret of a three-volume travel account (s. Ferret – Galinier 1847), G. subsequently fought in Algeria and participated in the Franco-Prussian War, in which he was captured, being later promoted to the rank of general.

Galla

The (outdated) term G. (Amh. ጋላ) appears in many historical texts, both Ethiopian and foreign. Its exact meaning differed depending on context and period. Despite many inconclusive and often fanciful linguistic speculations, such as "shepherds" or "strangers who are guests", its origin remains unknown. It was predominantly used by highlanders for the (semi-)nomadic Cushitic, sometimes including Omotic, peoples in the south and east. It usually stood for the ↗Oromo, but also ʿAfar or even Dinka could be called G. During the 18th cent., the term was often used to refer to non-Christians ("pagan" or Muslims), in contrast to Amara (Shiferaw Bekele 1990:166f.; cp. ↗Amaaro). The Somali and other ethnic groups in the south used the term G. for the Oromo, while *galo* in Somali designates 'infidels' or 'non-Muslims' (Lewis 1966:37). The Añwaa lowlanders still use the term G. for highlanders. ↗Baḥrəy in his *History of the Galla* used the term as the name of the Oromo people who, in the 16th cent., successfully invaded the centralized and monarchic Ethiopian state. Baḥrəy mentioned a river Galanaa from were the G. originated. Aṣmä Giyorgis (BTafA) follows this assumption and the *Tarik zägalla* even states that the name G. derives from the name of a river "G." situated between Dawäro and Kätäta. Others argue, the Oromo group Galaan (↗Gullellee) might have inspired the term, others connect it to *gaalaa* ('camel'), brought by the camel-herding Karrayyuu of the Awaš to Šäwa in the 16th cent. Some early sources (cp. Tutschek 1844) indicate that G. was sometimes used as a term of self-reference but it is not accepted as such nowadays (cp. Zitelmann 1996:106f.).

Later, following the increasing cultural and linguistic dominance of Amharic, the word G. was used widely on the political and scholarly level, often without a negative connotation (cp. VSAe II). It came to be used, by both Ethiopian and European commentators, for both the Oromo people and their language (also Galləñña). The "Vicariate Apostolic of the Galla" (↗Catholicism), created in the 19th cent., encompassed all territories from Šäwa and the Gibe states to Käfa and Anfillo kingdoms. Oromo leaders founded in 1935 the "Western Galla Confederacy", a year later Italy created the province of "Galla e Sidama".

Starting from the mid-18th cent., the term acquired pejorative connotations in the Christian highland discourse (though still not as negative as ↗Šanqəlla or ↗Barya). The G. then came to be represented as a great human "tidal wave" (BZHist 9) and "a nomadic, destructive and purposeless force" (MesfGeogr 17) which had to be contained. The G. became the "outsider", the "stranger" or the "barbarian", the essential "other" against which the heterogeneous Abyssinians could unite. Implicit in this "representation of the G." was the "right of northern settlers to rule over Oromo tenants" (Hultin 1996:82f.). As this was taken over by agents of the central government, in accordance with official policies, the use of ↗Oromiffa was increasingly restricted in courts, schools and publications while Oromo customs (↗*aadaa*) and laws (↗*seera*) were forbidden or threatened. At the same time, education and communications improved, so the schooled and the travelled Oromo learned that they were the most numerous people in Ethiopia. Government policies of incorporation, which required a degree of Amharization, came to be interpreted as colonisation and provoked the very responses which they had been designed to prevent. The word G. itself, as applied to those who did not adopt northern customs, came to be resented as patronising and discriminatory. The success of the Oromo cultural and nationalist movements along with political decisions – the *Därg* forbade its use – has forced the term G. out of current literary and political use.

Gallabat ↗Qallabat

Galli Šeročo

G.Š. (b. ca. 1840, d. 1890), also known by the names Galliti or Galli, ruled the Kingdom of ↗Käfa for 22 years from 1868 to 1890. Internal issues and foreign invasions marked G.Š.'s reign.

The main external threat was the expansion of *nəguś* Mənilək of Šäwa (the future *aṣe* ↗Mənilək II). In 1886 Mənilək's general, *däǧǧazmač* Baša Abboye, invaded Käfa and caused significant damage until he was defeated by the Käfa army at Mera.

G.Š. also fought back several invasions by the Ǧimma King ↗Abbaa Ǧifaar II, who tried to make up for the losses due to the tax imposed by Mənilək by robbing his neighbours. G.Š. successfully fought Abbaa Ǧifaar's troops, stopping them at the Goǧäb River (Lange 1982).

Internally, this period saw the greatest increase of influence of the "foreign" monotheistic religions, such as Christianity (in the first place Catholicism) and Islam, that came to replace the traditional ↗*eqo* belief-system. G.Š. saw in the conversion the danger of dividing and weakening the country, especially in the face of the Šäwan expansion.

Apart from the internal damage caused by the religious shift, G.Š. saw the security of his kingdom endangered by foreigners – in the first place Catholic missionaries and Muslim merchants – travelling in and out of the country, as they could pass critical security and defence strategy information to his enemies. G.Š. banned European missionaries from entering Käfa (Leon 1903), expelled Muslim merchants and established a close watch over all the converts.

Upon his death G.Š. was succeeded by ↗Gaki Šeročo, who was to become the last king of Käfa.

Amanuel Gano

Gallina, Francesco

G. (b. 25 July 1861, Asti, d. 22 April 1942, Naples) was an Italian Orientalist. He began studying engineering, but shifted soon towards Oriental studies becoming a student of Ignazio ↗Guidi. From 1891 he held the chair of Amharic Language and Literature at the Reale Istituto Orientale di Napoli, where he continued teaching well after his retirement. G. dedicated a great part of his scholarly life to his students, who, often supported economically by him, always remembered him with esteem and affection. Among them there were Enrico ↗Cerulli, Elena Sengal and Luigi ↗Fusella, who was to replace him in the chair of Gəʿəz and Amharic Language and Literature at the ↗Istituto Universitario Orientale di Napoli. In the early 1900s, G. participated in the archaeological Mission to ↗Adulis directed by Roberto ↗Paribeni.

In the course of his long career as a researcher, G. published only a few works (1888, 1890, 1894), but, as was once emphasized by Cerulli (1942), he prepared or participated in the publication of a number of other works, among them: a catalogue of Ethiopian manuscripts of the Vatican Library (unpublished, s. ZanBib I, no. 37); an unpublished catalogue of Ethiopian manuscripts from minor Italian collections; a collection of proverbs in Amharic (unpublished); and a collection of Təgrəñña texts of popular literature, in particular related to Ḥamasen traditions (1902). It was G. who edited several well-known texts of such Ethiopian authors as ↗Awäfärq Gäbrä Iyäsus and *abba* ↗Täklä Maryam Sämharay.

Yaqob Beyene

Gälmo

Bälambaras G. (ገልሞ, also ገልሞ፡ የዘንደር Gälmo Yäzändär) was one of the comrades-in-arms of *aṣe* ↗Tewodros II. A native of ↗Qəmant, one of the relatively few non-Amhara close to Tewodros, he joined the future Emperor in the early 1850s and remained loyal till the death of his master in 1868.

Upon Tewodros's coronation, G. became *balabbat* of ↗Čəlga and later governor of the ↗Qʷara province. When in the summer of 1864 the rebel Gəmbaro Kaśa from Alläfa (a locality in Čəlga, west of Lake Ṭana) attempted a revolt and attacked G. in Qʷara, he lead a successful counter-attack. According to the chronicler (MonVidTheo 29f.), making use of the fact that Gəmbaro Kaśa's people first attacked the food and drink in G.'s capital and were relaxed, G. easily defeated them. His army made over 500 prisoners, the rest were killed in battle or fled.

According to tradition, G. limped and always fought from horseback.

Ğalqaba Barsiisaa

Ğ.B. (Orom. *Jalqaba Barsiisaa*, 'The Spelling Book') was the first ↗Oromiffa textbook, compiled by ↗Onesimos Näsib and ↗Aster Ganno and published at the Swedish Evangelical Mission Printing Press at ↗Ǝmkullu in 1894.

The Ğ.B. uses a *fidäl*-based alphabet different from the earlier system used by ↗Krapf for his ↗Bible translation. Onesimos introduced new symbols for the sounds absent in Amharic, e.g., a new letter for the ɗ sound (= *dh* in the current Oromo spelling), by placing a vertical stroke over the ደ. No solution was offered for discrimination between simple and geminated consonants or short and long vowels.

The second part of the book is a dictionary, with ca. 3,000 Oromo words organized typologically, based on the number of syllables and ranging from the two-syllable to the six-syllable pattern (e.g., one type is formed by two-syllabic words like *nama*, 'man', *lafa*, 'earth', another by three-syllabic like *ganama*, 'morning', etc.).

The bulk of the Ğ.B. consists in short tales and anecdotes, partly drawn from oral tradition, partly translated. Among these are *weedduu tiksituu*, 'shepherd songs', *ururuu*, 'nursery rhymes', *weedduu jaalalaa*, 'love songs', *makmaaksa*, 'proverbs', *durii durii* (*fakkeenya*), 'stories, folktales', *hibboo*, 'riddles', *tapha ijoollee*, 'children's plays', *weedduu ateetee*, 'songs of ↗*ateetee*', *sagada oromoo*, 'Oromo prayers', ↗*geerarsa*, 'warrior song', *faaruu gaddaa*, 'lamentations' and *weedduu heerumaa*, 'marriage songs'. The book preserves invaluable material for researchers on Oromo language and literature.

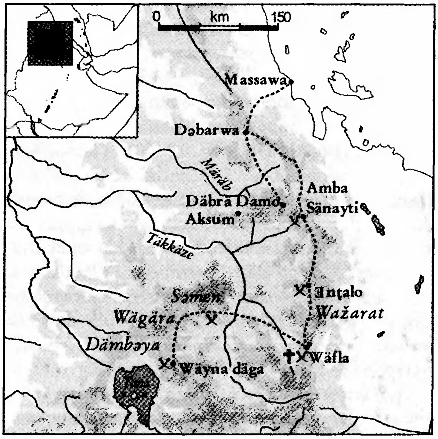
Kebede Hordofa Janko

Gama, Christovão da

G. (b. ca. 1516 Evora [?], d. 28 August 1542, Wäfla [?]), fourth son of the discoverer of the sea route to the East Indies Vasco da Gama, was the leader of a Portuguese military expedition that fought against *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ).

G. travelled to India for the first time in 1532. Later, he held the title of captain of Malaca (granted by the Portuguese king to the da Gamas), and participated in military campaigns in the Far East, Cochin and ↗Diu (Costonhoso 1898:vii–xxxiii). In 1541 he took part in the last and most ambitious Portuguese armada into the Red Sea against the Turks. The fleet, headed by his brother Estevão da ↗Gama, then governor of India, was composed of around 75 boats and 2,000 men (Costonhoso 1898:xxii). Having made a halt at Massawa in February 1541 and informed by *baḥər nägaš* ↗Yəsḥaq of ↗Gälawdewos's dramatic situation, a military company was formed in an attempt to rescue what ↗Portugal then considered a strategic ally (*aṣe* ↗Ləbnä Dəngəl). The company was composed of 400 volunteers, fidalgos (noblemen), soldiers and craftsmen, 150 servants and abundant artillery (more than 1,000 muskets and harquebuses and eight artillery pieces). G., not without some opposition due to his young age, was appointed captain of an expedition that had much of improvised colonial adventure (s. the role played by the pseudo-Patriarch ↗Bermudez). The soldiers were split according to a classic division into groups of 50



Tentative itinerary and battle sites of G.'s expedition and G.'s place of death; after Whiteway 1902 and Littmann 1907 under five captains, and the remaining 150 under the royal flag lead by G. (Castanhoso 1898, ch. 6; s. Bermudez 1875, ch. 10, 15; Correia 1976, 199f.; Couto 1977, dec. V, liv. VII, ch. IX).

In July 1541 the expedition left Massawa and, heading southwards, spent the rainy season (*kərämt*) of 1541 at the town of the *baḥər nägaš*, ↗Dəbarwa. In December, they joined *ətege* ↗Säblä Wängel, encamped at ↗Däbrä Damo (Castanhoso 1898, ch. 3) and spent Christmas time with the queen's retinue in a "serra do *baḥər nägaš*". The first military action of the expedition was a successful siege in February 1542 (25 March in Kropp 1988:24) of Amba Sänayti in central Təgray, where a Muslim garrison was established. In April, a second battle was fought at ↗Anṭalo, Wažarat, where Grañ had come from his base camp at ↗Däräsge (↗Dämbəya), expecting to defeat the determined G. and his men. The *imām* was, however, wounded and his horse killed (Bermudez 1875, ch. 14; Castanhoso 1898, ch. 15).

G. and the major bulk of the expedition, which by then had been split and had also lost between 50 and 100 men (Bermudez 1875, ch. 22), encamped and spent the *kərämt* of 1542 at ↗Wäfla with the Queen (for a problematic appraisal of the forthcoming events s. Beckingham 1959:365–73). From there G. dispatched Ayres ↗Dias to contact Gälawdewos. In August, having crossed the Täkkaze, the Portuguese, lead by G., freed a "serra de judeus" in ↗Səmen, killed the Muslim leader *sidi* Muḥammad and gave the *amba* back to its ↗Betä Ǝsraʾel lords. Shortly after that, a new encounter with a reinforced Muslim army took place. On 28 August G. was wounded and successively captured, tortured and killed (probably back in Wäfla; s. Almeida quoted in Lobo 1971:417 note 1) by Grañ himself, together with 13 other companions (Bermudez 1875, ch. 21; Castanhoso 1898, chs. 19–20). The surviving expedition, however, continued to fight in Dämbəya; allegedly, it was one of G.'s servants, one Pero de Lião, who is credited with mortally wounding the Muslim leader with his musket at Zäntära (↗Wäyna Däga; Bermudez 1875, ch. 34).

G.'s death was later the motif of miraculous stories. Bermudez described in full detail a macabre division of G.'s body by the Muslim troops (1875, ch. 23) – the head being sent to the governor of Cairo (s. *ibid.*; Castanhoso 1898, ch. 20) – and told of a spring with healing water emerging from the site of the "martyrdom" (Bermudez *ibid.*; Castanhoso *ibid.*). ↗Castanhoso, who recorded also the latter story, wrote about a tree turning upside down in a monastery on the day of G.'s death (Castanhoso *ibid.*; s. marvellous visions during G.'s life in Bermudez, ch. 16), something which could hint at local stories of the miracle. These legends were later recovered by the chroniclers ↗Correia (1976: 380) and ↗Couto (dec. VII, liv. I, ch. I), and G.'s fame remained alive well into the 17th cent. through works such as ↗Paez's (Pais 1945–46, book 1, ch. 31–34). The ↗Jesuit missionaries reportedly recovered his bones and took them to India (Castanhoso 1898:xxxiii–xxxvi; BecRASO I, 286f.; Lobo 1971, ch. 19). G.'s fate was novelized in the *Tragicomedia del martir d'Ethiopia* by the captain Botelho de Carvalho (1646) and a few episodes of the military expedition appear in an Ethiopian royal chronicle that refers to G. as "Dongestobu" (Kropp 1988:23).

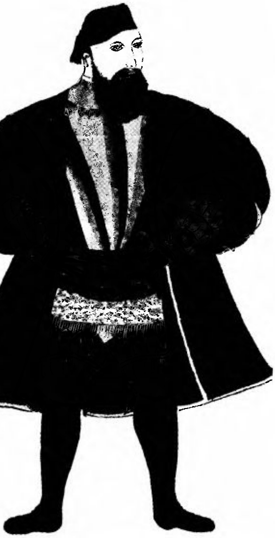
Andreu Martínez

Gama, Estevão da

G. (b. ca. 1503–05, d. 1575) was Vasco da Gama's second son and leader of an ambitious expedition into the Red Sea in 1541. G. succeeded his brother Paulo da Gama at his death as captain of Malaca, where he served from 1534 to 1539. On 4 April 1540, at the death of Garcia de Noronha, he became governor of India. In one of his first meetings, according to the orders received from Portugal, he proposed to lead an expedition through the Red Sea. His main goal was to burn the Ottoman



Estevão da Gama; from do Couto 1998, pl. after page 68

fleet stationed at Suez, that between 1538–39 put in jepoardy the precious fortress of ↗Diu.

In May 1541, G. reached the coasts of Massawa. In the Red Sea he burned and destroyed the city of ↗Sawākin, the port of Alcocer and the city of Tor. In Massawa he received some letters through the *baḥər nägaš* ↗Yəsḥaq in which he was informed of *aṣe* ↗Ləbnä Dəngəl's death earlier the previous year and the hardships that the Christians in Ethiopia were enduring under the ravages of the Muslim troops. Therefore, he decided to send an expedition of 400 men to Ethiopia, commanded by his younger brother, Cristovão da ↗Gama, to fight against the armies of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī.

G. went back to Portugal in 1542 after finishing his term as governor in 7 May. Unsatisfied with King ↗João III, who wanted to impose on him a marriage of convenience, he settled down in Venice. Years later, he returned to Portugal, where he was offered the position of governor of Lisbon.

Leonardo Cohen

Gama Moras

G.M. (ጋማ፡ ሞራስ, b. 1820s, Guduru, d. 1860s) was the founder and ↗*mooti* of the small Oromo kingdom of ↗Guduru (↗Mäčča). He was the son of a trader who migrated from Goǧǧam to the commercial capital of the region, Asändabo (Assandabo).

Guduru was both the name of a very fertile territory in northern Wälläga, which bordered with Goǧǧam, and also the name of the "Seven Houses of Guduru", a powerful Oromo clan-federation that numbered between 100,000 to 120,000 people in 1840. G.M.'s father made a fortune in lucrative trade in Asändabo, which his son inherited. G.M. was a very energetic, dynamic and resourceful man who had strong political ambitions. For this purpose, he became a son of a powerful Guduru nobility through ↗*guddifačaa* (adoption). This provided G.M. with an Oromo clan genealogy and with an opportunity to participate in all the market-centres in Guduru. Despite his adoption and wealth, the Guduru nobility regarded G.M. as a "stranger" and "inferior" because "he had neither wealth in land nor in cattle, the two items which brought honour to a family" (MasMis vol. 3, 52f.). G.M. converted his large inherited treasure into land and cattle, thus elevating his social standing among the Guduru nobility. He also used his wealth for winning friends and spreading the honour of his name and his prestige far and wide. His ambition was to be the *mooti* of all Guduru by breaking the power of the established nobility.

The opposition to G.M.'s ambition was engineered and led by Fufi, a wealthy nobleman from Asändabo. G.M. gathered firearms and trained his soldiers, while cultivating friendly relations with the Guduru nobility. When war broke out between Fufi and G.M., the former was easily defeated by the latter. However, Fufi was saved from general rout by the elders' intervention. Both Fufi and G.M. agreed to take their case to the ↗*čaffee* assembly at Qobo in southern Guduru. By the decision of the assembly, G.M. was left in full control of the market of Asändabo, which marked the beginning of his rapid rise to power. Delighted by a decision that favoured him, G.M. lavishly feasted the Guduru nobility, honouring them with liberal gifts, and immediately implemented the assembly's decision. By doing so, he appealed to the moral influence of the assembly and on that ground he won a decisive victory. Fufi, by refusing to implement the assembly's decision, was questioning its moral influence, and on that ground, he earned public outrage (MHasOr 95).

When hostilities were resumed three months later, G.M. was not again disposed to sacrifice any solid advantage for the elders' call for peace. He successfully defeated and expelled Fufi from the land of Guduru. By a single victory, G.M. achieved the status of the *mooti* of the "Seven Houses of Guduru". From that day onwards, G.M. abandoned his humble speech of "calling every Gudru my Lord" (MasMis, vol. 4, 174). He became their master and the undisputed king and created the small kingdom of Guduru around the 1840s. It was through war that G.M. made himself the *mooti* and he made war the prime business of his administration (ibid., 179, Lewis 2001:31f., 128).

Ǧama Raʾuf mosque ↗Harär

Ǧamāladdīn I b. Bazyū

Ğ. (جمال الدين بن بزيو بن عمر ولشمع, Ğamāladdīn I b. Bazyū b. ʿUmar Walašmaᶜ), *sulṭān* of ↗Ifat, was the seventh ruler of the ↗Walašmaᶜ dynasty and ruled over Ifat for seven years. He succeeded his brother, Manṣūr b. Bazyū, in 1318/19 and was followed in 1324 by a group of three short-reigning persons with non-Arabic names. It seems that usurpers interrupted the succession of Walašmaᶜ for some years.

The only source for Ğ. is the Walašmaᶜ chronicle (Cerulli 1931:41, 43f.) which states that he was a wise and pious man and that the genies were at his service. They transported letters from the River Abbay to his residence in one hour. They also brought him water from the River Awaš.

Ğ. should not be confused with ↗Ğamāladdīn II b. Dalḥūy b. Manṣūr who was installed as ruler of Ifat by ↗ᶜAmdä Ṣəyon in 1332 and deposed in the same year.

Ewald Wagner

Ǧamāladdīn II b. Dalḥūy b. Manṣūr

After deposing ↗Ṣabraddīn b. Dalḥūy b. Manṣūr in spring 1332, *aṣe* ↗ᶜAmdä Ṣəyon installed Ğ. (جمال الدين بن دلحوي بن منصور), Ṣabraddīn's brother, as ruler of ↗Ifat. Ğ. then asked the victorious Emperor to spare the ruined country. He and his Muslim subjects would remain his "slaves". The Emperor answered that he would spare Ifat but would ravage ↗ᶜAdal. The Muslims of ᶜAdal tried to prevent ᶜAmdä Ṣəyon's campaign by attacking his camp in Ifat. They were, however, defeated and in June 1332 ᶜAmdä Ṣəyon left for Təgray.

Shortly afterwards, the *qāḍī* ↗Ṣāliḥ gathered the forces of the Muslim principalities of Ethiopia – among them ᶜAdal and Harär – to fight the Christians. Ğ. informed the sultan of ᶜAdal that he would join the coalition. The latter, along with the other Muslim princes, considered, however, that the assembled troops were already enough. Since they did not want to share with another participant the lands they hoped to conquer, they marched off before the troops from Ifat arrived.

In July 1332 the Muslims were defeated and Ṣāliḥ was killed. In September 1332, at the end of his victorious march through the Muslim countries, ᶜAmdä Ṣəyon camped in Bəqʷəl Zär. He ordered the Muslim king (most probably Ǧ.) to surrender all the Christians who had converted to Islam. In order to avoid the order, Ǧ. tried to prevaricate and in response to that ᶜAmdä Ṣəyon deposed him, had his hands bound with chains of iron, laid waste his country and gave his office to his brother, ↗Naṣraddīn.

This narrative is the common interpretation offered by the only source of the events of September 1332: the Gəᶜəz account of the victories of ᶜAmdä Ṣəyon (Dillmann 1884:1036, n. 1; Cerulli 1936:24 [1971:301]; HuntAmd 106f.; MarAmdS 1993:180–83). An alternative interpretation is given by Kropp (KrAmdS tr. XXVI, 70, n. 331). Since the Gəᶜəz text does not mention the name of the Muslim king in connection with the September events, Kropp argues that an unknown king of Bəqʷəl Zär was meant and not Ǧ. The Arabic chronicle of the ↗Walašmaᶜ dynasty does not mention at all either Ǧ. or his brother Naṣraddīn. This might be due to the fact that they were only puppets of the Christian Emperor.

Ǧ. should not be confused with his grand-uncle ↗Ǧamāladdīn b. Bazyū.

Ǧamāladdīn III Muḥammad b. Saᶜdaddīn Muḥammad

Sulṭān Ǧ.M. (جمال الدين محمد بن سعد الدين محمد, d. January 1433) succeeded his brother Manṣūr to the throne of ↗ᶜAdal when the latter was taken prisoner during a lost battle against *aṣe* Yəsḥaq (r. 1414–29).

According to al-Maqrīzī's *Ilmām*, Ǧ.M. was weak at the start of his reign. However, he was much assisted by his general Ḥarb Goš, a former Christian nobleman who, along with many followers, had changed sides at the time of Ǧ.M.'s father, *sulṭān* ↗Saᶜdaddīn Abū l-Barakāt Muḥammad b. Aḥmad Ḥarb Arᶜad. Just at the start of his government, Ǧ.M. was attacked by the "Barābir" (a term designating Berber, here ↗Beğa or people from ↗Berbera?). But Ḥarb Goš managed to push them back and to oblige them to pay the *zakāt* (a Muslim tax, which means that they were Muslims, either originally or by forced conversion). Later, whilst the general was fighting in Bale, *aṣe* Yəsḥaq, camped in ↗Ǧidāya, was attacked and beaten by Ǧ.M. himself, forcing the Amhara to flee. The Emperor gathered a new army and Ǧ.M. needed a three-month campaign to beat him again in a final battle. Ǧ.M. destroyed many churches and houses and enslaved numerous women and children. Meanwhile, Ḥarb Goš had also been successful in Bale. He distributed three slaves to every *faqīr* (poor man or Ṣūfī).

Ǧ.M. continued to fight the Amhara. He pursued them as far as the sources of the Nile, while Ḥarb Goš and Ǧ.M.'s brother, ↗Aḥmad Badlāy, penetrated into Däwaro. All these wars were so successful that the whole Near East, from Egypt to India and from the Yemen to Anatolia, became flooded with Abyssinian slaves. Whilst al-Maqrīzī gives a quite detailed description of these fights, they are not at all mentioned in the "short chronicle".

Ǧ.M. was murdered by one of his envious nephews. The Arabic sources call him a martyr, a title which normally is given only to people who die in the 'holy war' (↗*Ǧihād*). Cerulli (1931: 74, n. 2 [=1971:145, n. 29]) thinks that the title perhaps refers to a connivance between the murderer and the Christians. Ǧ.M. was succeeded by his brother ↗Aḥmad Badlāy who discovered and killed the murderer.

Al-Maqrīzī praises in high tones the piety and justice of Ǧ.M., especially his relation to the theologians, the Ṣūfīs and the pious. Ǧ.M. is one of the few Muslim rulers from Ethiopia who were included in some Arabic biographical works.

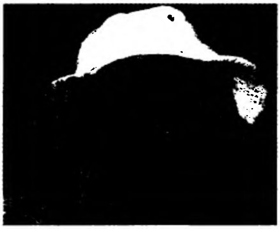
Ǧämbäre Ḫaylu

Qäññ geta Ǧ.Ḫ. (ጀምበሬ፡ ኃይሉ, b. 1913, d. 1994) was born in a little village south-west of ↗Däbrä Tabor. He received a traditional church education and was advised in painting by his uncle *aläqa* ʿAlämu Gäbrəʾel, with whom he decorated a number of different churches in the province of Wällo and in Däbrä Tabor. His painting career was temporarily interrupted while he fought as a guerrilla against the Italians (1936–41). In 1943–47 Ǧ.Ḫ. decorated the Gärägära Giyorgis church near Lalibäla. In 1948 he moved to Addis Abäba where he met the famous ↗Bäläččäw Yəmär, who encouraged him to paint for the growing expatriate and tourist market. Ǧ.Ḫ. had a repertoire of religious, historical and secular themes.



Ǧämbäre Ḫaylu, photo Doro Röthlisberger, courtesy of Völkerkundemuseum Zürich

Ǧ.Ḫ.'s paintings can be seen in the Museum of the ↗Institute of Ethiopian Studies in Addis Abäba, Ethiopia, in the Völkerkundemuseum of the University of Zurich, Switzerland, in the Staatliches Museum für Völkerkunde, Munich, Germany, and in the Michigan State University Museum, East Lansing, USA.

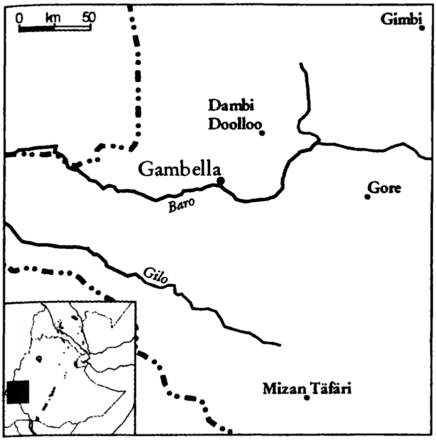
Gambella

G. (ጋምቤላ, 526 m A.S.L.) is a town in western Ethiopia and the name of the region where it is located. It was the administrative centre of an *awrağğa* of ↗Illubabor province and is now the centre of Gambella Regional State (former *kəlləl*). According to the Central Statistical Agency its population was 23,955 in 1999. It has a multiethnic composition with the ↗Añwaa (Añuak), the host population of G. town, being most numerous (6,174), followed by the ↗Oromo (4,761), ↗Amhara (2,553) and ↗Nuer (1,903).

Possibly attested already in the ethnicon *Gambelá* ('people [living] beyond the Nile', i.e. the ↗Täkkäze) of a 6th-cent. scholium to the ↗*Monumentum Adulitanum* (Fiaccadori 2004:120f.), the G. region (and town) has been a strategic point in the relations between Ethiopia and the ↗Sudan since the end of the 19th cent. When the international border between Ethiopia and the Anglo-Egyptian Sudan was drawn in 1902, the present day G. region was confirmed as an Ethiopian territory. But the British kept an interest in the "Baro Salient" (↗Baro) projects in the Sudanese territory and negotiated with *aṣe* Mənilək II to open a trading post in 1904. First it was opened at Itang, but soon it was transferred to a place further upstream of the River Baro. It is located on the right bank of the Baro and divided by the stream of the Ǧabǧabe (Ǧağabe). The western side of the stream was considered as a Sudanese enclave and a British Customs Inspector (after 1919, District Commissioner) was assigned there, while on the eastern side it was occupied by Ethiopian officials.

Although initially there were difficulties, the international ↗trade via G. became prosperous. Coffee, wax and gum from the highlands of Illubabor and ↗Wälläga were brought down by mules and porters and then exported to the Sudan by steamer connecting G. with Malakal-Kosti, which was navigable in the rainy season. From the Sudan, manufactured goods such as cotton-cloth, salt and empty sacks were imported. Greek traders settled on the "British side" of town to engage in the business. In order to secure the trade route, the British opened a consulate at ↗Gore in 1917. The Ethiopian administration of G., which was hardly distinguishable from plunder and looting, was conducted from the two centres on the highlands: Gore and ↗Dambi Doolloo (Sayyoo). A representative at G., *ləğ* Kaśa, was killed in 1913 in a battle against the local Añwaa, and in 1914 the first Ethiopian governor of G. was appointed. In 1915 Maǧīd ʿAbbū, a Syrian Christian, became a resident imperial agent and engaged in military campaigns against local Añwaa and Nuer to plunder, in alliance with some Añwaa leaders, notably Udiel



of Abobo (Abwobo) village. Seen by the British, this state of affairs was their concern because raiding did not stop at the border and a considerable amount of rifles supplied by imperial agents to their local allies were smuggled into the Sudan, where armed resistance by the Nuer was still going on.

The international trade via G. began to decline when the Addis Abäba–Djibouti railroad opened in 1917. Also, the significance of the region for the Ethiopian empire as the supplier of local wealth was lost as resources, especially elephant tusks, were exhausted and exploitive and military ways of administration gradually gave way to more moderate ones. After the 1930s G. became a dormant local town where demoted officials were assigned. When the Sudan became independent in 1956, the office of British District Commissioner was taken over by the Sudanese Consulate. It kept an eye on the movement of south Sudanese refugees and rebels when the first civil war became intensified in the 1960s.

After the ↗Revolution the Sudanese Consulate was closed and the river transportation halted. The strategic importance of G., however, surfaced again as the second civil war in Sudan started in 1983 and the *Därg* commenced various development projects in the region. A bridge over the Baro river, allegedly the longest in Ethiopia, was constructed at the town and a new airport also opened. The population and urban facilities of G. town expanded and still continue to do so as the town has become the capital of a federal state. In 2001, an indication of oil was found (petroleum).

Gämbo

The G. (ገምቦ) were an historical ethnic group in north-eastern Wälläga where they inhabited the highlands immediately to the west of the Č̣omän swamps. They are attested to in Gəʿəz sources over some 200 years, from the early 15th cent. (when they appear in a soldiers' song in praise of *aṣe* Yəsḥaq) until around 1600, with most of the information available for the second half of the 16th cent. (chronicles of Gälawdewos, Śärṣä Dəngəl and Susənyos). During the period of their historical visibility, the Christian emperors repeatedly raided the G. lands, capturing much booty as well as slaying and enslaving many of the inhabitants. The Christian monarchs' ultimate goal, of course, was to subject the G. to their rule. The G., on the other hand, tenaciously struggled to preserve their autonomy and never appear to have been fully subjugated.

Having survived two centuries of pressure from the Solomonic monarchy, the G. were, however, unable to resist the onslaught of the ↗Oromo in the first decades of the 17th cent. Sources from this time onwards do not mention them any more. This strongly suggests that the G. at the time had been annihilated, dispersed or absorbed – or a mixture thereof – by the advancing ↗Mäč̣č̣a. A trace of their existence is probably preserved in the name of the town of Šambu, located in the historical G. land. This toponym could well be a reflex of the ethnonym G. (through, essentially, palatalization and devoicing of word-initial /*g*/ to /*š*/).

The sources indicate that the G. had a mixed economy, practising agriculture as well as raising livestock. Within the agricultural sector, they appear to have cultivated *ənsät*, as well as cereals

(Gəᶜəz *əkl*, presumably referring to *ṭef* or related species). They did not possess horses, and their only weapons seem to have been spears and shields.

The Chronicle of Gälawdewos describes the G. and their (unspecified) neighbours as "heathen peoples" (**አሕዛብ፡ ከሓድያን**, *aḥzab käḥadəyan*; ConzGal 51) which hence could be reduced to servitude. About four decades later, however, when a large group of G. were besieged by the troops of Śärṣä Dəngəl, they appealed to a cleric affiliated with Däbrä Libanos, but presumably living in their vicinity, for mediation to save their lives. This, and the fact that Śärṣä Dəngəl forcefully intervened when his soldiers disobediently tried to enslave the surrendering G., could indicate that at least some G. groups had become Christian by the 1590s.

Taddesse Tamrat (1988), on the basis of an allegedly traditional ethno-genealogy transmitted by *aläqa* ↗Tayyä Gäbrä Maryam, straightforwardly categorized the G. as a ↗Gafat clan. It can be shown, however, that Tayyä's inclusion of the G. among the Gafat is not "traditional", but a result of his misreading of evidence from the Chronicle of Susənyos (Kleiner in StudAeth). An independent review of the sources yields no data that unambiguously support Tayyä's and Taddesse's claim. Against this background it seems premature to confidently assert a Gafat identity for the G., even if there is no fully conclusive evidence to the contrary, either. Yet the sheer absence of any linkage between the G. and the Gafat in all sources but one (Chronicle of Śärṣä Dəngəl – where, however, the connection is highly indirect) seems to favour the latter view. Undoubtedly, though, the G. lived in close proximity to a number of Gafat groups and in all likelihood shared several cultural traits with them.

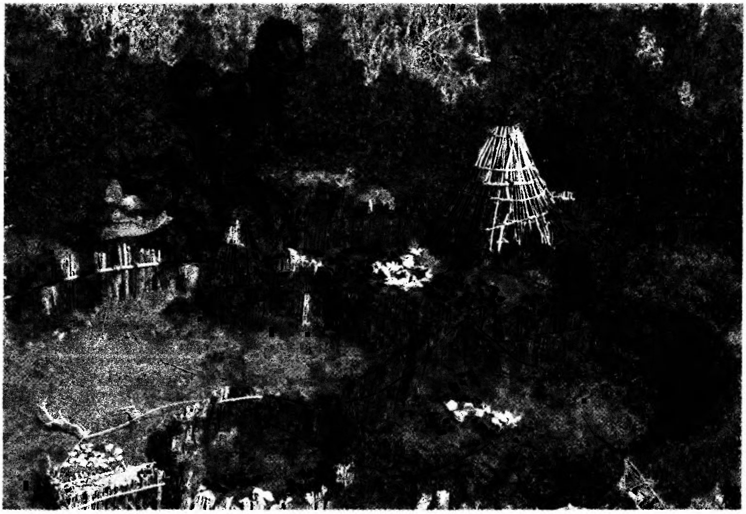
Games

Like rituals and theatre performances, G. can be seen as a chain of action within a specific set of rules separated from the usefulness-oriented course of daily life but reflecting social relationships and cultural norms. The degree in which G. are regulated and organized can differ significantly. Many G. have a narrative structure with a clearly defined beginning and end and a "dramaturgic tension". The main purpose of most G. is recreation or leisure. In addition, G. function as means of exercising cultural behaviour, of education as well as of generating rank or prestige (e.g., in the case of competition G.). Often the distinction between ↗sports and G. involving physical activities cannot easily be drawn. G. in general offer a certain "primary liberty" (Caillois 1958: 52) which makes them more open to improvization and invention than sports.

As fundamental principles Caillois (1958:27ff. 113–20) proposed competition, chance, imitation and temporary social disorganization. Ethiopian and Eritrean G. can also be classified according to 1) the social position of the actors defined by gender, age [-group] and social stratum; 2) the symbolic significance of a G., e.g., shown by connection to a certain religious feast or by the presence of an audience; 3) the position of a G. within the agricultural/seasonal cycle; and 4) the rules of a G., including combinable categories: number of players, number of teams, "goal" of the G., type of G. (types such as competition-, board-, ball- or throw-G., etc.).

An early scholarly collection of Ethiopian G. was published by Mittwoch (1910). His source was *aläqa* ↗Tayyä Gäbrä Maryam, who described 13 children's G. The collection includes craps-like G., "trick or treat"-like G., hide and seek G., G. including dancing as well as ball- or throw- G. such as ↗*gänna* and different types of **ኳስ** (*kʷas*, 'ball'). Griaule (1935) compiled a large collection of Ethiopian G. It includes not only G. in the strict sense, but descriptions of children's toys, many of them imitating items of the material culture of the adults, e.g., toy weapons, body decoration, miniature houses, children's musical instruments etc. Other toys were exclusively invented for specific G., e.g., a hoop to roll on the ground and different types of balls and sticks. Griaule also describes oral G. like "narration-G.", children's secret language, play on words, tongue twisters and children songs (s., e.g., ↗*ənqoqəlləš*). He also documents



Hamär children with a toy village, little stones designating livestock; photo 1950/52 by Elisabeth Pauli, courtesy of the Frobenius Institut, Frankfurt am Main (23–Pa046–7a)

playful dances and describes the imitation of different kinds of animals and plants, some of them connected with songs.

Many G. recorded by Griaule have a fairly aggressive character. Such G. include insulting G. and abusive songs, as well as "G." in which children tease others. Fighting-G. including aspects of sports and military training play a prominent role. A good example here is ↗*gugs* and the many variants of wrestling (Amh. ትግል, *təgəl*).

A more sporty competition-G. among Oromo children is *korbo* ('circle'). The G. is named after a circle on the ground which serves as a target. The G. is played by boys, all equipped with sharpened sticks. One of them is the "master". He stands on a higher place and gives the order to throw the "spears" from a defined distance. The boys who miss the circle have to carry the winners. The best becomes the "master" for the next round (personal communication with Kebede Hordofa).

A G. with some similar features is reported from Goǧǧam: two boys fitted with sticks agree upon who should start the G. The first boy throws his stick, then the other tries to throw his stick on to the first. If he succeeds in hitting the first stick, he is to be carried on the shoulders of his fellow up to where the sticks lie. From there the G. can start again (personal communication from Getie Gelaye).

The reflection of adult behaviour in playing terms finds a partly sexual quality in the huge number of G. which perform the interplay of the male and the female. In the G. አውርስ (Tgn. *awərs*, 'inherit') in Təgray documented by Griaule (1935: 246) a young couple dances parallel to each other along the two sides of a line drawn on the ground. They almost touch one another and perform different figures. If by chance the two dancers reach a front-to-front position, the young man is allowed to kiss his female counterpart.

Ethiopian and Eritrean children's G. show a functioning self-organization of the children – sometimes led by older children – and a great creativity in the making of toys, as well as the innovation of new or modified G. Modern schooling supported the practice of Western/ "Olympic" G. and sports, on the one hand, while, on the other, children have less leisure time and are more watched than in the times of Mittwoch and Griaule.

Board-games

The most popular board-G. is ↗*gäbäṭa* (also *mankala*). This G. has many variants but in general is played on a wooden board containing two rows of six or more holes ("houses") and a bigger hole ("bank or storage") at each end. Seeds, pebbles or beans serve as tokens. The two players compete in capturing the tokens until the opponent is unable to make a move (for the rules of capture s. Natsoulas in PICES 11) There also exist various types of board-G. with similarities to draughts (cp., e.g. Griaule 1935:177ff.; Pankhurst 1971:154).

"Ethiopian chess" or ሰንጠረዥ (*sänṭäräž*, according to DillLex 'going back to Sanskrit') was probably introduced into the region by Arabs and shares some rules with Oriental chess. It is reported that *aṣe* Ləbnä Dəngəl (r. 1508–40) already played chess and also cards with a visitor from Venice (Pankhurst 1971: 149). Chess was largely a G. of the royal court and the nobility. For the clergy, however, it was forbidden by the ↗*Fäws mänfäsawi*, while the ↗*Fətḥa nägäśt* opposes any "amusement" (ቀርቂስ, *qärqis*) to clerics. Chess is documented at the court of *ras* Mikaʾel Səḥul of Təgray in the second half of the 18th cent. From Henry Salt a description of *sänṭäräž* at the courts of *ras* Wäldä Śəllase of Təgray and *nəguś* Śahlä Śəllase of Šäwa in the first half of the 19th cent. is extant. It was also played by the courtiers of *aṣe* Mənilək II (Pankhurst 1971:150–58).

Ethiopian chessboards traditionally were made of leather or skin, were coloured in red with black or blue lines of square (ሰር, *sər*, 'vein') and consisted of eight by eight squares. The chessmen, defined by different colours, were made of ivory, horn or wood. While the arrangement of the chessmen was almost as in Europe, their names and the moves of some were different: ንጉሥ (*nəguś*, 'King'); ፍርዝ (*fərz*, 'minister' [from Arab. *firzān*], i.e. 'Queen' – a single diagonal step), *fiʾl* ('elephant' [from Arab. *fīl*] or Amh. ሰበ, *säbä*, i.e, 'Bishop' – two squares diagonally, jumping being possible, moves not more than three steps), ፈረስ (*färäs*, 'horse', i.e. 'Knight'), ድር (*dər*, 'house, castle' [from Arab.], i.e. 'Rook') and ሜዴቅ (*medeq*, 'Pawn' [from Arab.]). The G. starts with a phase of mobilization, during which both players can move freely without waiting for the move of the other. This phase ends with the first capture, after which the moves are carried out alternately (for details s. Pankhurst 1971: 158–70).

Ǧämǧäm

Ǧ. (ጀምጀም) is a high mountainous area dominating the basins of the Dawwaa, Gannaalee rivers and Lake Abbayya. It takes its name from the Ǧ., a part of Guǧǧi Oromo, a subdivision of the Arsi Oromo group. Traditionally this was where the ↗*abbaa muudaa* had his residence (HuntGal 83, note 84). Their territory borders to the south with the Gideʾo and to the north with the Sidaama. The Ǧ. were integrated into imperial Ethiopia at the end of the 19th cent. with the conquests of *däǧǧazmač* ↗Balča Safo. The new rulers constrained them to integrate ↗coffee cultivation in a farming system largely dominated by ↗*ənsät* plantations. The increase in the cultivation of this product has been at the expense of forest and grazing land.

After the 1941 Restoration Ǧ. was the central part of Ǧ. *awraǧǧa* which extended to the south over high plates and mountains of low human density. In the north, on the contrary, the densities approached those of the ↗Sidamo *awraǧǧa* (more than 100 and 200 inhabitants/km^2 in 1970 and 1984 respectively). Kəbrä Mängəśt (2,650 m A.S.L.), in the south, was the chief town until the advent of federalism in 1991. According to censuses, the population decreased from 318,000 to 267,886 between 1970 and 1984, probably as a consequence of the disorders affecting the area at the down of Ḥaylä Śəllase I's regime.

Since 1991, the southern part of Ǧ. and Kəbrä Mängəśt have been integrated into the Oromiyaa *kəlləl*. The northern part was annexed to the Sidaama zone, a subdivision of the Southern Peoples and Nationalities region. The population of the Sidaama zone is ca. 2,777,000 (with the density of 406 inhabitants/km^2). The highest concentration of population has been reached in Gideʾo (584 inhabitants/km^2, overall population 774,121 inhabitants). Rural migration affects the northern and western areas: Awasa, in Sidamo, and Dilla, in Gideʾo, reaching 114,127 and 55,657 inhabitants respectively (CSA 2004).

Ǧāmiᶜ al-Anwar

The Ǧ.A. (الجامع الأنور) is the largest central mosque in ↗Addis Abäba and the principal site for the performance of daily prayers by the city's Muslim residents and those of its suburbs. For several decades the congregational Friday prayer (*ṣalāt al-ǧumᶜa*) has been held at this mosque. The main office of the Ethiopian Supreme Council for Islamic Affairs (*al-maǧlis al-aᶜlā liš-šuʾūn al-islāmīya fī Ityūbīyā*) and those of its constituent departments (except the office of the *ḥaǧǧ* and *ᶜumra* committee, which is now near the railway station), were located within the premises of the Ǧ.A. until they were relocated to the former compound of the Royal Embassy of Saudi ↗Arabia.

During the early decades of the 20th cent., the Muslim residents of Addis Abäba, estimated at 5,000, who primarily worked as petty traders, had no mosque. They celebrated the annual Islamic festivals (↗Feasts, Islamic) on the open meadow by the hot springs or Fəlwəha (since 1991 the festivals have been held inside and around the stadium). The two precursors of the Ǧ.A. were the Wale Muḥammad Mosque, located on the low grounds opposite the imperial ↗*Gəbbi*, and the an-Nūr Mosque near the Piazza (popularly known as the Banin *safar* Mosque).

The Ǧ.A. has a long and chequered history characterized by administrative obstacles and financial constraints, not to mention problems with the ↗Ethiopian Orthodox Täwaḥədo Church and state officials which delayed the completion of its construction.

It was the Italians who began the Ǧ.A.'s construction on a plot of land belonging to *fitawrari* Habtä Giyorgis Dinägde (d. 1926), but they left before completing the work. As a result, the area around the unfinished structure became a refuse site.

As Addis Abäba expanded, the number of Muslims residing in the city also increased. Some of the community's prominent elders took the initiative to erect a large mosque and a school. A committee, named the Islamic Association, was set up to secure the government's permission and the collection of contributions from the prosperous members of the Ethiopian merchant community. A plot of land at the heart of the Märkato (↗Addis Kätäma) was purchased, but it soon became evident that the construction of a new mosque would require more money than was available. It was therefore decided to enlarge and complete the work on the construction of the mosque which the Italians had started. After a formal request for a grant of land had been approved by the government, although not without the usual bureaucratic hurdles and hostility from several quarters, the mosque and the adjoining school (later named after an Ethiopian Somali Muslim patriot, *däǧǧazmač* ᶜUmar Samatar) were constructed.

Among the problems the Ǧ.A. faced during its early history was a debt of 16,000 *bərr* which it owed to the building contractors, which led to the temporary closure of the mosque. Eight individuals eventually contributed between 1,000 and 5,000 *bərr* each; the debt was paid and the mosque reopened. Another problem was that much of the land within the premises of the mosque still belonged to individuals who had not yet received compensation from the government. There was also the additional issue of security, which was solved when money for the construction of a stone wall was obtained from members of the Muslim community. A new well had to be dug to draw water. Toilets and a water-trough were constructed with private financial assistance. Electricity was provided with money secured from *al-ḥāǧǧ* Aḥmad Šāš and his brothers. The monthly salaries of the *imām*, the *muʾaḏḏin* and three guards were covered by individuals from the community. *Al-ḥāǧǧ* Ṣāliḥ ᶜAbdallāh Abba Fogi donated the income of two shops as a regular source of funds for covering the mosque's administrative expenses.

Beginning in 1950, an attempt was made by ↗Mäkʷännən Habtäwäld to bring the Islamic Association, originally set up with the permission of the Ministry of the Interior to oversee the administration of the mosque, under his direct and personal control with the aim of weakening it. This led to a successful opposition organized by *al-ḥāǧǧ* Rahmato Muḫtār, with the mosque administration finally achieving its autonomy.

In 1955/56, a new committee for the administration of the mosque was formed with the responsibility of managing and developing the mosque's property. The members of the committee were elected by major donors. The endowments took the form of a number of shops constructed with the donors' money. The income from the monthly rent was donated as ↗*waqf* to the mosque. A total of 14 shops were constructed between 1953 and 1956. The income from these shops was not only used to cover the mosque's expenses, but also to build 27 additional stores. In 1975 all shops were nationalized by the state, with a monthly financial compensation of 7,688 *bərr* each month paid to the mosque, which allocated the money among the 12 mosques in the city. Later, the shops were restored to the Ǧ.A.

In 1982, a one-storey annex for women with a new minaret was added to the western wing of the main building and in 1990 a large two-storey prayer-hall was constructed, the latter financed by the late Yemeni businessman, *šayḫ* (later *qäññazmač*) Muḥammad Aḥmad Šariyān. The entire mosque is renovated regularly, especially before the approach of ↗*Ramaḍān*, when the site attracts a multitude of the faithful. In the area around the Ǧ.A., stalls selling various commodities are continually being set up.

The first administrator (*nāẓir*) of the Ǧ.A. was *al-ḥāǧǧ* Abū Bakr Ibrāhīm Šarīf, whose appointment was approved by the *Šarīᶜa* court. Upon his death, he was succeeded by his son, ᶜAbdarraḥmān, who served until 1995 when he and about 40 other prominent Muslims were arrested and jailed for more than two years following a violent incident in and around the Ǧ.A. in February of that year. All were later released. The *imāms* were, successively, *al-ḥāǧǧ* ᶜUmar Yūsuf, *šayḫ* ᶜAbdalḥayy and *al-ḥāǧǧ* Muḥammad Ṯānī Ḥabīb Bašīr (d. 1989), who was succeeded by Ḏū l-Makāna Ǧamāl. The current incumbent is *al-ḥāǧǧ* Ṭāhā Muḥammad Hārūn.

Hussein Ahmed

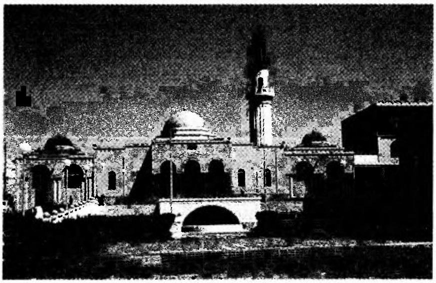
Ğāmiᶜ al-Ḫulafā' ar-Rāšidīn

The Ğ. (جامع الخلفاء الراشدين, 'Great Mosque of the Righteous *Ḫalīfas*') is one of the oldest mosques in ↗Asmära. According to oral tradition, the Ğ. was first built in the 1st cent. H. (7th cent. A.D.), at the time as Islam came to the coastal region (*↗Hiğra*).

During the Italian occupation the colonial administration mobilized the Muslim merchants in Asmära and other Muslims residing there to collect money to reconstruct the mosque in a modern way, as they did with the *cattedrale*, the Catholic church of Asmära. It was first rebuilt in 1900, using material brought from abroad, and was designed to look like the mosques of Cairo. The reconstruction was carried out by the Italian engineers Giuseppe Bruno and Guido Ferrazza, at the cost of 1,5 million *färänka* (Lira). In 1937 and 1940 it was widened and renovated by Yemenite merchants residing in Asmära, including ᶜAbdallāh Bāmušmuš and his brothers, ᶜUmar Bāᶜaqīl and his brothers and *šayḫ* ↗Aḥmad ᶜUbayd Bāḥubayšī, who decorated the inside with a sense of simplicity combined with ornaments of mosaic trim and chandeliers. Inside the mosque there is a collection of *al-Qur'ān* manuscripts on low bookshelves along the wall with stools nearby.

On the eastern side of the mosque there is a school, *Maᶜhad ad-dīn al-islāmī* ('Institute of Islamic Religion'), opened in 1944 and founded by the *muftī* and Aḥmad ᶜUbayd Bāḥubayšī. The school originally was known as *Maᶜhad al-Fārūq al-Awwal* ('Institute of Fārūq I'), named after the King of Egypt in the time of its foundation. The al-Azhar University and the Egyptian government supported the school by sending teachers and teaching material. Although closed several times, following political tensions between Ethiopia and Egypt, it is still in service, albeit dependent on the relations between Asmära and Cairo. Children attend the elementary, middle and (since 2000) secondary school in the morning and evening.

The reference library, which is situated on the other side of the mosque, is a small store with a number of texts, primarily of religious content, in Arabic, Təgrəñña and English. It was established together with the school in 1944 and funded by Aḥmad ᶜUbayd Bāḥubayšī. The *muftī šayḫ* Ibrāhīm donated most of his books to the library. However, many books were later confiscated by the Ḫaylä Śəllase government.



The mosque Ğāmiᶜ al-Ḫulafā' ar-Rāšidīn in Asmära; photo 2001, courtesy of Michael Curtis

The three major religious holidays (*ᶜĪd al-fiṭr*, *ᶜĪd al-aḍḥā*, *ᶜĪd mawlid an-nabī*; ↗Feasts; ↗Mawlūd) are celebrated at the mosque with prayer-services held in the large public area outside the mosque. The *muftī*, head of the Muslims of Eritrea, assigns the *imāms* of the mosques and selects the members of the Islamic *Awqāf Council* (*↗Waqf*), he himself being assigned by the government. He thus had much influence on the development of the Ğ.

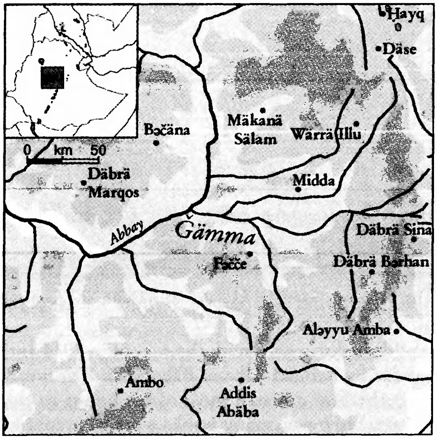
Ğāmiya ↗Kulub

Ğämma

The Ğ. (ጀማ) is a tributary of the river ↗Abbay. Located in northern Šäwa, it has several tributaries. The Bärissa, flowing westwards from the foothills of the high plateau of Tägulät and the high mountain of Qundi and the Č̣ač̣a, crossing the Abbičuu Oromo settlements, joins their waters and form Ğ.'s upper course, at this stage locally known as Adabay. Other tributaries are the Wančit, collecting waters from the Mänz and Märḥabete mountain ranges, the Wayət and the Zegawadəm, which rises from the uplands of Ṣälale. Thus, Ğ. appears as a collective name



for all these tributaries which become ↗Abbay's main source of waters in northern Šäwa (as the two French travellers Edmond Combes and Maurice Tamisier wrote in 1830s, "Zouma [=Ǧ.] est le rendez-vous général de toutes les eaux qui s'écoulent de Choa"; Combes 1838, vol. 3, 226f.). As many of its tributaries are perennial rivers themselves, they increase its volume mainly during the rainy season.

The Ǧ. valley, with its particular geographic location, has been the stage for historical events. The valley was one of the key areas of Šäwa, protecting those who rebelled against the central Ethiopian state, such as the ↗Gafat people who opposed *aṣe* Ləbnä Dəngəl in the early 16th cent. The valley was also well known for its bandits, who used to waylay and rob travellers and local merchants. The Ǧ. played the role of a strong shield for the Ethiopian patriotic resistance movements during the bloody years of the Italian occupation (1936–41). The importance of the Ǧ., its waters and forests for Ethiopia has remained fresh in the memory of elderly patriots and Ethiopian singers.

Ahmed Hassen Omer

Gamo

Gamo language

G. (also Gamu, Gemu, self-name: Gamottso) is an Afroasiatic language belonging to the Ometo sub-branch of ↗Omotic. According to the 1994 Ethiopian Census, the number of its speakers is 690,069 (Hudson 1999:91). They live in the highland of the former ↗Gamo Gofa province in the Gamo *awrağğa*, comprising the four districts (*wärädа*) of ↗Çenča, Gulta, Kamba, and Borodda. The G. language territory is geographically delimited in the north by the River ↗Omo, in the east by the ↗Dorze territory and Lake Abbayya, in the south by the Ganta and in the west by the ↗Oyda and the ↗Gofa territories. Within Ometo, G. belongs to the northern branch together with Wälaytta, Zala, Dawro, Konta, Malo, Gofa and ↗Daçe, appearing to be particularly close to the latter.

The prosodic and phonological systems of G. are similar to those of Daçe. G. seems to be a "tonal accent language" and, as Daçe, presents an interaction of accent and tone within the phrase. Tone plays a very important role at the lexical level and especially in the grammar of the language. In G. there are two tones (high and low); the high tone usually also coincides with a prominent stressed syllable. The usual syllable structure of G. is Consonant-Vowel or Consonant-Vowel-Consonant. The vowel system consists of five vowels (*i*, *e* [ɛ], *a*, *o* [ɔ] and *u*). Vowel quantity is phonologically relevant. The vowel phonemes are thus altogether ten. Voiceless vowels, if present at all, are in all probability not phonologically relevant. G. possesses a rich consonant-system, consisting of five points of articulation (labial, coronal, palatal, velar and glottal) and eight manners of articulation (stops, fricatives, affricates, ejectives, nasals, vibrant, lateral and glides). Voiceless stops and voiceless affricates are realized as aspirated. It is still unclear whether [*pʰ*] and [*f*] constitute two allophones of the same phoneme or rather two distinct phonemes. According to the dialect, the ejective *p̣* seems to alternate with the implosive *ɓ* (s. Hompó 1990 and Sottile 1999). Among the ejectives G. also possesses postglottals (*mˀ*, *nˀ* and *lˀ*), but it is uncertain whether they represent monophonematic sounds or rather the realization of the combination *sonorant* + *glottal stop*. The consonant inventory of G. consists thus of the following phonemes:

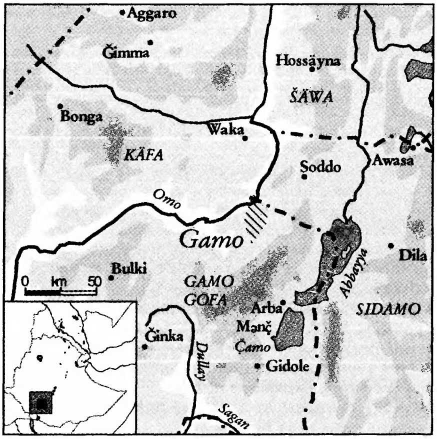
stops:	*b/p, d/t, g/k, ᵓ*;	nasals:	*m, n*;
fricatives:	(*f*), *z/s, š, h*;	liquids:	*r, l*;
affricates:	*ʣ/ʦ*, (*ğ*), *č*;	glides:	*w, y*;
ejectives/ implosives:	*p̣, d/ṣ, ṭ, q*.		

Consonant gemination is phonologically relevant (s. Sottile 1999:442). Consonant clusters are exclusively biconsonantal, syllable final and mostly consist of the combination *sonorant + consonant*.

Word-stems are mostly biradical or triradical (the latter often contain a sonorant as second radical).

G. is predominantly an inflectional language. Nouns have two genders, masculine and feminine. As a rule they are masculine, which can be considered the unmarked gender in the language: only if a noun refers to a female living being, does it require agreement with the feminine gender. Nouns referring to female living beings are often formed by means of the suffix *-iyo*, which changes to *-iya* if the noun acts as subject of the sentence (cf. *naᵓ-a*, 'son' / *naᵓ-iyo*, 'daughter' / *naᵓ-iya*, 'id. (subject case)'). As far as number is concerned, nouns in G. can be singular or plural. In the singular they always end in a vowel, with the exclusion of *-u*. Plural is, as a rule, marked, as is usual in Ometo languages, by the suffix in dental *-ta* (in the absolutive case). The nominal system in G. exhibits nine cases. Case is marked by means of morphemes suffixed to the end of the noun phrase (the head noun has usually the last place in the noun phrase; if not, it appears in its absolutive case). Nouns used as direct object are as usual inflected in the absolutive case, i.e. they thus appear in their citation form. The cases are: absolutive (markers *-a/-e/-i* or *-o*), subject (*-y/-i*), genitive (*-aa/-y*), dative (*-s/-w*), directive (*-kko*), locative (*-n*), instrumental (*-ra*), ablative (*-ppe/-fe*) and vocative (*-oo* [masc.]/*-ey* [fem.]).

The personal pronouns are typical for a *Ta/Ne* language: 1st pers. sg. *ta-*, 2nd pers. sg. *ne-*, 3rd pers. masc. sg. *ᵓizi* , 3rd pers. fem. sg. *ᵓizaa*, 1st pers. pl. *nu-*, 2nd pers. pl. *ᵓintee*, 3rd pers. pl. *ᵓista-*, 2nd pers. polite *ᵓintee*, 3rd pers. polite *ᵓista-* . The demonstratives are *heesi/hiina* ('this', masc./fem.), *seekki/hee* ('that'), *ha* ('this here'). The interrogatives are *ᵓooni* ('who?', inflecting stem *ᵓoona-*), *ᵓay/ᵓaaza* ('what?', subject *ᵓaazi*), *ᵓayi-s* ('why?'), *ᵓaw-de* ('when?'), *ᵓawa-n* ('where?'), *wosta/wosti/ᵓay-mala* ('how?'), *ᵓay-likke* ('how much?'), *ᵓaappun* ('how many?'), *ᵓawa* ('which?').



The G. verb system exhibits a complicated flexion with a great richness of paradigms and forms. The G. verb distinguishes the affirmative conjugation from the interrogative and within these the positive from the negative one. Tenses and modes in general correspond to those of the other ↗Ometo languages (s. Moreno 1938, Lamberti – Sottile 1997). Verb-paradigms usually consist of the three classical persons (1st, 2nd and 3rd pers.) sg. and pl.; a gender contrast is found only for the 3rd pers. sg., with a masc. and a fem. form. In addition, G. makes use of the 2nd pers. pl. and 3rd pers. pl. form to express the polite form in direct speech and in indirect speech respectively. The copula is *-ko* ('is'/'are').

Some forms for the verb-stem *koy-* ('to want'/'ask for') are: affirmative positive present/past: 1st pers. sg. *koy-ays / koy-adis*, 2nd pers. sg. *koy-assa /koy-adassa* etc.; negative: 1st pers. sg. *koy-iikke / koya-beykke*, etc.

Syntactically, G. has a basic Subject-Object-Verb structure. Phrase modifiers in a noun phrase always precede their head noun. The definite article *-za* is suffixed to the noun it refers to. In possessive constructions the genitive always precedes its head noun. Relative clauses usually precede their head noun. In verb phrases auxiliaries follow their main verb.

The Hermann Bell ten-word list for G. is: *ᵓissiinni*, 'one', *namᵓa*, 'two', *heedʣa*, 'three', *haatʦe*, 'water', *tama*, 'fire', *ᵓawa*, 'sun', *ᵓagina*, 'moon', *sutʦi*, 'blood', *ᵓinṣaarsi*, 'tongue' and *ᵓačče*, 'tooth'.

Gamo ethnography

The term G. (ጋሞ, also Gamu, Gemu, Guemu) is used as a place-name and as an ethnonym for a complex of ethnic (sub-)groups living mainly in the *awrağğas* of G. and Gardula in the former ↗Gamo Gofa province (after 1991 named North Omo; since 9 November 2000 Gamo Gofa Zone). Today the G. can also be found as migrants all over the country, mainly in Addis Abäba. The G. number over a million, but according to the 1994 census, which wrongly puts them as a sub-unit of the ↗Wälaytta, they are reported as numbering 710,055 (CSA 1996). This includes the ↗Dorze and ↗Zayse, which the census considers as separate groups. G. in the literature also refers to a clan-name among the ↗Mäč̣č̣a Oromo (Knutsson 1967) and among the ↗Ittuu (BTafA 917).

The name G. was in use long before the arrival of *aṣe* Mənilək II's forces, who incorporated the region by force in 1894/95 (Getahun Dilebo 1974; Vanderheyn 1896). The first mention of the term G. dates back to a 15th-cent. "Soldier's Song" dedicated to *aṣe* Yəsḥaq (r. 1414–29). The song refers to two entities with the names ሱፍ፡ ገሞ (*Suf Gämo*) and ባሕር፡ ገሞ (*Baḥər Gämo*) which had to pay tribute in horses to the Emperor (Guidi 1889:56; Littmann 1914:14; cp. VSAe III 141f., 164). On a map which accompanies the work of the Portuguese Jesuit de Almeida, both kingdoms are marked in the southern Ethiopian lakes region (BeckHuntAlm 10, map XCVI). Straube wrongly mentions a derogatory meaning attached to the name G. (s. Abélès's critique of Straube). The G., like the Oromo, were referred to as ↗"Galla" or "Gamo Galla" (cp. Harrison 1901; VSAe III 142). G. is also the name of a range of mountains, the Gamo Mountains, inhabited by the G.

The term G. is also used to designate the language of the G. A second language, *Dač̣etso* or *Zegetso* (↗Dač̣e), closely related to the former, is variously named according to the locality it is spoken in and is used side-by-side with *Gamotso* in the central G. areas of Balta, Baza, Bonke, Ganta, Gatse, ↗Gäräse, Algude etc.

Before its incorporation into the Ethiopian empire, G. country comprised of 40 or 55 politically autonomous units (*dere*, pl. *dereta*; Abélès 1981; Olmstead 1975). The *dereta* include territories of confederations such as Qogo and ↗Dokko and of single units such as ↗Dorze, ↗Dita, Bonke, Balta, Guge, Wäyza, Anduro, Goza, Halaha, Zute, Wobbara, Doqama etc. Each *dere* is divided into autonomous neighbourhoods (*guta*) that have their own assembly-places (for the G. political system s. Bureau 1981; Olmstead 1997 [Dita of central G.]; Abélès 1983 [Otčollo]).

Each G. *dere* has a hereditary king, *kao*, a descendant of a hero-founder of the community, or a man of exceptional good character, or a renowned warrior. Thus, Dorze say they are descendants of Sazi Getto's son Tänkälä; Bonke say they are descendants of Dada's son Arše; Ganta say they descend from Tolba Kalsa etc. Each *dere* is attributed to such a fatherly figure whose name appears in songs and proverbs. Parallel to the *kao* in power there is a council or "forum of citizens" (Halparin – Olmstead 1976), or "forums of elders" (Olmstead 1975), who maintain law and order in the *dereta*, the market-place and assembly-grounds and who make peace with other groups (s. Wolde Gossa Tadesse 1991 for the social and ritual function of public places). A number of clans are evenly spread among the *dereta*. Due to the senior position they occupy in relation to other clan-leaders, heads of clans have ritual responsibilities for initiating phases of agricultural work, sacrificing for rain, for human, animal and crop fertility, as well as for mountain pastures and for peace with other groups (for the G. political system s. Bureau 1981).

In G. there used to be a division between "citizens" (mainly farmers and weavers) and craftsmen (potters, smiths and tanners) involving taboos of marriage between the two and prohibition of ploughing land for the latter. In a different context, but without the prohibition of marriage

Gamo village of Dita, houses and *ənsät* fields; photo 1954/55 by Wolfgang Kuls, courtesy of the Frobenius Institut, Frankfurt am Main (027-Ku069-29)

and sharing of power with a tinge of hierarchy, there existed another form of division between Gamo and Daçe in a few central G. territories.

The G. are connected in a web of markets (Jackson 1971) where local assemblies or forums of citizens take care of law and order. Four major *kaos*, responsible for averting misfortune by prescribing sacrifices and offers for transgression of taboos, give service to G. communities (for the management of misfortune among the G. of Dorze, s. Sperber 1980).

Today the majority of the G. population follows Orthodox Christianity, which dates back to the 16th cent. and developed a kind of syncretism among the G. Members of specific clans, such as Mak, Amara etc., spread over a wide area of G. (e.g., to places like Bərbər, Qogo, Doina, Ele, Halaha, Zala etc.), served as keepers of a blend of the *beni woga* (the traditional socio-religious order) and an ancient form of the Orthodox Christian faith. They are also the keepers of manuscripts, *tabotat* and other ecclesiastical objects of ancient date found in churches, such as ↗Bərbər Maryam, Ele Gabriel, Doina Kidanä Məḥrät, Qogo Mikaʾel and Dorze Giyorgis (s. Caquot 1955; Bureau 1976; Abélès 1981; Jackson et al. 1969).

In addition to the *beni woga* and old Christian practices, many G. followed the prophet Esa of Liša, whose teachings in the late 19th cent. won him a large following from all over G., ↗Gofa, ↗Dawro and ↗Wälaytta and resulted in the prophet's imprisonment and exile in Addis Abäba during the reign of Empress Zawditu. Esa returned and died in G. after being released from exile for his truthfulness, knowledge and charisma, which was said to be acknowledged by his captors. The former house of Esa of Liša till today is a centre of pilgrimage.

Keepers of *tabotat* from Bərbər, Doina, Ele and Dorze and the *tabotat* under their care were taken as prisoners to Šäwa after the incorporation into Mənilək II's empire. The keepers were accused of being heathen and of possessing a *tabot* while being smokers of tobacco. Neither their knowledge of corrupted G.-Gəʿəz prayers nor the display of manuscripts under their care helped to avert imprisonment. They succeeded, however, in not passing the *tabotat* on to the victors. They were allowed to return with the *tabotat* only after an epidemic in Addis Abäba when *däbtära* advised Mənilək to release the *tabotat* (interview with Kasto Kabiso).

The G. practise an intensive agriculture, keeping a tradition of mountain-terracing. They also have a tradition of pastoral mountain-pasture. The G. are exporters of fish, bananas, cotton and handmade cotton products. They play an important role in the production of traditional Ethiopian costumes. Migrant weavers from G. are widely spread throughout the country (for G. economy s. Cartledge; Jackson – Russell 1969).

Gamo Gofa

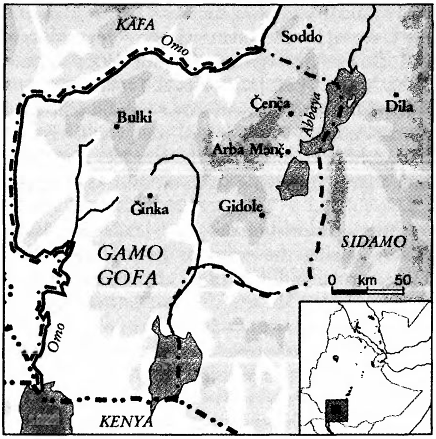
G.G. (ጋሞ፡ ጎፋ, also Gammo Goffa, Gamu Gofa, Gemu Gofa) is located in the south-west of Ethiopia and borders on both the Sudan and Kenya. It was incorporated by conquest into Ethiopia ca. 1894–95 (Lapəso Getahun Dəlebo 1983). Before it was given its name and the status of a province, the region was divided into various domains administered by rulers appointed by the centre. G.G. province (*ṭäqlay gəzat*) was set up immediately after the return of *aṣe* Ḫaylä Śəllase I from exile in 1941 (Fino 2000; Henze 2000:234). The capital of the administration was for the most part the town of ↗Çenča. Later on, when the district ↗Gardula was added to G.G., the capital of the province was shifted to Gidole by *däǧǧazmač* ↗Gäräsu Duki. The capital was later returned to Çenča, but in 1955 A.M. [1962/63 A.D.] it was moved again to ↗Arba Mənč̣. Early in the 1960s the *awrağğa* Gäläb and ↗Hamär Bakko were added to the province.

The name G.G. remained until, soon after the revolution of 1974, the *Därg* decided that the province be split into two and re-named as North Omo and South Omo, with administrative centres in ↗Arba Mənč̣ and ↗Ǧinka, respectively.

G.G. is home to more than 25 ethnic groups, among which are the ↗Gamo, ↗Gofa, ↗Oyda, ↗Maale, ↗Diraašša, ↗Konso, Gawwada (↗Dullay), ↗Basketo, ↗Dime, ↗Gangule and Marta. Gamo (or Gamottso) is the major language spoken (also Gofa in the Gofa district). This is followed by Basketo, Gangule, ↗Zayse, Oyda and other languages spoken by smaller groups of people residing in the province. Members of groups such as the Konso, Koorete, Wälaytta and Guǧǧi migrate to G.G. to work as manual labourers on plantations in Arba Mənč̣ and along the western shores of the lakes. In the early 1970s, farmers from Šäwa and famine victims from Wällo and Gondär were settled in G.G. in villages between privately owned plantations. Migration slowed down after the nationalization of land, but the presence of migrants and their claims to land have created tension between the Gamo, the state and the migrants (Olmstead 1997:85–96).

Orthodox Christianity, Islam and various brands of Evangelical Christianity, mainly ↗Ethiopian Evangelical Church Mekane Iyesus, are practised in the urban areas. Mekane Iyesus Church has spent over five decades evangelizing and being involved in activities related to health, education and, currently, relief and development. The Catholic Church has been present for over 30 years in urban centres of the province. In its early days it was primarily active as a development non-governmental organization, rather than an agent of conversion.

G.G. is a land of beautiful lakes and scenic mountains. The high mountains are known for their extensive alpine pastures and terraced bar-



ley- and wheat-farms. The highly complex administration of pastures provided a secure source of much-needed manure to the extensive terrace farms. Due to the high population density and resulting pressure on land, people engage in intensive ↗*ənsät*- and cereal-cultivation in the mountains and maize and cash-crops in the lowlands. G.G. produces much cotton in the fields around Arba Mənč̣ and exports bananas, coffee, beeswax, honey, raw cotton, fish, *ənsät* sisals and undyed industrial and hand-woven textiles to markets in central Ethiopia and in neighbouring provinces. In addition, people of the province, mainly the Gamo, engage in weaving and are migrant weavers in most of central and other parts of southern Ethiopia (Karsten 1972). In Addis Abäba Gamo weavers who come from various Gamo localities are referred to as ↗Dorze.

Gäñ

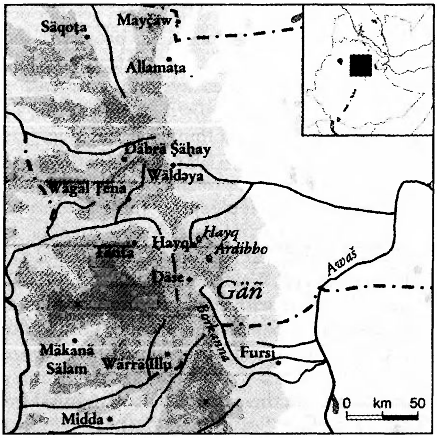
G. (ገኝ, also Gäñi), called in some sources also ምድረ፡ ገኝ (*mədrä Gäñ*, 'the land of G.'), was a historical province in Ethiopia lying between ↗Gədəm and ↗Angot, in what by then could be defined as the eastern Amhara province. Sources roughly identify G. as a locality between ↗Ifat and Amhara, to the south-east of Lakes Ḥayq and Ardibbo, and precise G.'s location as to the east of the river Hanazo (the name by which the Borkanna was locally known at that time) strategically facing the Č̣affa plain of southern ↗Wällo. G. was probably more important as location for military camps rather than as viable administrative unit. Like its northern neighbours of Angot, Qeda and Bugna, G. protected the highland settlements from the lowland nomadic and pastoral communities dwelling eastwards.

The medieval market town of Wasäl, one of the biggest markets in Ethiopia at the time, was apparently located in G. Like its southern neighbour Gədəm, G. was probably inhabited by "a very mixed and, apparently, fully integrated population of Christian and Muslim Amhara, as well as Christian and Muslim ᶜAfar from nearby lowlands" (Merid Wolde Aregay in PICES 4, vol. 1, 622). Together with such provinces as Mäqet, Dälanta, Wadla, Sayənt and Šädäho, G. was the homeland of the ↗Amhara people, at least since the 13th cent. It was from here that the Amhara began to radiate their linguistic and cultural influence over their Semitic and Cushitic-speaking neighbours.

During the 15th cent., *aṣe* ↗Zärᵓa Yaᶜəqob appointed his nephew Aṣnaf Sägädu head of G., an indication of the importance the Emperor attached to the province. Another official in charge of G., with the special title of *raq masäre*, witnessed an increase of the area's military importance when the Emperor stationed his ↗*č̣äwa* there. Zärᵓa Yaᶜəqob's son and successor, ↗Bäᵓədä Maryam I, continued the same tradition, appointing a ruler of his choice with the title of *nəguś* (PerrZarY 14, 16, 47[?], 112, 137).

When in the 16th cent., during his retreat from the onslaught of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī, *aṣe* ↗Ləbnä Dəngəl moved towards Betä Amhara, he reportedly regrouped his forces at G., getting support from local population (BassHist 79, 81). Further on, sources mention a certain Maqarəs, "*mämhər* of Amhara, G. and Gədəm" ("crowned" by *əč̣č̣äge* ↗Yoḥannəs; Ricci 1967-68:92), who most probably died in battle in 1559, together with *aṣe* ↗Gälawdewos.

Manoel de ↗Almeida included G. in his list of Ethiopian "kingdoms" – subjects of "Prester John" (BeckHuntAlm 10); yet the status of G. changed during the late 16th and 17th cent. with the coming of the ↗Oromo. The area was devastated, in particular by the *luuba* (leader) Harmufaa (or Dulo; this happened in 1562-70, s. BeckHuntAlm 118, 209), and later strongly "Oromicized". It was then overrun by the Marawwa Oromo and subsequently occupied by the three sub-groups ("three houses") of Sadan Marawwa: Abati, Uru and Anaa. In the early 17th cent. ↗Susənyos and ↗Śəᶜəlä Krəstos undertook



a series of successful military campaigns against the "three houses" of Marawwa, who were completely defeated. However, the region was not regained; the 1696 raid led by *aṣe* Iyasu I was without much success (GuiIohan 180f. [text]).

The Oromo gave new names to G. and its neighbours. The strategic escarpment supposed to have been its nucleus became known as Goñi. Other parts of the former G. were given the names Maqdasaa and Dheraa Kalili Namee. The central hills of the area were called by the Amhara "Galla Godana". Parts of a vast plain below Goñi near the Bọrkanna are known by Oromo names, such as Ç̌afaa Ellemo, Ç̌affaa Ç̌äqorso, Ç̌affa Luṭe and Ellemo Siddan. Some elderly Oromo argue that Goñi must have been a simple corruption of the word G. In any case, local oral Oromo tradition sees Goñi as synonymous with G. Tradition also preserves records of the importance of the area in earlier centuries.

Ğan Amora

Ğ.A. (ጃን፡ አሞራ, also Žan Amora, Ğanamora and variants) is generally known as a *wäräda*-subdistrict (with Mäkanä Bərhan as its centre), constituting the southern part of Səmen.

The name, which may mean something like 'the vulture of [his] Majesty' (cp. ↗*Žan hoy*), certainly points to its origin as the designation for one of the traditional ↗military units. The policy of building the imperial army of regiments whose members were rewarded with (hereditary) land possessions and other privileges goes back at least to early Solomonic times (cp. ↗*Ç̌äwa*). In fact, Ğ.A. appears in a "Royal Song" in honour of *aṣe* ↗ᶜAmdä Ṣəyon I in connection with historical ↗Angot (Žan Amora, Guidi 1889: 62): despite the uncertainty of the translation, it is usually interpreted in the sense that the Emperor subjugated Ğ.A. (which, therefore, must have rebelled against him before, s. Littmann 1914:26; Merid Wolde Aregay 1997:39). A land charter ascribed to *aṣe* ↗Dawit II gives "Ad Ğan Amora" as a *gʷəlt* to the monastery of Samuᵓel of Däbrä Qʷäyäsa (CRAxum no. 10).

Later, the Chronicle of *aṣe* ↗Bäᵓədä Maryam I reports, that Ğ.A. (Žan Amora, here apparently restituted in its quality and rights of an imperial regiment), according to the Emperor's order, was fighting in the north a certain "Amba Näḥad, *śəyyum* of Ṣällämt"; Ğ.A. soldiers had been previously established (transferred?) there by *aṣe* ↗Zärᵓa Yaᶜəqob to check the incursions of the much-feared ↗Dobaᵓa from the deserts bordering the south-eastern Təgray (cp. Merid Wolde Aregay 1997:44). The campaign against Dobaᵓa, undertaken ca. 1471, was a big success and Ğ.A. (along with Žan Qänṭäfa, another regiment) was rewarded with the enemy's cattle. Ğ.A. soldiers' fame as the vanquishers of the Dobaᵓa continued well into the 16th cent. and their *šum* was praised by ↗Alvares, who passed through the area (BeckHuntAlvar 194f.): the region of Ğ.A. (Žan Amora) is reported to be located in Təgray, to the west of Wägära, east of Säläwa and north-east of the historical habitat of the Dobaᵓa.

In the 16th cent. Ğ.A. suffered serious losses. During the invasion of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī, according to the *Futūḥ al-Ḥabaša*, "*batrīq* Qāsim", the commander of Ğ.A., obviously invested with high military authority, fiercely resisted the Muslims, but was captured and killed (BassHist 266). Thereafter, the regiment is reported to have been exterminated by the ↗Oromo during the *gadaa* of Maçallee (some time in 1554–62). It is not clear what happened to Ǧ.A. after this and to what extent its military tradition was preserved; it appears much later in the Chronicle of *aṣe* Susənyos as a place without any particular importance, situated near Ṣällämt (approximately coinciding with the location of the later *wäräda*), i.e. beyond Täkkäze and far to the south-east of the "old Ǧ.A.". The immediate cause of the transfer is not known, but the resettlements of the *čäwa* and their families in a new place by order of the emperor did happen from time to time (it is unclear whether local traditions of the "old" and "new" Ǧ.A. preserve any remembrance of the past). In any case, during the ↗*Zämänä mäsafənt* Ǧ.A. in Səmen obtained some importance due to the fact that *däǧǧazmač* ↗Wəbe Ḫaylä Maryam established his capital in ↗Däräsge and built the church of Däräsge Maryam there.

The historical traces of Ǧ.A. – reflected in areas called by its name – still remain in Təgray and even in northern Šäwa (in Efräta; s. Merid Wolde Aregay 1997:44, n. 52 and 53, n. 61); to one of them (and probably not to Ǧ.A. of Səmen) there is a reference in the monastic genealogy of *abba* ↗Täklä Haymanot (Getatchew Haile 1982–83: 24, no. 11).

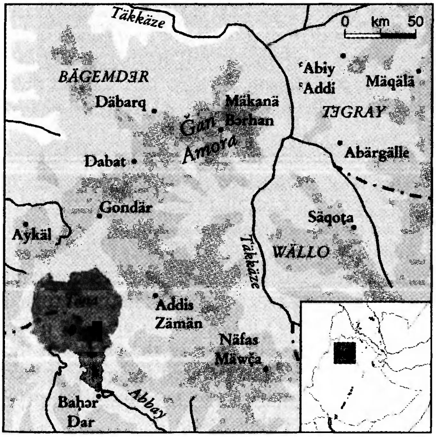
Denis Nosnitsin



Ǧan Bädəl

Ǧ.B. (ጃን፡ በድል, also Žan Bädəl) was a locality near the Bərr river (a tributary of the Abbay) in ↗Damot (later *awraǧǧa* Qʷälla Däga Damot), Goǧǧam. The name itself reveals the military origin of the settlement: its structure is patterned after royal regiments' names, like ↗Ǧan Amora, Ǧan Gädäb, ᶜAdal Mäbräq, Badəl Amba etc. (↗Military units). These regiments were granted lands in hereditary and collective (regimental) ownership, either near the winter residence of the emperor, or along the frontier in the most-endangered areas. It was a practical system, where soldiers could live on the resources of their land during peacetime and on the enemy's resources (booty) during wartime. It is only natural that usually these regimental lands were called after the name of the regiment. The origin of the regiment Ǧ.B. remains obscure. Probably, it was established among other regiments by *aṣe* ↗Zärʾa Yaᶜəqob, when his previous regiment Ǧan Haṣana had deserted to ↗ᶜAdal. In the Chronicle of *aṣe* ↗Susənyos, Ǧ.B. is mentioned under the year 1608 only as the name of the place where the Emperor defeated the Liiban ↗Oromo.

Sevir Chernetsov

Ǧan Bet

The term Ǧ.B. (ጃን፡ ቤት, lit. 'house of the emperor' [cp. ↗*Žan hoy*]) seems to be already lying behind the name *Gunbayta* by which the Arab geographers of the 12th-13th cent. designated the capital city of the country of al-Ḥabasa (↗Abysinnia; s. CRStor 324ff.). Much later, in ↗Gondär, the 17th–18th cent. capital of Ethiopia, it had at least three different meanings. Firstly, it denoted a building in the Gondär palace compound which was alternatively mentioned in the royal chronicles as *žan/ǧan täkäl*. It was a tower inside the palace compound, opposite the palace of *aṣe* ↗Fäsilidäs, not far from the main gate (Fit Bär). One of the gates of the compound, which was in front of the tower, was also called

Žan Täkäl (possibly, a correlation to the መርዕድ፡ ደጅ, *märʿəd däǧǧ*, 'majesty's gate' of the medieval Ethiopian moving royal camp [↗*Kätäma*], TadTChurch 270). The tower and the gate were badly damaged by a tornado on 9 September 1704, but were still of strategic importance during the unrests of the last days of *aṣe* ↗Yosṭos and the events which led to *aṣe* ↗Bäkaffa's ascension to power. Later, the tower was completely destroyed. It was set on fire during 1732, when rebels, who wanted to enthrone Həzqəyas, fought followers of *ətege* ↗Məntäwwab and *aṣe* Iyasu II, and burnt down again in 1794, when retainers of *nəguś* ↗Täklä Haymanot fought against *balambaras* ↗ʿAśrat.

Secondly, Ğ.B. designated the ceremony of the royal trial, which usually took place in the Addäbabay square in Gondär in front of the main palace of Fasilädäs and the Žan Täkäl tower. The emperor would be sitting on a platform within the walls of the palace compound to the left of the Žan Täkäl gate, while the Metropolitan and the other prominent ecclesiastics were on a tower called Awağ Mängärya (i.e. the place for announcing ↗*ʿawağ*), where all the learned men were seated beneath them according to their rank.

Thirdly, Ğ.B. was the name of a body of the royal guards (attested already in the pre-Gondärine time, s. Varenbergh 1915–16:40), who guarded the Žan Täkäl tower and escorted the accused to the place of trial. Their reputation was rather bad among the citizens, because immediately after the trial they acted also as executioners at the Addäbabay square before the crowd of spectators.

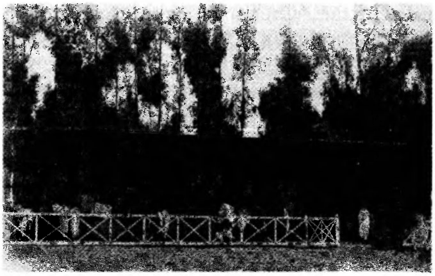
Ğan Meda

The plain of Ğ.M. (ጃን፡ ሜዳ, loosely translated as 'field of the emperor' [cp. ↗*Žan hoy*]) became a major public space in ↗Addis Abäba associated with the name of *aṣe* Mənilək II after the foundation of the capital. There is evidence that previous emperors had imperial spaces similarly named. It first came to prominence when the cannons captured from the Italians at the 1896 battle of ↗ʿAdwa were displayed on its broad, flat and grassy surface. Within a few years the impact of Western influence could be seen when foreign diplomatic representatives organized polo matches there. It also became a race-course where horses were entered with great enthusiasm by the Emperor, the Ethiopian nobility, foreign diplomats and others. After the turn of the 19th cent., some large and substantial homes were built on its periphery. Some of the earliest aeroplanes to Ethiopia also landed at Ğ.M.



The tribune of the regent *ras* Täfäri Mäkʷännən during a horse race at Ğan Meda, 1927; from ms. of Ambassador Fechter, Politisches Archiv, Auswärtiges Amt, Berlin

Nevertheless, it remained essentially a gathering point for traditional ceremonies: the ↗*dämära* of ↗*Mäsqäl*, the cutting of hay in the spring, ↗*Ṭəmqät*, as well as games of ↗*gugs* and military reviews. Significant military reviews were held there in 1903 (honouring the dead of the Italian War 1895–96, with a 300,000-men military review), in 1909 (to declare *ləǧ* ↗Iyasu heir) and in 1916 after the battle of ↗Sägäle. Ğ.M. also played a significant role in the coronations of Täfäri Mäkʷännən as *nəguś* in 1928 and then emperor under the name of ↗Ḫaylä Śəllase I in 1930.

Ğ.M.'s role was played down by the Italians during their occupation when they renamed it the Hippodrome on their maps. After the Liberation in 1941, it regained its stature as a major public space for *aṣe* Ḫaylä Śəllase I and where national religious festivals were celebrated and also military reviews were held. It also continued to be the country's major race-course and polo-ground. Throughout most of the period of the *Därg*, it continued to be used for major public celebrations, but began to encounter competition from other public spaces.

Ğan Meda

Ğ.M. (ጃን፡ ሜዳ, 'field of the emperor') was the name of a plain just to the east of ↗Däbrä Tabor. It was here in April 1855, that the missionary Johannes ↗Krapf met newly-crowned *aṣe* ↗Tewodros II. Krapf was accompanied by Johannes ↗Flad and ↗Maḫdärä Qal, an Ethiopian who had received European education. Krapf received the encouragement of the Emperor and the acquiescence of the bishop, *abunä* ↗Sälama, to the commencement of a new Protestant mission, this one to be staffed by lay artisans. A year later the artisans arrived and the Emperor settled them close to Ğ.M., at ↗Gafat, where they established a workshop. At the end of 1859 it was here that Tewodros received a visit from the Coptic Patriarch Qerəllos. The original emperor with whom it was associated is unknown. However, given its centrality at a commanding place in the highlands east of Lake ↗Ṭana, and the space which it provided for a military camp, it must have served as a military mustering point for quite some time, not least in the reign of *aṣe* ↗Yoḥannəs IV, who succeeded Tewodros in 1871 and who based himself for some years at Samara, close by.

Ganaalee

The G. (Amh. ገናሌ Gänale; also Genaalee Doriya) is one of the major arteries of south-eastern Ethiopia. The Italian explorer Vittorio ↗Bottego added "Doria" to the name of the river in order to honour Marchese Giacomo Doria, the then president of the Reale Società Geografica. After merging with the Dawa at Luuq Gaanaane in Somalia, it becomes the Juba river, which flows further into the Indian Ocean near Kismaayo. The G. originates from the confluence, in ↗Bale *kəflä hagär*, of two rivers, the Genaalee Guddo and the Genaalee Gambello, which come from Mount Gurumba in the Southern Nations', Nationalities' and Peoples' Regional State (the former Sidamo province). The ↗Wabi Šäbälle, which also originates from this mountain, flows northwards, whereas the G. runs southwards into Oromiyaa. The river bends its course progressively to the south and runs deeply into the plateaux built upstream of Precambrian volcanic rocks and downstream of Mesozoic sedimentary strata. Its canyons are interrupted by numerous falls, including the Baratieri and the Del Verme falls. On its left bank the G. collects numerous tributaries originating from the very wet high mountains of Bale; among these rivers are the Genaalee Dida, the Welmel, the Wabi Mäna and finally the Wabi Ğestro (Wäyb) at Dolo in the Somali *kəlləl*, near the Ethiopian-Somali border. It was on the shores of the G. that, from October 1935 to January 1936, *ras* ↗Dästa Damṭäw resisted ↗Graziani, who came from Dolo/Doolow, trying to reach Nagallee following the valley.

Gänale

The G. (**ገናሌ**) *awrağğa* takes its name from the ↗Ganaalee River (s. map for the river). It occupied the right bank of the ↗Wabi Šäbälle, the left bank forming, to the north, the border with the ↗Çəlalo *awrağğa* (Arsi region) and, to the west, that with the ↗Gämğäm *awrağğa* (Sidamo region). Before the *awrağğa* disappeared with the administrative reform of 1991, its capital city was Dodola, located over the road coming from the Rift.

The censuses of 1970 and 1984 gave for G. 120,300 (14,8 inhabitants/km^2) and 223,691 inhabitants (21,6 inhabitants/km^2), respectively. The low numbers of 1970 reflect in all probability the effects of the agrarian crisis which devastated highland Bale between 1963–67. In 1984, the urban population was remarkably low: 17,926 inhabitants, including 8,287 in Dodola. In 2000, Dodola and Adäbba reached 18,616 and 13,436 inhabitants, respectively (CSA 2000), over a total population of more than 40,000, comprised in the four *wäräda* which formed part of the old G. *awrağğa*. The *wäräda* of Kokossa (164,5 inhabitants/km^2), Dodola (94 inhabitants/km^2), Adäbba (57,3 inhabitants/km^2) and Nänsäbo (33,7 inhabitants/km^2) have nearly 300,000 inhabitants. The western part, near Ğämğäm, is more densely populated than the eastern, which has higher elevations. The territory has now become the Bale National Park. It was affected by fires in spring 2000.

The high population densities in Kokosa and Dodola recall the nearby mountainous regions of the Southern Nations, Nationalities and Peoples' Region (*kəlləl*), where the cultivation of *ənsät* and coffee are dominant. On the other hand, the densities of the other *wäräda* are comparable to those of Bale, a subdivision of the Oromiyaa Region. The area is populated mostly by Oromo farmers, joined by new settlers, being neighboured to the west by the ↗Gide'o and the ↗Sidaama.

Gänäzo

The name G. (**ገንዞ** Gänzo, also **ገንዝ** Gänz) is first mentioned in the "Soldiers' Songs" in honour of *aṣe* ᶜAmdä Ṣəyon (r. 1314–44), in which it is stated that the Emperor defeated numerous enemies, including the "Ṭäṭa of Ganz" (HuntAmd 129). Whether "Ṭäṭa" is a title of the ruler of this territory or a personal name cannot be established. In the Chronicle of *aṣe* Zärʾa Yaᶜəqob (r. 1434–68), the ↗*gärad* of G. is quoted in a list as a member of an alliance of enemies that was beaten by the Emperor (PerrZarY 17f.). During the time of his successor, *aṣe* Bäʾədä Maryam (r. 1468–78), G. must have lived under the strict control of the Christian state. The Emperor entrusted his sons to the leader of G., *zändäraba* (or *gäräd*) Matewos, to take care of their education and they grew up in his country (ibid. 155f.; PerrEsk 345ff.). In 1532 G. was invaded by ↗ᶜAbdannāṣir, a general of ↗Aḥmad b. Ibrāhim al-Ġāzī from the Hadiyya. He defeated the Christian troops that were under the command of the governor Aiker, converted the remaining population by force to Islam and adopted the title *Ganz gärad* (BassHist 392ff.). After the wars of Aḥmad b. Ibrāhim al-Ġāzī G. does not seem to have persisted as an important territorial and/or ethnic entity.

It is difficult to identify the precise location of G. It was presumably situated in the Rift Valley between ↗Wäğ to the east and Kämbata to the west. Clans called G. or Gänz still exist among the Qabeena, Gurage, Yäm and Kambaata. Besides other similarities, all share the taboo on khaki-coloured cattle, explaining this custom by a legend which states that, during a time of starvation, their ancestors mistook a donkey for a cow, slaughtered it and ate the impure meat.

Ğända

Ğ. (**ጀንዳ**) in ↗Dämbəya was the country seat of the Ethiopian bishops, possibly from as early as the 1630s through into the 1860s. There the bishops had tributary lands and a palace and were buried. Of the palace nothing remains. The

French traveller Charles Jacques ↗Poncet may have visited *abunä* ↗Marqos there in 1699.

In 1860, with the permission of *aṣe* ↗Tewodros II and the support of his bishop, *abunä* ↗Sälama, protestant missionaries led by Johannes Martin ↗Flad and supported by the ↗London Society for Promoting of Christianity among the Jews, established a station there, directed to the conversion of the local ↗Betä Ǝsraʾel population. In 1862 a controversy between the missionaries and the Betä Ǝsraʾel broke out at Ǧ. The missionaries left Ethiopia in 1868 with the withdrawal of the troops of General ↗Napier. However, in 1874 Ethiopian converts took over the staffing of the mission, which remained a centre of the Betä Ǝsraʾel.

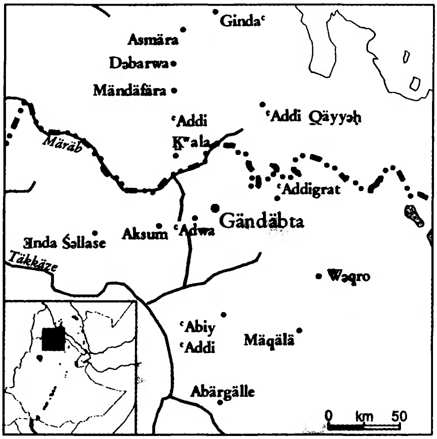
Gändäbta

G. (ገንዳብታ) is a village to the north of ↗ᶜAdwa on an ancient trade route to ↗Massawa. This settlement always existed in a shadow cast by the nearby ᶜ↗Adwa as the main commercial and administrative centre in the region.



This area acquired a short-lived political and military significance on 1 February 1896, when *aṣe* Mənilək II occupied it before taking ᶜAdwa, which had been previously occupied by the Italian General Oreste ↗Baratieri on 28 December 1895 and evacuated six days later on 2 January 1896.

Sevir Chernetsov

Gandolfi, Primizio Remigio

G. (b. 11 July 1865, Bagnolo San Vito, Mantova, d. 24 November 1939, Asmära) was an Italian industrialist who worked as a mason in France and Germany before he arrived in Eritrea in 1887. He came as part of the military expedition headed by General ↗San Marzano and established himself in Massawa. There he began his building activities, being engaged in the construction of the Massawa–Asmära railway line in the areas of Massawa, Säʾaṭi, Gindaᶜ and ᶜArborobuᶜ. After the completion of the construction of the Sabarguma – May Aṭal road, G. moved in 1898 to Asmära, where he received agricultural concessions and constructed major water-supply systems. As part of his work, in 1905 he was engaged in the construction of the governor's palace and the May Čehot water-wells as sources of water-supply for the city of Asmära. He planted the telegraphic lines linking Massawa to Asmära, Märäb and Addis Abäba. In 1912 G. was transferred to Libya, where he continued construction work. After 1922 he returned to Eritrea where he created further agricultural concessions.

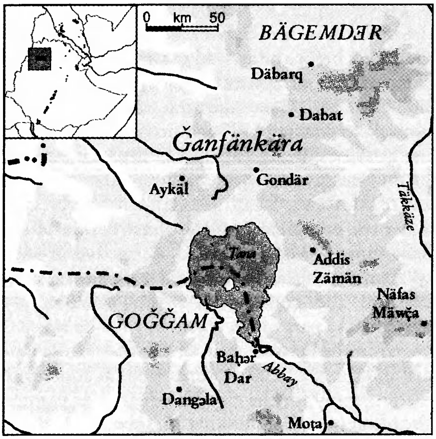
Ǧanfänkära

Ǧ. (**ጃንፈንከራ**) is a district in the eastern part of the region of ↗Armač̣əho. Located north-west of Gondär and south-west of Dabat, down the escarpment toward the west, Ǧ. was historically a principal settlement-area of the ↗Betä Ǝsraʾel. According to tradition, Mount Hohwara in the Ǧ. district was the site of a Betä Ǝsraʾel monastery, said to have been established by *abba* ↗Sabra in the 15th cent. (Quirin 1992:66f.; 1988; d'Abbadie 1845:49, 72; Leslau 1974:625f.).

In the 17th cent., *aṣe* ↗Susənyos fought several battles against the Betä Ǝsraʾel and their leader, ↗Gedewon. After one of these conflicts in 1617, the Emperor ordered the Betä Ǝsraʾel in several districts, including Ǧ., to be killed (PerChron vol. 1, 155f.; Quirin 1992:83f., 247, n. 238).

In the 19th cent., one of the leading Betä Ǝsraʾel religious officials was *abba* Yəsḥaq from Hohwara in Ǧ. He was evidently a monk, but was also considered one of the four "high priests", or principal Betä Ǝsraʾel leaders. *Abba* Yəsḥaq was a main source of information on the Betä Ǝsraʾel for the French traveller and scholar Antoine ↗d'Abbadie in the 1840s; d'Abbadie indicated that he was also well-respected by Ethiopian Christian scholars. D'Abbadie noted there were 15 Betä Ǝsraʾel households in Ǧ. and 20 priests on the mountain of Hohwara (d'Abbadie 1845: 45f.; 1851:261f.). ↗Flad, the Protestant missionary to the Betä Ǝsraʾel, noted Hohwara was an important place of pilgrimage and that 200 monks lived there (Flad 1869:29).



Several 19th-cent. travellers to north-western Ethiopia mentioned either Ǧ. or the mountain of Hohwara, or included the locations on their maps, but few seem to have actually visited the place. These include Ferret and Galinier, Samuel Baker, and Guillaume Lejean (Ferret — Galinier 1847, atlas; Baker 1870:131; Lejean 1867:364).

In the 1860s, the Jewish scholar Halévy visited Ǧ. He counted eight Betä Ǝsraʾel villages surrounding the mountain of Hohwara and 15 "hermits" living on the mountain and indicated that some of the people still spoke their own Agäw language rather than Amharic (Halévy 1877:227–31; 1869:282). In his second voyage to Ethiopia in 1908–09, ↗Faitlovitch visited the holy site of Hohwara (Faitlovitch 1910:88f.). Ǧ. remained one of the Betä Ǝsraʾel holy sites into the post-World War II period (Leslau 1975:636).

Gangule ↗Harro

Gänna ↗Lədät

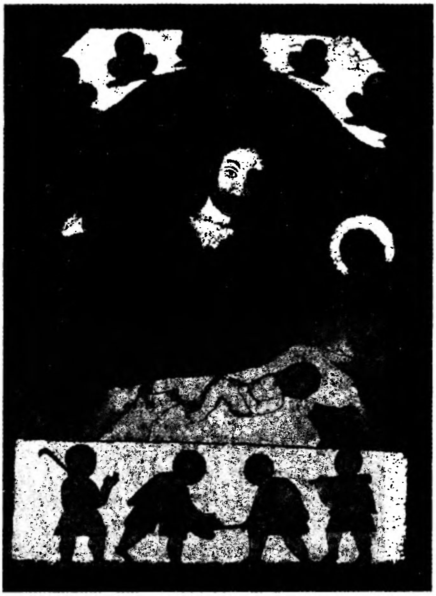
Gänna

G. (**ገና** or **ጌና** *genna*) is a traditional Ethiopian ↗game. Similar to hockey, it is named after the word for Christmas (↗*Lədät*) in Gəʿəz and other Ethiopian languages. The appellation was chosen because Christmas was the period when the game was most frequently played by boys and grown men (↗Feasts). They might start a week before the festival and continue until Epiphany (↗*Ṭəmqät*).

In Ethiopia, G. is widely played and known, with local variations, not only in the Highlands by the Amhara and Təgrayans, but also among the Oromo (as *qalle* or *qile*), e.g., in Wälläga and Arsi, and among the Hadiyya, Sidamo, Gurage etc. (VSAe II, 183f.). It is not known, however, when G. started to be played. The most important evidence is the appearance of G. in traditional paintings: from ca. the 17th cent. onward, the game is sometimes included in the Nativity scene (Chojnacki 1974:41f.).

The rules for G. are traditional and were never codified. Players would usually begin by dividing themselves into two teams (**ቡድን**, *budən*), each representing a different locality or quarter of a town. A playing-field, often a market-place, might then be chosen, though the same area was often used annually. The players might then select their respective captain, known as *abbat* (**አባት**), i.e. 'father', though in other variations of the game it was the captains who selected the teams. These sometimes chose a collective name, such as Färäs ('horse') or Bäqlo ('mule'), or two different types of rifle: Sänadər (the Sneider) or Wäğigra (Fusil Gras). The two captains would then together identify a "house" or spot in the middle of the field, where they would dig a small hole with their G.-sticks. These would be sometimes in the shape of a cross. There they would place the G.-ball, which was often a gnarled, round piece of wood, a piece of skin stitched in the shape of a ball or, for youngsters, a wad of cloth. The two captains would begin the game by ritually hitting each other's sticks three times, after which they, and later the other players, would try to knock the ball in the direction of their opponents' part of the field. In certain circumstances it was also permissible to pick up the ball. The side which hit it as far as their adversaries' rear boundary (marked, e.g., by a tree, hollow or elevation) scored a goal. The game is often played all afternoon until dusk, as long as the players are able to see the ball. Games were often repeated day after day, the last game in some localities being between a team of bachelors and newly weds against long-married old men. The game was generally accompanied by ritual insults (Griaule 1935;

Boys playing *gänna* on a stubble field near Hossäyna, Hadiyya; photo 1999, courtesy of Dirk Bustorf



Nativity of Jesus and shepherds playing *gänna*; triptych, central panel; 17th/18th cent.; IES no. 3523; from Raunig 1973: 135

Samuel Alamayahu 1959; any social distinction between the players was considered invalid); being tough and relatively rough, it might result in injuries, sometimes serious, which were, however, considered incidental and therefore not subject to compensation.

Gännätä Giyorgis

G.G. (**ገነተ፡ ጊዮርጊስ**) is the renowned church at ↗Fičče, the principal settlement in Sälale, 112 km from Addis Abäba on the road to the Blue Nile. It is situated on a plateau overlooking the ↗Gämma river. The original building is believed to date from around 1821. Church officials state that it was founded by *nəguś* Śahlä Śəllase's son ↗Säyfu. Others state that the existing circular edifice was erected half a century or so later by Säyfu's younger brother, *aṣe* Mənilək II's uncle *ras* ↗Darge Śahlä Śəllase. Originally thatched, as seen in the Duchesne-Fournet report (vol. 1, 77), the building was subsequently covered with corrugated iron in the early 20th cent. on the order of *ətege* ↗Zäwditu.

The church's paintings, many of them executed by the notable church artist *aläqa* ↗Ḫəruy of Dima Giyorgis, are in an excellent state of preservation, and include pictures of *aṣe* Mənilək and *ətege* ↗Ṭaytu, and *ras* Darge and his family, as well as a fine representation of an equestrian St. George. The church's possessions include a silver hand-cross reputed to have belonged to *abba* ↗Täklä Haymanot, and a fine roundish processional cross presented by *ras* Darge. A nearby building, long since demolished, was for a time the place of imprisonment of Mənilək's grandson and chosen successor *ləǧ* ↗Iyasu.

Richard Pankhurst

Gännätä Iyäsus

G.I. (**ገነተ ፡ ኢየሱስ**, 'Paradise of Jesus') is the name of a Catholic church in ↗Azäzo (13 km south of Gondär) built by the ↗Jesuit Pedro ↗Paez. Together with the accompanying Jesuit residence, it was planned in 1621 at the request of *aṣe* ↗Susənyos and built on a small hill called Aṣe Wägän, about 450 m to the west of the ↗Azäzo Täklä Haymanot church.

On 9 November 1621, eight days after the Ethiopian royal clergy formally accepted the Catholic formula about the two natures of Christ (↗*Hulät lədät*), the Emperor, accompanied by his son, the future *aṣe* ↗Fasilädäs, laid the foundation stone for the new church (BecRASO III, 386f.). In 1623, G.I. was consecrated in the presence of the Emperor (BecRASO II, 493). The Chronicle of Susənyos relates in great detail the story of the construction, reporting on the dimensions of the building (PerChron 258f. [text] = 199 [tr.]). Besides the church, the compound included a royal residence, an orchard and a garden (BecRASO VI, 387f.), a water-cistern and a pavilion with a fountain, and was endowed with land-grants by the Emperor.

Azäzo was part of the "royal space", a territory under the direct authority of the Emperor (though in those days the true "royal camp", *kätäma*, was in ↗Dänqäz). Thus, the construction of a Catholic church there was a clear manifestation of Susənyos's political choice in favour of the Jesuits and a result of growing Portuguese influence.

After the abdication of Susənyos (1632), *aṣe* Fasilädäs transferred the land given to the Jesuits, included that of the Church of G.I., to the monastic community of ↗Däbrä Libanos of Šäwa. Susənyos and Fasilädäs were buried in G.I., but Fasilädäs's body was moved later to ↗Daga Əsṭifanos. The complex is not preserved, but some fragments of the foundation are still visible above ground level.

Mulatu Wubneh

Gännätä Ləʿul

The G.L. (**ገነተ፡ ልዑል**, lit. 'Garden of the Most High') Palace (↗*Gəbbi*) was built for Emperor ↗Ḫaylä Śəllase I in 1935 and was known prior to his coronation as the Little *Gəbbi* or New *Gəbbi* (name chosen in distinction to the larger, and older, palace of *aṣe* Mənilək II). It was located on land in Addis Abäba inherited from his father *ras* Mäkʷännən (other parts of this land were allocated to the Ətege Mänän school and ↗Berhanənna Sälam Printing Press). The building was designed by E. Kametz, engineer from the Ethiopian Ministry of Public Works who worked under the Minister *fitawrari* Taffäsä Habtä Mikaʾel. G.L. was a simple two-storey building of modern design that was later expanded on numerous occasions; it was supplied with electricity, and furnished by the London firm Waring and Gillow (ZerEth 73f., 200, 289; Farago 1035:75–79).

Palace of Gännätä Ləʿul, main entry; photo courtesy of the IES (no. 30 G2)

A royal residence, it was also used as a guest palace for Crown Prince Gustav Adolph of Sweden, during his state visit to Ethiopia in January 1935 (ZerEth 488; HSLife 207f.). The building later served as the administrative headquarters of two successive Italian viceroys, ↗Badoglio and ↗Graziani, and later as the residence of the third, di ↗Savoia, Duke of Aosta. The attempt on Graziani's life, in February 1937, was made on the palace's front doorsteps.

After Ethiopia's liberation, G.L. was reoccupied by Ḫaylä Śəllase as a royal residence and centre of government, and was the location for many formal state occasions. It was in the palace's "green salon" that the ministers were shot during the abortive ↗coup d'état of December 1960 (Talbot 1955:134-40; Greenfield 1965:428-31). The Emperor shortly afterwards presented the building and surrounding compound to the then Ḫaylä Śəllase I University (later ↗Addis Ababa University). Part of the former building then became the University's administative centre, while the remainder was occupied by the ↗Institute of Ethiopian Studies library and museum.

Gännätä Mänäkosat ↗Monastic literature

Gännätä Maryam

The church presently known as G.M. (**ገነተ፡ ማርያም**, 'Garden of Mary') is situated on a broad ledge of Mount ↗Ǝmäkina, overlooking the vast gorge of the Täkkäze River in ↗Bugna (Lasta), about 16 km east of ↗Lalibäla. A free-standing structure carved from living rock, the church was erected and decorated in the last quarter of the 13th cent. for *aṣe* ↗Yəkunno Amlak, founder of the ↗Solomonic dynasty.

Among the murals, there is a unique dedicatory portrait of the patron Yəkunno Amlak flanked by two abbots of the church. The inscription indicates that the church was originally dedicated to *abba* Mäṭṭaᶜ (↗Libanos): "It is I who has [this church] built, [I,] Yəkunno Amlak, whom God made king by his [good] will. My father, Nəḥyo Bäkrəstos, was an agent for me to have this church built in the name of Mäṭṭaᶜ. May God have mercy upon me in the Kingdom of Heaven with my fathers Mäḥari Amlak and Nəḥyo [Bäkrəstos]" (Heldman – Getatchew Haile 1987:3f.).

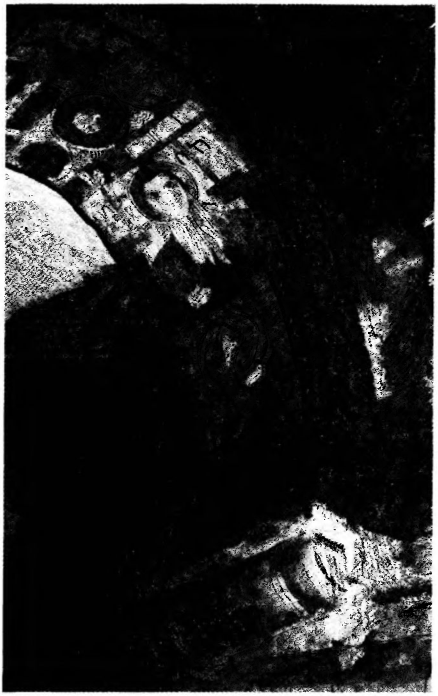
The church is an oriented basilica with a narthex that opens into the central nave. At the east end of the nave is a dome-covered rectangular sanctuary, from which open two smaller chambers at the north and south. Heavy piers separate the central nave from the side aisles (Gerster 1970:115). The church sits upon a podium, a typical feature of Aksumite ↗architecture. Its exterior colonnade of piers and the gabled roof carved with a frieze of arcade-framed crosses are distinctive architectural features copied from the church of the Redeemer or Mädḫane ᶜAläm at Lalibäla (Heldman 1992:230ff.).

All the upper portions of the walls and piers – including the soffits of the arches, the ceiling of the nave, and the sanctuary – were originally covered with murals, most of which survive albeit in a damaged and faded condition. Nevertheless, the murals, inscribed in a formal Gəᶜəz script, provide an invaluable example of a relatively complete scheme of monumental painting. The walls of the sanctuary are painted with the 24 Priests of Heaven, St. ↗Anthony, founder of Egyptian monasticism, St. Stephen the Deacon, the priest-king Melchizedek (Gen 14) and *abba* Mäṭṭaᶜ. The small central dome, presently devoid of paint, was probably painted originally with Christ enthroned among the Four Heavenly Creatures, as within the sanctuary dome of Ǝmäkina Mädḫane ᶜAläm, a small 13th-cent. basilica church built within a large cavern in the upper eastern ridge of the Mount Ǝmäkina (Gerster 1970:109f., plates 100–08; Heldman 2000).

Christological scenes, which include the Annunciation, Baptism, Transfiguration, and the Washing of the Feet, occupy faces of the piers, although the Wedding at Cana is found at the west end of the north aisle, and the Entry into Jerusalem and the Presentation to the Temple are painted on the east wall (Heldman 2000). The Crucifixion is no longer extant, and perhaps was never a part of the Christological cycle.

Pairs of angels decorated the vault of the nave, and on the walls of the side aisles and the soffits of the arches are portraits of saints – frontal figures standing within an abbreviated frame, as in the 13th-cent. Coptic murals at the monastery of St. Anthony at the Red Sea (Bolman 2002, figs. 4: 39, 5–32). ↗Equestrian saints include St. George, St. Mercurius, and St. Cyriacus. Old Testament figures include individual portraits of Moses and Aaron on the south aisle wall, and the Sacrifice of Abraham (Gen. 22–23) and Dinah (Gen. 34) with her father Jacob on the north-east wall (Jacob is inscribed "Jacob grieved [very] much."). Sarah, mother of Isaac, painted on the adjoining north wall, relates to portraits of exceptional women arranged farther west along the north wall – the mother of George the Deacon and St. Sophia with her three virgin daughters. Narrative scenes of St. Mary of Egypt (north aisle) and St. Mamas (south aisle) and portraits of the luminaries of Egyptian and Ethiopian monasticism provide exemplary models for the monastic life. Portraits painted on the soffits of the arches that run along the north and south axis of the nave include some of the Nine Saints – ↗Gärima, ↗Yəmᶜata and ↗Päntälewon – along with *abba* ↗Shenute, the 5th-cent. reformer of Egyptian monasticism; Arsenius, the famed Egyptian ascetic; and *abba* Näfər (Onophrius), the great Egyptian hermit. Egyptian monastic saints on the wall of the north aisle include Daniel of Scetis, whose visit with the ascetic Emperor Honorius is commemorated on 16 *Ḫədar* (BudgeSaint I, 252–55), and St. Samuel, founder of the monastery of Qalamun, along with female hermits and monastics, St. Mary of Egypt and St. Marina (*anbä* Märina) of Scetis. The Egyptian martyrs St. Barbara and St. Juliana are painted on the adjoining pier.

Many of the portraits are inscribed with simple prayers – such as "St. George, pray for us. May your prayer be upon us" and "St. Barbara with Sister Juliana. Pray and supplicate for



Gännätä Maryam; *abba* Šenute (Apa Shenoute) on the soffit of the arch, to the left on the east wall Jacob and Dinah; photo courtesy of the author

us", – which suggest that these iconic portraits served as devotional images for all who worshiped in the church. A few inscribed prayers are more specific, such as "St. Mercurius, martyr of Christ. Pray and supplicate for Yəkunno Amlak and Nəhyo Bäkrəstos. Amen."

A later historical note refers to the church as the "monastery of Yəkunno Amlak" (Caquot 1955:77, 87). The preponderance of portraits of monastic saints, female as well as male, suggests that a dual monastic community was attached to the church. The murals are closely related stylistically to the better preserved murals of ↗Ǝmäkina Mädḫane ᶜAläm. The murals of G.M. as well as the murals of Ǝmäkina Mädḫane ᶜAläm reflect the style of the early 13th-cent. murals at the monastery of St. Anthony, executed by a team of painters led by the master Theodore (Bolman 2000:37–89).

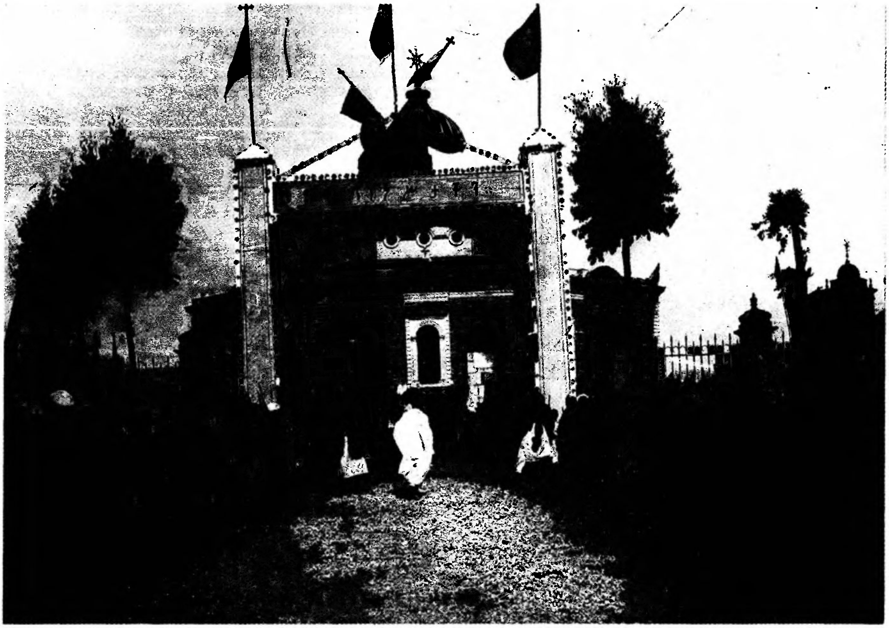
Gännätä Ṣəge Giyorgis

G.Ṣ.G. (ገነተ፡ ጽጌ፡ ጊዮርጊስ; also known as Qəddus Giyorgis, or Männagäša Qəddus Giyorgis) in the Arada district, near Mənilək Square, is one of the principal churches of Addis Abäba. Before the establishment of the present church, the French Missionary Taurin ↗Cahagne had obtained permission from Mənilək of Šäwa to settle in the area called Birbi(r)sa (↗Finfinnee). Ruins of an ancient church could be then still seen nearby; according to the local tradition, it had been destroyed during the time of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (Foucher 1987:35), but was still revered by the local people.

After Mənilək was crowned Emperor, Cahagne was requested to leave the area. It was decided to establish there a church dedicated to St. ↗George of Lydda, one of the most venerated saints. On 30 July 1894 the ↗*tabot* consecrated in the name of St. George was brought and placed in the house built by Cahagne, which served as a መቃኞ (*mäqañño*, a temporary dwelling for a *tabot*). The first ↗*gäbäz* of the church was *ras* ↗Mäkʷännən Wäldä Mikaʾel, the cousin of Mənilək (Haile Gabriel Dagne 1972:69, 73).



Church of Gännätä Ṣəge Giyorgis during the coronation of Empress Zäwditu, 1917; photo from the estate of Maurice de Coppet, Helsinki University Library, no. E 2392

On 30 September 1895, before the campaign of ↗ᶜAdwa, the *tabot* was transferred to a new and larger building, which, although a temporary hut, was consecrated and is still considered the first G.Ṣ.G. church. It is said that, as the beginning of the campaign was approaching, Mənilək came and vowed that if he returned from the battle safely he would establish a new modern building for St. George church as a commemoration. Following the old tradition, Mənilək and his army were accompanied by the *tabot* of G.Ṣ.G. (the miraculous help of St. George, as well as the presence of the *tabot*[*s*] near the battlefield are motifs frequently recalled in the traditional ᶜAdwa-pictures).

The battle of ᶜAdwa, in which Mənilək was victorious, coincided with the monthly celebration in honour of St. George on 23 *Yäkkatit* 1888 A.M. [2 March 1896 A.D.]. On his return, Mənilək wanted to fulfil what he had promised to the church, but the construction of a new building did not begin for about a decade. The church, however, continued to provide the service for the faithful. A new *mäqaňňo* was built in the middle of the graveyard (it is still used today as a dwelling by clergymen) and the Emperor allotted to the church several land-estates, most of them in Šäwa. An important event came in 1903 when a huge celebration of the anniversary of the ᶜAdwa victory was held in the church compound.

The foundation of a new church building was laid in February 1907 in a ceremony presided over by the Metropolitan *abunä* ↗Matewos. The architect was the Greek Orphanides and it was erected by the Italian engineer Castagna. In order to facilitate work, Mənilək himself brought a steam-roller (*yäṭis babur*) from Europe. Construction was financed by the Palace, but the faithful also contributed money and, in particular, labour-services. Shortly thereafter Mənilək fell ill and had to withdraw from actively managing the administration of the place. After his death in 1913, it was his daughter, *ətege* ↗Zäwditu, who completed the construction of the church in 1916 – a beautiful octagonal building with a high round dome. As in other traditional Ethiopian ↗church buildings, the interior is divided into three sections. The interior contains paintings from the Ethiopian artists Afäwärq Täkle and ↗Əmäᵓalaf Ḫəruy.

In the following years, the importance of the church increased: it was here that the coronations of Zäwditu (11 February 1917) and *ras* Täfäri Mäkʷännən as ↗Ḫaylä Śəllase I (2 November 1930) took place. As a result, the word መናገሻ (*männagäša*, 'royal residence') was added to the name of the church.

The establishment of G.Ṣ.G. had an impact on the further development of Addis Abäba. With its erection the city appeared to develop in a westerly direction from the Palace (↗*Gəbbi*; PankEcon 702).

Ganza ↗Mao

Ğär Śəllase

Ğ.Ś. (ጀር፡ ሥላሴ) is the monastery founded, according to tradition, by the holy monk ↗Iyasu of Ğ.Ś. It is situated in the district of Ǝnsaro (Dännäba, Ğärru, Šäwa), north-east of the famous monastery of ↗Däbrä Libanos; it takes ca. eight hours to walk from there to Ğ.Ś. Several manuscripts are reported to be preserved in the monastic library; the underground church of Mäkanä Päraqliṭos Amlakənä is certainly that mentioned by Antonio Mordini (1953:47f., n. 3). The church school of Ğ.Ś. receives boys from the villages nearby (where in the 1980s there was still no governmental school).

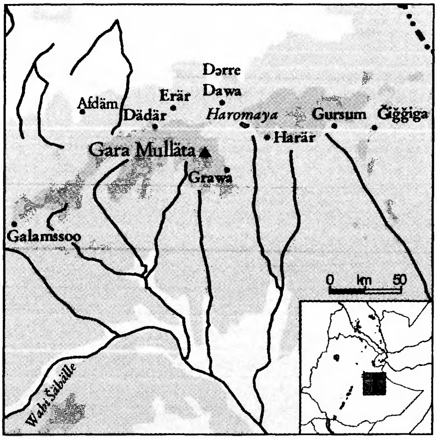
Gara Mulläta

G.M. (ጋራ፡ ሙላታ, Gara Muläta, also Gara Mullata, Oromo Gaara Muldhataa; ca. 3,400 m A.S.L.) is a flat-summit mountain at the northern end of a volcanic range running from the north-west to the south-east and ending at Mount Geyle at an altitude of over 3,000 m A.S.L. The range towers above lakes Adäylä and Haromayya (2,069 m A.S.L.), situated on the pass followed by the Harär-Dərre Dawa highway. G.M. can be reached by a track which branches off the Alämayya–Gərawa road at Kurfa Čäle.

On the piedmont sorghum and coffee are grown, but since the 1960s agriculturalists have pioneered the expansion of ↗*čat* cultivation (*deema* variety) fot the market in Somaliland (Ezekiel Gebissa 2004:132). On the slopes remnants of forests include junipers, olive and eucalyptus trees which have been partially cleared to make room for fields of barley up to an altitude of 2,800 m. The top is covered with tree heath, a typical plant of the afro-alpine strata.

In order to protect ↗Harär from southern invasions, *ras* ↗Mäkʷännən built a fortified position on a rocky table above Grawa. In 1932 ↗Ḫaylä Śəllase I detained *ləǧ* ↗Iyasu inside the fort, until in 1935 he was taken to Addis Abäba and killed (Monfreid 1933). Towering above the



Harär–Dərre Dawa main road, the G.M. mountains have also been a stronghold for several guerrilla wars and ↗šəfta bands. As soon as the Italians occupied Harär and Dərre Dawa (8 and 9 May 1936), *fitawrari* Million and some remnants of its defeated army entrenched in these area (Del Boca 1982:703, 729 note), where they were pursued by the Italian Air Force (Gingold Duprey 1995:621-25). In 1942, after the Liberation some bands of *šəfta* launched sporadic attacks upon Amhara settlements of the Gursum *awrağğa* (Gilkes 1975:220). In 1977–78, among the Ethiopian troops and militias entrenched in the mountains, were the Western Somalia Liberation Front and the Somalian Army, who had taken Alämayya and besieged Harär and Dərre Dawa. From the villagization campaign which was edicted by the *Därg* in 1986–87 till the beginning of the 2000s, some limited but violent clashes opposed the Oromo Liberation Front maquis against the regular Ethiopian troops.

Gärad

G. (ገራድ) is a title carried by Ethiopian local rulers of both Islamic and Christian faith. The etymology of the word G. remains unclear: Leslau (1979:291) speaks of a generic Cushitic origin without any further specification. Nowadays the word G. can be found in several languages spoken in Ethiopia, indicating a title of chiefs or rulers of different rank.

In ↗Səlṭi (Gutt – Hussein Mohammed Mussa 1997:769f.), *garaad* means ‘chief, king (of the Səlṭi people)’ and is used also as a ‘title or reference form’; *saar garaad* is the ‘candidate for chieftainship or kingship’, while *walab garaad* is ‘spokesman of the chief or king’.

In ↗Harari, *garaad* has the meaning of ‘tribal chief lower than *damīn*’ (Leslau 1963:75) and *yäʾakkababi aläqa* ‘chief of a locality’ (Abdurahman Mähammäd Qorram 1991/92:184).

With respect to ↗Amharic, the word G. seems to have been only used by Guidi (GuiVoc 729) and Kane (KaneDic 1940) in an historical context, as it appears in ancient ↗Gəʿəz texts, indicating the “title of the governor of Hadiyya and Gänz”. Kane (ibid.) also uses to the word *gärada* or *gäräda* (apparently an Oromo form: though no dictionary of Oromo has the word G.), deriving it from Eadie's *Amharic Reader* where it describes a “tribal notable of Harärge”, or a “land proprietor”.

In ↗Somali *garaad* means ‘tribal chief’ (Agostini et al. 1985:256, ‘capo tribù’). It also means ‘intelligenza; discernimento; capacità di comprendere’. The semantic affinity between “understanding” and “chiefdom” in Somali is not unusual, as it is also attested in the word *ʿaaqil* (ibid. 76), itself coming from Arabic *ʿāqil* (‘clever, rational’). Nowadays the title *garaad* is commonly carried by Somali local leaders and warlords.

Looking back in history, as far as we know, the title G. is mentioned for the first time in the Chronicle of ↗Zärʾa Yaʿəqob (PerrZarY 16ff.), as a title carried by the governor of Hadiyya, who was tributary to the Christian Emperor. Zärʾa Yaʿəqob summoned the *Hadiyya gärad* – apparently a Muslim called Mahiko, son of G. Mehmäd and brother of the *ite* Žan Zela, the *qäññ* ↗*bäʿalteḥat* queen – to pay the tribute due to the

Emperor. Mahiko refused and declared a revolt. A subordinate of G. Mahiko, the governor of Gädayto who also carried the title of G., revealed to Zärʾa Yaᶜəqob the *Hadiyya gärad's* war preparations and told the Emperor that many local chiefs were ready to help Mahiko. The *Gädayto gärad* mentioned the following allies of G. Mahiko, who all carried the title of G.: *Gudola gärad*, *Diho gärad*, *Hadäbo gärad*, *Gänäzo gärad*, *Säga gärad*, *Gäb gärad*, *Qäbᶜen gärad*, *Gogälä gärad* and *Haläb gärad*. From the list mentioned above, we may infer that the title G. was also used for a low-ranking ruler who governed a district.

The *Gädayto gärad* advised Zärʾa Yaᶜəqob to appoint Mahiko's uncle, Bamo, to the office of *Hadiyya gärad* in place of his nephew, and to fight the rebel governor. G. Mahiko was thus defeated and killed.

In the Chronicle of ↗Bäʾədä Maryam, the title G. is carried by the ruler of Bali. Bäʾədä Maryam sent the *Bali gärad* ↗Žan Zeg to fight in the country of Gam where he died in battle (PerrZarY 140f.). Another *Bali gärad* mentioned in the Chronicle of Bäʾədä Maryam is Gäbrä Iyäsus (possibly the successor of Žan Zeg) who was also a ↗*bitwäddäd*. He defeated many local Muslim chiefs of ᶜAdal (*śəyyumanä ᶜAdäl*) among whom were: an *Eror gärad*, a *Geday gärad*, a *Kʷäšem gärad*, a *Hargay* (or *Harägay*) *gärad* and another *Geday gärad* (PerrZarY 165f.; ms. also adds a *Täläg gärad* and an *Adgo gärad*).

During Bäʾədä Maryam's reign, G. also became the title given to the governor of Gänz (PerrZarY 112), which was previously ruled by an *higano* (DillmZarY 13). The sons of the Emperor grew up in Gänz under the guardianship of G. Matewos (TadTChurch 277). It thus seems that at this time the title was variously and independently used by both Muslim and Christian authorities for local governors, and that its attribution was not specifically restricted to the Muslim vassals of the Christian empire (as reported in BassHist 10, n. 3 and TrIslam 78, 84, n. 3).

In the 16th cent., the ↗*Futūḥ al-ḥabaša* mentions many individuals carrying the title G. Among them were: G. Aboñ, at whose service the young *imām* ↗Aḥmad b. Ibrāhim al-Ġāzī started his career, and who died as a martyr, fighting against the sultan Abū Bakr; G. Naṣr b. Bali, a close companion of the *imām*, who was, according to the text of the *Futūḥ* (BassHist 141f.), the son of the governor of Bali; G. ᶜUṯman b. Ǧawhar (BassHist 93, n. 2) and G. Dīn, who also had the title of *farašaham* and *amīr* (BassHist 55, n. 1), which appear to be its equivalent.

Garäd Kənfu

Ləǧ G.K. (ጋረድ፡ ክንፉ, horse name Abba Gəlbəṭ; d. 1860) was the son of *däǧǧazmač* ↗Kənfu who ruled ↗Dämbəya province from 1831 until his death in 1839. Through him, G.K. was related to *aṣe* ↗Tewodros II, Kənfu's half-brother. We know that G.K. himself had two brothers, Yəlma and Mäkʷännən, who were active in contesting the legacy of Kənfu after their father's death.

G.K. lived and acted in their shadow. During the rainy season of 1856 he and Mäkʷännən disturbed Gondär. He is noted as one of the rebels against Tewodros, in Dämbəya and Wälqayt. In 1860 he emerged as an ally of *däǧǧazmač* Agäw Nəguśe (↗Nəguśe Wäldä Mikaʾel), at the time the most prominent opponent of *aṣe* Tewodros II. In a skirmish outside Gondär, G.K. killed the British Consul, Walter Chichele ↗Plowden. He, in turn, was killed in revenge later that year in a battle in Waldəbba by the Emperor.

Gärᶜalta

G. (ገርዓልታ) is a district in the sandstone escarpment of south-central Təgray, to the north of historical ↗Tämben and ↗Ǝndärta (the latter later became an *awrağğa* encompassing G.-*wäräda*). The district is approximately half-way along the western side of the main Mäqälä-ᶜAddigrat road; ↗Ḥawzen, some 22 km to the west of this road, abuts the northern flank of the area, also accessible from ↗ᶜAbiy ᶜAddi to the south-west. In such a predominantly rugged mountainous zone, crossed by the Ṣalet river, the major foci of settlement are the villages of ↗Dəgum and Ṣəgäräda (the district's administrative centre). Special attention attaches to G.'s rich ecclesiastical patrimony, both along the escarpment itself and within the valley plains, where a characteristic landscape contains one of the most important concentrations of ↗rock-hewn churches in Ethiopia.

Moving from the south-east, on the east-facing arm of the escarpment, to the north-west, the key churches include: Däbrä Mikaʾel in ᶜAbiy ᶜAddi (Sauter 1976, no. 1223; Plant 1985, no. 12); Ǝnda Qəddus Yoḥannəs, ↗Mäᶜaquddi (Sauter 1976, no. 1221; Plant 1985, no. 13); Ǝnda Kidanä Məḥrät, Yaᶜid (Sauter 1976, no. 1220; Plant 1985, no. 11); Arbaᶜətu Ǝnsəsa churches in Mäṭäri [May Ṣäbari], disused, (Sauter 1976, no. 1222); in Gundo (Sauter 1976, no. 1225; Plant 1985, no. 17) and ↗Qämär (Plant 1985, no. 18); Kidanä Məḥrät and Abunä Abrəham in ↗Däbrä Ṣəyon; Ǝnda Maryam Ayräfäda and the Śəllase churches (↗Dəgum, Sauter 1976, nos. 1218, 1215A/B; Plant 1985, no. 10; nos. 8-9); Abunä Gäbrä Mäsqäl and Abunä Abrəham (↗Däbrä Mäᶜar); Däbrä Maryam P̣əp̣pasäyt(i) (Sauter 1976, no. 1213; Plant 1985, no. 3) and another Maryam church on an eastern outcrop at Gulbəša (Sauter 1976, no. 1216; Plant 1985, no. 19); Mikaʾel in Harägʷa (Sauter 1976, no. 1212); Abunä Zärʾa Buruk [Zärʾabruk] (Sauter 1976, no. 1211; Plant 1985, no. 20); Maryam Mägdälawit (↗Mary Magdalene) in Mänguda (Sauter 1976, nos. 1229; Plant 1985, no. 21), Däbrä Danəʾel (↗Qorqor) and Yəmʾata (↗Gʷəḥ). The escarpment switches south-east after the pinnacle at Gʷəḥ. Moving southwards, the first church to be encountered on the plain is Maryam Mägdälawit at Bäraqit (Sauter 1976, no. 1204). On the escarpment proper, there are the churches of Abba Gärima (↗Səllaᶜ; Sauter 1976, no. 1205); Giyorgis and Mikaʾel, ᶜAngʷa (Sauter 1976, no. 1226A/B; Plant 1985, nos. 15-16); Giyorgis and Mikaʾel (Qʷəraro; Sauter 1976, no. 1208A/B; Plant 1985, 25-26); Mikaʾel Arägawi (↗Tənsok̠e; Sauter 1976, no. 1209).

Niall Finneran – Red.

Gärᶜalta history

The beginnings of the history of G. could be connected to the South-Arabian migration to Ethiopia (8th–7th cent. B.C.), if the name of the village of ↗Ḥawzen is in some way reminiscent of the South-Arabian place-name ḤWZN. It is precisely in this district of Ḥawzen that Aksumite pottery remains (next to ↗Dəgum) and the early Ethiopic inscription of ᶜAnza (2nd–3rd cent. A.D.) were found, confirming the participation of south-eastern Təgray in one of the most ancient phases of Ethiopian civilization.

According to hagiographic traditions, ↗Gʷəḥ in G. is the place where ↗Yəmʾata of Qosəyat, one of the Nine Saints, established his own community in Aksumite times. One of the several almost-contemporary groups of ↗Ṣadqan (the "Righteous ones") are the so-called Ṣadqan of Ḥawzen.

During the ↗Zagʷe period, G. was crossed by one of the country's major routes, connecting the new capital city, ↗Lalibäla, with ↗Aksum, via Lasta, Wag and Tämben. The role played by the medieval G. as a political and cultural centre is documented by the impressive bulk of monuments still visible. Its remarkable churches – namely the rock-hewn exemplars in the Bäraqit and Dəgum areas – show architectural elements going back to the Aksumite period, thus also revealing G.'s archaic cultural features.

G.'s medieval hagiographic traditions are very rich and interesting, though still little fathomed. We only know such personalities as Abrəḥam of

Rocky outcrop of Gärᶜalta, view from the Ḥawzen plain towards south; photo 2000, courtesy of Michael Gervers

Däbrä Ṣəyon, who flourished towards the end of the 14th cent., and Gäbrä Mäsqäl, the founder of Däbrä Mäᶜar, who lived in the 14th–15th cent. Much better known is ↗Danəʾel, abbot of Däbrä Maryam on Mount ↗Qorqor, for he is celebrated as the spiritual father of ↗Ewosṭatewos of Däbrä Ṣärabi, the founder of the monastic movement of ↗Ewosṭateans.

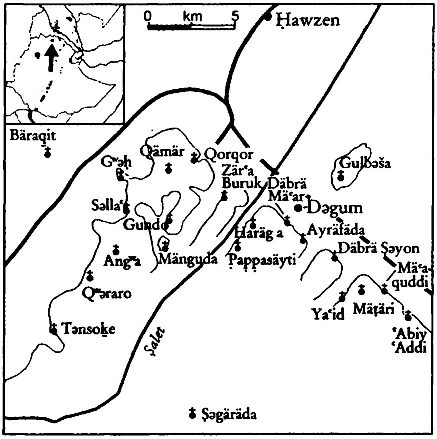
Gärᶜalta churches

Unlike other churches of Təgray, those of G. are relatively well-known. As a general rule, they are rock-hewn, with uneven degrees of internal complexity.

Presently, some 30 G. shrines are recorded, most of them cut in the craggy sandstone escarpment. They display a wide variety of plans, dimensions, structural features and decorative system; to date, only one attempt at establishing a preliminary typology has been made (Buxton 1971). Also, the problem of chronology remains unsolved. In some instances, foundation dates may be estimated with the help of historical notes preserved in the manuscripts (↗Däbrä Mäᶜar, ↗Gäbrä Mäsqäl), or on the basis of the stylistic and iconographic analysis of the murals they include (↗Qorqor Maryam, ↗Mäᶜaquddi Yoḥannəs Wäldä Nägʷädgʷad). Sometimes, events described in the ↗hagiography may provide interesting clues (↗Däbrä Ṣəyon, Ǝnda Kidanä Məḥrät, Gʷəḥ Yəmʾata). In general, however, all such chronological pointers are absent. A further difficulty, which hinders scholarly interpretation, is the inaccessibility of the sanctuary. As to the interiors, the proper exploration of these monuments has recently been complicated by the unfortunate, but popular, habits of whitewashing the carved decoration and the ancient paintings (ᶜAbiy ᶜAddi Mikaʾel, Däbrä Mäᶜar) and adding wooden and constructed parts so as to replace or support the deteriorating sandstone.



Buxton and Plant (Plant – Buxton 1970:167) divide G.'s rock-hewn churches into two categories: those situated in the valleys and those excavated on different levels in the mountains. The first group, with the complexes of ↗Dəgum and Bäraqit Maryam alone, is characterized by very regular plans (mostly basilical), small dimensions, skilled stonework, clear forms, modest decoration and the presence of archaic elements typical of early Christian monuments, e.g., a crypt or a stepped baptismal fount excavated in the floor. Moreover, architectonic elements of buildings of Aksumite origin are imitated in these churches with both exactness and precise understanding of their original function: e.g., the friezes running above the massive rock-lintels or along the entire length of the walls, the stepped bracket-capitals and various forms of ceilings. The authors of architectural texts in Gerster (1968:129ff.) presented a hypothesis, developed by Lepage (1971:177f.; 1972:161, 177), that this type of churches might have served as the funeral chapels or the chapels housing the relics. Oral tradition is silent on that matter.

The churches of the second category have generally a basilical ground-plan (central nave and two aisles, preceded by hewn or constructed *pronaos*, tripartite sanctuary). However, layout and dimensions here often depend on the geological formation of the mother rock. They may be cut either parallel (Dəgum Maryam Ayräfäda, Gundo Arbaᶜətu Ǝnsəsa) or at right angles to the rock-face (↗Qʷəraro Gäbrä Mikaʾel, Angʷa Giyorgis); encircled on three sides by ambulatories (Däbrä Ṣəyon) or passages (Qämär Arbaᶜətu Ǝnsəsa) hewn into the rock; they may be approached through three regular entries from west, north and south (Abunä Zärʾabruk), or only by a single one from the west (↗Gʷəḥ Yəmʾata); they may have very large (Däbrä Mäᶜar, with 3 m diameter) or strikingly thin (Abunä Zärʾabruk, 23 x 23 cm) columns or pillars. However, everywhere in this group the imitation of Aksumite architectonic elements is poor. Their structural forms get lost when unsystematically applied as decorative motifs. Ornaments are most visible in the treatment of ceilings simulating wooden crossed beams, barrel vaults and lanterns. The ceiling can consist of a series of domes, even with imitation of pendentives (Qʷəraro Gäbrä Mikaʾel) and ribs (Qorqor Maryam). Most common are flat or shallow cupolas (Gʷəḥ Yəmʾata).

There is still another category of churches including those which were cut either as enlargements of a natural grotto (↗Qorqor Danəʾel, Harägʷa Mikaʾel) or in the form of one or more grottos (Qʷəraro Giyorgis, Angʷa Mikaʾel, Gulbəša Maryam). Some of these are very roughly carved (Mändaᶜ Mikaʾel, Yaᶜid Kidanä Məḥrät).

Relief decoration, usually representing crosses, is common for the entire second group, but even figural variants occur (Qorqor Maryam, Abraham's cell at Däbrä Ṣəyon). Also, their interiors are often extensively decorated with paintings. They were created at various times and represent different techniques (fresco al-secco, paintings on canvas), styles and iconographic programmes. The oldest examples, from the 14th cent., are preserved in Däbrä Mäᶜar and in Däbrä Ṣəyon (first set); the most recent, from the 18th cent., in Qʷəraro Gäbrä Mikaʾel. High-quality paintings of the second Gondärine style decorate Səllaᶜ Abba Gärima and ↗Maryam P̣appasäyt while the local 17th-cent. production is represented by Yoḥannəs Mäᶜaquddi.

In Buxton's five-part typology of Ethiopian rock-hewn church architecture, none from G. is attributed to the earliest or "Archaic" period (10th to 11th cent.), while Lepage suggests, with some reservations, that Dəgum and Bäraqit Maryam may belong to the 10th-12th cent. (1971: 177f.; 1972:177, 200). G.'s churches are equally absent from Buxton's second and third types: respectively, "Inscribed-Cross Churches" (11th to 12th cent.) and "Classic Ethiopian Basilica" (13th-14th cent.?). They first appear in his fourth group of the "Tigrean Basilicas-Earlier Series" (13th-14th cent.). Typical of this group is a progressive misunderstanding of Aksumite building tradition (with the exception of the ceilings, still faithfully reproducing several types of wooden constructions) and a lack of architectural differentiation between the bays of the sanctuary and those of the naves: e.g., Qorqor Maryam, Yoḥannəs Mäᶜaquddi, Dəgum Śəllase, Däbrä Mäᶜar. The last group of Buxton, the "Tigrean Basilicas-Later Series" (14th-15th cent.), is characterized by the absence of a clear distinction between aisles and nave, the disappearance of Aksumite features and a multiplication of domes: e.g., Däbrä Ṣəyon and Gʷəḥ Yəmʾata.

Owing to lack of any restoration and preservation programme, almost all churches of G. are in a bad state. Most striking is the case of Harägʷa Mikaʾel, where the entire wall bearing precious early 14th-cent. paintings has totally collapsed.

Ewa Balicka-Witakowska

Gäramanǧo

G. (ገራማንጆ) refers to a spirit medium "cult" (↗Eqo; ↗Possession cults) in the ↗Käfa region of southern Ethiopia. Though the ideological onslaught and suppression of the post-1974 *Därg* regime and its successor diminished the cult's importance, it is by no means dead. Within one Käfiččo clan, the Hammo, there is an hereditary line of mediums in which the G. spirits possess one individual in each generation. According to certain sources (Lange 1975:116), the cult originated among the ↗Yäm, who, like the Käfiččo, are also a Gonga people. The spirit-medium is a charismatic figure whom the people consult for a variety of purposes: divination, migration, land-disputes, selection of suitable marriage-partners, fertility problems, serious illnesses and other personal crises, apparently with some success. The medium held "court" in a special compound and was always consulted through intermediaries. The G.'s central residence was in Goba-Çara, a rural location two days' walk from Bonga, but he also had accommodations near the locality of ↗Bonga. The incumbent possessed extensive land-holdings, many wives and thousands of cattle; he also had many people working for him.

The G. cult was a regional phenomenon extending into the areas of the Benç, Še, Meʾen, Çara, Nayi and Šekačo peoples. It became a religious world-view, especially among the Benç, because neither (Orthodox) Christianity nor any other religion was firmly established among them. Many secondary spirit-mediums across Käfa were tributary to the chief G. medium, having received their formal power or authority from him. They built large compounds with "spirit houses" in their home-communities to receive and treat people. In return for their services they too were rewarded and consequently accumulated substantial wealth for themselves. The people brought yearly payments or transfered gifts and property to the G. cult-centre in Käfa (e.g., livestock, grain and in more recent years money). Additionally, young boys and girls were offered to work for the medium. The mediums thus formed a network throughout Käfa and beyond that is still in existence today.

During the *Därg* regime the G. cult was labelled as "baseless superstition" and "deceptive"; consequently, the regime persecuted its followers severely. In 1976 the revolutionary *Zämäča* students in Bonga and Käfa purposely desecrated the G.'s utensils in his home and humiliated him. A number of G. followers later took revenge when they killed a group of these students by surrounding and burning down a school where they were gathered. In 1978 the incumbent G. (Lange 1982, fig. 36) was himself killed by government forces, and many of his followers were also persecuted in the following years. Following these acts of persecution, the cult went underground.

Today, though the era of powerful spirit-mediums has all but disappeared, a form of the G. cult still exists in the south-western countryside. The current mediums, however, take a much lower profile, because the state authorities continue to view them as superstitious and backward. They also face mounting competition from expanding Evangelical Christianity (↗Protestantism). Until the mid-1990s, Academic studies on spirit-possession cults in general have been lacking, so that scant material exists on the G. cult and its subsidiaries. The political situation has made it difficult to remedy this. The ethno-historian Werner Lange devoted some attention to the G. in his works on the Gonga and the Benç peoples (1975: 113–17; 1982). Though recent years have seen a renewed interest in the subject of spirit-possession by several Ethiopian researchers, little has been published on the subject.

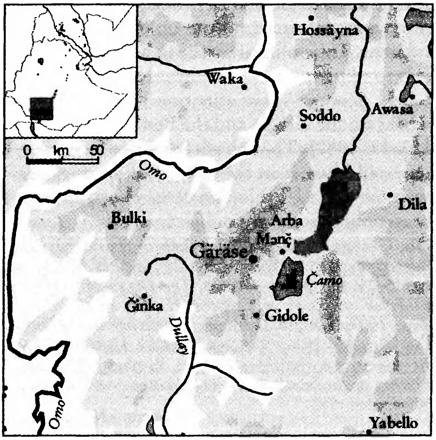
Gäräse

G. (also written Garassè [Scott 1950-51:110f., 155] or Ghereze [Vannutelli–Citerni 1899, tavola 3a] and pronounced Gäräsä) is the name of a town in the southern part of Central ↗Gamo. It was a *məkəttəl wäräda* administrative centre for many years under Kämba *wäräda* administration in ↗Gardula *awraǧǧa*. It was later on given *wäräda*-centre status for Bonke administration in ↗Gamo Gofa (formerly Northern Omo) province.

G. has been a trading centre for a long time. Its location at two important routes that extend from Lake ↗Çamo to Gofa and to the Omo and from ↗Šäwa through the heart of Gamoland south to Gidole (Gardula) and beyond made it an important camping-centre for trade caravans.

G. is also a traditional territorial unit (*dere*) of the Gamo, constituted by G. and the neighbouring settlements of Dambille, Mele, Algude, Zame, Zaziʾe, Bode, Monne, Dambala, Zillo, Zemute and Urga. The open market at Zillo is the central market and traders come from surrounding parts of Gamo with lowland and highland crops on Tuesdays and Saturdays, the two market-days. Zillo *dubuša* is the main assembly-place where matters of interest to the settlements listed above are discussed. Scott refers to G. as a village. The *guta* neighbourhoods listed above centred around G. consider themselves as belonging to Zato son of Onte, their founding ancestor. The last official *kawo* ritual king of this place was the late Ç̣oqo Ç̣onde.



Today G. is the administrative centre of the *wärädа* of Bonke. According to Wändəmmu Gäzzahäñ (personal communication), the population of the town, and the *wäräda* is 109,441. Prior to the choice of G., Bazza was the administrative town also known correctly as Bonke Bazza. Bazza was a well-fortified garrison town of the conquering soldiers of ↗Mənilək II, located high in the mountains. Other garrison towns within close range of G. include Balta Qara, Gulta, ↗Ç̣enča, ↗Koddo and Ezo in Gamo country and ↗Gardula further south. They were administered by high ranking military officers.

Wolde Gossa Tadesse

Gäräsu Duki

G.D. (ገረሱ፡ ዱኪ; b. ca. 1904/05, d. 7 June 1966) was an Oromo patriot. He was born in the Wäliso area, some 100 km south-west of Addis Abäba.

During the ↗Italian war 1935–36, he fought the Italian army as a vanguard soldier in the battles of Tämben and ↗Mayc̣äw. After the Ethiopian army was defeated, he moved to his native area in western Šäwa and started his career as a patriot in the ↗Resistance movement. He fought for five years in Wäliso, Bačo, Mäc̣c̣a, Ammayya, Nonno, Botor, Ç̣äbo, Dilala, Gurage and Soddo, as well as in other areas. G.D. was given the title of ↗*ras* by his followers during the resistance, but dropped it during the restoration. He hanged an Italian spy, Castagna, who was sent to him by the Italian General ↗Martini pretending to be an envoy of peace.

G.D. was a warrior who fought through all the five years of the Italian rule. At the end of the Liberation campaign in 1941, he was the one to head the campaign for the liberation of ↗Ğimma on 17 June 1941.

Emperor Ḫaylä Śəllase I gave G.D. the title of *däǧǧazmač* some time after the Liberation and appointed him as governor of the provinces of Arsi, Gamo Gofa and Illubabor, successively. Later G.D. was appointed senator. He died in 1966 and was buried in Wäliso (MahHorse 279).

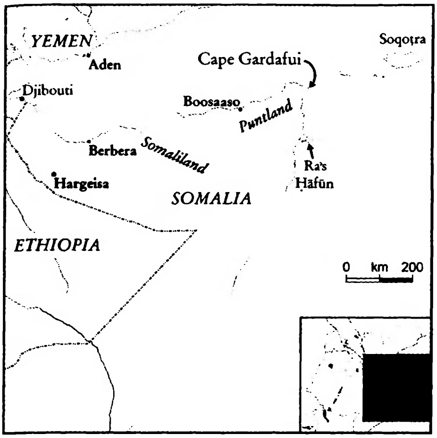
Gardafui

Cape G. (also Guardafui, 11°44'12"N – 51°13'24"E; Somali *Raas Caseyr*) forms the eastern end of the Somali peninsula and of the African continent. Mount Hooda (1,400 m A.S.L.), a prolongation of the mountain chain



of Somaliland, falls to the sea, forming a 244-m cliff which separates the Gulf of Aden from the Indian Ocean to the west and east, respectively.

During the Italian colonization, a lighthouse was built on the top of the cape, named after the Prime Minister, Francesco Crispi, responsible for the offensive that concluded disastrously at ↗ᶜAdwa in 1896. The site protected the strait between Somalia and the island of Soqoṭra in the Yemen.

On the coast of the Indian Ocean, 200 km to the south, the Società Saline e Industrie della Somalia Settentrionale (Majurteen) built on both sides of the peninsula of Ra's Ḥāfūn (Somali: Raas Xaafun) the largest salt-works in the world. The firm, constituted in Milan in 1922, built a town for 5,000 inhabitants called Dante and started production in 1931. This gigantic project, a symbol of Mussolini's colonization, went bankrupt in 1935. The hinterland (province of Bari) was the territory of the *sulṭān* of Majeerteen – name of the clan eponym, – a subdivision of the clan-family of ↗Daarood. Since the de-facto independence of Somaliland (1991), there have been sporadic combats with the "Puntland" for the possession of the port of Boosaaso, in the Gulf of Aden.

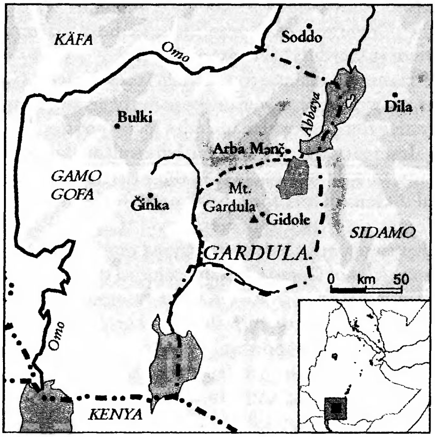
Alain Gascon

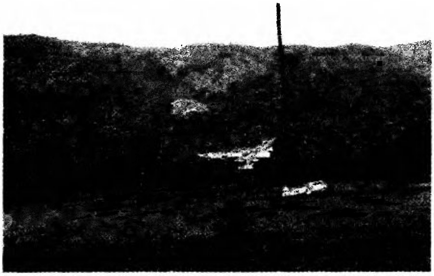
Gardula

G. (also Gardulla) is the name of a mountain, a town and an *awrağğa*, which included a *wäräda* by the name of G.

The mountain of G. (2,521 m A.S.L.) is locally known as Horoma Kalo in the language of the ↗Diraašša people. The Diraašša form one of the four or more ethnic groups living around this mountain. G. mountain lies west of the town of Gidole (Amh.; Diraašša: Kitoole), which is located at an elevation of around 1,538 m A.S.L. on the western escarpment of the rift valley. G. ceased to be the name of the town – founded as a military camp – when it was moved downhill to its present location and named Gidole during the brief Italian occupation (Hansamo Hamela 2000:138).

According to Gäbrä Śəllase's map of 1930 (GueCopMen), G. was an administrative centre of the ↗Boräna region, then a large territory governed by *fitawrari* ↗Habtä Giyorgis, *aṣe* Mənilək II's War Minister. Boräna territory as shown on the map comprised the people and territories of Çäbo, Soddo, Gurage, part of Wällamo, Qutča, Boreda, Guèmo, Konso and Boräna. In this capacity, G. was the name of a town on Mount G. which was established after





View over Gidole *kätäma* towards the Gardula mountains; photo 1950/52 by Eike Haberland, courtesy of the Frobenius Institut, Frankfurt am Main (023-Ha66 030–12)

the conquest of the territory in the late 1890s. A travel account by Harrison (1901:269) testifies to the use of G. as the name of an administrative centre: "At Gardula we camped in the middle of terraced gardens, all the hillside being leveled up by thousands of low stone walls: none of the plots are more than 2 m wide, and yet hundreds of miles are treated in this manner. Here we were courteously entertained by *fitawrari* Wäldo, who now represents the last Abyssinian outpost; owing to the fearful drought, the more advanced posts at Hamär Koki and on the Omo have all been forced to retire. This officer has 1500 soldiers under his command, who spend all their time killing elephants for the emperor; he told us they alone have sent 1500 tusks to Addis in the last two months, which possibly accounts for the few we found."

Hodson, the British Consul who lived in G., also used the name in the sense of a garrison town: "… I wished to call upon Fitaurari Waldi, the Governor of Boran, whose headquarters were at Gardula" (Hodson 1970:33).

Hansamo Hamela (op. cit. 22f.) uses the term G. as a town-name as well as the name of an administrative territory which includes many entities.

Immediately after the withdrawal of the Italians, Gidole was made the administrative capital of ↗Gamo Gofa for a brief period of time. The centre was later transferred to ↗Čenča. From that time until 1991, G. remained one of the four *awraǧǧas* of Gamo Gofa. It included the *wärädas* of Gumayde, Konso, Kamba, Bonke and G. During the *Därg* rule the number of *wärädas* was rearranged and was limited to three.

The population of G. *awraǧǧa* consisted of ↗Gamo, ↗Konso, ↗Gawwada and mixed communities of Konso, Diraašša, ↗Burǧi and Kore. The *wäräda* territory that took the name of G. was constituted by Diraašša, Mosiye and Haralle peoples.

Today the name G. has been narrowed down to represent its original referent, the mountain west of the town of Gidole, after the rearrangment of the whole ethnic-territorial complex of Ethiopia during the last decade of the last century.

Recently the phrase Konso-Gardula has reappeared in archaeology to denote a palaeo-anthropological area discovered by the 1991 palaeo-anthropological inventory of Ethiopia in the Southern Main Ethiopian Rift.

Gärima

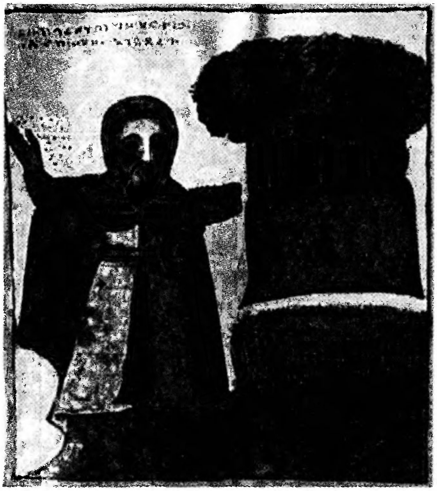
Abba G. (**ገሪማ**; also known as Yəsḥaq) was one of the so-called ↗Nine Saints – holy monks of foreign origin who came to Ethiopia in Aksumite times, between the 5th and 6th cent. A.D.

In traditional sources both the composition of this group and the chronology of individual Saints have some variations. The main source on G. is a Homily (↗*Dərsan*, in this case not much differing from a Vita or ↗*gädl*) in his honour written, according to the text, by a certain ↗Yoḥannəs, *eppisqoppos* of Aksum (the memorial reading in the ↗*Sənkəssar* for 17 *Säne* is thought to have been extracted from the Homily, s. GuiSyn I, 626–29). Here, the Saint's father is Masfəyanos, "king of Rome [↗Byzantium?]"; his mother, Səfəngəya (or Fəngiya), remained barren for twelve years prior to G.'s birth. The child received the baptismal name of Yəsḥaq; he later succeeded his father and reigned seven years. Then, following a call from *abba* ↗Pänṭälewon, he left his kingdom and went to ↗Aksum (Conti Rossini 1897: 153). Historically, this could have happened in the late 5th cent. (CRStor 158–61; BrakKirche 127–31). Pänṭälewon initiated G. into monastic life. At the request of a "noble from Aksum" and in order to save Ethiopia from its king, the "dragon" (↗*Arwe*), G. continued praying for 40 days together with the other Saints; thereafter, the "dragon" was killed by a God-sent lightning strike (Conti Rossini 1897:158) and the pious ↗Kaleb became "king of Ethiopia". The inclusion of the folklore legend of the "serpent king", more commonly linked with the legendary figure of ↗Mənilək I and pre-Christian times, is a striking difference from other traditions (e.g., about ↗Pänṭälewon, ↗Zämika᾽el Arägawi), in which the arrival of the Nine Saints is put in the time of Alᶜamida/Al(ᶜa)meda (cp. ↗Ǝllä ᶜAmida), succeeded by ↗Tazena and ↗Kaleb (one of the mss. of the Homily has a passage aimed at lending chronological support to the unusual moving of the "serpent king" legend to the time of G., s. Conti Rossini 1897:171f.).

When the Nine Saints decided to disperse throughout the country, G. went to ↗Mädära (near ᶜAdwa), where he remained working miracles. At that place, called Däbrä Mädära (or Betä Mäsqäl) in the homily, King ↗Gäbrä Mäsqäl – the second successor of Kaleb – built a church for G. (Conti Rossini 1897:167), which is believed to be the nucleus of the celebrated monastery of ↗Ǝnda Abba Gärima. G. became *liqä kahənat* of Mädära; the homily vaguely reports, once, that G. "was beaten" (ibid. 169), thus possibly alluding to some resistance that the Evangelizers of Aksum's vicinities had to face.

The homily recounts a number of G.'s miracles, some of which became emblematic of his personality and, in general, of the holy power of the Nine Saints: wondrous growth of cereals and grapes for Eucharistic bread and wine (Conti Rossini 1897:161 and 168, where his spiritual children are said to have built "40 communities" of 150 monks each), a fallen pen-*qäläm* sprouting out (cp. Conti Rossini 1904:51f.; Guidi 1894: 62f.; YaqMist I, 122f.).

A Syriac etymology of the name G. has been rejected in favour of an Ethiopic one (s. Conti Rossini 1897:140). It is indeed an Aksumite name, already borne by an Ethiopian prince in ca. 230–40 A.D.: ↗GRMT, found in Sabaean inscriptions from ca. 230–40 A.D. (cp. Marrassini 1999:328). Yet, no longer understood as such, the name was traditionally explained in connection with Gəᶜəz *gärrämä* ('frighten, scare, astonish'). According to the homily, when the Saint was (falsely) accused of celebrating the mass without keeping a strict fast before hand, Pänṭälewon wanted discretely to inquire him, and G. had all the stones and trees around move far away. Deeply impressed, Pänṭälewon would have exclaimed: *abba kəbur gärrämkäni!*, 'Oh honourable father, you did astound me!' (Conti Rossini 1897:165; a different story, though based on a similar sentence, is in the *Gädlä Pänṭälewon*, s. Conti Rossini 1904:60). Nor does it seem more tenable that G. participated in the creation of the Ethiopic ↗Bible, as it might be weekly surmised from a passage in the Homily (s. Conti Rossini 1897:161f.; ↗Syriac influences).



Miracle of *abba* Gärima: the wondrous harvest; miniature from ms. *Maṣḥafä Śəllase*; Čäläqot, Church of the Trinity; turn of the 19th and 20th cent.; photo 1993, courtesy of Michael Gervers

In medieval Ethiopia, Yəsḥaq/G. was widely venerated. The homily in his honour dates back to the 15th cent. (the brief introduction strongly advocates the cult of St. Mary, Conti Rossini 1897: 49). The name Yəsḥaq prevails in the homily and other texts, whereas G., seemingly, is favoured in popular devotion (Conti Rossini 1942:167, 201): it labels, among others, the images of G. in the famous wall-paintings of Ǝnda Abunä Yəm᾽ata

(↗Gʷəḥ, s. Gerster 1968, fig. 188) and a in fragment of canvas from ↗Däbrä Damo (Mordini 1952). The 15th-cent. Acts of Zämikaʾel Arägawi first speak of Yəsḥaq (nephew of Zämikaʾel) and later of "Yəsḥaq who is G." (Guidi 1894:62, 63). However, G., not Yəsḥaq, is mentioned in a homily by "Julian [Luləyanos], bishop of Aksum", also praising ↗Yəmʾata and ↗Guba, that is transmitted in ms. EMML 1763 (Getatchew Haile 1985) from Däbrä Ḥayq Ǝsṭifanos, dating between 1336 and 1340 (cp. ms. London, BritLib Or. 8192, fol. 119vb–20vb). Earlier attestations of Yəsḥaq/G. are missing; it cannot be excluded that this Saint is a conflation of two different historical persons: Yəsḥaq and G.

Gärima Taffärä

G.T. (ገሪማ፡ ታፈረ, b. 24 June 1912, d. 11 August 1982, Gondär) was a priest, teacher, patriot, administrator and author with profound knowledge of the history and society of ↗Gondär and Bägemdər.

He received a traditional church education and became an Orthodox priest and a public school teacher. During the Italian occupation 1935–41, he joined the patriots, reporting on Italian activities in Gondär and carrying intelligence between Khartoum and Bäläsä, activities, for which Italian authorities twice imprisoned him in Gondär. He fought with British and Ethiopian forces in the liberation of Gondär and Bägemdər in October and November 1941 and was decorated for his wartime service. After the war, G.T. was a lieutenant in the Gondär police force, and, from 1946 to 1965, a public school administrator in Čəlgä and in Gondär.

G.T. devoted the remainder of his life to researching and writing about 19th- and 20th-cent. Gondär. His best known works are: *Gondäre bägaššaw*, about the patriots in Bägemdər; *Abba Taṭäq Kasa*: *Yäqʷaraw anbäsa*, about *aṣe* Tewodros II ; and *Yämäkära däwäl käMəṣəwwa əskä Mätämma*, about the late 19th-cent. challenges posed by the Italians and the dervishes. He also wrote on other topics, including Gondär city history.

Garlic

G. (*Allium sativum*; Amh. ነጭ ፡ ሽንኩርት *näč šənkurt*, Tgn. ጻዕዳ ፡ ሽጉርቲ *ṣaʿda šəgurti*, Oromo *qullubbii adii*) belongs to the family *Liliaceae* and has its origin in Central Asia and in the Near East. The plant was used more than 5,000 years ago by the Sumerians and later in Egypt and India. It is one of the oldest cultivated plants and is widely grown and used in many parts of Ethiopia and Eritrea. Ethiopia ranks among the 20 countries with the highest G.-production (average annual production in 2004, 71,000 million tons).

A relatively small main bulb of G. is surrounded by a number of subsidiary bulbs, all enclosed by white husks forming a large bulb that can become as big as a fist and is of plump shape with flattened-out basis. The membranous skin of the G.-bulb encloses up to 20 edible bulblets, called cloves. G. is grown as an annual crop and is propagated by planting cloves or top bulblets. It has a powerful, onion-like aroma and pungent taste and is used in many national cuisines as a relish.

G. contains about 0.1 % essential oil, the principal components of which are diallyl disulfide, diallyl trisulfide and allyl propyl disulfide, which have a positive effect on certain health disorders. However, only in recent times has G. been subjected to scientific research. The four main areas of research have covered G.'s effects on diseased organisms (antimicrobial effects), its effects on heart and blood-vessels (cardiovascular health), its antioxidant effects and its potential for cancer prevention. Positive effects have been demonstrated in both animals and humans, though there is a need for more well-designed clinical trials, the better to determine therapeutic value, dosage levels and duration of treatment.

In Ethiopia and Eritrea G. bulbs are used either sliced or ground to flavour all kinds of sauces, stews and salad dressings. It is generally mixed into all blended sauce-powders, such as ↗*bärbäre*.

Since ancient times, G. has been used in many cultures throughout the world as food, but also as a folk remedy for various ailments. People in Ethiopia and Eritrea, especially in rural areas, prize the healing effect of G. and make use of it in different ways. E.g., mothers make their baby smell G. when they notice that the child does not feel well. G. is used together with honey and butter, or in combination with other plant remedies, in the treatment of malaria, eczema, and snake bites (Dawit Abebe – Ahadu Ayehu 1993). Other authors report the use of G. in the treatment of the common cold, (whooping) cough (Lulu Muhe et al., 1994) and pulmonary tuberculosis (Dawit Dikasso – Tadesse Mola Tito 1999), as well as of influenza and symptoms of gout. In the Təgrəñña traditions, G. and rice are used together with kohl as a wound-dressing when a child has been circumcized (Gebre Selassie 1986).

Anke Weissenborn

Gärmame Nəway

G.N. (**ገርማሜ፡ ነዋይ**, b. 1924, Addis Abäba, d. 24 December 1960, near Addis Abäba) was the son of an ecclesiastical official from Goǧǧam. Through his mother he belonged to the Moǧa family of the Šäwan nobility. His elder brother was Brigadier General ↗Mängəśtu Nəway, commander of the Imperial Body Guard (1955–60).

After receiving primary education at Täfäri Mäkʷännən School in Addis Abäba, G.N. joined the ↗Ḫaylä Śəllase I Secondary School. The Crown Prince ↗Asfa Wäsän sponsored his higher education in the United States, where he earned his B.A. degree from the University of Wisconsin (Madison) and his M.A. from Columbia University. His M.A. thesis on land alienation in colonial Kenya was a veiled critique of class exploitation in his own country.

After his return from his studies, G.N. strove to organize his fellow intellectuals with a view to inducing administrative reform. He first set up a discussion group known as the "Qäčäne Club" (after the house in that neighbourhood in the capital given to him by the progressive *ras* ↗Əmməru Ḫaylä Śəllase). When that group failed to hold together, he sought to exert pressure through an alumni association of Kotäbe graduates.

Apprehensive of his radical views and his predilection for organization, the government tried to remove him from the centre by appointing him successively governor of Wälaytta and then Ǧiǧǧiga. G.N. translated these posts of banishment – for they were little short of that – into models of equitable administration. Probably realizing the inadequacy of such isolated measures, he took the step that put him into the history books. He is generally believed to have been the moving spirit behind the abortive ↗Coup d'état

1960, led by his brother, Mängəśtu, and enjoying the active support of *aṣe* Ḫaylä Śəllase I's security chief, Colonel ↗Wärqənäh Gäbäyyähu. After the failure of the coup, G.N. and Mängəśtu managed to escape, but were hounded and discovered some weeks later at their hideout not far from the capital. G.N. died in the course of the shootout; Mängəśtu was captured, tried and hanged.

Gärmame Wäldä Ḥawaryat

Däǧǧazmač G. (ገርማሜ፡ ወልደ፡ ሐዋርያት, b. ca. 1810, Tagulät, Šäwa, d. 1899, Qäčäma, Awaš valley) served ↗Śahlä Śəllase, ↗Ḫaylä Mäläkot and ↗Mənilək II as a military commander, provincial governor and royal counsellor. Hardly anything is known about his formal education, but he was admired as the most intelligent and successful strategist by European travellers and Ethiopian writers.

G. quelled through a stratagem rebellions of the Oromo in the region from Sälale to the Awaš valley in 1848–49 and made his seat at Qäčäma. He submitted to *aṣe* ↗Tewodros II in the late 1850s and stayed at his court until mid-1865 when he, together with a few other officials from Šäwa, smuggled out Mənilək from Mäqdala. Upon his return to Šäwa, he resumed the administration of his old province, which was, however, limited this time to the Awaš valley.

In 1876, G. was assigned to act as regent when *nəguś* Mənilək travelled to Bägemdər. He foiled the coup attempt of *märəd azmač* Ḫaylä Mika᾽el and *wäyzäro* Bafäna and pacified Šäwa before the *nəguś* returned.

Unlike many of his peers, G. preferred landed property and the storage of grain to anything else. During the great famine of 1888–92, he was the only notable who could supplement the depleted granaries of the imperial palace. He died of illness and was buried at the Lalibäla church cemetery of Qäčäma.

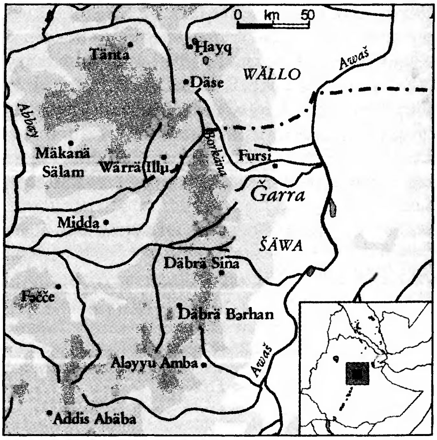
Garo ↗Käfa/Käfiččo

Ğarra

Ğ. (ጃራ) is the name of a river that runs eastwards from the highlands into the Awaš. A little to the north, the border between Šäwa and Wällo runs along the Borkäna river, another Awaš tributary.

The river gave its name to a small village on a bridge crossed by the Däse–Addis Abäba road and to an *awrağğa* in Šäwa (up to 1974), with Fursi as its capital. The village of Ğ. is so small that it did not find any mention either in the *Guida*, or in the CSA censuses of 1970, 1984 or 2000. At the beginning of the 1970s, the *awrağğa* was renamed as Yəfat–Təmmuga, a name borrowed from the emirate of Ifat, with Efeson/Aṭaye as its capital.

The territory of the *awrağğa* of Ğ./Yəfat-Təmmuga (10,900 km²) included parts of the highlands (↗*Däga*) inhabited by the Christian ↗Amhara, practising cereal agriculture, and the lowlands (↗*Qʷälla*), occupied by the Muslim ↗ᶜAfar, nomads and stockbreeders. In-between, along the bordering escarpment of the Rift Valley, there are the ↗Oromo and ↗Argobba, the latter claiming descent from Muslim merchants. They are farmers, cultivating the slopes.



With the administrative reform of 1991, the *awrağğa* disappeared: the lowlands were incorporated into the ᶜAfar *kəlləl* and the highlands into the Amhara *kəlləl* (North Šäwa Administrative Zone). Between 1970 and 1984, its population more than doubled, from 141,500 (14 inhabitants/km^2) to 331,271 inhabitants (32.8 inhabitants/km^2). By adding the *wärädas* of the highlands, including Anṣokiya and Gänz (225.4 inhabitants/km^2), Efrata and Gädäm (281.9 inhabitants/km^2), Mafud Mäzazo Mog and Nadära (132.8 inhabitants/km^2), as well as of Qäwät (151.5 inhabitants/km^2), the population reaches almost 500,000 inhabitants.

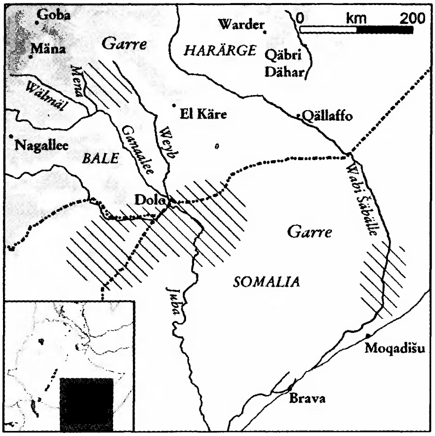
Alain Gascon

Garre

G. (also referred to in the literature as Garreh, Gerra, Gherra, Garri etc.) is a Somali clan found in southern Somalia, Ethiopia and Kenya. According to Lewis (1955:27), the G. inhabit at least four different locations: the lower reaches of the Šäbälle river near Awdegle, in southern Somalia; two areas in Ethiopia: around the border town of Dolo in the Upper Juba and bordering and intermingled with the ↗Arsi in an area between the Wabi Ǧestro (Wäyb) and the Wabi Mäna; and further to the south in northern Kenya between the Ağuraan and Digodia Somali.

Except for those G. living along the lower course of the Šäbälle river in southern Somalia and who speak a distinctive Somali variety, all the other G. are to a greater or lesser extent oromized and are part and parcel of those groups of "Proto-Rendille-Somali" culture which, according to Schlee (1989), have undergone "Booranization" after the 16th cent. While Booranization is apparently complete as far as language is concerned, the G. consider themselves and are considered Somali.



As to the agnatic position of the G. within the Somali clanic families, Colucci (1924), followed by Lewis (1955), considered them to represent the numerically most important clan of the "pre-Hawiye" family, who had preceded the ↗Hawiye in a very early migration from the north of Somalia. Local traditions investigated by Mohamed Nuuh Ali (1985) and already referred to by Cerulli (1957) and Turton (1975) ascribe to the G. (or a part thereof) a central role in the "Somalization" of the Lower Juba and of the coastal area around its mouth. In the course of their migrations, the G. came into contact with the Northern-Swahili-speaking Bajuni of the Bajuni Islands (certain Bajuni sections claim a G. origin) and dominated the whole area until the Orma invasions of the 16th cent. The most important linguistic result of the G. presence in what is today southern Somalia and northern Kenya has been the Somalization of the Boni (or Aweera), a hunting and gathering group of a few thousands living in the forest belt stretching along the coast of the Indian Ocean, immediately to the south of the Somalia-Kenya border (Tosco 1994b).

While nothing specifically links the G. to the north, there does not seem to be any evidence either of an ancient southward migration, all pointing to a "southern" origin of the G. in an area of strong Oromo/Somali (and Rendille) interaction. The internal clan-structure of the G. supports this view: like many groups of the area, the G. divide themselves into two moieties, which among the G. are called Tuuf and Quranyow; many almost identical names of sections are further found among the Rendille (cf. Schlee 1989 and Tosco 1994a).

Linguistically, the G. of southern Somalia speak a distinctive variety of Somali (Tosco 1989), which Lamberti (1985) classifies within his highly heterogeneous "Digil group" of dialects (although, agnatically speaking, the G. have nothing to do with the Digil clanic family). Giving credit to the historical traditions referred to above, the language of the G. (i.e. of the G. of southern Somalia) finds its closest linguistic relative, not among any other Somali dialects, but in the Boni language. The most important and unique isogloss linking G. and Boni is the devoicing of initial /d/ and /g/ (whereby these G. call themselves Karre and their language Af-Karre).

All the other G. groups, as anticipated, speak varieties of (Southern) Oromo.

Gaš

The G. (Arab. خر القاش, *Ḫur al-Qāš*, in the Sudan pronounced *Ḫor al-Gāš*; Kunama *Sona*, *Soba*) is a seasonal river running through Eritrea and the Sudan. About 680 km long, it originates in the Eritrean highlands south-west of Asmära (called there ↗Märäb). In dialectology the term "G." designates a Beǧa dialect; the G. region is an ancient settlement-area, allowing a local dialect to develop (s. Morin 1999).

Debates among 19th-cent. European geographers on whether the G. and the Märäb were one river were solved by ↗Munzinger on his expedition to the Kunama (Munzinger 1890:359). From Arakebu on, the Märäb leaves the mountains and enters into the plains, in the beginning flowing underground. At this stage it is known under the name G., respectively Sona or Soba (*ibid.* 360, map). Hydrologically it is the same river, but in local tradition and naming both parts are detached from each other. The G. disappears in the arid lowlands north of ↗Kassala in an interior delta, the G.-Delta, its waters reaching the Nile drainage system underground in periods of great water flow and joining the ↗Atbara. The lower G. has water between 70 to 110 days a year (end of June to mid-September). However, the soil holds the water for about half a year, assuring intense cultivation, especially in the G.-Delta.

Starting from the beginning of the Egyptian expansion in the 19th cent., the G. attracted some interest among the new Egyptian-Sudanese leadership due to the fertile soil and its regular irrigation in the rainy seasons. The lower G. was included in the Egyptian realm in 1840 (and attached to Kassala), while the upper G. was only later annexed. In the 1860s the upper G. served as a border between the Egyptian ↗Taka province and French-Ethiopian-ruled Bogos (↗Bilin). *Ḫidīw* Ismāʿīl *bāšā* mentioned in 1863 to a British diplomat that he had no claims to Bogos or other Ethiopian territory "on the other side of the G." (contradicting, however, earlier claims), but on the Kunama. In 1869 he still seemed to accept the frontier marked by the G. (Longrigg 1945:105), while in 1872 the latter ceased to exist as a border when Bogos was formally annexed and, together with Taka, ↗Barka and G., attached to the Red Sea Coastal Province of the Ottoman empire (↗Ḥabeš).

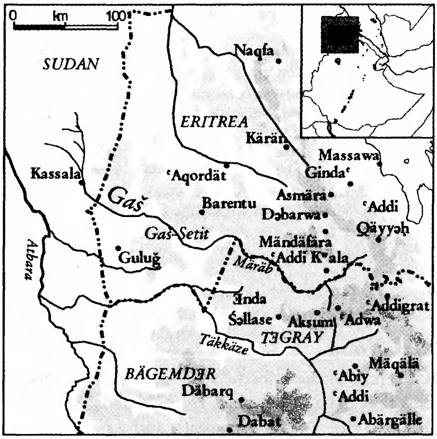
In the 1880s the advance of the ↗Mahdists was stopped close to the G. by *ras* ↗Alula Ǝngəda, who integrated the area into the ↗Märäb Mällaš in exchange of his alliance with Great Britain. However, following Italian colonial advance, Kassala was occupied by Italian troops. Subsequently, the whole upper G. region (with the Kunama and Nara) became Italian. For the rec-

The Upper Gaš, Kunama area, Eritrea; photo April 1993, courtesy of Paul B. Henze ognition of these new territories, Italy left Kassala to the British. This exchange of territories was realized legally by the 1902 border treaty (↗Boundaries).

Originally the G.-Delta was a savanna, dominated by tamarisk trees, that served as an important grazing-ground for the local Təgre and Beni ʿAmər herders. Already in the 1840s a canal had been built to irrigate the vast plain west of Kassala, abandoned in about the 1870s. Then about 3,000 ha were irrigated by the G. waters (Wondimeh Tilahun 1979:129). The first culture in the G.-Delta, still existing today, was cotton. In the period of the Mahdīya state it was largely replaced by durra and later, when it was under the British, again by cotton. In ca. 1901 about 600 ha were irrigated, as only small canals remained in use. By 1910 this had increased to 2,000 ha due to the construction of the new Kassala canal in 1905/06. Further canals followed until the 1920s, the irrigated area increasing to 6,000 ha (ibid. 129f.). In addition to cotton-plantations, the G. waters flooded wells, grazing-grounds and fields with food-crops.

Today the G.-Delta is still one of the most important agricultural centres of the Sudan (cp. Geographisch-Kartographisches Institut Meyer 1968). An irrigation system consisting of five main channels, starting from the eastern branch of the G., provides water for the plantations during the rainy season. The Delta comprises about 280.000 ha, up to 50 % of which can be irrigated; over 20.000 ha are irrigated yearly, the distribution of water changing on a yearly basis. Cotton dominates (up to 80 % high-quality cotton), with an additional of ca. 20 % of the products consisting of barley and, in small quantities, castor-oil plant and vegetables in smaller gardens. During the dry season fields traditionally become camel-grazing areas again.

Following the former British rules, the grounds are redistributed yearly on the basis of rents paid by local half-sedentary farmers and migrant-workers. A relatively high percentage of these are migrants from Western Africa (25%, *ibid.*), especially ↗Hausa, who settled here in the 19th and 20th cent. in the course of their pilgrimage to Mecca. The traditional trans-African pilgrimage route crosses the G.-Delta.



As the G. is of crucial importance for the irrigation of the cultures both in the Eritrean ↗Täsänäy and Sudanese Kassala regions, it has been subject of several exchanges of notes between Italy and Great Britain. In 1901 Italy declared that, while keeping her right to the G., the use of the water would be regulated "in accordance with the principle of good neighborship" (Wondimeh Tilahun 1979:69). In 1924–25 the Eritrean Governor Jacopo Gasparini and the Governor-General of the Sudan regulated in detail the use of the G. waters, following the project of a huge dam, built in 1924-27 by the Italians near Täsänäy (s. ibid. 121–34). British and Italian experts then prepared the agreement that water up to the discharge of "5 metres cube per second will be entirely at the disposal of the Government of Eritrea for the works at Tessenei" (ibid. 127), while the surplus was to be shared with the Kassala Province (e.g., when 20 m/second would be reached, 10 m³ would "be passed on for the Province of Kassala"). The Sudanese Government was paying an annual share of the sums earned from the irrigations to Eritrea.

In Italian colonial times the Commissariato di Gasc-Setit, named after the two rivers bordering it, was created in 1909, encompassing the Kunama and other groups at the G. (↗Eritrea, administrative division). Merging with the Commissariato di Barca in the 1930s, the region was then called Bassopiano Occidentale. Only in the 1960s was the province of G.-Setit created. Within the modern Eritrean state, the Province of G.-Setit existed from 1991 until 1995. It mainly comprised the Kunama-land, the Nara and some Təgre and Beni ʿAmər territories. In 1995 the administrative division was reshaped and it merged with Barka Province. Now it forms the G.-Barka.

Wolbert Smidt

Gaš group

G. refers to the ancient agro-pastoral communities that existed between ca. 2700 B.C. and 1400 B.C. in the ↗Gaš river delta and adjacent areas near the town of Kassala in the southern Atbai region of east-central Sudan. The G. group may have developed from the earlier Butana-group culture of the southern Atbai (ca. 3800–2500 B.C.). G.-group-culture-period settlement-sites range in size from 0.5 to 12 ha in total area and are characterized by large residential villages surrounded by smaller more ephemeral occupations. The most complex G.-group settlement investigated to date is the site of Mahal Teglinos near Kassala. Clay-stamp seals, sealings, and tokens have been found at Mahal Teglinos, suggesting that the site may have served administrative functions within the region. Mahal Teglinos also contains a formal burial-ground with three distinct types of monolithic stelae marking graves.

Subsistence remains recovered from archaeological excavations at G.-group sites suggest that G.-group communities kept cattle and goats/sheep, hunted wild animals, fished, gathered wild plant resources and may have cultivated cereal crops such as barley. The G.-group ceramic (↗Pottery) tradition is believed to be a regional and temporal variant of the larger Atbai ceramic tradition (late 5th millennium B.C. to early 1st millennium A.D., ↗Atbara) of east-central Sudan. G.-group ceramic assemblages are dominated by a high frequency of scraped ware, but also contain dash roulette, horizontal zig-zag and punctate-zoned rim-band decorative motifs. Ceramic sherds similar to those of the G.-group ceramic tradition have been documented in surface scatters at a number of archaeological sites surrounding the Eritrean town of Aqordät, including the sites of Kokan, Ntanei, Šabeit, Dandaneit, and Ǧabal Walād al-Baraq, suggesting that G.-group communities may have existed in the western lowlands of Eritrea. The position of the G. group settlements between the Nile Valley and the southern Red Sea regions may have been vital to the development of the nascent cultural complexity evident at sites such as Mahal Teglinos. Rodolfo Fattovich, one of the principal investigators of G.-group archaeological sites in the ↗Kassala area, has argued that the G.-group culture was a central component within a complex inter-regional exchange network that linked communities from the Egyptian and Nubian Nile Valley areas (↗Nubia), the northern Horn of Africa and the southern Arabian Peninsula.

Gaṣame/Gaṭame ↗Harro

Gasəčča ↗Däbrä Baḥrəy

Gasparini, Armido

G. (b. 19 August 1913, Lizzana, Bologna, d. 21 October 2004, Addis Abäba) was an Italian missionary. He attended elementary school in his home town and thereafter joined in Brescia the minor seminary of the Congregation founded by Daniel Comboni. From 1934 to 1938 he studied Theology at the Urban College of the ↗Sacra Congregatio de Propaganda Fide in Rome. He was ordained priest in the Basilica of St. John Lateran in Rome on 16 April 1938.

By October of 1938 G. had reached Gondär, where Pietro Villa was Apostolic prefect. During that period of turmoil due to the war, he worked as the Prefect's secretary and engaged himself in the study of ↗Amharic. He was also active in trying to establish contacts with the clergy and the monks of the ↗Ethiopian Orthodox Täwaḥədo Church. However, the Italians were defeated and he was made a prisoner of war.

In 1941 G. moved to Asmära in the capacity of superior of the Comboni Fathers in Eritrea. In 1946, under his direction, construction work began of the prestigious Comboni College (now renamed "Barka School"), which was to be one of the most-shining academic institutions in Eritrea and win nation-wide approval. From 1959 to 1973 G. was in Rome as General Procurator of the Comboni Missionaries to the Holy See. In 1960 he was appointed Consultor of the then Sacred Congregation for the Oriental Churches. On 16 February 1973 he was elected administrator of the Apostolic prefecture of ↗Awasa (Sidamo). On 15 March 1979 the Prefecture of Awasa was raised to an Apostolic vicariate: as its first bishop, G. was in charge until 20 December 1993; and, on account of his dedication he was asked to stay in his post well beyond the age limit of 75 in force for Catholic bishops. He spent the rest of his lifetime between Awasa and Addis Abäba in the houses of formation of the "Handmaid of the Church", a female religious congregation he had founded in 1988. On his death he was buried in Awasa.

G. enjoyed the fame of being a skilful administrator and organizer. He was not only a prominent churchman, but an extraordinary linguist and polyglot who, besides in his native Italian, was also fluent in English, Hebrew, Arabic, Gəᶜəz, Amharic and Təgrəñña. During his stay in Sidamo, he learned Sidaama, Guǧǧi-Oromo and Gideʾo, writing useful grammars of these languages. In 1954–58, during his stay in Asmära, he acquired several important Ethiopic manuscripts, some of which go back to the 15th cent.; the great majority are now deposited in the ↗Biblioteca Apostolica Vaticana, "Fondo Comboniani" and have recently been catalogued (Raineri 2000:VII, 308, nos. 13, 15, 18, 41, 71, 81, 82, 84, 126, 128, 172, 202, 205, 209, 222).

Tedros Abraha

Gasparini, Jacopo

G. (b. 23 March 1879, Volpago del Montello, Treviso, d. 1 July 1941, Asmära) was an Italian civil servant and Governor of the colonies of ↗Somalia and ↗Eritrea. After obtaining a degree in law, in 1902 G. joined the Italian Ministry of the Interior. In 1910 he became head of the Civil Affairs of the Somali colonial Government and responsible for legislative and juridical reforms. From 1913 he was Governor ad interim until 1919, when he was given the title and honorary status of Secretary. From 1 June 1923 to 1 June 1928 he was Governor of Eritrea. During this time G. set up a programme of land reclamation in Tessenei for cotton-plantation. In parallel, he fostered diplomatic relationships with the governments of the Arabian peninsula, especially the ↗Yemen, with whom he signed a treaty of friendship and commerce in Ṣanᶜāʾ. On 22 December 1928 he was named senator and from 1 July 1931 president of the Società Imprese Africane, that was engaged in the Tessenei project. In 1936 G. was again in Ṣanᶜāʾ to renew the agreement of 1926.

Gian Carlo Stella

Gašša

G. (ጋሻ) is an Amharic term meaning 'shield' which came to designate a (measured) plot of cultivated land – in particular, landholding granted to soldiers for their services – and then, by extension, a unit of rural land measurement.

The term, in the meaning of landholding or fief, was widely used already for land measurement in the ↗Gondärine kingdom (CrumLand 172). One G. consisted of eight to nine *mədər* (a primary unit of arable land, i.e. the area a ploughman could cover in one day). The actual size of a *mədər*, and thus of G., could therefore vary greatly depending on the quality of soil, the terrain and other geographical and ecological characteristics.

The first land measurement outside Bägemdər was instituted by Mənilək (future *aṣe* ↗Mənilək II) in Šäwa in 1879–80, who entrusted *ṣähafe təʾəzaz* ↗Gäbrä Śəllase with the work. G. was the basic unit employed. It was measured with the aid of a special cord, *qälad*, ca. 133 cubits long. One cubit (*kənd*) is traditionally believed to have been fixed by the arm of a certain Baymot. "Cubit Baymot" equalled to ca. 66.5 cm, one *qälad* therefore approximated to ca. 88 m. The actual size of one G. (on the average, ca. 1,200 m x 800 m) could vary from 12 x 8 to 20 x 9 *qälad*, depending on the fertility of the land and the kind of grain it yielded: a G. of fertile land was smaller than a G. of barren land. All lands, in particular those newly incorporated by Mənilək into the empire, were to be measured in G., *gašša märet* becoming a usual term for measured landholdings.

In 1941, the size of G. was fixed. A G. of land was equalled to 400,000 m^2 or 40 ha.

Aberra Jembere – Red.

Gäṭär

G. (ገጠር) has two meanings: 'countryside, suburb', and, by extension, 'a countryside church'. It is a typical ecclesiastic structure of the ↗Ethiopian Orthodox Täwaḥədo Church.

G. abound, as sub-parish churches, where the presence of such ecclesiastic institutions as ↗*gädam* or ↗*däbr* is scarce. Unlike the latter two, founded by emperors, kings, queens and members of the royal family, noblemen, bishops or the ↗*əč̣č̣äge*, G. are founded by the common folk, their number depending upon how many people live in the area. Before the Revolution of 1974, when the Church was not separated from the state, *gädam* and *däbr* had their own land and the G. had none.

Services in a G. differ from those in a *gädam* or a *däbr*. In the two latter, the prayers of the liturgy (↗*Qəddase*) – ↗*säʿatat*, ↗*maḫlet* – are conducted every day, whereas in the former the liturgy is performed only on Sundays and important holidays, *maḫlet* and *säʿatat* only conducted occasionally. In the *gädam* and *däbr* there are church schools and teachers, but not usually in G. Only in exceptional cases do the inhabitants hire teachers by providing them food.

In the G. there must be deacons (↗*Diyaqon*), assistant deacons and priests (↗*Qäsis*). In their absence, the service cannot be held and such a G. is considered *ṭäf* – a church where the service is discontinued. Most of the G. churches hire neither ↗*däbtära*-cantors nor ↗*märigeta*.

Merawi Tebege

Gato ↗Kusuma

Ǧawe

The Ǧ. (Jawe), a branch of the ↗Boorana Oromo, migrated during the 16th cent. from far southern Ethiopia through ↗Wäǧ and (Old) ↗Damot to the southern banks of Abbay. They are first mentioned in late 16th cent. Christian records in which they are called the Dawe, a word close to the Gəʿəz term for 'sickness, scourge', an indication of the dread with which they were regarded by their opponents, and nearly identical in sound with their name, *ǧawwee*, 'serpent' in Oromo.

The Ǧ. were probably part of the army that *aṣe* ↗Susənyos used to claim the throne in 1604 (1605 or 1607 according to different sources), and they were among the soldiers whom Susənyos settled in ↗Dära and Wəddo, districts east and southeast of Lake Ṭana, in the early 1620s.

During the 17th and 18th cent., the Ǧ. converted to Christianity; they also enrolled as cavalrymen in the army of (New) Damot, marching regularly in royal campaigns, serving as palace guards, and enjoying a fearsome reputation. In 1704, ↗Iyasu I settled them on the north bank of the Abbay in Damot as a bulwark against attacks by other Oromo living south of the Abbay. ↗Dawit III allowed them to massacre some 100 monks in Gondär when the clerics taunted him in 1721, and in 1732, Ǧ. forces from Damot helped rescue ↗Iyasu II from rebels in Gondär. The Ǧ. are little mentioned as a separate people in post-1800 records.

LaVerle B. Berry

Ǧawla

Ǧ. (s. map for Gawwada) is the name of an old settlement in ↗Gamo Gofa which used to be one of the seats (*gadʾo*) of the ↗Gofa kings. Ǧ. was also one of the sections of the autonomous kingdom of Gofa. The other sections, ordered by seniority as usual for the territories of Omotic-speaking people, were Wurki, Ṣanga, Kenčo, Oll Wuzate, Anko Wačo and Badiri Ballo. In Ǧ. the king offered sacrifices in the sacred forest of Korra Wuga.

The historical capital of the Gofa kings used to be on top of a mountain in a location known as Ṣanga. When in 1891 the last king of the Gofa, Kamma, refused to surrender to Mənilək's general *ras* ↗Wäldä Giyorgis Abboyye, Ṣanga was devastated. More than 3,000 were killed or taken captive. After Kamma's death in battle, the victors looted property in the battle of Čaqo Qoḍe. Ṣanga was turned into a garrison centre of the conquering army. It became the first centre of the new administration in the late 1890s. By decision of *däǧǧazmač* Beša, after some years the administrative capital was moved to Ǧ. Beša was replaced as its head by *däǧǧazmač* Lämma, who in his turn was followed by *däǧǧazmač* Märəd. The latter moved the administrative centre to Barza and, by the time of *ətege* Ṭaytu's death (1918), to Bulki.

The choice of Ǧ. as the centre of the new administration was inspired by its central location and its proximity to other highland areas such as ↗Malo, ↗Basketo and ↗Aari country. Besides, Muslim slave-traders had a thriving slave market in Ǧ. which was later strengthened by the conquering army. The elevation and centrality of Ǧ. facilitated access to the highland garrison-centres. Ǧ. was a centre for nearly ten years. It was composed of the settlements of Gore Oda, Wuga Maštala and Bəlala Arketa. Ǧ. had twice-weekly market days on Wednesdays (bigger market) and on Sundays (smaller market). Based on Gofa political tradition, Ǧ. was administered by a representative of the Gofa kings (later *balabbats*), the *woraba*. Between the *woraba* and the grass-roots leaders, known as *bitante* were in ascending order the *moçona* and the *guda*.

Ǧ. weavers were well-known for their skills in weaving cotton products. They made *madda* costumes for high-ranking officials, as well as *gonpa* and *bunguza* for men for use as shorts.

Ǧ. was connected to trade routes linking it to the highland areas as well as to the lowlands south of Maale (a source of ivory) and to ↗Dawro across the Omo River, to where much cotton clothing, a large number of slaves, animals and sorghum were taken. In return, Ǧ. imported iron, gold, horses and other essential items. Since the time when Ǧ. was a trading post, a number of Muslim families, headed by the *nagade godo*-chief, lived in Ǧ. The kings of both Dawro and Gofa and the kings of the small autonomous territories were involved in inter-ethnic trade. Elaborate treaties between the various autonomous groups of the area kept a balance between periods of peace and trade and moments of war. In general, good relations were maintained between the nobility of the autonomous groups and between their subjects.

After the conquest of Gamo Gofa in the 1890s, St. Mary church was established, which grew popular both among both Christians and the non-Christian local majority.

At the beginning of the 20th cent. Ǧ. was described by Bourg de Bozas as a "settlement of

400–500 huts 'lost in the clouds' at an altitude of 2,700 metres" (s. PankHist II, 194).

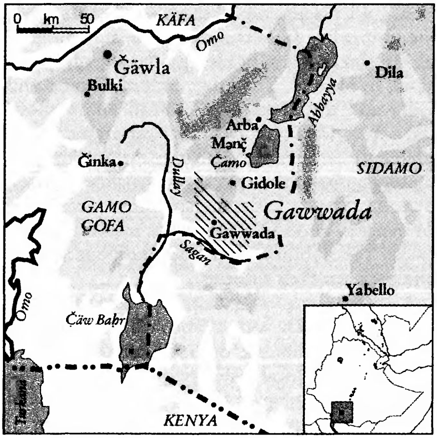
Gawwada

G. (also Gawada, Gawata, Gauwada, Kawwaakko) is an Afroasiatic language belonging to the ↗Dullay cluster. G. speakers (probably a few thousands) live in the former province of ↗Gamo Gofa in and around the town G., southwest of Lake Çamo. The G. people share with their closest neighbours, the other Dullay speakers, several cultural peculiarities that have been described by Amborn et al. (1980:20–54).

Black (1976a:222) differentiates two varieties of G. that he calls "Gawwada of Išarkuta" and "Gawwada of Đalpeena". Išarkuta is a village in the middle of the G.-speaking territory, while Đalpeena is a river that crosses the Đoobase and Gorrose territory, before it flows southwards into the ↗Sagan River and forms in some places the eastern frontier of the G. country. During the Italian occupation, the G. people succeeded in shifting their northern frontier at the expense of the neighbouring Gorrose. The peculiar mixed character of Black's "Gawwada-Đalpeena" forms could therefore depend on the fact that this variety is actually to be ascribed to Gorrose (cf. Amborn et al. 1980:57).



From the lexical point of view, here too there do not seem to be any clear boundaries of discrete Dullay dialects. Nevertheless, there is a set of words characterizing the Harso-Đoobase dialects, on the one hand, and Gollango-G., on the other (cf. Amborn et al. 1980:58 for examples).

Information on G. can be found in the works of Moreno (1943), Black (1976a on G.), Amborn et al. (1980, predominantly on Harso-Đoobase) and Hayward (1989 on Ṣamay). The author's own data on G. were collected in Ethiopia in 1984–85.

Gayənt

G. (ጋይንት) is an area situated in the southern part of Gondär (↗Bägemdər) province. It is bordered by Libo *awrağğa* to the north (s. ↗Çäçäho), Moṭa *awrağğa* of Goğğam to the south, the rivers Täkkäze and Bäšəlo in the east and Farṭa in the west. The region is characterized by *däga*, *wäynä däga* and *qʷälla* ecological zones. G. was always known due to its good farmland; the peasants of ↗Səmäda in G. used to cultivate *səyyət* (a high-quality white ↗*ṭef*), not only for their own livelihood, but also for the imperial court of Ethiopia. The *qʷälla* areas of G. also contain some of the most ↗malaria-ridden areas in Ethiopia; even today, malaria remains a chronic health problem for the inhabitants of G.

Historically, G. served as a shelter for numerous Christian Orthodox churches and monasteries. Among the churches of G. the best-known are ↗Betä Ləḥem Maryam, ↗Zuramba Ṣərḥa Maryam, Wəqro Giyorgis, Satila Maryam, Sägoda Maryam, Mäsäna Mädḫane ʿAläm, Lida Giyorgis, Šewla Giyorgis and Yäkuwas Abbo Betä Ləḥem; the monastery of Däbrä Qäṭin is situated on the hill overlooking the western bank of Täkkäze. Betä Ləḥem Maryam is an early church that illustrates the transition from the traditional rectangular structures to the later round ones (Henze 1977:35). Local Christian tradition claims that Ṣərḥa Maryam of Zuramba was founded by the 6th-cent. *abunä* ↗Zämikaʾel Arägawi, one of the Nine Saints, and associates this church with *aṣe* ↗Gäbrä Mäsqäl.

In the 16th cent. *aṣe* ↗Gälawdewos seems to have reorganized his forces against the army of *imām* ↗Aḥmad b. Ibrāhīm al-*Ġāzī* ("Grañ") in the ragged terrain of G., before defeating him at Zäntära, near Lake ↗Ṭana, on 22 February 1543. During the war some buildings of Zuramba were damaged, but the monks were able to appease Grañ by offering him precious objects owned by the monastery. The monastery was repaired by *ase* ↗Śärṣä Dəngəl, who also had old pillars replaced in the church.

In May 1799, Libän Amäde (d. 1815), one of the hereditary governors of Wärrä Himäno (↗Yäǧǧu), led an incursion into G. that resulted in the burning of several churches (Conti Rossini 1917:13, 89). *Aṣe* Tewodros II seems to have contributed to the revival of Zuramba Ṣərḥa Maryam; he and his close associate *fitawrari* Gäbrəyye (↗Gäbrä Ḥəywät Goššu) are said to have taken Holy communion at the monastery. However, in 1867 Tewodros personally took part in pillaging the G. regions of Farṭa and Guna (as *däbtära* ↗Assäggak̲äñ reported to Antoine d'Abbadie, s. Conti Rossini 1925:467; RubActa II, no. 248).

From the reign of *aṣe* ↗Mənilək II until the ↗Italian war of 1935–36, G. was divided into two large districts – G. and Səmada – for purely economic reasons: to facilitate the collection of ↗taxes and the annual ↗ᶜ*aśrat*-tithe. During the occupation, the Italian rule faced strong resistance from both the local people of G. and the patriots.

In imperial times and well into the *Därg* period, G. was included as an *awraǧǧa* in the Bägemder/Gondär province, with Näfas Mäwča as its capital, and subdivided into ላይ፡ ጋይንት (*Lay Gayənt*, 'Upper G.') and ታች፡ ጋይንት (*Tačč Gayənt*, 'Lower G.') *wärädas*. After 1974, G. became a district belonging to the South Gondär Zone. The last population census of G., in 1994, numbered 472,841 inhabitants, most of whom live in rural areas. Formerly, G. was a particularly inaccessible part of southern Bägemdər; the recently constructed 300-km Wärräta–Wäldəya road now links the region to the wider transport network of Ethiopia.

Gaz

G. (Tgn. [varieties spoken in Wäǧǧärat and Rayya Azäbo] ጋዝ; ᶜAfar: *Galla qarim* ['Raiding against Galla = highlanders'], Amh.: የአዳል፡ ዘመቻ *yäʾadal zämäča*, 'Raiding against ᶜAfar']) was a traditional system of raiding that mainly occurred on the border regions between northern Amhara, Təgrəñña-speaking areas and ᶜAfar lowlands, especially in southern Təgray and northern Wällo. The phenomenon is not confined to a single ethnic group (cp. Getachew Meressa 1998). A G. may be prepared by either small or large local communities; such groups elect: an *abbo* G. ('father of the raid') as a temporary leader, with lieutenants at his side; the *alänga ṭay* (Amh.; Tgn.: *gärafi ḥalängi*, 'one who flogs with a whip'); the *was ṭäri* (Amh. 'guarantor'); and the *goṭ azmač* (Amh. 'village commander'). Anyone reputed for his fighting skills could be elected on the basis of the local assembly's decision (the *qanči* system, Tgn. [variety spoken in Wäǧǧärat] 'equality'). Alternatively a sorcerer (Amh.: *dəngay ṭay*, Tgn.: *wäqaᶜi əmni*, 'one who throws a stone') may use a ritual involving the casting of pebbles in order to select the *abbo* G. This ritual also predicts the success or failure of a G.; in the latter case it is postponed.

G. were carried out periodically until the early 1940s, when they were interdicted and raiders persecuted. One of the starting points for the 1943 ↗Wäyyane rebellion was the government's campaigns against local raiding in Wäǧǧärat and Raya. Anything from 100 to as many as 50,000 males (*gazäyte*, 'raiders'), comprising a whole region's confederacy of related communities, could participate in a G., which could take months to complete. There have been reports of G. travelling by foot from Moḵoni, Wäǧǧärat or Alamaṭa up to Mäʾisso near Assäbe Täfäri or the Awaš River. The raiders profited economically through their looting of cattle, sheep, goats and camels.

Socially, G. was a stabilizing factor. A "hero", as reported in Wäǧǧärat, who had killed and mutilated an ʿAfar, extended his prestige over his family, especially his wife, who would, for example, receive priority over all other women when fetching water at a spring, or would be the first to receive food and beverages at weddings. A successful raider is distinguished by clothing and hairstyle; his wife would also wear distinctive clothing (*šawro* in Wäǧǧärat and Raya).

Traditionally a raider had to present mutilated male organs to his wife. However, because the raiding often took a long time, informants agree that this was replaced by showing the trophy to the lieutenants of the *abbo* G. as witnesses, then burying it. In place of the trophy, a symbolic representation (the bark of a tree, the *ḫinto*) of the mutilated organ would be put on a stick, where the number of *ḫintos* would symbolize the number of mutilated organs. This stick would finally be suspended under the roof of the raider's house, so that it could be seen and admired by visitors. As opposed to this, a "cowardly" raider, who had deserted his fellow raiders during the G., would be dressed as and considered a woman and his property would be destroyed (his cattle slaughtered and house burned). As a consequence, even his family could disintegrate. Performing a "heroic" deed in a subsequent G. would, however, fully restore his pride and honour.

Gazzera, Pietro

General G. (b. 11 December 1879, Benevagienna, Cuneo, d. 30 June 1953, Ciriè, Torino) was a colonial officer. G. had a smooth military career. Lieutenant in 1900, in 1905 he was admitted to the School of War, from where he graduated in 1908 and joined the General Staff. Promoted Captain in 1910, the following years he participated in the Turkish–Italian War (1911–12). Later, he taught at the School of War and was mobilized during World War I, where for his exceptional war merits he was promoted to Brigadier-General. Named Commander of the School of War from February 1926, in 1928 he was in command of the Genova Division. Promoted General of Division in March 1928, he joined later the staff in the Ministry of War, which he himself headed from 12 September 1929 to 22 July 1933. On 31 July he was promoted Army General and was named senator on 30 October.

In 1938 G. moved to Africa. Between 12 August 1938 and 6 July 1941, he assumed the office of Governor of the "Galla and Sidamo" region, with the capital in ↗Ǧimma. After the viceroy Amedeo di ↗Savoia, Duke of Aosta, surrendered ↗Ambalage on 23 May 1941, G. became Governor-General of the ↗Africa Orientale Italiana. He remained in this office until 6 July 1941, when he was captured at ↗Dambi Dolloo. In custody for two years in India and in the United States, he returned to Italy in 1943. From 1943 to 1945 he functioned in the capacity of High Commissioner for the prisoners of war.

GDR(T)

A ruler of ↗Aksum, GDR, is the author of the oldest surviving royal inscription in Gəʿəz, RIÉ 180, found at ↗ʿAddi Gälämo: *gdr / ngśy / ʾksm / tbʿl / mzlt / lʾrg / wllmq*, the meaning of which is highly uncertain (cf. Kropp 1994; Drewes 1999: 186–89). Since the obscure *mzlt* is inscribed on a 'boomerang-like object', the function of which has been convincingly explained by Drewes (1999) as "insigne de la royauté, sceptre", and if *ʾrg* and *lmq* are toponyms or possibly sanctuaries, this text could perhaps be translated: 'GDR, king of Aksum, gave (this) sceptre into the possession of (the sanctuaries) ʾRG and LMQ'.

According to the palaeographical dating of RIÉ 180, GDR must be prior to 300 A.D (Drewes 1962:78–83). Should GDR be identified with the anonymous king of the ↗Monumentum Adulitanum and be one and the same Aksumite king as GDRT mentioned in two Middle-Sabaean inscriptions, his reign could be put more precisely between ca. 200 and ca. 230 A.D. The first inscription, CIH 308 from Riyām, was set by the Sabaean king ᶜAlhān Nahfān and his two sons and co-regents Šāᶜirum ʾAwtar and Yarīm ʾAyman (undated, around 200 A.D.). It mentions in lines 10–14 that GDRT sent a diplomatic mission to ᶜAlhān Nahfān in order to form an alliance with Sabaʾ: *bḏt/nbl/wbltn/bᶜbrhw* 11 *gdrt/mlk/ḥbštn/ltʾḫwn/bᶜmhw/wstkml/hʾ/ʾḫwnn/byn* 12 *hmw/wbyn/gdrt/wmṣr/ʾbšn/*… 13 … *ytʾḫwnn/slḥn* 14 *wzrrn/wᶜlhn/wgdrt/kl/ᶜbrthmw*, 'because GDRT, king of Ethiopia, had sent a diplomatic mission to him [sc. ᶜAlhān] in order to form an alliance with him and to achieve friendship between them [the Sabaeans] and GDRT and the troops of the Aksumites … (and) that Salḥīn [the royal palace in Mārib] and Zrrn [i.e., the royal palace in Aksum?], and ᶜAlhān and GDRT will be allied in all their bilateral relations'. That such an alliance was not only concluded but did work in case of war is confirmed by the Himyarite inscription NNAG 13+14 in which Sabaʾ, Ḥaḍramawt, Qatabān and Aksum are allied against ↗Ḥimyar. The second Sabaean inscription, Ja 631 from the sanctuary ʾAwām in Mārib was set up during the reign of Luḥayᶜaṯt Yarḫum (perhaps around 235 A.D.), but relates events that happened during the last period of Šāᶜirum ʾAwtar's reign (around 230 A.D.). The dedicant mentions that Šāᶜirum ʾAwtar had sent him on a diplomatic mission to GDRT: *bkn/nb* 12 *lhw/mrʾhmw/šᶜrm/ʾwtr/mlk/sbʾ/wḏrydn/ᶜdy/ʾr* 13 *ḍ/ḥbšt/bᶜbr/gdrt/mlk/ḥbšt/wʾksmn*, 'because his lord Šāᶜirum ʾAwtar, king of Sabaʾ and *ḏū* Raydān, has sent him on a diplomatic mission to the land of Ethiopia, to GDRT, king of Ethiopia and the Aksumites'. The result of these negotiations are unknown, but since the same text continues with a description of the war between Sabaean and Aksumite troops in the southern highlands of Yemen, the alliance between these two powers seems to have come to an end.

GDRT is the first Aksumite king mentioned in Sabaean inscriptions and probably the first Aksumite king to interfere in South Arabian politics. In the passages cited above, he is called *mlk/ḥbštn* and *mlk/ḥbšt/wʾksmn*, but in line 15 of Ja 631 his Gəᶜəz title *ngšyn* (with the Sabaean determination-marker *-n*) is used. GDRT enters South Arabian history around 200 A.D. as an ally of the Sabaean king ᶜAlhān Nahfān, but during the reign of ᶜAlhān's son Šāᶜirum ʾAwtar (ca. 210–30 A.D.), the relationship between Aksum and Sabaʾ deteriorates: although in the beginning of Šāᶜirum's reign they seem to be allied against Ḥaḍramawt (Ry 533/21–22), until ca. 225 A.D. GDRT manages to control vast parts of western Yemen – the Tihāma, Nağrān (Ja 635/23–24), Maᶜāfir (Ja 631/33), Ẓafār (Ja 631/21–25) and parts of Ḥāšid territory near Ḫamir in the northern highlands (Ir 12) – the expansive policy of both Ethiopians and Sabaeans leads to a confrontation that is to dominate the whole 3rd cent. A.D.

In the Ethiopian tradition, the memory of GDR was possibly preserved in the traditional "king lists" (CRList 284, 277, 286, 299), in which his name appears with variants: e.g., Gədur (list C, in the 3rd place), Zägduru (list E, in the 6th place), or Zägdur (list B, in the 3rd place, after Ǝbnä Ḥakim [s. ↗Mənilək I] and Tomay), the latter form (with the relevant list) having hence passed into at least one hagiographic work (s. CRList 274) and the "short chronicle" as well (s. DombrChr 145).

Alexander Sima

Ge

G. occurs in several Ethio-Semitic languages with the meaning 'home area, home place'. The word is probably to be connected with Hebrew *gay* (*status constructus*: *gē*), 'valley' and Ar. *ǧiwāʾ* 'valley' (LesCDic 174). The other possibility is to derive it from Gr. γῆ, 'earth, land' through loaning.

In ↗Harari *gēy* refers to the city of ↗Harär and denotes characteristic features of the city and its inhabitants, i.e. the speaker of *gēy sinān* 'Harari language [i.e. 'the language of the city']'; *gēy gār* 'house built in the Harari style', *gēy usuʾ* 'inhabitant [*usuʾ*, 'man, somebody'] of Harär'. In ↗Səlṭi *gee*, *geye* means 'native country, home place', e.g. *gee-ka heeda*, 'he went to his [*-ka*] home area', *ya-gee nibaarat*, 'country life' (Gutt – Hussein 1997:795f.).

In Amharic **ጌ** is used only in compounds, as **ራስጌ** *rasge*, 'head part [esp. of a bed]' (cf. Harari *urūs gē*), titles: ↗*əčč̣äge*, ↗*ətege*, *aṣege* (↗*Aṣe*), and place names, e.g., *Gurage*, *Däräsge* (KaneDic 1876).

In Gafat *-gä*, 'to, at' has become a postposition, e.g. *aləǧǧä gä*, 'to my brother [*alä*]', *əǧǧä gä*, 'together' (*əǧǧä*, 'one' is cognate with Gəʿəz *aḥadu*, Amh. *and*).

In Gəʿəz, **ጌ** 'territory' is not (well) attested (cp. however, Fiaccadori 1992:76f.). In an indirect way the element G. is also contained in Gəʿəz **ገሀነም** *gähannäm*, 'hell, Gehenna' (in this or a similar form in modern Ethio-Semitic languages such as Tgn.: **ገሀነብ** *gähannäb* and Amh. **ጋነብ** *gannäb*), which goes back via Ar. *ǧahannam* to Hebrew *gē*(ʾ) *hinnom* (which is abbreviated from *gēʾ bēn hinnom*, 'valley of the son of H.') and its Jewish Aramaic form *gē hinnām*. The place outside Jerusalem where in former times people were sacrificed became a prophetic symbol for the final judgement and hence for hell.

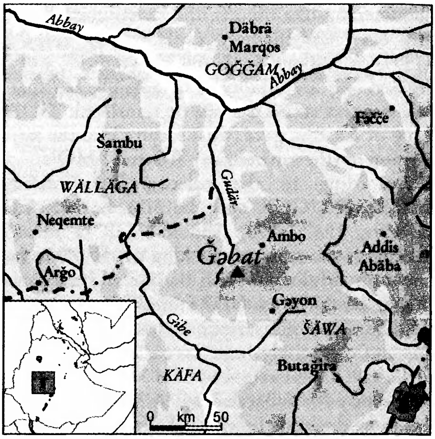
Rainer Voigt

Ǧəbat

Ǧ. (**ጅባት**) is the name of a mountain in Šäwa rising to over 3,000 m A.S.L. (EMAtlas: 3,017 m A.S.L.; Carta dell'AOI: 3,072 m A.S.L.). It forms the western summit of a volcanic mountain-range by the same name, which continues eastwards with Badda Roge (3,245 m A.S.L.), Toke (2,690 m A.S.L.), ↗Wänč̣i (3,387 m A.S.L.) and Dändi (3,268 m A.S.L.). Rising between the Addis Abäba – Läqämte highway to the north and Addis Abäba – Ǧimma to the south, these recent (cenozoic) volcanoes tower above the Ambo-Gudär graben to the north, with rivers running into the Abbay, the Upper Awaš depression to the east and the Omo-Gibe basin to the west and south. The Ǧəbat-Mäč̣č̣a *awraǧǧa* (with the capital in Hagärä Ḥəywät, or ↗Ambo), a subdivision of the Šäwa province, derives its name from Mount Ǧ.



This high and remote range has a population of ↗Mäč̣č̣a Oromo agriculturalists and pastoralists and has preserved large juniper-forests, notably on its southern slopes (Last 1965). Under Ḫaylä Śəllase I the junipers began to be felled; and under the *Därg* investors from South Yemen developed large-scale sheep-breeding for export.

The Ǧ. range can be accessed, though with difficulties, from the ↗Gudär through a hardly passable path running between the Toke to the north and the Roge to the south through the depression of Təqur Inč̣inni and Šänän, an area regularly flooded during the rainy season. This track, which followed the old caravan route to Ǧimma (via Nonno), was improved when the high-voltage line linking Addis Abäba and the Gəlgəl Gibe hydroelectric power plant was constructed (planned as early as 1985, but completed only in 2004).

The mountain is reported to have been surrounded by legends, relating that the 15th-cent. *aṣe* ↗Zärʾa Yaʿəqob built a "castle" on the top, where miracles are said to happen. In any case, the old Christianity must have vanished there due to the migration of the Oromo (cp. BTafA 709ff.). During the reign of Mənilək II, in the 1890s, at the foot of the mountain there was a residence of *däğğazmač* Ḫaylä Maryam, brother of *ras* Mäkʷännən (Bulatovich 2000:7f.). A Franco-Ethiopian archaeological expedition found on G. the remains of a "palace" (Anfray 1965:13), but up to now no excavation has been attempted.

Gəbbi

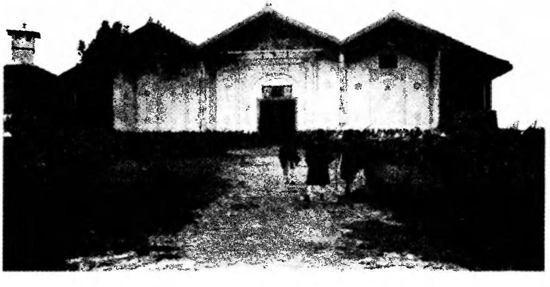
G. (ግቢ) designates a compound, including a palace compound, and by extension a palace in general. The term is derived from the Amharic verb 'to enter', i.e. ገባ (*gäbba*, 'he entered'; s. also ↗Gəmb); it gained currency in the late *aṣe* ↗Mənilək II period, when it was primarily applied to the Emperor's palace compound in ↗Addis Abäba, and, it should be noted, to the compound as a whole rather than to any of its individual buildings (KaneDic 1969). The late emergence of this usage is apparent from the fact that it is not mentioned in Guidi's *Vocabolario* of 1901 (GuiVoc), but is included in its supplement of 1940 (Guidi 1940:217).

A typical Ethiopian royal or provincial G., or palace, consisted of two main buildings: an እልፍኝ (*əlfəñ*; KaneDic 1117f.), or private apartment of the monarch or ruler, inner chamber also used as a reception room, and an አዳራሽ (*addaraš*; KaneDic 1306), or large reception hall where the ruler gives audiences and banquets.

The term *əlfəñ* is found extensively in Ethiopian royal literature. One of the earliest references is in the Chronicle of *aṣe* ↗Iyasu II, which, referring to the death of *aṣe* ↗Bäkaffa, in 1730, tells of the deceased's body being carried from the *əlfəñ* to a nearby church. References to *əlfəñ*, at Ankobär, Ǝnṭoṭṭo and Addis Abäba, are likewise to be found in Gäbrä Śəllase's Chronicle of *aṣe* Mənilək II. The *əlfəñ* of Mənilək II's G., due to its shape, received the name of ↗Ǝnqulal Bet.

The importance of the royal *əlfəñ* is evident from the use of such court titles as እልፍኝ፡ አሽከር (*əlfəñ aškär*, 'servant of the inner chamber') or እልፍኝ፡ አስከልካይ (↗*Ǝlfəñ askälkay*, 'chamberlain'). It can also be seen in the naming of churches by the vicinity of the royal *əlfəñ*, e.g., Ǝlfəñ Giyorgis at Gondär or Ǝlfəñ Gäbrəʾel in Addis Abäba.

Addaraš is the Amharic term for a large hall often employed for banquets and festivities (GueCopMen I, 158). The Chronicle of *aṣe* ↗Yoḥannəs I used the word in the 17th cent. for a royal tent in the Gondär palace compound. *Aṣe* Bäkaffa's Chronicle, however, later applied it to a royal throne room, apparently a built-up structure, and also referred more explicitly to an አዳራሽ፡ ሰቀላ (*addaraš säqäla*), or long rectangular *addaraš* (GuiIohan 175, 312, 335).



Part of Mənilək's *gəbbi* complex: *addaraš*; postcard from 1909; from the collection of Lorenz Jensen

Säqäla (ሰቀላ; KaneDic 507) probably originally a rectangular marqee tent, from the Amharic *säqqälä* ('he hung [tent hangings]') is the term for a long rectangular building, already mentioned by Alvares in the early 16th cent. (BeckHuntAlvar vol. 2, 507) and by the chronicler of *aṣe* ↗Śärṣä Dəngəl (CRHist 43). The distinctive character of the *säqäla* was reported almost a century later by Almeida, who reports that whereas "most" Ethiopian houses were round, there were also long ones, called *säqäla*, a word which had come to mean a "palace of the king and grandees" (BeckHuntAlm 85). The term was also widely used in 18th-cent. Gondär. The Chronicle of *aṣe* Bäkaffa thus refers to a ወርቅ፡ ሰቀላ (*wärq säqäla*, possibly a *säqäla* decorated with gold) and speaks of it as a "sweet-smelling" palace, which the Emperor and all his courtiers and princesses attended for a banquet (GuiIohan 328, 334, 344).

Large rectangular banqueting halls were in widespread use in 19th-cent. Ethiopia. One such room in a nobleman's palace in Təgray was illustrated in a Henry Salt engraving (Annesley 1809, vol. 3, 135). More impressive was the great hall in King Sahlä Śəllase's palace compound at Ankobär. Bernatz (1852, vol. 2, 9) depicts the monarch, lying on his ↗*alga*, many courtiers seated at table, soldiers with swords and shields in attendance, and musicians and dancers entertaining. Not so different was one of Mənilək II's pre-Addis Abäba banqueting halls reproduced in Cardinal Massaja's memoirs (MasMis vol. 9, 139). Mənilək's great rectangular three-gabled *addaraš* at Addis Abäba (GueCopMen II, pl. xli) was thus in a long-established Ethiopian tradition.

Apart from the *əlfəñ* and *addaraš*, there were however usually several essential ancillary buildings. These would include a ማዕድ፡ ቤት (*maᶜd bet*, 'kitchen', KaneDic 319), a ፈረስ፡ ቤት (*färäs bet*, 'stables', KaneDic 2279) as well as sundry antechambers, servants' quarters, craftsmen's workshops, etc. Of these, ሰገነት (*sägännät*, KaneDic 584) was of particular importance. It was a building or pavilion which served as a tribunal and court of appeal, and was presided over by the monarch or ruler (GueCopMen I, 90). The importance of Mənilək's *sägännät* in Addis Abäba was underlined by the fact that it was dominated by a prominent watch-tower (Vanderheym 1896: 105, 216). The whole establishment would initially be surrounded by a fence of branches which would later be replaced by a sturdy wall.

The above functional arrangement of buildings was apparent in one form or another at most 19th-cent. Ethiopian palaces. At ↗Däbrä Tabor, e.g., the G. compound contained three round houses standing behind each other, like chambers in a multi-roomed building. The first consisted of an antechamber; the second, somewhat larger, was a banqueting hall, i.e. *addaraš*; and the third, the monarch's private chamber and reception room, or *əlfəñ* (PankHist II, 75f.). The palace at Däbrä Marqos was likewise reported to comprise a large structure, serving as an armoury and store, as well as ten huts, one of which was used for banquets, i.e. as an *addaraš*, and another as a court of justice, i.e. *sägännät* (PankHist II, 147f.).

Palace of *aṣe* Yoḥannəs IV, Mäqälä; in the foreground ruins of the old *gəbbi*; from Wencker-Wildberg 1935

The typical royal or provincial G. employed a staff of many officials, or courtiers, each with a special title, as well as innumerable servants, workers and craftsmen. The most important palace officials thus included the ↗*blatten geta*, or master of the pages (D'Abbadie 238f.; KaneDic 867); the ↗*bäǧərond*, or treasurer (KaneDic 940); and the ↗*aggafari*, an officer responsible for arranging appointments with the monarch (d'Abbadie 342ff.). There would also be officers with the status of ↗*bä^{c}aldäräba*, who served as intermediaries with the ruler (KaneDic 869), as well as ↗*asallafi*, or waiters (KaneDic 1116), responsible for serving various items of food and drink, the name of which would be added in the title, e.g. *ṭäǧǧ asallafi*, or mead-waiter (Plowden 59; GueCopMen 224).

G. was used as the name for the palace of *aṣe* Mənilək II in Addis Abäba. His original palace buildings, erected in 1889, were accidentally destroyed by fire in 1892, but were rapidly rebuilt. The palace grounds, according to Mérab (1921–29, vol. 2, 23f.), then covered a stretch of land two km long by one km and a half wide, and had a permanent staff of almost 7,000 people, 2,000 in the personal service of the Emperor and his consort. The compound as a whole, which was more important than its individual buildings, contained innumerable structures. The most notable were, as usual, the *əlfəñ* and *addaraš*, which, according to Mənilək II's chronicle, could hold 7,000 persons. Among other buildings there was a small summer house, a saddlery, smithy and joinery, a mint, pharmacy and dispensary, an arsenal, weaving and embroidery booths, and innumerable sheds of every shape and size, as well as a vegetable garden, ploughed fields, herds of cattle and sheep, a vineyard, and a lion cage. The palace's water supply was installed by Mənilək's Swiss craftsmen ↗Ilg, and the electric installations in part by the 1905 German diplomatic mission to Ethiopia. Besides being the seat of Ethiopian government the G. was the site of many great banquets, where as many as 20,000 visitors would be fed, in four or five services (Gleichen 1898:143–47; de Castro 1915:192–95; PankHist II, 205–11; for a description of the G. in the royal chronicle s. GueCopMen 465–70).

With the rise of Täfäri Mäk^{w}ənnen (↗Ḥaylä Śəllase I) it became customary to speak of his residence and compound (↗Gännätä Lə^{c}ul, now the main campus of ↗Addis Ababa University and site of the ↗Institute of Ethiopian Studies) as the Upper (*Lay Gəbbi*) or Small G. (*Tənnəšu Gəbbi*), as opposed to the earlier, and much larger G. of Mənilək (*Tallaqu Gəbbi*; ZerEth 73–76; Farago 1935:72–79).

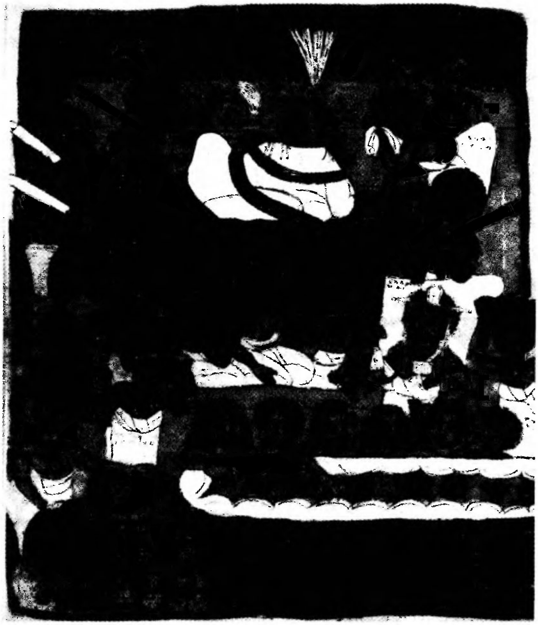
Gəbər

The underlying meaning of G. (**ገብር**, Gə^{c}əz lit. 'act', 'work', 'workmanship', 'produce', 'tribute', 'force', 'compulsion', 'necessity', 'banquet', 'feast')



Gəbər presided over by *nəguś* Śahlä Śəllase, from ms. EMML 2097, early 19th cent. (probably produced by order of Śahlä Śəllase), fol. 130b; Miṭäq Täklä Haymanot, photo 2000, courtesy of Donald Crummey

lies in the field of acting, doing, making. However, in the historical record its use has two primary, at first glance highly contrasting, meanings: 'tax' or 'tribute', 'rent', and 'banquet' 'feast'. Reconciling these two meanings is not easy. From one angle, the holding of feasts was dependent on the prior receipt of tribute; from another angle, feasts were occasions for the re-distribution of tribute. In its first sense of the payment of tribute or taxes, it is closely related to the associated words *gäbbar* 'tributary' and *gäbbare* 'farmer'. This, in turn, reflects the fact that the historic Ethiopian society and the state associated with it, were rooted in the land, in agrarian relations. The great court feasts were institutions, which brought together everyone involved in the court and dependent on it – the payers and the receivers of tax and tribute – in such a manner as to re-enforce the relations of inequality on which the regular payment and receipt of tax and tribute relied.

G. as tax and tribute refers to the regular payment of tax based on land and on the product of land. Conceptually, it was held to bestow on the payer ownership and/or use-rights to the land or to confirm the prior existence of those rights. Historically, it was paid in kind (grain, honey, beer), in the form of money (Maria Theresia thalers or ↗*bərr*) and/or in gold (*wäqet*). G. might be paid to an individual (e.g., a holder of church *rim* land) or to a representative of the state. At different historical periods and in different places, through the interplay of political, social and cultural forces, the payment of G. could be as highly personalized as the payment of rent to a landlord, or as broadly institutionalized as a collective payment to the representative of an institution (such as the church) or the state.

In the ↗*rəst*-↗*gʷəlt* system of northern and central Ethiopia, the tendency was towards annual payment of a fixed collective sum by particular territorial units or settlements. In the *gäbbar-madäriya* system of central and southern Ethiopia, particularly as it evolved under the rule of Mənilək as *nəguś* of Šäwa, and then, from 1889, as *nəguśä nägäśt* of Ethiopia (↗Mənilək II), G. was paid individually on the size of land holdings. That means the state could make a land-survey or census to increase the tax rate and, consequently, the size of its revenue. The administration of G. was also different in the two systems. In the *rəst-gʷəlt* system, tax/tribute rested on the holding of overrights in land as *gʷəlt* and was administered by a *gʷəltäñña*, who might think of his or her rights as hereditary, or who might be a recent appointee, while in the *gäbbar-madäriya* system it was administered by a *mälkäñña*. Originally the *mälkäñña* were hereditary landlords and so they continued to be in parts of Šäwa (Weissleder 1965); but in the parts of Šäwa more recently brought under Mənilək's rule, the *mälkäñña* was an appointed officer accountable to the king.

G. as tax/tribute made possible the holding of G. as banquet. Banquets or feasts were held by the royal court and by great notables, whose courts mirrored those of the *nəguś*. We have accounts of the organization of the court and of royal feasts in the texts of *Śərʿatä gəbər*, which date at least to the mid-15th cent. (Kropp 1988). It seems that G. was inseparable from the basic organization of the royal camp of the itinerant Solomonics or the palaces of Gondär and the modern era and that the principal court officials were managers of the royal household rather than state officials (Kropp 1988:57). Space and staff were allocated to manage workable goods such as textiles and leather and consumables such as fuel-wood; and to store and process cereals, pulses, meat and beverages. The *Śərʿatä gəbər* speak of a great annual feast given just after the Ethiopian New Year, but the details concerning this feast seem applicable to other great celebrations of the principal festivals of the Christian Church: Easter, Epiphany, the Feast of the Cross. The texts of the *śərʿatä gəbər* document an "astounding ... variety of bread, vegetables, and drinks", not to mention meat, which were prepared for the daily royal table (Kropp 1988: 54). Our principal accounts of royal feasts insist on the replication of hierarchy and social privilege nobles ate and drank more refined food and drink from more valuable vessels than did their social subordinates.

During the time of Mənilək II, there were two types of royal banquet. The *əlfəñ* (↗ *Gəbbi*) banquets were held daily for the royalty, higher ranking court nobility, governors-general and children of the nobility brought up at the court. The *addaraš* banquets were held weekly and on significant holidays for the clergy, court troops and their commanders; the total number of participants was estimated at over 8,000. One account tells us that at Mənilək's great feasts, the palace guards ate first, after which they were dispatched to control the crowds who flocked in after them, in successive waves (Marcus 1970). The great nobles, the *mäkʷannənt*, kept their own schedules and ate on a dais with Mənilək himself, who, by contrast, never ate in public, but rather presided over the feast. The scale of resources invested and consumed was great. Early accounts speak of court provisions for 33,000 people (presumably not all distributed in one banquet; Kropp 1988: 55). Annually the royal court of *aṣe* MəniləkII expended around 350,000 *bərr* for banquets, an amount that was equal to the annual salaries of 97 expatriate teachers (Tsegaye 1996:175).

Gəbrä Ḥawaryat ↗ Apostles, acts of

Gəbrä Ḥəmamat

G.Ḥ. (ግብረ፡ ሕማማት, 'Acts of the Passion', lit. 'Service of the Sufferings', *gəbr* meaning here 'liturgical service', DillmLex 1163) usually designates the liturgical book with the readings for the Holy Week (hence the designation *Mäṣḥafä gəbrä ḥəmamat*). This book embraces the ordinary of the whole Holy Week, from the Palm Sunday vigil to the 12th hour of Easter Sunday (i.e. after the mass of the Resurrection, ↗ *Fasika*). However, some manuscripts merely begin with the evening of Monday in the Holy Week, or even otherwise. The G.Ḥ. is the equivalent of the Egyptian Coptic book of the *Baṣḫa* (Arabic, from Coptic Ⲡⲁⲥⲭⲁ < Gr. Πάσχα < Aramaic *pasḥā* < Hebrew *pęsaḥ*), which gives the readings for the "Week of the Sufferings and of the Glorious Feast of Easter" (for a presentation of the Ethiopian Holy Week, s. Habtemichael Kidane 1997; Fritsch 2001:211–60, §§407–579).

Celebrations

Like its Coptic model – and far from the antique liturgy of Jerusalem, with its many processions – the Ethiopian Holy Week liturgy is very so-ber. It is composed mostly of psalms, readings and hymns that are often rhapsodies of biblical verses. The ordinary services are distinguished from the solemn services.

I. Ordinary services

The ordinary services are the "hours" of Holy Week: between the end of the mass on Palm Sunday and Easter day, each day comprises ten services called "hours" (first, third, sixth, ninth, eleventh hour of the day or night, accordingly), all of which have more or less the same structure (cp. *Mäṣḥafä ↗ sä^catat*). Good Friday has an additional twelfth hour of the day.

It is well known that the ↗Ethiopian Orthodox Täwaḥədo Church follows strict rules concerning ↗fasting, especially during Holy Week, where certain Christians practise a fast called **አክፋይ** (*akfay* or *akfəlot*), which lasts 55 hours from the end of the mass on Holy Thursday until Easter morning (cf. Habtemichael Kidane 1997: 125 n. 107, 99; Fritsch 2001:239, n. 64). On Good Friday, those who do not eat at all take some bread with *gulban* (**ጉልባን**, or *g^wälban*, cooked crushed beans; cf. Fritsch 2001, §511) after all services have been sung.

The daily hours are generally grouped together, in accordance with the practice of the Coptic and almost all other Oriental Churches.

The introduction is invariable; amongst other elements, it includes the reading of 30 psalms, as well as a number of prayers and biblical canticles, followed by the "Doxology of the Lamb" (s. Rev 5:12), which has its origin in the Coptic text *Thine is the power* ... (in the Coptic usage, it replaces the 12 psalms of each hour, whilst in Ethiopia it is simply added to the rest).

All hours have a minimum requirement of one Scripture reading from the O.T. (notably from the Prophets): a psalm verse (**ምስባክ** *məsbak*) called **ቅድመ፡ ወንጌል** (*qədmä wängel*, lit. 'before the Gospel') introducing the Gospel reading. Many hours have one or more supplementary readings between the O.T. reading and the psalm preceding the Gospel. These readings fall into various categories:

(1) Biblical: a) a passage from one of the books of the Law of Moses (*Orit*; ↗Octateuch); b) an excerpt from one of the ↗Wisdom Books (Wis, Prov, Ecc, Job); c) another O.T. passage (in practice only Josh 5:10–12ab and Ruth 2:11–14a, which are read on the ninth hour of Good Friday).

(2) The commentaries on the biblical readings: d) the commentaries on the O.T. readings (↗*Tərg^wame*); e) a paraphrase of the Gospel called **ድኅረ፡ ወንጌል** (*dəḫrä wängel*, lit. 'after the Gospel'); f) exegetic homilies (commentaries of ↗John Chrysostom on the Gospels and on the letter to the Hebrews, and other Church Fathers: ↗Epiphanius, ↗Athanasius, ↗Cyril of Alexandria, ↗Jacob of Serug etc.).

(3) Ascetical texts: g) brief exhortations on Christian virtues (forgiveness of offences, love for the poor, mutual charity etc.), coming from the Coptic tradition.

(4) Excerpts of dogmatic scope: h) the ↗*Haymanotä abäw* and sometimes i) the ↗*Didəsqəlya*.

(5) Readings common to the Ethiopian tradition, namely: j) the ↗*Tä^ɔammərä Maryam* and k) the ↗*Tä^ɔammərä Iyäsus*.

Once a day, for the sixth hour, the G.Ḥ. has a reading from the ↗*Sənkəssar*. During the Holy Week there are practically no N.T. readings apart from the Gospel (with a few exceptions).

After the readings, the service moves on to its conclusion, which follows the order of the ↗*Mə^cəraf* and is fairly long: intercessions, supplications etc., concluded by 41 *Kyrie Eleison* with prostrations and final hymns. For the most part, one can find these elements, in one or another form, in the Coptic Church (more detailed description in Habtemichael Kidane 1997:107–21).

II. Solemn services

These exceptional moments in the liturgical year include many distinctive and often very ancient features. One may note that, unlike the Greek and Coptic Churches, the Ethiopian one has no exact equivalent for the "Saturday of Lazarus".

Palm Sunday shows more peculiarities than the normal Sunday and comprises a procession with palms, during which the relevant passages from the four Gospels are read. Immediately after the mass, the Absolution for the Dead (↗*Fətḥat*) is recited for all those who might die during the forthcoming week, since during the Easter period it is forbidden to perform any services other than those of the G.Ḥ. (cf. Habtemichael Kidane 1997:103–07; Fritsch 2001, §§411–55).

Mass is never celebrated on Monday, Tuesday, Wednesday or Friday of Holy Week. Only the "hours" are taken. There are services proper to each of the last three days of Holy Week – Thursday, Friday and Saturday (Habtemichael Kidane 1997:121–32; Fritsch 2001, §§467–530).

Holy Thursday is characterized by the ceremony of the Washing of the Feet, opened by the solemn blessing of the water and followed by the eucharistic celebration commemorating the Last Supper and the betrayal by Judas.

On Good Friday, by tradition, everyone comes to the church – even those who do not frequent it otherwise. Long and magnificent services fill the day. For example, at the first hour of the night, the "Gospel of the Paraclete" (*Päraqliṭos*, Jn 13: 21–17:26) is read. At the ninth hour a commemoration of the prayer of the Good Thief is made. Lk 23:42 is chanted three times "in Greek" (the words are somewhat deformed for having made their way into Ethiopic via Coptic and Arabic): "Remember me, Lord [second time: Remember me, Holy One; third time: Remember me, Master] when you come into your kingdom" (cf. Raineri 1980). The service follows each successive step of the narrative of the Passion, read from the four Gospels. This day ends exceptionally with a twelfth hour, during which a commemoration is made of the Burial of the Lord, followed by beautiful chants; it culminates in the popular ritual of extinguishing the last candle, which is meant to represent Judas (the chanters therefore vie with each other in attempting to strike it with their sticks). Immediately afterwards, the service of Holy Saturday starts with the Canticle of Moses, **ንሴብሖ፡ ለእግዚአብሔር** (*Nəsebbəḥo läʾəgziʾabəḥer*, 'We praise the Lord'; Ex. 15:1b–20) sung to the rhythm of the drum (↗*Käbäro*). The Resurrection has not yet been explicitly proclaimed, but it is already perceptible.

On Holy Saturday, reeds are distributed at the end of the service as a sign of the coming Resurrection of the Lord. According to certain authorities, a mass may be celebrated on Holy Saturday, but in practice this is hardly ever the case (cf. Habtemichael Kidane 1997:102f.; Fritsch 2001, §520).

On Easter night, the worshippers gather in the church for a very long series of readings: namely, the entire ↗Revelation of John, the entire ↗Psalter – distributed amongst all the participants – and the entire Gospel of John, readings from the O.T. and other ecclesiastical works, all interspersed with appropriate chants. Before the Trishagion, the celebrants and the assembly alternately sing the Pascal hymn (corresponding to, but not identical with, the Easter troparion of the Byzantine Churches): "Christ is risen from the dead. He died and trampled death under foot. To those who were in their tombs, He has given a life of eternal rest." After the resurrection Gospel (according to the three Synoptic Evangelists) and the Easter **ምልጣን** (*məlṭan*), a procession is formed. At the end of the service, all come forward to kiss the cross held by the celebrant in his hands, whilst exchanging the Pascal dialogue (this is done up until Pentecost): "Christ is risen from the dead! – With great force and power. – He has bound Satan – And delivered Adam – Peace! – Peace! – Henceforth – There is joy and peace!". Once midnight has passed, the Easter mass may begin (cf. Fritsch 2001, §§544–79).

Mäṣḥafä gəbrä ḥəmamat

The most ancient manuscripts of the G.Ḥ. do not date any farther back than the 15th cent. The translation of this Coptic liturgical book is usually attributed, perhaps mistakenly, to *abba* ↗Säläma "the Translator". According to Getatchew Haile, it is possible that he rendered into Gəʿəz only certain homilies, but not the entire liturgical book. By that time, an Ethiopian liturgy of Holy Week must have already existed. Today we can only reconstruct it through different hypotheses (cf. Habtemichael Kidane 1997:132; Zanetti in PICES 11, 774f.). A translation of the G.Ḥ. in the multicultural milieu of ↗Dayr as-Suryān during the mid-14th cent. has also been suggested (Proverbio 1998:106ff.). Five manuscripts of the G.Ḥ. have been described in catalogues: three of ber. It is composed mostly of psalms, readings and hymns that are often rhapsodies of biblical verses. The ordinary services are distinguished from the solemn services.

I. Ordinary services

The ordinary services are the "hours" of Holy Week: between the end of the mass on Palm Sunday and Easter day, each day comprises ten services called "hours" (first, third, sixth, ninth, eleventh hour of the day or night, accordingly), all of which have more or less the same structure (cp. *Mäṣḥafä ↗säʿatat*). Good Friday has an additional twelfth hour of the day.

It is well known that the ↗Ethiopian Orthodox Täwaḥədo Church follows strict rules concerning ↗fasting, especially during Holy Week, where certain Christians practise a fast called አክፋይ (*akfay* or *akfəlot*), which lasts 55 hours from the end of the mass on Holy Thursday until Easter morning (cf. Habtemichael Kidane 1997: 125 n. 107, 99; Fritsch 2001:239, n. 64). On Good Friday, those who do not eat at all take some bread with *gulban* (ጉልባን, or *gʷälban*, cooked crushed beans; cf. Fritsch 2001, §511) after all services have been sung.

The daily hours are generally grouped together, in accordance with the practice of the Coptic and almost all other Oriental Churches.

The introduction is invariable; amongst other elements, it includes the reading of 30 psalms, as well as a number of prayers and biblical canticles, followed by the "Doxology of the Lamb" (s. Rev 5:12), which has its origin in the Coptic text *Thine is the power* ... (in the Coptic usage, it replaces the 12 psalms of each hour, whilst in Ethiopia it is simply added to the rest).

All hours have a minimum requirement of one Scripture reading from the O.T. (notably from the Prophets): a psalm verse (ምስባክ *məsbak*) called ቅድመ፡ ወንጌል (*qədmä wängel*, lit. 'before the Gospel') introducing the Gospel reading. Many hours have one or more supplementary readings between the O.T. reading and the psalm preceding the Gospel. These readings fall into various categories:

(1) Biblical: a) a passage from one of the books of the Law of Moses (*Orit*; ↗Octateuch); b) an excerpt from one of the ↗Wisdom Books (Wis, Prov, Ecc, Job); c) another O.T. passage (in practice only Josh 5:10–12ab and Ruth 2:11–14a, which are read on the ninth hour of Good Friday).

(2) The commentaries on the biblical readings: d) the commentaries on the O.T. readings (↗*Tərgʷame*); e) a paraphrase of the Gospel called ድኅረ፡ ወንጌል (*dəḫrä wängel*, lit. 'after the Gospel'); f) exegetic homilies (commentaries of ↗John Chrysostom on the Gospels and on the letter to the Hebrews, and other Church Fathers: ↗Epiphanius, ↗Athanasius, ↗Cyril of Alexandria, ↗Jacob of Serug etc.).

(3) Ascetical texts: g) brief exhortations on Christian virtues (forgiveness of offences, love for the poor, mutual charity etc.), coming from the Coptic tradition.

(4) Excerpts of dogmatic scope: h) the ↗*Haymanotä abäw* and sometimes i) the ↗*Didəsqəlya*.

(5) Readings common to the Ethiopian tradition, namely: j) the ↗*Täʾammərä Maryam* and k) the ↗*Täʾammərä Iyäsus*.

Once a day, for the sixth hour, the G.Ḥ. has a reading from the ↗*Sənkəssar*. During the Holy Week there are practically no N.T. readings apart from the Gospel (with a few exceptions).

After the readings, the service moves on to its conclusion, which follows the order of the ↗*Məʿəraf* and is fairly long: intercessions, supplications etc., concluded by 41 *Kyrie Eleison* with prostrations and final hymns. For the most part, one can find these elements, in one or another form, in the Coptic Church (more detailed description in Habtemichael Kidane 1997:107–21).

II. Solemn services

These exceptional moments in the liturgical year include many distinctive and often very ancient features. One may note that, unlike the Greek and Coptic Churches, the Ethiopian one has no exact equivalent for the "Saturday of Lazarus".

Palm Sunday shows more peculiarities than the normal Sunday and comprises a procession with palms, during which the relevant passages from the four Gospels are read. Immediately after the mass, the Absolution for the Dead (↗*Fətḥat*) is recited for all those who might die during the forthcoming week, since during the Easter period it is forbidden to perform any services other than those of the G.Ḥ. (cf. Habtemichael Kidane 1997:103–07; Fritsch 2001, §§411–55).

Mass is never celebrated on Monday, Tuesday, Wednesday or Friday of Holy Week. Only the "hours" are taken. There are services proper to each of the last three days of Holy Week – Thursday, Friday and Saturday (Habtemichael Kidane 1997:121–32; Fritsch 2001, §§467–530).

Holy Thursday is characterized by the ceremony of the Washing of the Feet, opened by the solemn blessing of the water and followed by the eucharistic celebration commemorating the Last Supper and the betrayal by Judas.

On Good Friday, by tradition, everyone comes to the church – even those who do not frequent it otherwise. Long and magnificent services fill the day. For example, at the first hour of the night, the "Gospel of the Paraclete" (*Päraqliṭos*, Jn 13: 21–17:26) is read. At the ninth hour a commemoration of the prayer of the Good Thief is made. Lk 23:42 is chanted three times "in Greek" (the words are somewhat deformed for having made their way into Ethiopic via Coptic and Arabic): "Remember me, Lord [second time: Remember me, Holy One; third time: Remember me, Master] when you come into your kingdom" (cf. Raineri 1980). The service follows each successive step of the narrative of the Passion, read from the four Gospels. This day ends exceptionally with a twelfth hour, during which a commemoration is made of the Burial of the Lord, followed by beautiful chants; it culminates in the popular ritual of extinguishing the last candle, which is meant to represent Judas (the chanters therefore vie with each other in attempting to strike it with their sticks). Immediately afterwards, the service of Holy Saturday starts with the Canticle of Moses, **ንሴብሖ፡ ለእግዚአብሔር** (*Nəsebbəḥo lä'əgzi'abəḥer*, 'We praise the Lord'; Ex. 15:1b–20) sung to the rhythm of the drum (↗*Käbäro*). The Resurrection has not yet been explicitly proclaimed, but it is already perceptible.

On Holy Saturday, reeds are distributed at the end of the service as a sign of the coming Resurrection of the Lord. According to certain authorities, a mass may be celebrated on Holy Saturday, but in practice this is hardly ever the case (cf. Habtemichael Kidane 1997:102f.; Fritsch 2001, §520).

On Easter night, the worshippers gather in the church for a very long series of readings: namely, the entire ↗Revelation of John, the entire ↗Psalter – distributed amongst all the participants – and the entire Gospel of John, readings from the O.T. and other ecclesiastical works, all interspersed with appropriate chants. Before the Trishagion, the celebrants and the assembly alternately sing the Pascal hymn (corresponding to, but not identical with, the Easter troparion of the Byzantine Churches): "Christ is risen from the dead. He died and trampled death under foot. To those who were in their tombs, He has given a life of eternal rest." After the resurrection Gospel (according to the three Synoptic Evangelists) and the Easter **ምልጣን** (*məlṭan*), a procession is formed. At the end of the service, all come forward to kiss the cross held by the celebrant in his hands, whilst exchanging the Pascal dialogue (this is done up until Pentecost): "Christ is risen from the dead! – With great force and power. – He has bound Satan – And delivered Adam – Peace! – Peace! – Henceforth – There is joy and peace!". Once midnight has passed, the Easter mass may begin (cf. Fritsch 2001, §§544–79).

Mäṣḥafä gəbrä ḥəmamat

The most ancient manuscripts of the G.Ḥ. do not date any farther back than the 15th cent. The translation of this Coptic liturgical book is usually attributed, perhaps mistakenly, to *abba* ↗Säläma "the Translator". According to Getatchew Haile, it is possible that he rendered into Gəʿəz only certain homilies, but not the entire liturgical book. By that time, an Ethiopian liturgy of Holy Week must have already existed. Today we can only reconstruct it through different hypotheses (cf. Habtemichael Kidane 1997:132; Zanetti in PICES 11, 774f.). A translation of the G.Ḥ. in the multicultural milieu of ↗Dayr as-Suryān during the mid-14th cent. has also been suggested (Proverbio 1998:106ff.). Five manuscripts of the G.Ḥ. have been described in catalogues: three of them date from the 15th cent. (EMML 1765, 4434, 4752) and two are more recent: London, BritLib, Orient. 2080: between 1694 and 1706 A.D.; Paris, BN, Griaule 72: 20th cent. A collation of these manuscripts (plus the 17th–18th-cent. ms. Paris, BN, d'Abbadie 11 which was examined *de visu*) has been made, also in comparison with the text of the only printed edition, produced by the Ethiopian Orthodox Church in 1980 (described in Boussygina 1999). The readings of the manuscripts consulted quite often agree with each other, in spite of displacements and minor variations; on the whole, the manuscript tradition they represent appears to form a unity – which may lead one to surmise that an attempt at "normalization" was made at some point. In so many respects does the 1980 G.Ḥ. text differ from the one transmitted in those manuscripts that an origin in a different manuscript tradition can be assumed for the printed edition.

The "normal service", to which the manuscripts refer, contains for the ordinary hours certain rubrics, a number of variable readings from the O.T. – sometimes accompanied by a commentary – a psalm-verse and a passage from the Gospel, with one or two homilies in the morning (↗*Səbḥatä nägh*), one at the ninth hour and possibly another at the eleventh hour (with a few exceptions).

This service corresponds (even if not fully) to that of the Coptic Church, especially for the Scripture readings (cp. the concordance of Burmester 1934:475–85). The Coptic lectionary does not provide a commentary and comprises in its present state brief exhortations (ed. Burmester 1932); the longer homilies presently found in the 1980 G.Ḥ. edition, however, are also part of the Coptic liturgical tradition (cf. Sauget 1987; Zanetti 1983). The other supplementary readings have all passed over into the service in Ethiopia itself. Additionally, Ethiopic manuscripts have a number of Scripture readings and homilies not found in Coptic manuscripts, whilst on the other hand, they omit a few texts and show peculiar anomalies (s. Zanetti – Boussygina).

Literary composition

Many books are used during the Ethiopian Holy Week. Those sections which are chanted are normally of Ethiopian composition and originate from the ↗*Ṣomä dəggʷa*, the *Məʿəraf* or from other collections. The majority of them are apparently made up of verses taken from Holy Scripture, in particular from the Psalms or from other Church compositions.

On the other hand, with the possible exception of the biblical commentaries, the sections that are read appear to originate from a foreign source, even though they have been perfectly adopted and adapted. Besides the Holy Scripture, one finds homilies and exhortations from well-known Copto-Arabic collections. The *Dəḫrä wängel*, for example, is a translation of the Copto-Arabic *ṭarḥ* (a kind of *psali*). In the Ethiopian services for the Holy Week there is no shortage of readings from apocryphal works: the *Täʾammərä Maryam*, the *Täʾammərä Iyäsus*, the ↗*Laḥa Maryam* and the *Mäṣḥafä* ↗*dorho*. The *Sənkəssar*, as well as the *Haymanotä abäw*, originate from Egypt. Most of the prayers, too, are taken from the Coptic repertoire. This, however, does not exclude the possibility that some prayers are of Ethiopian composition. Whatever the distant origins of the various sections may be, the actual G.Ḥ. has been perfectly assimilated and "Ethiopianized" and profoundly expresses the Ethiopian religious feelings.

Gədəm

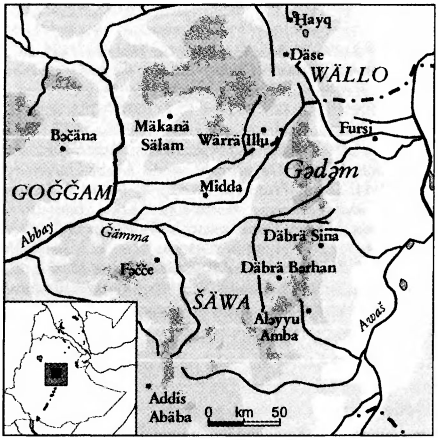
G. (ግድም, lit. 'surrounding place/area') is the name attributed to an area in north-east Šäwa, about 280 km north-east of Addis Abäba. Its immediate neighbours are the Oromo populated-district of Gillee Duguggguru in the east, Mänz in the west, Efrata in the north and Qäwät in the south.

The earliest mention of G. in the sources is in one of the soldiers' songs in honour of *aṣe* ↗ʿAmdä Ṣəyon I (HuntAmdS 129; Guidi 1889), perhaps an indication that it was one of the key provinces conquered and controlled by the 14th-cent. Ethiopian monarch and that the province existed long before that.

In the 15th cent., during the reign of *aṣe* ↗Zärʾa Yaʿəqob, G. seems to have been one of the most-important provinces in the ruler's vast empire. On one occasion he appointed one of his own daughters, Sofya, governor of G. Later he removed her from that office and for much of his reign his loyal governors bearing the title of ራቅ፡ ማሰሬ (*räq mäsäre*) governed over G. (PerrZarY 13, 16, 47, 71, 93, 95). The ↗*čäwa* troops often camped there. Zärʾa Yaʿəqob's son and successor, ↗Bäʿədä Maryam I, appointed governors of G. bearing the title of አቃንሰን (*aqansän*). His ↗Ğan Amora contingent was also stationed there.

Throughout its history, G. has been inhabited by both Christians and Muslims. Šihābaddīn ʿArabfaqīh, the chronicler of ↗Aḥmad b. Ibrāhīm *al*-Ġāzī*'s* campaigns, mentions G. several times (BassHist 280f., 283, 285, 287, 338f., 403, 408). His war-commanders, such as Goyta Nūr, Wärʾay ʿUṯmān, *gärad* Abğad, Addole and others, marched over G. and converted the local population to Islam. They burned down Kässayäh Abba Ewosṭatewos, one of the monasteries in G., which housed about 1,000 monks.

In the 16th cent. the area of G. fell into the hands of the Oromo. Later, in the 17th–18th cent. it became one of the autonomous provinces of Šäwa and throughout the 19th cent., at different times, a district and a province. The missionaries Isenberg and Krapf, as well as the French traveller Rochet d'Héricourt, report that G. was an important political unit, especially during the reign of ↗Sahlä Śəllase (1813–47). The governor of G. under *nəguś* Ḫaylä Mäläkot of Šäwa was defeated by the army of *aṣe* ↗Tewodros II, who entered Šäwa via Gässe, Efrata and G. Later, in 1865, the future *aṣe* ↗Mənilək II entered Šäwa via Kosobär in Efrata. He proceeded south, where he fought a fierce battle at Gädəllo in G. with Tewodros's appointee over Šäwa, *däğğazmač* Bäzzabəh Wärq. It was Mənilək's victory at G. which finally cleared his way into Ankobär and let him proclaim himself king of Šäwa on 22 August 1865.



During the rise of Mənilək's power, G. assumed a low profile, until it reappeared on stage during the battle of ↗ʿAdwa in 1896. It is reported that when Mənilək reached G. on his way to ʿAdwa with the *tabot* of Arada Giyorgis in Addis Abäba, he changed his mind and took the *tabot* of Bärgəbbi Giyorgis instead. He reportedly remembered a vow his mother *wäyzäro* Əğğəgayyähu made to the church of Bärgəbbi Giyorgis if her son Mənilək won against Tewodros's appointee over Šäwa. Even on his way back from ʿAdwa he brought the *tabot* of Bärgəbbi and kept it in the church of Arada Giyorgis.

In the first two decades of the 20th cent., G. was at one time part of the province of ↗Mänz and, at another, part of that of ↗Yəfat. It was one of the cores of Resistance against the Italian occupation (1936–41), notably under the leadership of the Mänz patriot *ləğ* Gəzaččäw Ḫayle and the patriot of Efrata and G., *däğğazmač* Damṭäw Mäšäša. After the liberation of Ethiopia in 1941, G. was either a district (*wäräda*) or sub-district (*məkəttəl wäräda*) until 1974. It was integrated into the district of Efrata-Ğillee of Yəfat-Təmmuga until 1991.

Gedewon

G. (ጌዴዎን) is the name and/or title that over the centuries used to bear the leader of the ↗Betä Ǝsraʾel. In Ethiopian Christian traditions on the legendary ↗Mənilək I (recorded in Mondon-Vidailhet 1904), G. was one of Mənilək's three most important governors.

During the reign of the Aksumite ruler ↗Gäbrä Mäsqäl, another G. was known in Christian tradition as the uncle and teacher of *abba* ↗Yared, a man known for his musical notation and compositions. In Betä Ǝsraʾel traditions, Yared is remembered as a son of G. (Quirin 1992:25).

After 1270, G. was often the name (or title) of the Betä Ǝsraʾel leader as remembered in the Ethiopian chronicles and/or Betä Ǝsraʾel oral traditions, such as during the reigns of *aṣe* ↗Yəsḥaq, and *aṣe* ↗Ləbnä Dəngəl. Finally, in the last stages of Betä Ǝsraʾel political independence between 1563 and 1632, one of the principal leaders (brother of ↗Gʷäšən) was again G. A woman named Harago, who was probably his sister, became the mistress of *aṣe* ↗Śärṣä Dəngəl in the 1580s, and was the mother of the Emperor's four sons. During the short regency of *aṣe* ↗Yaʿəqob, one of these sons, G. was appointed governor of Səmen. During the next two decades he supported several pretenders and rebels against *aṣe* ↗Susənyos. He was finally killed by Susənyos about 1625.

Geeraa

G. was the last Oromo state to be formed in the ↗Gibe region (for map s. Gibe). It was bordered by ↗Käfa in the south, ↗Ǧimma Abbaa Ǧifaar in the east, ↗Gomma in the north and ↗Guummaa in the north-west. Like other states in the Gibe region, the nucleus of G. was formed probably during the last decade of the 18th cent. and most definitely existed during the first decade of the 19th cent. However, the lack of adequately recorded traditions on the origins of the Oromo states prevents us from establishing a clear picture of the formation of G. (It was not until 1974 that extensive oral tradition was collected in the region, shedding light upon the process of state formation in G.)

In pre-state G. the different Oromo clans lived under their own elected ↗*gadaa* leaders, such as ↗*abbaa bokkuu* and ↗*abbaa dulaa*. The most famous *abbaa dulaa* of G. was Gunǧi, an outstanding warrior, described as a tall, well-built, brave and handsome man (Guluma Gemeda 1980:33). His organizational ability, leadership qualities and strong ambition enabled him to create the nucleus of the state of G. His death (most probably in a battle against one of the more powerful neighbouring states) made a lasting impression on his people.

Gunǧi's son and successor, Tulluu Gunǧi, completed and consolidated the process around 1835. According to oral tradition, Tulluu Gunǧi was an intelligent leader, a clever politician, a warrior king and a good administrator (JOT, fol. 7), who spread the fame of G. in and beyond the Gibe region.

G. was a land with flourishing agriculture. Antonio ↗Cecchi described it as "a basin surrounded by softly notched hills with gentle slopes" (CecZeila vol. 2, 263). The fertile valleys of G., naturally watered with many streams, yielded abundant *ṭef*, maize, sorghum, *ənsät*, finger-millet, and several varieties of beans and peas. Also known for the abundance of coffee (MHasOr 117) and the variety of its spices (CecZeila vol. 2, 280f.), G. was and still is famous for its eight different qualities of ↗honey (JOT, fol. 27). Of these, *ebičaa*, named after the plant from which the bees extracted the nectar, was considered the best honey in the Gibe region. It was known as royal honey, from which *dadî* ('mead') was made for the kings and great dignitaries to drink.

The wealth of G. attracted the attention of its more powerful neighbour, ↗Ončo Ğilča (1810–30s), king of Guummaa, who wanted to control G. by overthrowing Tulluu Gunği and replacing him by his half-brother, Abbaa Baso (1836–38). The power struggle between the two ended in Tulluu Gunği's defeat and capture. Despite the sending of ambassadors to Guummaa by the leaders of ↗Limmu Ǝnnarya, Gomma and Gimma Abbaa Ğifaar, Ončo Ğilča executed Tulluu Gunği. The ambassadors on their turn were soundly beaten, imprisoned and forced to grind corn (Guidi 1907:181; Cerulli 1922:161) – an ultimate insult to the leaders of the surrounding states. The latter not only waged wars against Ončo Ğilča, but also launched an effective propaganda campaign depicting him as a monstrous tyrant and the embodiment of cruelty (Beke 1843:259; CecZeila vol. 2, 541f.).

The wealth of G. also attracted Muslim traders, instrumental in the spread of Islam. Thus, a merchant called Abbaa Garo established a good relationship with King Abbaa Rago (d. 1848), cemented by mutual commercial interests. Abbaa Garo became the first Muslim king of G. During the reign of his son and successor, ↗Abbaa Magaal (1848–68), Islam took deep root. According to Cecchi, Abbaa Magaal became a zealous Muslim towards the end of his life as a result of a letter from the guardian of the tomb of the prophet in Medina in 1866.

In 1882 *ras* ↗Gobäna Dačị, *aṣe* Mənilək II's great empire-builder, forced the submission of Gummiti Gane, Queen-regent for Abba Rosa, the young king of G. (Bairu Tafla 1967:147), bringing to an end the independent existence of G.

Mohammed Hassen

Geerarsa

G. is one of the most wide-spread genres of ↗Oromo folk poetry. Traditionally, it was a warrior song, boasting about an individual's deeds and (military) skills (from *geraru*, 'sing before going to war', TilHDic 258; cp. ↗*Fukkära*). It was sung by single warriors, unlike the *farsa*, sung by a group or a clan as a whole (s. CerFolk 58, MHasOr 12). The G. was included as a separate poetic genre by Onesimos Näsib in his ↗*Galqaba barsiisaa*. Leengiso Diiga, an ↗Arsi leader of the late 19th cent., is reported to have composed the following G. (Abbas Haji 1995):

Koloobni gadii gatee
Abeetni guddifatee
Waan boru biyyaa tayuu
Waan boru Arsii tayuu
Leenjoon ardhumaa mul'dhifatee

'The Kolloba did not care of him
The Abeeta reared him up
What he will do tomorrow for the country
What he will do for the Arsi
Leenjiso has shown it today.'

G. were traditionally sung by Oromo warriors during major ↗*gadaa* gatherings (e.g., *gadaa gindaa*, or *duula guuto*, the 'killing feast'), in order to win both the respect of the participants and the hearts of their mistresses.

A boasting couplet sung by hunters before or after a successful hunt (↗Hunting) can also be called G. Killing an ↗elephant, for example, was a feat of great bravery that deserved composing a special G. (↗Meritorious complex).

The genre has undergone a considerable functional and thematic transformation, whereas the term G. has acquired a wider meaning. Today, almost any song can be called G., whether boasting or not, and whether sung individually or in a group. It may express different sorts of emotions, not only traditional bravery and heroism: it may also mourn over the "good old days" or narrate of the real facts of life. Through G., one can talk virtually about everything: one's socio-economic position, experiences, nostalgia, misgivings, the wish for a brighter future etc. When the individual feels mistreated by the authorities, or even by his friends or neighbours, it is a means to try to tackle the situation by expressing his disapproval or protest and at the same time his commitment to overcome it (cp. ↗*Ǝngʷərgʷərro*). A well-known example of a G. one sings about being poor, showing one's determination to get rid of poverty through work, is:

Deega koo yaa farrisaa
afi amman si fannisaa
muka damee hinqabneetii
akka badde hingaleetii

'My destitution, you are ugly.
You just wait, I will hang you
on a tree with no branches
so that you never climb down and come back to me.'

Bekele Gutema – Red.

Gəʿəz

1. Significance, affiliation, history

G. (**ግዕዝ**) is the classical language of Ethiopia. Names used in European literature are "Classical Ethiopic", "Old Ethiopic" or simply "Ethiopic".

G. is not, as was stated by earlier researchers, an offshoot of Old South Arabian (Appleyard 1996). The Semitic languages of Ethiopia (↗Ethio-Semitic) form an independent subgroup of the ↗Semitic languages. Within Ethio-Semitic, G. belongs to the North-Ethiopic group, together with ↗Təgre and ↗Təgrəñña (Hetzron 1972:15–21).

G. was spoken in the kingdom of ↗Aksum. The earliest extant texts are ↗inscriptions of the 3rd cent. A.D., written in an unvocalized ↗script. Later inscriptions were written in the vocalized version of the Ethiopic script. G. was used for all literary purposes during the Aksumite period. The only direct evidence of G. of Aksumite period can be found (apart from scarce G. words on the Aksumite coins) in the inscriptions. The language of the inscriptions differs in some aspects from the classical language of the post-Aksumite period. A number of inscriptions are written in what is customarily defined as "pseudo-Sabaic", that is, G. imitating Sabaic by using certain Sabaic words (*bn* instead of G. *wäld* 'son', *mlk* instead of G. *nəguś* 'king') and (probably purely graphic) mimation.

After the rise of the ↗Solomonic dynasty, G. maintained its overwhelming importance as a written language, and as the language of formal communication, e.g., in the liturgy. With few exceptions (e.g., Old ↗Amharic, ↗Harari, ↗Arabic), G. was the only written language in Ethiopia until the 19th cent. As the language of the ↗Ethiopian Orthodox Täwaḥədo Church, G. still holds great prestige. It is also the liturgical language of the ↗Betä Ǝsraʾel. The influence that G. exerts on modern Ethio-Semitic languages can be traced in educated loan words and "learned" constructions; e.g., the first Ethiopian passenger plane (1938) was named **ንስረ፡ ኢትዮጵያ** (*Nəsrä ʾItyop̣ya*, 'Hawk of Ethiopia'), with the G. marker of construct state *-ä* instead of the Amharic genitive construction with *yä-*. For "educated" words in Amharic, G. orthography is often retained. The position that G. holds in Ethiopia has often been compared to that of Latin in Europe.

2. Phonology

The inventory of the Proto-Semitic consonants is reduced in G. through the merger of the Semitic interdental fricatives (or affricates) with the respective sibilants (**ṯ*, **š*, **s > s*; **ḏ*, **z* > *z*; **ṯ̣*, **ṣ > ṣ*; s. Voigt in PICES 8 and 1994), and the disappearance of Semitic *ġ, which probably merged with *ʿ into ʿ (Weninger 2002). On the other hand, two new phonemes were integrated, *p* and *p̣*, but these occur only in loanwords. The lateral obstruants *ṣ́* and *ś* are retained (Weninger 1998), although in G. of the post-Aksumite period they are often in free graphic variation with *ṣ* and *s* respectively (other graphemes that are often interchangeable in classical G. are *h*, *ḥ* and *ḫ*; ʾ and ʿ). The introduction of labialized velars (*kʷ*, *gʷ*, *ḫʷ*, *qʷ*) was perhaps due to Cushitic substratum (Leslau 1945:62). The Semitic vowel system, which was characterized by quality and quantity distinctions (*a, *i, *u, *ā, *ī, *ū), was transformed by way of mergers and monophthongization into a system characterized mainly by quality distinctions (*ä, ə, a, i, u, e, o* [Correll 1984; Diem 1988]). To what extent the traditional pronunciation of G. nowadays preserves traces of the original pronunciation is still open to discussion (Mittwoch 1926; Brockelmann 1929; Ullendorff 1955:29–32; Makonnen Argaw 1984).

3. Morphology

3.1. Pronouns

The pronominal system is rather conservative. The independent personal pronouns are: *ʾanä*, 'I', *ʾantä*, 'you' (sg. masc.), *ʾanti*, 'you' (sg. fem.), *nəḥnä*, 'we', *ʾantəmu*, 'you' (pl. masc.), *ʾantən*, 'you' (pl. fem.). The third person pronouns are partly innovations: *wəʾətu*, 'he', *yəʾəti*, 'she', *ʾəmuntu*, 'they' (masc.), *ʾəmantu*, 'they' (fem.). Parallel to the classical Semitic tongues of West-Asia, G. has a set of suffixed pronouns indicating possessors at the noun and objects at the verb: *-yä*, 'my', *-ni*, 'me' (at the verb), *-kä* (2nd pers. sg. masc.), *-ki* (2nd pers. sg. fem.), *-hu* (3rd pers. sg. masc.), *-ha* (3rd pers. sg. fem.), *-nä* (1st pers. pl.), *-kəmu* (2nd pers. pl. masc.), *-kən* (2nd pers. pl. fem.), *-homu* (3rd pers. pl. masc.), *-hon* (3rd pers. pl. fem.). These pronouns are subject to mergers to a large extent, e.g., *bet*, 'house' vs. *bet-u*, 'his house' (nominative), and *betä*, 'house' (accusative) vs. *bet-o*, 'his house' (accusative), *qätälä*, 'he killed' vs. *qätäl-omu*, 'he killed them', *qätälki*, 'you (fem.) killed' vs. *qätälkəyy-o*, 'you (fem.) killed him'. G. developed also an independent possessive pronoun on the basis of *ziʾa-* (sg. masc.), *ʾəntiʾa-* (sg. fem.) and *ʾəlliʾa-* (pl.), e.g., *ziʾa-hu* 'his own [possessions, home etc.]'. Demonstrative pronouns are formed with the elements *z(ə/ä/a)-*, *əll-*, *-t-*, *(ʾ)ənt-*, *-ku* and nominal endings.

3.2. Verbs

G. has preserved the Semitic root-structure of nominal and verbal morphology. The derivational system of the verb has produced more verbal stems than the Asian Semitic languages by free combination of the inherited morphological elements, e.g., **አስተቃተለ** (*ʾastäqatälä*, 'to incite to kill'), combining historical long *ā (> *a*) in the first syllable with the prefix *ʾastä-* (s. Waltisberg 2001). The use of some derivational morphemes is restricted to weak verbs or verbs with more than three consonants, e.g., *ʾan-* (e.g., **አንሶሰወ**, *ʾansosäwä*, 'to walk around'). Verbs are inflected according to person, gender (masc., fem.) and number (sg., pl.). Verbal inflection in G. is very regular.

Perfect, imperfect and jussive which build the basis of the verbal system are formed with different inflectional bases, e.g., in stem $Ø_1$ *qätäl-* (perfect), *-qättəl-* (imperfect), *-qtəl-* (jussive). The perfect is inflected with suffixed morphemes: *-ä* (3 sg. masc.), *-ät* (3 sg. fem.), *-kä* (2 sg. masc.), *-ki* (2 sg. fem.), *-ku* (1 sg.), *-u* (3 pl. masc.), *-a* (3 pl. fem.), *-kəmu* (2 pl. masc.), *-kən* (2 pl. fem.), *-nä* (1 pl.). Imperfect and jussive are inflected with prefixed and suffixed morphemes: *yə-...-Ø* (3 sg. masc.), *tə-...-Ø* (2 sg. masc.), *tə-...-Ø* (3 sg. fem.), *tə-...-i* (2 sg. fem.), *ʾə-...-Ø* (1 sg.), *yə-...-u* (3 pl. masc.), *yə-...-a* (3 pl. fem.), *tə-... -u* (2 pl. masc.), *tə-...-a* (2 pl. fem.), *nə-...-Ø* (1 pl.).

A typical innovation of Ethio-Semitic is the converb (gerund, verbal infinitive). It evolved from an infinitive in the adverbial accusative and is inflected with the suffixed personal pronouns. The converb is hardly ever negated and occurs only in verbal sentences. The converbial clause denotes preceding actions or concomitant states of the situation of the main clause: **ወሰሚዖ፡ ንጉሥ፡ ተከዘ፡ ጥቀ** (*wäsämiʿo nəguś täkkäzä ṭəqqä*, 'when the king heard [this] he became very sad'), where the converb *sämiʿo* denotes the preceeding action 'having heard' and *täkkäzä* is the verb of the main clause ('he became sad').

Auxiliary constructions with the verbs of being *hallo, konä* and *näbärä* are largely due to foreign (i.e. Greek, Arabic or Amharic) influence (Weninger 1999; 2001:256–307).

3.3. Nouns and adjectives

Common nominal patterns are *qätl* (e.g., **ወልድ**, *wäld*, 'son'), *qətl* (e.g., **ብርት**, *bərt*, 'copper'), *qätäl* (e.g., **በረድ**, *bäräd*, 'hail'), *qətal* (e.g., **ሕያው**, *ḥəyaw*, 'alive'), *qətul* (e.g., **ዕሩቅ**, *ʿəruq*, 'naked'), *qätil* (e.g., **ጠቢብ**, *ṭäbib*, 'wise'), *qättal* (agent noun, e.g., **ገባር**, *gäbbar*, 'worker', cf. **ገበረ**, *gäbärä*, 'to work'), *mäqtäl* (tools, vessels and products, e.g., **መልበስ**, *mälbäs*, 'clothing', cf. **ለብሰ**, *läbsä*, 'to clothe'), *məqtal* (nomina loci, e.g., **ምሥያጥ**, *məśyaṭ*, 'market', cf. **ሤጠ**, *śeṭä*, 'to buy'), *qätali* (agent nouns, e.g., **ሐራሲ**, *ḥarasi*, 'plowman', cf. **ሐረሰ**, *ḥaräsä*, 'to plow'). Patterns with *mä-* are used in participles. Feminine endings are *-at* and *-t*. G. has broken plurals for masculine nouns. Common plural patterns are: *qətäl* (e.g., **እዝን**, *ʾəzn*, 'ear', pl. **እዘን**, *ʾəzän*), *qätält* (e.g., **ንጉሥ**, *nəguś*, 'king', pl. **ነገሥት**, *nägäśt*), *ʾaqtəlt* (e.g.,

ዐይን, *ʿayn*, ‘eye’, pl. **አዕይንት**, *ʾaʿyənt*), *ʾaqtal* (e.g., **ክንፍ**, *kənf*, ‘wing’, pl. **አክናፍ**, *ʾaknaf*), *ʾaqtul* (e.g., **ሀገር**, *hagär*, ‘town, country’, pl. **አህጉር**, *ʾahgur*). The Semitic nominative **-u* and genitive **-i* have merged in G. resulting in a system with two cases: *bet*, ‘house’ (nominative-genitive) vs. *betä* (accusative), *nolawi*, ‘shepherd’ (nominative-genitive), vs. *nolawe* (accusative). Nouns ending in *-a*, *-e* and *-o* are inflectible. G. has an inflectible construct state formally identical to the accusative: *betä nəguś*, ‘the house (nominative/genitive/accusative) of the king’. A supposed Proto-Semitic absolute case **-a* has been proposed as the etymon of the G. construct state (Tropper 2000). Endings of the sound plural are *-an* (masc.) and *-at* (fem.). In some cases the plural ending *-at* is affixed to broken plurals, e.g., *nägäśt-at*, ‘kings’.

3.4. Prepositions and particles

G. has prepositions, some inherited from Semitic prepositions, like *bä-*, ‘in’, *lä-*, ‘to’, *laʿlä*, ‘upon, over’; some newly developed, like *maʾkälä*, ‘in the midst of’, *wəstä*, ‘in, into’. Compound prepositions like *ʾəm-ḫabä*, ‘from the side of’ (< *ʾəm-*, ‘from’, *ḫabä*, ‘towards’) are common. There are no postpositions, but there is a variety of conjunctions and discourse particles in enclitic position, e.g., *-əssä*, ‘but’, *-nu* (interrogative particle), *-ke*, ‘now, then’.

4. Syntax

G. syntax and style frequently reflect Greek, Arabic or Amharic models, depending on whether the text in question is a translated text, whether it is an Aksumite classical or post-classical text, and on whether its milieu is monastic or courtly.

4.1. Noun phrase

G. has no article. The basic word order within the noun phrase is Noun–Attribute (NA). That this basic word order is rather flexible can be seen in the translation texts of the Aksumite period, where usually the Greek word order is retained in G. texts. Attributive adjectives agree with their head nouns in case. Agreement in gender and number is restricted to persons. A tendency to analytic constructions is visible in the marking of possessors with the preposition *lä-*: **ቤቱ፡ ለንጉሥ** (*betu lä-nəguś*, ‘the king’s house’, lit. ‘house-his to-king’).

4.2. Verbless clause

In verbless clauses (nominal clauses) an independent personal pronoun is employed as copula: **እስመ፡ ረሐብ፡ ይእቲ፡ ምድር፡ ቅድሜሆሙ** (*ʾəsmä räḥab yəʾəti mədr qədmehomu*, ‘for spacious is the land before them’; Gen 34:21), where *yəʾəti*, ‘she’, agrees with the subject *mədr*, ‘land’, and functions as the pronominal copula.

4.3. Verbal clause

G. syntax has a rather flexible Verb–Subject–Object (VSO) word order in the verbal clause. The accusative of the object is often replaced by the analytic construction with *lä-*, especially when the object is determined: **ቀተሎ፡ ለብእሲ** (*qätälo läbəʾəsi*, ‘he killed the man’, lit. ‘killed-him to-man’).

4.4. Clause linking

The most frequent coordinating conjunction linking main clauses is *wä-*. Relative clauses have relative pronouns: **ብእሲ፡ በኢየሩሳሌም፡ ዘስሙ፡ ስምዖን** (*bəʾəsi bäʾIyärusalem zäsəmu Səmʿon*, ‘a man in Jerusalem whose name was Simeon’; Lk 2:25). Other subordinate clauses always have a conjunction at the beginning, like, e.g., **ከመ** (*kämä*, ‘so that’), **ሶበ** (*sobä*, ‘since, as, when’), **እንዘ** (*ʾənzä*, ‘while’), etc.

5. Lexicon

The lexicon has numerous cognates with the lexicon of the Asian Semitic languages, especially in the field of the core vocabulary (body parts, kinship terms, verbs). Cushitic loan words are also frequent (Leslau 1988:84–88). There is also a substantial body of words in the G. lexicon with unclear etymology, which are nevertheless to be found in other Ethio-Semitic languages, and other words shared with Cushitic, where the direction of borrowing is unclear (Leslau 1988). Greek loan words are quite numerous in the ancient translation literature, but often occur only as isolated hapax legomena. Loans from Syriac and other varieties of Aramaic often have religious connotations (Nöldeke 1910; Polotsky 1964; Marrassini 1990). Arabic loans are quite numerous in some post-Aksumite texts (cf. Weninger 2004). Loans from Coptic and Latin (Weninger 2000) are rare and often have intermediate sources (usually Arabic). Amharic loans as designations for every day items on the one hand and for titles and other administrative terms on the other, occur quite frequently in the post-Aksumite royal chronicles and in documentary texts (for a history of the G. lexicon, cf. Weninger, in press).

The ten word list is: *ʾaḥadu*, ‘one’; *kəlʾettu*, ‘two’; *śäləstu*, ‘three’; *ʾəsat*, ‘fire’; *may*, ‘water’;

warḫ, ‘moon’; *ṣ́äḥay*, ‘sun’; *dam* ‘blood’; *ləssan*, ‘tongue’; *sənn*, ‘tooth’.

6. Typology

G. shares many typological features with other classical Semitic languages like Arabic, Hebrew or Syriac. But there are also a few typological characteristics shared by G. and modern Ethio-Semitic. Most of the typological features of modern Ethio-Semitic however are innovations, at least partly triggered by intense language contact with Cushitic. E.g., G. shares its VSO/NA-word order with other classical Semitic languages against modern Ethio-Semitic with its SOV/AN-word order. The same applies to prepositions in G. vs. modern Ethio-Semitic with its many postpositions. On the other hand, the converb is a feature that is shared by G. and modern Ethio-Semitic. Features such as the relative verb, widespread use of cleft sentences, or palatalized consonants are innovations of modern Ethio-Semitic. The beginnings of some of the typical modern Ethio-Semitic features can already be traced in G., like compound verbs or the article (on the development of Ethio-Semitic typology, s. Weninger 2001a).

G., with its enormous body of texts and its long history of research, is among the best studied Semitic languages. Nevertheless, a comprehensive modern historical grammar and a critical dictionary, especially one covering the non-biblical material undocumented by Dillmann (DillmLex) are among the desiderata.

Stefan Weninger

Gə^{c}əz

G. (**ግዕዝ**) is one of the three categories of melody (↗*Zema*) or mode (**ስልት**, *səlt*) that constitute the Ethiopian Christian musical system, the creation of which is traditionally ascribed to St. ↗Yared. Assuming the name from the liturgical language of the prayer-texts it carries, G. *zema* is the most common of the three categories of melody. It is used for most occasions in the annual liturgical cycle, sometimes in alternation with ↗*araray*. G. *zema* is used on its own for the liturgy of rogation ceremonies (**ምህላ**, *məhəlla*).

Characterized by Ethiopian musicians as “the first” *zema*, G. is described by musicians as “strong” and “dry”. In terms of its metaphorical significance, G. is linked to God the Father, an association derived from traditional accounts of the life of Yared.

The repertory of short melodic patterns in G. *zema* constitutes the largest of the three divisions of the indigenous Ethiopian notational system. Each G. melody is represented by a sign (↗*Mələkkət*) derived from the G. syllabary.

The musical content of G. can be described as drawing on a pitch-set that is based on a series of thirds, which are represented in Western staff notation as A–C/C#–E. However, the distance between the first two pitches in this series varies from an interval that is often slightly larger than a minor third to that of a major third; all of the pitches can be, and often are, embellished by chromatic neighbouring notes. G. *zema* is further characterized by distinctive vocal slides (**ርክርክ**, *rəkrək*).

Gəʿəz literature

Gəʿəz (or Classical Ethiopic) has been the written language of Ethiopia at least since the beginning of the Christian Era. Therefore, when in the first half of the 4th cent. ↗Christianity reached the country, the latter was ready to receive its teaching in writing – which marked the beginning and subsequent fortunes of G.l., one of the most peculiar features of Ethiopian civilization.

G.l. is the main reason why historians include Ethiopia among the nations of the Mediterranean world. Ethiopia shares with this world not only the tradition of writing but also the content of its literature, Judeo-Christian.

Apart from the chronology and the relevant historical context, a major problem in the study of the history of G.l. is the identification of the authors of the works composed locally and of the translators of the imported ones. Ethiopian men of letters attach little importance to recording in titles and colophons their names and the dates of their works. In most cases, the latter must be assessed by circumstantial evidence found in chronicles and in the works themselves.

Traditionally a survey of G.l. is presented in chronological sequence, according to the periods associated with the ruling dynasties. One begins with the Aksumite age when Christianity was introduced, ca. 330–900 A.D. From the literary point of view, this phase can be characterized as the Greek one. Although a great deal was achieved in the fields of art and architecture, there is not much to report about the literary activities that took place under the ↗Zagʷe dynasty that succeeded the Aksumite kings, ca. 900–1270. Most of the literature, both translations and original works that have survived, was produced during the next, the so-called ↗Solomonic, dynasty, with its two houses, the House of ↗Amhara (1270–1560), followed by the House of ↗Gondär (1560–1770). Although this dynasty resumed its rule from Šäwa (1889 – 1974), after the decline of Gondär the place of Gəʿəz as a living literary language had been taken over by Amharic. Thus, since the turn of the 19th cent., Gəʿəz continued only as the liturgical language of the Church and for the composition of poetic *qəne*. From the point of view of literary history, the period from 1270 to 1770 may be referred to as the Arabic one.

Greek period

During this period, the Christian kingdom of Aksum was at its zenith in civilisation and political power. It was the time when most of the Christian East, including the ↗Coptic Church of Alexandria, used Greek as its main written language. It was also the period during which, according to tradition, missionary monks came to Ethiopia from the Mediterranean world "with their books". The Christian literature brought to Ethiopia during this time was inevitably the Greek literature of the Copts, besides a few works produced in the contemporary Palestinian milieu (Bausi 2000–02: 78, n. 7; Fiaccadori 2003:253, n. 34).

Ethiopia's close relationship with Alexandria throughout its Church's history has encouraged Ethiopian pilgrims, especially monks, to visit ↗Egypt and live in the Egyptian monasteries, worshipping with the Copts, or even building their own monasteries. The continuous presence of Ethiopians in Egypt and the hardly ever interrupted tradition of having a Copt as Ethiopia's metropolitan meant for the Ethiopian Church the translation into Gəʿəz of the literature of the Coptic Church and its importation to Ethiopia. This included doxologies, such as the ↗*Wəddase Maryam*, ascribed to ↗Ephrem the Syrian, and some (not all) of the eucharistic ↗Anaphoras, some 20 of which are known to exist, even though only 14 are in current use by the Church. Even the melodies for chanting may have originated in Egypt and were adapted possibly by St. ↗Yared.

Works transmitted during this period include first and foremost the biblical books, the N.T. from the Lucianic recension used by the Syrians at Antioch, and the O.T. from the Septuagint; the ↗*Fisalgos*; the collection of homilies by the early Church Fathers titled ↗*Qerəllos* (that is, ↗Cyril of Alexandria, who has several homilies therein); the monastic rules of Abbot ↗Pachomius; *The Shepherd* of ↗Hermas; the *Ascension of ↗Isaiah*; and the Books of ↗Enoch and ↗Jubilees. The last three are extant in their entirety only in Gəᶜəz.

The liturgy is believed to have been firmly founded as Ethiopian by St. Yared, the musician and priest who flourished during the reign of Gäbrä Mäsqäl (r. ca. 530/31 or 538/39–48). Tradition ascribes to the saint the composition of the hymns of the ↗*Dəggʷa*, the antiphonary for the year, and their music. The *Dəggʷa* contains beautiful hymns, some rhyming, for God and the saints of the Church – angels, martyrs, desert fathers and mothers. Some are sung on the eve and some on the day of their commemoration. The *Wəddase Maryam* and the ↗*Anqäṣä bərhan*, ascribed to Yared, are part of the *Dəggʷa*. The content of the *Dəggʷa* has been considerably extended to include hymns for the saints who flourished after Yared.

Arabic period

Some Christian Arabic literature from Alexandria seems to have reached Ethiopia during the Zagʷe dynasty. The ↗*Kəbrä nägäśt*, which relates the story of how the people of Ethiopia became the chosen people of God in place of Israel, is an example. But the work remained, according to its colophon, in its Arabic original until a dynasty favourable to its translation into Gəᶜəz took power. Following the overthrow of the Zagʷe dynasty in 1270 and the establishment of the Solomonic dynasty, the clergy were ready to import the Arabic Christian literature of the Copts and to translate it into Ethiopic. They also began to compose original works in the same language. The Chronicle of *aṣe* ↗ᶜAmdä Ṣəyon I must have been written at the beginning of this period.

The Church had then *abunä* Sälama the "Translator" (1348–88) as the metropolitan, interested in enriching it with service books and hagiographical works, hence his nickname. Whether that was because he was personally involved in the translation, as some sources suggest, or because the books were obtained from his personal library, as others imply, is not clear. Nevertheless, tradition credits him with translations of the Lectionary for Passion Week, the ↗*Gəbrä ḥəmamat*; several lives of saints (↗*Gädl*); a homily by ↗Jacob of Serug and another by ↗Cyril of Jerusalem; the Testaments of Abraham, Isaac and Jacob, ascribed to ↗Athanasius; the ↗*Filkəsyos*, one of the three books of the monks (*Mäṣaḥəftä mänäkosat*, s. ↗Monastic literature); and the ↗*Laḥä Maryam*. The funeral ritual, *Mäṣḥafä* ↗*gənzät*, also contains a homily attributed to Sälama himself.

The role of the monastery of ↗Däbrä Ḥayq Ǝsṭifanos in enriching the Ethiopian Church with hagiographic literature is unequalled by any other centre. Lives and miracles of saints (desert fathers, martyrs) and angels, including the ↗*Gädlä ḥawaryat* and the ↗*Gädlä sämaᶜətat*, were translated from Arabic by the monks of this monastery. *Apophthegmata Patrum* (known in Gəᶜəz as *Zena abäw qəddusan*, 'The Story of the Holy Fathers'), the ↗*Sənkəssar*, the two sources of Ethiopian canon law (the ↗*Senodos* and ↗*Didəsqəlya*), the *Zena Ǝskəndər* (↗Alexander the Great), the *Mäṣḥafä* ↗*säᶜatat* and one of the *Mäṣḥafä* ↗*fäws mänfäsawi* were all among the products of that age.

The years 1340–1500 mark the evident interest of local (Ethiopian) scholars in writing on topics that the imported literature did not deal with satisfactorily. Three authors are worth remembering. The first is ↗Rətuᶜa Haymanot, the *nom de plume* of an unidentified scholar who seems to have flourished ca. 1375. A collection of homilies for different feasts is ascribed to him and bears his name. The second author is *abba* ↗Giyorgis of Sägla or Gasəčča (d. 1476), to whom a number of important works are ascribed, including among others the ↗*Arganonä Maryam*, the ↗*Ǝgziʾabəḥer nägśä*, the *Mäṣḥafä säᶜatat*, the ↗*Ḫoḫətä bərhan* and the *Mäṣḥafä* ↗*məsṭir*. The third author of this period was *aṣe* ↗Zärʾa Yaᶜəqob (r. 1434–68), who was not only the head of state but also was the *de facto* head of the Church and her principal theologian. Works coming from his time suggest that he had a scriptorium in his palace where books were composed, translated, and copied in large numbers and distributed to the important monasteries. Zärʾa Yaᶜəqob notably had the collection of the miracles of the Virgin Mary, the ↗*Täʾammərä Maryam*, expanded (the translation of which was begun by his father *aṣe* ↗Dawit II) by adding other stories, some of them translated and others composed locally. These stories are small literary masterpieces, and those that deal with local issues are valuable historical sources.

Questions such as the observance of the Saturday-Sabbath, the theology of the Trinity and the image of God, the number of the canonical scriptures, and the veneration of icons and the cross were points of serious dissensions among the clergy of the time; and Zärᵓa Yaᶜəqob was a major player in each controversy. He (and probably his scholars at the royal camp) produced the following highly interesting works: the *Ǝgziᵓabəḥer nägśä*, the ↗*Səbḥatä fəqur*, the *Mäṣḥafä* ↗*bərhan*, the *Mäṣḥafä* ↗*milad* and the *Mäṣḥafä* ↗*śəllase*, the *Mäṣḥafä* ↗*baḥrəy*, the ↗*Täᶜaqəbo məsṭir*, the ↗*Ṭomarä təsbəᵓət*, the *Kəḥdätä säyṭan* and the *Dərsanä mälaᵓəkt*.

Most of these were composed in defence of Zärᵓa Yaᶜəqob's theological and Christological positions. Some are highly polemical in refuting the views held by others. Our knowledge of the views of most of the scholars the Emperor refuted with such force come precisely from his refutations, unfortunately not directly from their defenders themselves. Either their works (sometimes together with the authors) were suppressed or their views were not expounded in writing. Only the ↗Stephanites (the followers of the monk ↗Ǝsṭifanos), who refused to give undue reverence to Zärᵓa Yaᶜəqob (as the anointed ruler), the Icon of the Blessed Virgin and the Cross, as demanded by the Emperor, have left us literary expressions of their beliefs. They maintained that the metropolitan of the time agreed with their positions, but fearing the wrath of the Emperor, could not contradict him. In fact, they reported that Zärᵓa Yaᶜəqob attacked the metropolitan when the latter supported them.

Although it is not known for certain how it started, the composition of ↗*mälkəᵓ* hymns seems to have begun during this period.

Furthermore, Zärᵓa Yaᶜəqob's quotation from the ↗*qəne* of one of his opponents indicates that the practice of using this type of hymn in church services must have started before this time. At present, there are up to 20 types of *qəne* hymns, identified by the number of the lines, which vary from two to eleven, the rhythm, and the melody to which they are sung. In every major church, one of the clergy composes a *qəne* song for the occasion to be sung during the service.

Among works translated during this period are the ↗*Zena Ayhud* by Joseph ben Gorion; the ↗*Fətḥa nägäśt*, a collection of ecclesiastical and civil laws which the state used until the first half of the 20th cent. and which the Church continues to use; ↗*Giyorgis Wäldä ᶜAmid*, the universal history of Ǧirǧis b. al-ᶜAmid; and the ↗*Abušakər*, another historical source, that includes a section on computing the movable feasts and fasts of the Church.

The years of the national crisis (1500–1632)

During this period, while the Christian empire was invaded by the forces of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") from the east and overrun by the migrating ↗Oromo from the south, three scholars made names in the field of G.l.: ↗ᶜƎnbaqom, ↗Arkä Śəllus and ↗Baḥrəy.

ᶜƎnbaqom was a Yemenite merchant who, as a Muslim, was well versed in the Islamic religion. He embraced Christianity and became a celebrated teacher and spiritual leader of the Ethiopian Church, promoted as far as to become the *əčč̣äge* of ↗Däbrä Libanos. In addition to the books he helped to translate into Gəᶜəz – such as the other two monastic books, the *Mar Yəsḥaq* (by ↗Isaac of Nineveh), and the ↗*Arägawi mänfäsawi* by John Saba – he wrote a book entitled ↗*Anqäṣä amin*, in which he attempted to prove the divinity of Christ even from the Islamic literature, including the ↗Qurᵓān, and to invite the invading Muslims to Christianity and the apostates to repentance.

Such theological works as the ↗*Haymanotä abäw*, the ↗*Tälmid* and the *Mäṣḥafä* ↗*ḥawi* were all translated during this period, to which the translation from Arabic of the *Mäṣḥafä* ↗*fälasfa ṭäbiban* most probably also belongs. ᶜƎnbaqom and a certain Salik of Däbrä Libanos must have had a hand in the translation of these works.

The allusions to many sources found in the chronicles of Gälawdewos (r. 1540–59), Minas (r. 1559–63) and Śärṣä Dəngəl (r. 1553–97), perhaps made in part by Baḥrəy, and of Susənyos (r. 1607–32), made by Täklä Śəllase and ↗Məhərkä Dəngəl, reveal the high level of the literary life of the country at that time. Despite Grañ's devastating war and the destructive migration of the Oromo in progress then, the doctors of the local Church were active in translating works from the Christian Arabic of the Coptic Church.

The ↗*Mäwaśəᵓt* and the ↗*Məᶜəraf* hymns are contributions of this period. Furthermore, it was then that the musical notation, the *Dəggʷa*, was reportedly introduced into the Church's hymnody.

Although little is known about his identity and his monastery (if he was a monk), the poet ↗Arkä Śəllus must have flourished during this period, as Baḥrəy mentions him in his hymns for the saints. This religious poet is remembered in the Church as the author of the five-line hymns to the saints found in the *Sənkəssar*. His work, titled by his abbreviated name, ↗*ʿArke*, has become a model of hymn composition. The *ʿarke* hymns have been gathered in a single volume as a collection, and the individual hymns are inserted at the end of each *Sənkəssar* entry for a particular saint. The *ʿarke* hymns for the saints who lived after Arkä Śəllus are, of course, the compositions of other authors.

Another important author was *abba* Baḥrəy (b. 1535/36 A.D.). His works show that he was a ↗*liq*, an erudite, with a vast knowledge of the literature and a writer of great talent. It is now clear that most of the contents of the manuscript BritLib Orient. 534 (WrBriMus 84), especially the ↗*Mäzmurä Krəstos*, the ↗*Mälkəʾa Gäbrəʾel* and the ↗*Sälamä qəddusan*, are the works of this monk. The *Mäzmurä Krəstos* was modeled after the Psalms of David, with each of the 151 Psalms of Christ corresponding in the number of lines and of words on each line to its counterpart in the 151 Psalms of David. Baḥrəy quotes from almost all known (and two unknown) Gəʿəz sources, noting them on the left margin of the page where the quotations occur. Unlike the Gəʿəz version of Psalms of David, the Psalms of Christ rhyme. As for his *Sälamä qəddusan*, the model for it is Arkä Śəllus's *ʿArke*.

Abba Baḥrəy is well known and highly acclaimed among modern scholars as the author of the chronicle ↗*Zenahu lägalla*, copied on less than three folios of ms. BritLib Orient. 534 and on the margins of ms. Wien, Kaiserlich-Königliche Hofbibliothek, Aeth. 4 (Rhodokanakis 1906: 69). The text is an ethnography of the Oromo, which he wrote during the height of their migration into central Ethiopia. This short account of the social structure of the Oromo and the manner of their migration, written by an eyewitness observer, is unique and of immense importance for the history of the Horn of Africa.

The latter part of this period (1632–1770) is marked by the continuation of the tradition of chronicling the emperor's deeds and by an increase in the number of *mälkəʾ* texts. One or more such texts were composed for most of the nationally venerated saints. Of these, the ↗*Mälkəʾa Maryam* and the ↗*Mälkəʾa Iyäsus*, are part of the daily prayers of the clergy. Some of the "images" are of high literary quality, but as not all were composed by "licensed" theologians they may violate the Church's teaching.

The Gondär clergy developed a new collection of hymns for the saints, the ↗*Ziq*. The individual hymns are composed of lines from the *mälkəʾ* and *ʿarke* for the saint, and a new hymn of two or more lines, the *ziq*, is added as a refrain. The *ziq* has its own musical notation.

Although the service with *qəne* hymns had become a tradition centuries earlier, it certainly reached its peak during the last period of G.l. The *qəne* genre was originally intended to praise God and his saints with new songs (Ps. 95:1 and 97:1), but in the course of time it has been used for panegyrics to flatter people of power and authority.

The oral composition and use of *qəne* continues to this day, but writing in Gəʿəz has virtually ceased. The interest in secular literature and the foreign missionaries' use of vernacular languages to attract followers have inspired writers, including Church scholars, to use Amharic in place of Gəʿəz.

A treatise on the existence of God and his nature ascribed to a certain Zärʾa Yaʿəqob, and its continuation, ascribed to his disciple, Wäldä Ḥəywät, are said to have been written towards the end of this period. It is known today as ↗*Ḥatäta Zärʾa Yaʿəqob* and is accepted by modern scholars with skepticism. Unlike what we observe in the works of Ethiopian teachers, the author of this treatise reaches, by his own reasoning, a knowledge of the existence of God and of this God's relationship to man. In the process he rejects the teachings of the established religions, Christianity and others. This rational approach has made some scholars, especially Conti Rossini, conclude that he was not an Ethiopian, but a Catholic missionary who did nor want to reveal his new faith to his superiors. The language of the *Ḥatäta Zärʾa Yaʿəqob* is that of what Ethiopians would call a *Dawit dägami* or one whose daily prayer (and reading) is the Psalter. Unlike the writings of the *liqawənt*, the *Ḥatäta* is not enriched with ideas from traditional literature. Whatever quotations are added here and there from the scriptures, they would not put the author on a par with Ethiopian teachers or with a Catholic missionary of the caliber of Giusto Da ↗Urbino, who had received the education of his Church. The time was as conducive for that author to ask theological questions as it was for *abba* Baḥrəy to ask why a few Oromo with inferior weapons could defeat the Ethiopian government. He seems to be an Ethiopian rebel whose education had not gone beyond the elementary grade of a *qəne* school. The reason why his treatise is void of biblical quotations outside the Psalter is most probably because the author was not versed in them, rather than because he rejected them. The *Ḫatäta Zärʾa Yaᶜəqob* is, thus, by any criteria part of G.l.

The underground literature

The Christians' belief that prayers heal the faithful from their sickness (James 5:14) has been stretched, to include the word or the spell as a cure or curse or charm (↗Magic scrolls; ↗Prayers). This is a phenomenon that can be observed in non-Christian communities as well. In Ethiopia, biblical texts, such as John 1:1–5, are commonly copied on a piece of parchment and carried on the neck.

Not realizing that words such as *Adonay, Alšaday, Elohim* have non-Gəᶜəz forms because they have no Gəᶜəz equivalent, many of the clergy assume that they have been preserved because they have spiritual, in fact, magical power to heal the sick, protect the healthy and destroy the enemy if invoked in prayers or carried copied on parchment or paper. This comes from the belief that God has numerous secret names (↗*Asmat*) that would oblige him to hear prayers faster and respond favourably when they are repeated the number of times prescribed. Some Gəᶜəz sources imply that Jesus Christ himself used these "powerful words" when he healed the sick and raised the dead. Furthermore, they claim that he revealed these secret names, including his own, to his mother, Mary, and to his disciples when he sent them to preach his gospel.

Magical prayers, like these, must be common among Muslims and the clergy of the Coptic Church because some of the Ethiopian versions have Arabic words that must derive from Christian and Islamic *Vorlage*, e.g., *bismilʾab* and *aᶜuzu billahi*, respectively.

The Church would have liked to suppress this literature, but it has not succeeded because the chief culprits are themselves members of the clergy who practice it in secret. Zärʾa Yaᶜəqob, who believed that enemies were using charms to destroy him, took the harshest measure to destroy magic literature and magicians. He informs us in his *Ṭomarä təsbəʾət* that he had destroyed a voluminous manuscript containing such prayers, which he found in his palace. But there is no indication that he did more than that. The literature still flourishes underground as well as aboveground. The prayers of Mary and the ↗*Ləfafä ṣədəq*, both sanctioned by the Church, has many "secret names" of God and Jesus Christ.

Gəmb

The term G. (ግምብ) has the meaning 'wall', 'castle', 'tower', or even designates masonry in a stone building. It is attested in Gəᶜəz documents (Tgn. variant: ግምቢ *gəmbi*, but standard Amh.: *gənb*), first and foremost in the names of (today often ruined) Gondärine "castles" and antiquities, such as ↗Baḥrəy Gəmb, Gəmb Giyorgis, and ↗Maryam Gəmb. The palace of *aṣe* ↗Fasilädäs at ↗Gondär is commonly referred to as Fasil Gəmb (lit. 'G. of Fasilädäs'), and the nearby chancellory of *aṣe* Yoḥannəs I as Waräqät Gəmb (lit. 'Paper G.', or 'Archive house'); the "Turkish bath" of Məntəwwab (↗Bərhan Mogäsa) as Wäšäba Gəmb ('G. for steam-bathes'; s. GuiVoc 758-62). The traditional structures with egg-shaped domes are referred to ↗*ənqulal gəmb.*

Gəmǧa bet

G.b. (ግምጃ፡ ቤት, lit. 'silk house') was historically the imperial treasury or storehouse, and thus a part of the ↗*Gəbbi* compound. It was also known as ግምጃ፡ ዋሻ (*gəmǧa waššа*, 'treasure cave'), a term hinting at the antiquity of the institution, or ግምጃ፡ ደባና (*gəmǧa däbäna*, 'treasure tent'). According to Alvares, the G.b. was part of the palace complex in early 16th-cent. Šäwa, where the *bäᶜalä gəmǧa* tents housed the emperor's wardrobe and treasures (BeckHuntAlvar 444). G.b. was headed by the ↗*bäǧərond.* Over time, G.b. were established throughout the country and were employed to store taxes, tribute, weapons and sundry, other goods belonging to the national or provincial government.

By the late 19th or early 20th cent., *aṣe* ↗Mənilək II dispatched officials throughout the country to staff G.b., overseeing the collection of taxes and their transfer to Addis Abäba. Written records of deposits and expenditures, often kept in Arabic as well as in Amharic, were designed to minimize corruption, though little is known of how successful such efforts were. In the provinces, government officials and soldiers were paid out of G.b. stores, though the details of actual practice likely varied in time and place. In Harär in the early 1930s, the G.b. accepted taxes in the form of grain or stock, but often sold the products for cash, which was then at the government's disposal.

An ancient institution, the G.b. eventually foreshadowed the Ministry of Finance ("the government's G.b."), created by *aṣe* Mənilək II in 1906. The finance minister was then, theoretically at least, responsible for tallying the registers of all the G.b. in the provinces and had the authority to inspect their stores and registers at any time. This system ensured a degree of central government control over the country's finances, but granted local administrations some fiscal freedom. In 1931, for example, the expenses for provincial celebrations held to mark *aṣe* ↗Ḫaylä Śəllase I's coronation in Addis Abäba were covered by local G.b. rather than the Ministry of Finance in the capital.

Genealogy

Socio-cultural role of genealogy

G. is both the history of descent of a family or descent groups and the system describing it. In both senses it plays a crucial role in written and oral ↗historiography among the ethnic groups in the Horn of Africa. Knowledge of G. is of utmost importance for culture and local politics, having to some degree very practical purposes, being in no way a privilege of the *mäsafənt* (↗artistocracy). A G. may serve, e.g., to prove one's rights to (landed) property or to participation in (local) decision-making processes.

Forms and structure of genealogies

G. are preserved in both oral and written form, the most traditional model for the latter being the biblical one, i.e. "X begat Y, Y begat Z, etc.". G. are often written on the margins, though there are examples of manuscripts entirely dedicated to a G. They may be regularly amended, e.g., the ancient manuscript of the descendants of the *wag šum*, still in possession of the family. Leading families in particular had their G. kept in their "house churches" or monasteries linked with them, e.g., the G. of *däǧǧazmač* ↗Säbagadis Wäldu is kept in religious manuscripts at the monastery of ↗Gundä Gunde. Such lists do not differ visually from ordinary text pages (fig. 1).

Another form of G. is graphic, introduced perhaps in the 19th cent. only, linking names written on a large manuscript scroll with lines symbolizing descent. This model is known from European medieval manuscripts. An example of such type is the nine-meter-long scroll with an Amharic G. of the descendants of Prophet ↗Muḥammad kept at the Institute of Ethiopian Studies' archive (fig. 2). Modern publications with G., especially on dynasties, often contain graphic representations, e.g., a round circle, with *nəguś* Śahlä Śəllase in the centre, for all descendants of the Šäwan dynasty (cp. Mahtämä Śəllase Wäldä Mäsqäl n.d.).

The main principle of G. in the Horn of Africa is patrilineality. There are few exceptions to this pattern, as in cases when a specific right was introduced into a male line by a woman, or in the case of such matrilineal ethnic groups as the ↗Kunama. A genealogical list may also contain the names of all the sons of a certain forefather, especially if they are founding fathers of settlements or played an important role in politics. In some cases daughters are also included, particulary if through their marriages important genealogical links were established.

Traditional ↗naming rules reflect the central role of G., the second name being patronymic among most Ethiopian peoples, sometimes followed by a third name, that of the grandfather. In a way, such names are a simplified G.

Genealogies as a legal and social instrument

A G. is an important political instrument for enforcing solidarity within the group and even across its borders. Through genealogical networks, descent groups get linked to one another. Such linkages may even cross ethnic boundaries resulting in ↗inter-ethnic clan relations. Persons who are genealogically connected consider themselves "brothers" or "sisters". This establishes a strong tie, which results in the quasi-impossibility of refusing mutual help. G. can also be of practical economic importance, being the key instrument to legitimate a family's or group's right to land. In the context of local disputes on land, G. is a legal instrument. Elders (↗*Śəmagəlle*), who are the keepers of customary law, may also preserve genealogical knowledge. Contradictions between G. can be resolved in meetings with elders from other groups, who compare their knowledge.

A new genealogical link through a "political" marriage between two descent groups can help in ending conflicts (Oromo: ↗*gumaa*). The "discovery" of an ancient genealogical link can be used in the course of a peace-making process or to achieve a political goal. Among the Oromo and other Cushitic-speaking peoples the adoption of non-Oromo individuals or even (ethnic) groups (↗*Guddifačaa*; ↗*Moassa*) has the function of establishing a permanent relationship, based on the idea of fraternity. Such an adopted group may even claim a genealogical link to the adoptive group, even if non-historical. Comparable procedures can also be observed among northern groups. Some G. are social G., not historical: a newcomer family in a village in Təgray, for example, may have been included in the village's G. in order to allow access to land for the immigrants' descendants. Another case are the Təgrəñña-speaking villages within the Bilin territory; even if not speaking the same language, Bilin assemblies have recognized their inhabitants as descendants of the Bilin founding fathers.

G. serve to stabilize a group's identity, including its ideological and religious basis. As a wide-spread phenomenon, many Ethiopian genealogical narratives set up a connection – in the case of Christians – to the "Israelites", and, more specifically, to King ↗Solomon, or – in the case of Muslims – with Arab descent groups and the Prophet Muḥammad. Like the ↗Solomonic dynasty, the ethnic groups of the northern highlands in general trace their descent back to the "Israelites" who are said to have come to Ethiopia together with ↗Mənilək I. Such genealogical claims served to strengthen the self-identification with the myth of the biblical origin of Ethiopia.

G. also define the lineage ("sip"; ↗Ǝnda) in

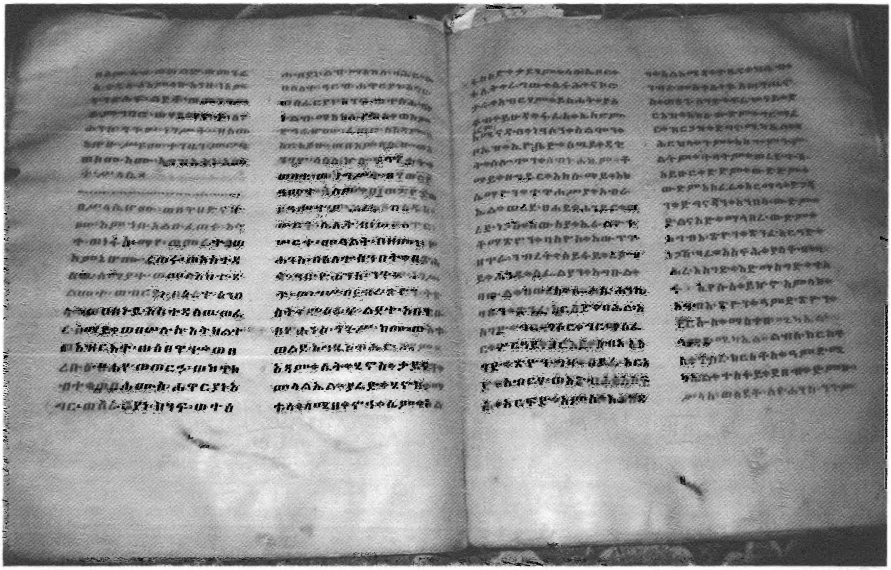

Fig. 1. Genealogy of *aṣe* Yoḥannəs IV, linking the Emperor to King Solomon and Adam; ms. of a Chronicle of *aṣe* Yoḥannəs, end of the 19th cent., pp. numbered 38, 45; Däbrä Bərhan Śəllase, ᶜAdwa (cp. BTafY 18ff.), photo 2005, courtesy of Wolbert Smidt

the narrow sense. Ethnic groups usually follow a combination of endogamic and exogamic principles; e.g., endogamic ethnic groups practice exogamy on a lower level, members of one "sip" not being allowed to marry each other, which is guaranteed by the existence of a G. The definition of lineage is strictly patrilineal in the case of Ethio-Semitic ethnic groups of the northern highlands, e.g., Təgrəñña-speakers and Amhara: those with a common patrilineal ancestor less than seven generations away are considered "brother and sister" and may not marry. On the mother's side, however, the relation can be much closer (only about four generations). Until today this is the most common reason for which even youngsters know at least about seven generations of the father's G. (the "seven names"), this being a precondition for marriage. Among Muslim groups, on the contrary, marriage between cousins is allowed.

G. often quickly loses its social role among urbanized people, especially in Addis Abäba (starting from already the second generation of migrants to the city). Marriage rules of their original ethno-cultural groups lose partly or entirely their significance. The loss of importance of G. is a symptom of the more general tendency to a weakened identification with the original descent group (↗Kinship). The effect is that even a clear affiliation to an ethnic group may sometimes become blurred, children of mixed Gurage and Oromo background, e.g., identifying themselves rather with the "national" culture ("Amhara"). As this example shows, the idea of G. is closely connected with that of "belonging", but only if belonging is defined through descent, which guarantees access to resources like land or offices or to the solidarity of the "own" group.

Genealogy as a historical source

G. is an important source and instrument for modern historiography. Any understanding of individual networks – both between "locals" and rulers and between descent groups – needs a thorough study of G. Carefully interpreted, they can give valuable evidence for population movements and settlement history. They can even help detect the approximate time of a ↗migration: the number of generations regularly counted in G. in one region can reveal a population paradigm change at the time of the apical ancestor(s): ᶜAfar and Irob G., for example, count 24 generations and go back to the ca. 14th cent. One may, combining this with other pieces of evidence,

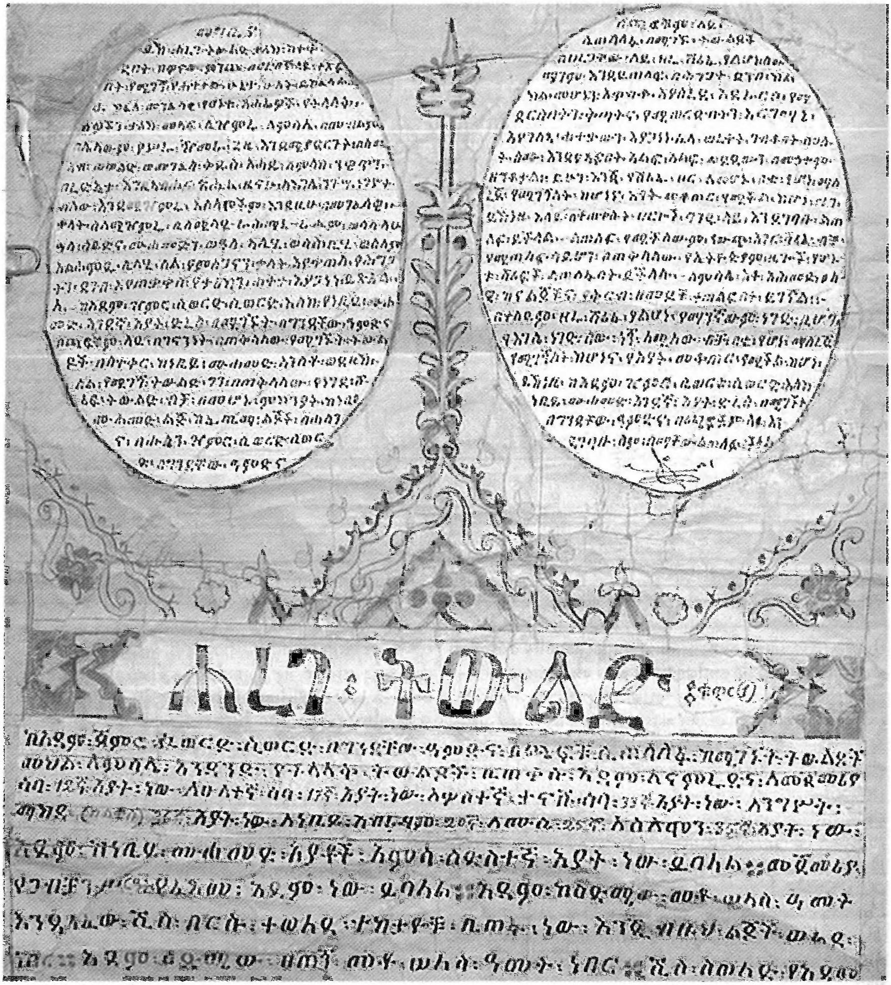

Fig. 2. Genealogy of Prophet Muḥammad, in Amharic, 20th cent. (detail); photo by Maki Momoka, courtesy of IES (IES P5310046)

conclude that in this period their ancestors migrated to the region, after a major population breakdown. Historical information can also be elicited from the appearance of names in different languages or with an identifiable geographic or ethnic background (cp. ↗Amaaro), or showing a change of religion (typical, e.g., for Bilin or Wällo G.). G. can also help reconstruct names of local office-holders, often being the only sources to have preserved these names.

Western researchers sometimes misinterpret contradictions among G., depreciating them as unreliable. This, however, can result from the misunderstanding of the terms used for the construction of a G. Especially in the case of forefathers tracing back to more than seven or twelve generations, G. tend to be simplified for practical purposes. The aim of a G. is the documentation of historic "truth", but not the preservation of every name and every generation. A filiation ("son of") does not necessarily mean that there is a distance of only one generation between the two persons listed; the term "son" may simply mean "descendant". "The two sons of…" may therefore well mean "the son and the [grand]son of …" as is the case in the medieval founding legend of the Akkälä Guzay descent group.

In many G., names of apical ancestors are not personal, but geographical or ethnic denominations. This is a consequence of the traditional identification of a territory with its "owners" and of a descent group with its apical ancestor and vice versa. Ethnic subgroups could be called after their apical ancestor (e.g., the ↗Däqqi Täššəm), on the other hand, the place name, becoming the group's name, could later get the function of an ancestor's name (e.g., the G. Kuš > Ityopis > Aksumawi). The legendary geographical origin of a migrant group is often reflected in their G. (e.g., the ↗Gurage coming from Guraʿ; "Gura", sometimes even "Akkälä Guzay" or "Erətra" also may appear as a personal name of an ancestor). In this sense both geographical and genealogical concepts can be related to each other. At the same time, names of far ancestors may correspond to historical reality (e.g., the important ↗Ḥamasen ancestor "*nəguś*" Märoni seems to correspond to a 13th-cent. historical leader).

Dynastic genealogy

Any proprietary and social status of any free Ethiopian was considered legal if inherited from the ancestors. This was the reason why everyone, from peasant to emperor, knew and remembered their G. The perception of history was, too, genealogical – from Adam for the mankind and from the Old Testament Books of Kings for the state. The G. of private persons were naturally a private matter and were only made public on the occasion, for example, of a court suit in property questions. Dynastic G. were a different matter as they were of public importance. However, even under these circumstances they seldom were written down, and dynastic G. are a rare occurrence in Ethiopian ↗historiography, whether official or not. As a matter of fact, Ethiopian historiographers would only resort to dynastic G. in exceptional cases, in order to justify a breach in a custom (e.g., a dynastic overturn) by presenting it not as an instance of violation but, on the contrary, of the triumph of an eternal tradition of legal inheritance and continuity of power and ↗kingdom. This was the real motivation behind such Ethiopian dynastic treaties as the ↗*Kəbrä nägäśt* or ↗*Bəʿəlä nägäśt* or the inclusion of G. into chronicles. The *Kəbrä nägäśt* was meant to account fully for the deposition of the ↗Zagʷe dynasty in 1270 by substantiating the far-from-the-obvious thesis that the Ethiopian royal dynasty was the legal (genealogical) successor of the Israelite dynasty of David and Solomon, that Solomon's firstling was his Ethiopian – and not Jewish – son, and that Ethiopia was thus the "new Israel". Though formally the *Bəʿəlä nägäśt* was also devoted to the events of the dynastic coup of 1270, i.e. the "restoration of the legal power of the Solomonic dynasty" represented by *aṣe* ↗Yəkunno Amlak, the real reason for the creation of the treaty was the necessity to account for the coming to power of a new branch of the dynasty, the descendants of *aṣe* ↗Susənyos, in the new capital of the Christian empire, ↗Gondär. This treaty clearly reveals the miraculous elements that had become characteristic for royal G.

It is true that G. were the legal ground for any proprietary or social claims, whether peasant or king; the character of these claims, however, varied considerably. On the basis of his G., a peasant could claim his share in common land heritage (the ↗*rəst* of all the descendants of a common ancestor), a pretender to the throne, in his turn, wanted to obtain the whole kingdom, and thus claimed an exclusive right that cancelled the rights of all other pretenders – descendants of the same ancestor. In disputable cases, this artificial situation resulted in artificial G., as they required an element that would unarguably prove one single pretender's exclusive right. Such an element was usually a miracle: a wonderful appearance, a prophecy of a saint, by all means something supernatural; and it was necessary to make this miracle well-known, which is why such G. had to be written down. In any case, it did not happen very often, as there were seldom doubts in the legitimacy of successorship on the throne.

A disputable situation emerged in 1730 when, after the death of *aṣe* Bäkaffa, ↗Iyasu II, his son by his youngest wife Məntəwwab (↗Bərhan Mogäsa), was declared Emperor. This happened due to the efforts of a small group of nobles from Qʷara, relatives of Məntəwwab, who thus became regent of her underage son. Iyasu had therefore the right to the throne thanks to his father but could only perform this right thanks to his mother (or, rather, her family). Such state of affairs had to be somehow grounded, and this need led to an innovation: a special G. of the ruling monarch was written. The Chronicle of Iyasu II's reign starts with the G. of Ethiopian kings from Adam to Bäkaffa. It is followed by the G. of Queen Məntəwwab, where all those relatives were mentioned who assisted Iyasu to the throne and practically ruled the country during his younger years. In order to justify this actual royal overturn, Bərhan Mogäsa's G. contains diffuse prophesies on "how Lord repeatedly kept telling our fathers about Iyasu's and Məntəwwab's reign". The first prophecy is ascribed to the famous Ethiopian saint ↗Wälätta Ṗeṭros: persecuted by the "apostate" ruler Susənyos, she declares to Məntəwwab's ancestors that "a king shall be born by a daughter of a daughter who shall save the people of Israel and by whom all the peoples of the earth will be blessed". This narration is followed by the prophetic visions of Məntəwwab's grandmother, Məntəwwab herself and her brother Wäldä Ləʾul.

One can say that most of the written dynastic G. bear such pronounced literary character, even if the goals their creators envisaged were neither literary nor historical.

In Ethiopia, all literary works devoted to the past were considered historical, whether chronicles, dynastic treaties, lives of saints (↗*Gädl*) or even certain homilies, such as, e.g., the ↗*Dərsanä Raguʾel*, which contains, as a vaticinium ex eventu, a narration on the sons of *aṣe* ↗Ləbnä Dəngəl. Archangel Raguʾel foretells the imminent downfall of the descendants of *aṣe* ↗Minas, Ləbnä Dəngəl's third son, i.e. of the Gondarine dynastic branch, and the rise of the descendants of Ləbnä Dəngəl's youngest son Yaʾəqob who settled down in ↗Šäwa. Such was, indeed, the political situation at the beginning of the 19th cent., time of the final redaction of the *Dərsanä Raguʾel*. Later, when the Šäwan dynasty reached supreme power in the Christian Empire, neither the text nor the Archangel found oblivion. *Aṣe* ↗Mənilək II dedicated a church at his new residence to St. Raguel (↗Ǝnṭoṭṭo Raguʾel), and Taddäsä Zäwälde published his "Short History of the Descendants of ***abetohun*** Yaʿəqob" (Addis Abäba 1956, conceived as a continuation of the *Dərsanä Raguʾel* – little wonder, as the then Emperor ↗Ḫaylä Śəllase I was considered Yaʾəqob's direct descendant. The Emperor himself did not neglect the opportunity to use G. in his own political interests, and the second article of the ↗Constitution of the Ethiopian Empire clearly connects the imperial position of Ḫaylä Śəllase I's line with his "direct descent from the dynasty of Mənilək I, the son of Sheba, the Queen of Ethiopia, and King Solomon, King of Israel", i.e. with the dynastic myth from the *Kəbrä nägäśt*.

It can be concluded that dynastic G. were never an independent subject of literary activity but merely an instrument of the authors in pursuit of their own political aims.

Monastic genealogy

Ethiopian monastic G., a part of ↗hagiography, are more or less original compilations formed by sequences of names "enchained" to each other in a characteristic syntactic pattern: personal name (of the "spiritual father") – *wälädo lä* (lit. '[he] begot/generated [him]') – personal name (of the "spiritual son"). These G. can be found in the Vitas of the saints (↗*Gädl*) or as autonomous texts. They usually feature three different levels, relevant to as many stages in the spreading of monasticism into Ethiopia; and cannot be used to date the actual lifetime of a monk according to the position assigned to him within the text. Like the hagiographers they are most often depending upon, the Ethiopian compilers often placed a monastic leader into a prestigious ascendancy so as to link him to a particular movement or order, which sometimes leads to chronological inconsistencies.

The first – and most common – level of these G. refers to the Egyptian fathers of monasticism, and especially to ↗Anthony, Macarius and ↗Pachomius; the second level, to the more prestigious Ethiopian monks of the early Christian period: the ↗Nine saints or the "isolated saints", as *abba* ↗Zämika'el Arägawi or *abba* ↗Maṭṭa^{c}. Lastly, the third level has its framework in the monastic line or the community a certain monk actually belonged in. For instance, if he is presented as a disciple of ↗Iyäsus Mo'a, one can find in his G. the name of Zämika'el Arägawi, founder of the monastery of ↗Däbrä Damo where Iyäsus Mo'a was initiated into monastic life, then those of *abba* ↗Yoḥanni, abbot of Däbrä Damo and teacher of Iyäsus Mo'a, and Iyäsus Mo'a himself, as the spiritual father of that monk. Hence, a few names of "spiritual sons" can follow with reference to the monastic community founded by the monk whose lineage is reconstructed. Thus, among the numerous G., those of the followers of *abunä* ↗Ewosṭatewos and *abunä* ↗Täklä Haymanot can be easily distinguished (↗Ewosṭateans).

Sometimes, the compiler adds a family G. to the spiritual one, in order to reinforce the link between a monk and his relative master (e.g., in the hagiography of ↗Tadewos of Däbrä Maryam, disciple of Täklä Haymanot). In more recent G. (after the 17th cent.), such very famous saints as Täklä Haymanot, Ewosṭatewos or ↗Gäbrä Mänfäs Qəddus are met with in the place formerly reserved to the earliest representatives of Ethiopian ↗monasticism.

Genne Gummiti

G.G. ('the lady from Guummaa') was the daughter of Abbaa Dulaa, King of ↗Guummaa (1856–70), a fervent Muslim, who believed passionately in the spread of ↗Islam in Guummaa. In this she was helped by Abbaa Boka, King of Ǧimma (1859–61), who sent Muslim teachers and preachers to Guummaa. Common interest in the spread of Islam resulted in a marriage alliance between Guummaa and Ǧimma.

Accordingly, in 1860 G.G. married ↗Abbaa Gomol, the son and successor of Abbaa Boka, king of ↗Ǧimma (r. 1861–77). It was out of this marriage that ↗Abbaa Ǧifaar II, later a king of Ǧimma (r. 1877–1932), was born in 1861.

G.G. played a key role in the government of Ǧimma. Her husband, and later her son, sought her advice on all matters. An extraordinary woman, endowed with a brilliant mind and generous hand, she was peace-loving, but also a strong-willed leader, passionately devoted to the welfare of her people. Thus, she encouraged the peaceful resolution of conflicts within the Gibe region and between the Oromo and their neighbours and cultivated a friendly relationship with the nobility of Ǧimma, who served her with devotion and loyalty.

After the death of her husband in 1878, she served as a regent for her young son Abbaa Ǧifaar II. It was most probably under the influence and guidance of G.G. and top officials that Abbaa Ǧifaar II made the most important decision of his reign in 1882, a peaceful submission to *nəguś* Mənilək of Šäwa (later *aṣe* ↗Mənilək II). That decision not only saved Ǧimma from the destruction endured by the four other Oromo states that decided to resist Mənilək, but also enabled the kingdom to enjoy a good deal of internal autonomy up to the death of Abbaa Ǧifaar II in 1932.

Gənzät: Mäṣḥafä gənzät

The M.g. (**መጽሐፈ፡ ግንዘት**, lit. 'The Book of the [Corpse's] Wrapping') is a large collection of texts used for the funeral service, the preparation of the body for the ↗burial being generally known as *gənzät*. The Amharic title of the book is **የፍትሐት፡ መጽሐፍ** (*Yäfətḥat mäṣḥaf*, 'Book of Absolution'). Beyond the liturgical and practical functions of those texts, which ritualize the death of the body and the separation of the soul from this world (*↗Fətḥat*), the M.g. is supposed to grant the sins of the dead forgiveness. The M.g. requires that the prayers begin from the house of the deceased, right from the "soul's exit" from the dead person, on to the church, and then continue in procession up to the graveyard; it contains also the liturgy for the commemorations (*↗Täzkar*).

The view regarding the M.g. as a purely Ethiopian composition is not supported by cogent arguments. It is commonly held that the M.g. is of Coptic(-Arabic) origin, at least in its essential features, though the form of the *Vorlage* and its relationship to the M.g. has yet to be established (s. Reckinger 1966; Dobberahn 1997). The time of composition of the M.g. is unknown, but texts for the funeral service – the ancestors of the M.g. – might have been among those composed or translated from Greek in the early, possibly Aksumite, period (cp. Kropp 1999:170ff.; Fiaccadori 2003: 252, n. 34, for the Palestinian background and the relevant connections with the Nubian "Prayer of the Deceased"). At least from the 14th cent. onward the book was enriched with additional material, both indigenous and translated. The commonly known version of the M.g. is clearly linked to both such service books as *Mäṣḥafä ↗qändil* and the Ethiopian *ordo communis* (s. Dobberahn 1997:659–62, 664–67). The *↗Senodos* and the *↗Fətḥa nägäśt* are among the sources for the norms the M.g. sets for the funeral service (cf. Bərhanä Mäsqäl Täsfa Maryam 1963:8).

The oldest extant manuscripts of the M.g., which allow an insight into the early stage of its textual tradition, are mss. BFBS 174 (Cowley 1982, no. 38), dated by Cowley (1972) to the 15th cent., Paris, BN Éth. 80, written in 1508, and Vat. Aeth. 51, dated to the 15th cent. Another important testimony is the 16th-cent. ms. EMML 1958, followed by EMML 2487 and EMML 2791, belonging to the 17th and early 18th cent. respectively. The other manuscripts are from the 18th cent. onwards. Being an indispensable liturgical tool, the M.g. has a very rich manuscript tradition. Therefore, the text of the M.g. differs from one copy to another in both contents and sequence of the parts: the more recent manuscripts present larger versions, as do the Ethiopian printed editions. A critical edition of the M.g. remains a desideratum.

In its current version the M.g. is composed of eight parts (s. Dobberahn 1997:660–72): "the watch over the dead" in the house of the deceased (M.g. 1944, chs. 3–37); absolution prayers for different categories of the dead according to their gender, age and social status (priests, deacons, monks and nuns; lay men and women, boys and girls etc.), corresponding broadly to the Coptic ritual (chs. 38–99); the readings for the funeral procession to the graveyard, with seven stops, *məʿəraf* (lit. 'stations', chs. 100–27; the eighth is in the church, the ninth at the grave); the funeral mass (chs. 128–39); the burial (chs. 140–52); the commemorations (chs. 152–82); the memorial service (**ክሥተት**, *kəśtät*; chs. 183–91); additional admonitions, didactic stories (chs. 192–200).

Extended biblical quotations are the substantial elements of the M.g. Purely Ethiopian elements may be represented by the homily attributed to *abba* ↗Sälama "the Translator" (d. ca. 1386) describing the Last Judgement (M.g. 1944, ch. 197; s. also Dobberahn 1997); a homily on the necessity of prayer; a homily for priests and deacons, attributed to ↗Jacob of Serug (M.g. 1944, ch. 35); the seven "blessings" (**ቡራኬ**, *burake*) attributed either to ↗Samuʾel of Kalamun, 7th cent., or to ↗Samuʾel of Waldəbba, who lived at the time of *aṣe* Dawit II (M.g. 1944, ch. 148; cp. GuiSLett 28f.). The Ethiopian rite also added "the greeting of the altar by the deceased", with a corresponding prayer (M.g. 1944, chs. 1 [*Təʾəzaz*] and 128) and more incense offerings.

Some pieces of the M.g. belong certainly to a later period: regulations for the faithful which should be observed, funeral prayers, a discourse attributed to St. ↗Athanasius, the prayer ↗*Mängädä sämay*. The ↗*Ləfafä ṣədəq* also is sometimes appended to the M.g. It is possible that some additions were introduced during the struggle with the ↗Jesuits in the 17th cent.

The ms. Vat. Aeth. 51 deserves special attention, for it is one of the oldest known testimonies of the M.g., significantly styled as "the book that came from Jerusalem" (fol. 24–30; cp. Guidi 1910:639); the manuscript also contains three formulae of absolution that have been in wide use ever since (fol. 33v–35v).

One of the major features of the Ethiopian funeral rite is the high number of *täzkar*. Whereas the Coptic rite has three commemoration days (on the 3rd day, after six months and after one year), accordingly, the Ethiopian rite has commemorative offices on the 3rd, 7th, 12th, 13th, 40th, 60th and 80th days, as well as in the sixth month after the death and on the anniversary. In the M.g. both the value of absolution and the power of the prayer for the deceased are stressed, while the high number and great importance of *täzkar* are linked to the primary religious belief that the dead have to be sustained by the living.

↗Funeral

Tedros Abraha

Geography

↗Ethiopia (1,106,000 km²) and ↗Eritrea (ca. 124,000 km² including the ↗Dahlak and the Haniš islands) occupy the central and northern highlands of the ↗Horn of Africa (Ethio-Eritrean plateau); ↗Somalia (ca. 638,000 km²) and ↗Djibouti (ca. 23,000 km²) occupy its eastern and southern lowlands. The peninsula stretches on 16° N and from 32° E to 52° E. To the west, mountainous ranges tower over the Nile-Sudan basin and to the south, the Kenyan Rift. To the east, in the Indian Ocean, the Horn is penetrated by the Gulf of Aden, linked with the ↗Red Sea by the ↗Bāb al-mandab straits.

The steep coasts of Eritrea, Djibouti and Somalia originated when they separated from the Arabic peninsula during the Cenozoic era. The north-south fractures of the East-African

Rift (↗Rift Valley) and the east-west faults of the Aden graben meet at the western end of the Gulf of Djibouti (↗Tağūra), an area which saw the birth of the Ardoukoba volcano in 1978. The constant tectonic instability in the region creates volcanic activity, numerous thermal springs and earthquakes (such as Karäkore in 1953). This expanse of intersecting faults in the centre of the Horn of Africa has isolated the highlands, separating them from the Red Sea and the Indian Ocean by a glacis of torrid, arid and desert lowlands.

In the north-east the vast arid tectonic depression of the ᶜAfar Triangle (↗ᶜAfar Depression) reaches a depth of -115 m B.S.L. at Lake Asälla in the north and -153 m B.S.L. at Lake Assal in Djibouti. Thick layers of marine and lacustrine sediments as well as lava, scoria and travertines discharged by active volcanoes (Ertaᶜale and Fäntale) have accumulated there. It was in this area that remains of ↗*Australopithecus afarensis* and other important palaeoanthropological findings were discovered. This region (which is considered an ocean in formation) is currently cut off from the Red Sea in the east by a mountainous horst (the Danakil Alps) formed from Mesozoic sedimentary rock covered by recent lavas culminating at Mount Mūsā ᶜAlī at an altitude of 2,051 m A.S.L. in Djibouti. The area west of the ᶜAfar Triangle is overlooked by the impressive cliff on the edge of the Eritrea, ↗Təgray, ↗Wällo and ↗Šäwa highlands with a difference in altitude of ca. 2,000 m. Its southern base is limited by the steep rim of the Harär and Arsi plateaus and mountains. In the south-west, at the latitude of Addis Abäba, the depression becomes a north-south rift, 10–15 km wide, at an altitude of 1,200 to 1,500 m which extends into Kenya.

The Rift and the ᶜAfar Triangle separate two regions of highlands with differing areas and topographies. In the west, the solid plateaus between 2,000 and 2,500 m A.S.L. consisting of thick Cenozoic basaltic traps are topped by huge ancient volcanic cones that have been partially eroded (Ras Dašän 4,620 m, Abunä Yosef 4,190 m, Guna 4,231 m, Çoqqe 4,154 m and Abuyä meda 4,000 m).

North from Addis Abäba, the highlands belong to the basin of the Blue ↗Nile (↗Abbay) and its tributaries (↗Täkkäze, ↗Bašəlo, catchment area 198,508 km², i.e. 20% of Ethiopia). The Abbay, (spanning 800 km in Ethiopia) after it crosses Lake ↗Ṭana (3,600 km² at an altitude of 1,840 m) and its tributaries (↗Märäb, Täkkäze, Bašəlo and ↗Didessa), runs through a series of deep gorges. Along with the ↗Baro river further south, it collects water, over 20 % of which comes from Ethiopian territory, channelling it to the Mediterranean. In ↗Wälläga in the south and the Abbay canyon, the Precambrian basement is still visible, and partially covered with calcareous and sandstone strata dating back to the inferior Mesozoic and Paleozoic eras. In Təgray, Anṭalo limestone and ᶜAddigrat sandstone have formed two massive table-top mountains (↗*Amba*), ᶜAdwa and Däbrä Damo. In Eritrea the basement is dotted with sandstone and limestone patches, and slopes gently towards the ↗Gaš and ↗Barka depression before rising again above the Red Sea (↗Amba Soyra 3,031 m).

East of the Rift, the edge of the ↗Sidamo and ↗Arsi plateaus, and south of the ᶜAfar Triangle, the rim of the ↗Harär mountains is lined with ancient volcanoes that reach the same altitudes as those in the west (Bada 4,133 m, Qäča 4,160 m and Çəlalo 4,036 m A.S.L.). Limestone and sandstone tables (Gara Mulläta 3,381 m) and chaotic rocky terrains which extend into Somaliland (2,408 m at Mount Buuraha) are still visible east and south of Harär city. In Bale the volcanic horst of Mount Batu (4,307 m) towers above the karst of the Sof Omar caves to the east. The Mesozoic and Cenozoic plateaus and plains of the Ogaden slope gently towards the Benaadir in Somalia. The ↗Wabi Šäbälle (1,340 km long in Ethiopia), its tributaries (Fafan and Erär) and the Juba river – formed by the ↗Ganaalee, Dawa and ↗Weyb – collect the waters of the eastern highlands (25 % of which are on Ethiopian territory, catchment area 205,407 km²) and carry them to the Indian Ocean.

In the Rift, endorheism prevails, and the south-central region contains a number of volcanic lakes (↗Zʷay, ↗Šala, ↗Abyata, ↗Langano and ↗Awasa). In the ᶜAfar Triangle, the ↗Awaš river (1,200 km, catchment area 113,709 km²) collects approximately 10 % of its water from Ethiopian territory before disappearing into Lake Abbe. The ↗Omo river (760 km) – formed by the ↗Gibe rivers that originate from the volcanic mountains in ↗Guduru, ↗Mäçça and ↗Ǧimma – and its main tributary, the ↗Goğäb, cuts deeply into the ↗Wälaytta and ↗Käfa plateaus and curves around Mount Guge (4,203 m) to the west before it flows into Lake ↗Turkana near the Kenyan border (catchment area 77,205 km², i.e. 6 % of Ethiopia). The Bilate river, which originates in the Gurage mountains (3,721 m), runs into Lake ↗Abbayya. After the rains, the water levels of these streams rise, irrigating and fertilizing the lowlands of Ogaden, Somalia, Sudan and Egypt.

Acting as a water reservoir for north-east Africa, the Ethio-Eritrean highlands enjoy abundant rains that predominantly fall from June to September, with a short rainy season from February to March. This orographical rainfall, which increases with altitude, is more regular and intense in the south-west (Daniel 1977). For 7 to 9 months there are more than 2 m of rainfall in Wälläga, Käfa, Sidamo and Arsi, and more than 2.5 m for 10 to 12 months in ↗Illubabor. In Šäwa, ↗Goǧǧam, Wällo and ↗Gondär there is 0.8–1.2 m of rainfall for four to six months; Tәgray and Eritrea receive approximately 0.6 m, mainly in summer. In the north and east, in the "Croissant aride" (Gallais 1989), rainfall is not only less abundant, but more irregular and does not refill phreatic ground water supplies that are needed for plant life. During the rains, overflowing rivers become brown, and the sticky mud slows the speed at which the water flows. Hydromorphic black cotton soil is difficult to till and turns into dust during the dry season. Farmers favour red soil, whether volcanic or sedimentary, in which water percolates more freely.

Temperatures decrease with altitude: frost is not unknown between 1,800 and 2,800 m, while above 2,800 m frequent night frost makes coffee growing impracticable. The ↗ecological zones at various altitudes are: ↗*qʷälla*, a lower climatic tier up to 1,800 m A.S.L. that is hot (average temperature 20° C), dry and prone to ↗malaria and *trypanosomiasis* (sleeping sickness); ↗*däga*, an upper tier that is wet and cold (above 2,400 m A.S.L., average temperature 14–16° C); and ↗*wäyna däga*, a middle tier (between 1,800 and 2,400 m A.S.L.) with milder temperatures. In the south, because the middle tier is less conspicuous, the generally admitted distinction between the three tiers is not recognized as easily as in the north. The 30–50 % variations in the total rainfall should be attributed to the varying exposures to the humid winds from the Sudanese depression. While it is easy to describe the vegetal species of the *qʷälla* (prairies, bush land with acacias and thorn trees), it is more difficult to imagine the "primeval" flora of the highlands when early human occupation began there. The remaining patches of "primeval" forest that were cleared by cereal cultivators in ancient times have been partly replaced by eucalyptus plantations (Gascon 1998). In the north and east, the remaining forest was replaced by coniferous trees (*zәgba* and *ṭәd*), and in the South and West by broadleaf trees (sycamores, olive-trees, "willows") and bamboo forests on the Sudanese side. The slopes above an altitude of 2,800 m are home to ↗*koso* trees; tree-like heather, *asta* (*Erica arborea*), grows on elevations above 3,000 m, and at ca. 4,000 m afro-alpine prairie dominates (↗Climate).

In the highlands, ↗famines are regular, often worsened by ↗epidemics and wars. Nevertheless, since antiquity the north has seen the birth of an agrarian civilisation based upon rain-fed cereal cultivation with ox-drawn ploughs. Between Addis Abäba and Asmära open fields and grouped settlements prevail. To the south-west and east, there remains a stronghold of intensive horticulture with digging-sticks where ↗*әnsät* and ↗coffee are grown (↗Agriculture). These regions have notable ↗population density. As a result, there is continuous competition for arable land which prompts the clearing of ↗forests, the last reserves of wild fauna land. In the north and in the south, in spite of frost risks above 3,000 m A.S.L., ↗barley fields gain ground to the detriment of heatherland and of the alpine pastures for sheep. Since its acclimatization, the ↗eucalyptus has, among other consequences, permitted and sustained the expansion of towns.

Despite many obstacles (canyons, mountains, rains, floods) the highlands have been crossed by caravan routes, linking the important markets on the periphery (e.g., ↗Bati in Wällo, ↗Alәyyu Amba in Šäwa) to the coasts. In order to acquire weapons, ↗Mәnilәk II, in 1894, launched the building of a ↗railway. Finalized in 1917, it connects Addis Abäba and Djibouti via ↗Dәrre Dawa and the Awaš valley. From 1935/36 to 1941, in order to secure their conquest, the Italians equipped Eritrea and Ethiopia with a road network radiating from the capital that cleared the major obstacles of the relief. Italian road construction linked Addis Abäba to Asmära; other roads reached Ǧimma, Läqämte and Mogadishu through Dәrre Dawa and Harär. Until the 1960s the Italian road system had been maintained with difficulty and extended to the south-western coffee regions and to the southern Lake region. Determined to secure the Ethiopian unity, the *Därg* sought to open the countryside by improving the main roads. Since 1991 the government has asphalted the major trunk roads, developed the radial links and established relations with Sudan, Djibouti, Somaliland and Kenya.

Geography, historical

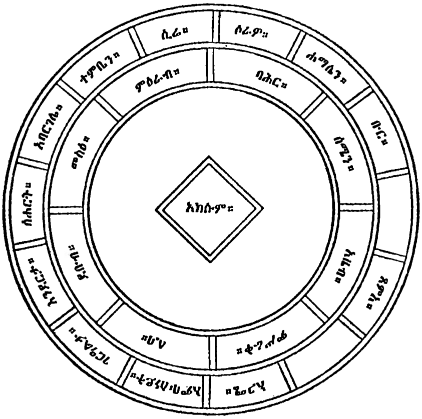
In its broader sense, historical G. is the study of the changes – induced by human presence, whether settlements, different forms of land tenure or exploitation of natural resources – in environment and landscape. Originally, this historical science, closely associated with ↗cartography, was limited to the reconstruction of political and ↗administrative divisions or to the illustration of battle fields and courses. Nowadays the commonly accepted definition of historical G. implies the general study of the influence of economic life, social relationships, politics and culture upon the environment, if possible with the help of statistical surveys, graphs and maps. From this, one must distinguish historical ↗topography – a similar but narrower discipline mainly focusing on place-names, their etymologies and their transformations or substitutions in the course of time, as well as their correspondence to historical sites, in order to detect linguistic stratification within a certain territory.

Within the general African context, an inquiry into historical G. is particularly difficult due to the lack of sources. In contrast, Ethiopian settlements have left sufficient linguistic and material evidence harking back to different epochs. Thus, the studies in historical G. must resort to different disciplines and scientific operations: interpretation of archaeological reports, analysis of narrative or pictorial representations of landscape (even if only ideal), examination of written sources (documentary, annalistic and hagiographic) and linguistic inquiry into modern languages, with special attention paid to the physical and ergologic vocabulary.

In the literary tradition of Christian Ethiopia, the representation of the earthly G. strictly depends upon biblical narratives and the accompanying descriptions of eschatological places. In the Ethiopic *Book of the Mysteries of Heaven and Earth* (*Mäṣḥafä ↗məśtirä sämay wämədr*), the apocryphal apocalypse and exegetical treaty on *Genesis* written by Bäḫaylä Mikaʾel during the reign of *aṣe* ᶜAmdä Ṣəyon (1314–44), the section devoted to the history of the "peoples of the flood" (*säbʾa ayḫ*) relates the names of the earthly peoples divided into the three big "ethno-linguistic" families descending from Noah's sons. While amplifying and interpreting the data of the biblical tradition, in his list of the sons of Ḥam, after ↗Egypt and ↗Nubia, Bäḫaylä Mikaʾel counts names of peoples and regions of central and northern Ethiopia: Ḥabäsi "namely Təgray", Zagʷa, Ḥazo, Dänkelən, Sewa, Angot, Mänbärta, Endərta, Bəgwəna, Liban, Sire, Läggo, Wäqärt. The geographic horizon of Bäḫaylä Mikaʾel is limited in the south by the Liba, living west of the Zärawiyan and the "mountains of fire", and by the Bali, dwelling east of the Yafet, with women at the head of a monarchy. Several manuscripts, mostly historical and chronographical miscellanies, contain illustrations summarizing the geographical knowledge of Ethiopian scholars. The scheme reflects the plan of a church, with three circles inserted one into another, and in the centre, in the place of the ↗*mäqdäs*, a square with the word *aksum*. The space between the innermost circle and the median one is divided into eight sectors containing the writings (clockwise from top) *məʿərab*, *baḥər*, *sämen*, *azeb*, *məśraq*, *liba*, *däbub* and *mäsəʿ*; the space between the median circle and the outermost one is divided into twelve sectors with the names (clockwise from top): *särawe*, *ḥamasen*, *bur*, *ṣämə*ʾ, *agame*, *anba sännäyat*, *gärʿalta*, *əndärta*, *saḥart*(*a*), *abärgälle*, *tä*(*m*)*ben* and *šire*. This representation has some empirical grounds, but chiefly aimed at depicting Ethiopia as the Holy Land; its symbolic structure is based on the equivalence between ↗Aksum, whose cathedral houses the Tablets of the Law, and the *mäqdäs* of a church, the central room where the ↗*tabot* is kept.

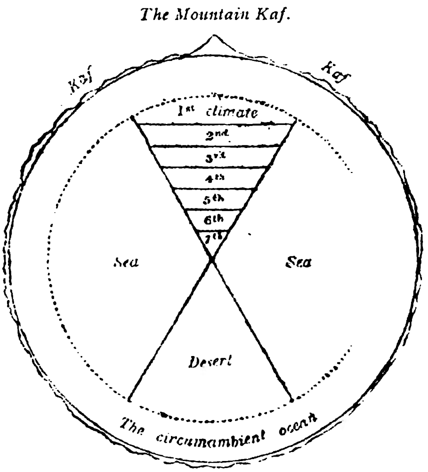
According to an authoritative reconstruction based on linguistic palaeontology, the Ethiopian highlands were originally populated as a consequence of the ↗desertification of the Sahara region, some time around the 8th millennium B.C. During that period the ↗Afroasiatic linguistic unit split into several branches, such as Berber, Chadic, Egyptian, Semitic and Cushitic (including Beǧa and Omotic). Of these, the Cushitic branch spread to the south-east and gave birth to settlements over a wide territory, including north-eastern Sudan, the Ethio-Eritrean highlands and the Somali plateau, where contacts with the African peoples of the Nilo-Saharan phylum that were already in the region were presumably established. From the 4th millennium B.C., new relationships between Ethiopia and the ↗Nile valley became possible due to the growing trade circuit that connected Egypt to the Ethio-Sudanese lowlands, the Ethio-Eritrean highlands and the western coast of the Red Sea. Egyptian geographical documents dating back to the 18th dynasty (about 1450 B.C.) connect the ↗Punt Land to WḎLṮ harbour, possibly the site in Eritrea where in Hellenistic times the port of ↗Adulis was built.

In the course of a long process, stretching for over a thousand years, the culture unit of the Cushites, originally keepers of livestock, underwent a considerable transformation with the development of new forms of agriculture, probably not least because of a steady cultural relationship with the Arabian peninsula. In fact, the existence of a coastal Afro-Arabian cultural complex beginning in the first half of the 2nd millennium B.C. has been proved by recent archaeological findings (e.g., Fattovich 1997). These brought to light important cultural features – as in the case of the ↗ʿOna culture in Eritrea – connecting the Arabian Tihāma to the Təgrayan Plateau in Eritrea and the Eritrean-Sudanese lowlands. Moreover, an inquiry into the morphology of the North-Ethiopic languages, e.g. Təgre, reveals the existence of a Semitic stratum more ancient than Sabaic (↗Epigraphic South Arabian), and allows one to conclude that the South Arabian influence, tracing back to the 8th–7th cent. B.C., involved a territory already connected to the Arabian peninsula as a result of more ancient economic and cultural exchanges.



Traditional map of Ethiopian provinces, with Aksum as centre; ms. Orient Rüpp. Ib, fol. 201, replotted; from Goldschmidt 1897:103

After a close examination of archaeological, epigraphic and linguistic evidence one can exclude the hypothesis that urban civilization was introduced into Ethiopia by the Sabaean immigrants. The South-Arabian settlements known up to now seem to belong to the typology of "villas" or "farms", equipped with devices for water-supply, namely basins for gathering and preserving seasonal rainwater. Even in ↗Yəḥa, where a dynasty of political leaders most probably ruled (maybe the *mukarrib* of ↗DʿMT, who also used the royal title), the ruins of civil buildings do not exceed the dimensions and the shape of a rural settlement. The Sabaean presence in Ethiopia has left clear archaeological and



Traditional representation of the world, Somali; from Burton 1894, vol. 1, 25

linguistic evidence for water regulation: e.g., the monumental ruins of Safra, on the ↗Qoḥayto plateau, a big reservoir delimited by a squared-stones dam for the use of the dwellings scattered around. The place-name Qoḥayto itself has been etymologically interpreted in light of the South Arab. root QLḤ, 'raised water-channel', and the reconstructed form *Qolaḥ-(t)a, inspiring the Gr. ↗Coloë (Κολόη) as a phonetic adaptation of the Semitic name. Thus, the Sabaean legacy in Ethiopia apparently consists of the use of advanced agricultural techniques for more efficient exploitation of water resources and food storage. However, the period of the Sabaean presence marked the change from "pastoral" to "agricultural" landscape: skilfully carved stone buildings, waterworks, terracing and land divisions are the material results of the short, yet intense, Sabaean activity on Ethiopian soil. The epigraphic evidence suggests the existence of two main strata or groups in Sabaeo-Ethiopian society ("reds" and "blacks"), but the absence of defensive structures or traces of destruction suggests that the coexistence between *emigrés* and local people was rather peaceful.

A complex urban civilization appeared in Ethiopia during the intermediate period between the end of the Sabaean presence (8th–7th cent. B.C.) and the establishment of the economic and political leadership of Aksum (1st cent. A.D.). The most ancient (and for centuries the only) Ethiopian town was Adulis, the Eritrean harbour whose monumental ruins can be dated back at least to the 4th cent. B.C. The historical and cultural setting for the emergence of this advanced urban centre was the trading system promoted and controlled by the Egyptian dynasty of the Ptolemies (331–23 B.C.), within the framework of the trade route connecting Alexandria with the regions overlooking the Red Sea coast. Literary and epigraphic documents (↗*Periplus of the Erythraean Sea* [ed. Casson 1989:51ff.]; ↗Cosmas Indicopleustes's *Christian Topography* II, 51–63 [ed. Wolska-Conus 1968, vol. 1, 360–79]) illustrate the role played by Adulis from the 1st cent. onwards, after the monsoons cycle was "discovered", which enabled long-distance trade between Egypt and the Indian Ocean. In this context, before the introduction of ↗Christianity, the port maintained a strong political autonomy from the bordering powers and claimed sovereignty over the ↗Saḥəl coast.

According to literary traditions (*Liber Axumae* [*Mäṣḥafä ↗Aksum*; ed. CRAxum] §1: *Zähagär wägäbäzä aksum*), apparently confirmed by modern archaeological surveys, considerable groundworks underlay the construction of the city of Aksum, particularly ↗land drainage, that allowed settlement on the marshy plain at the foot of ↗Betä Giyorgis (3rd–1st cent. B.C.). Following the development of the Aksumite political authority (1st cent. A.D.), the urban civilization spread across the highlands of Eritrea and Təgray. This process has left monumental remains in Aksum and in the areas along the road connecting the city with Adulis, via Coloë, the Qoḥayto plateau, Mäṭära and Toḵonda. The hydrological techniques and intensive cultivation methods, borrowed from the Sabaeans, were further developed thanks to new contacts with Yemen, dating back to at least the 2nd cent. A.D. The agrarian economy of Aksum needed a commercial outlet, a role assumed by the port of Adulis. The agrarian character of the Aksumite economy also accounts for the big "state" expeditions for goods such as gold and slaves to be sent to the "free" port of Adulis and the struggle against what was then left of the ancient Sudanese kingdom of ↗Meroë (ca. 350 A.D.), still a serious rival on the trade route to Egypt.

Beginning with the time of ↗ʿEzana's reign (335/40–365/70), military expeditions, mainly to Eritrea, are documented. Their aim was to secure additional manpower for the regions under the emperor's control (RIÉ 185, 270, 185b, 270b). This form of "resettlement" was necessary to provide sufficient human resources for rationally organized agriculture as well as for large-scale public works, the monumental remains of which can still be seen.

With the change from a *polis* to a territorial state, the face of the empire was increasingly marked by the strong relationship between the interior and the coast as well as between different regions. An essential part in this process was the construction of a road network. The differences in shapes and sizes of private houses indicate that the society was notably stratified as a result of work division. Documentary sources possibly originating from the 6th cent. (*Liber Axumae* documents 3–4; *Golden Gospel of Däbrä Libanos* documents 1–5 [ed. CRDLib]) – even if the available text collections and copies date back to the 15th cent. at the earliest – indicate that, after the Christianization of Aksum, ecclesiastic institutions received control over part of the state land in accordance with a general plan of organization and social control of state territories. The political and social collapse of Aksum in the 7th cent. signified the end of urbanized civilization and loss of the know-how of South Arabian and Alexandrian origin.

Beginning with the 10th cent., a new phase of economic and territorial expansion of the Christian Ethiopian state brought about a technological revival, which culminated in the years of the political leadership of the ↗Zagʷe dynasty. A possible element of continuity between the Aksumite period and the following ages is found in land tenure. In the "legal" documents ascribing themselves to the Zagʷe era (*Liber Axumae*, documents 5–6; *Golden Gospel*, documents 6–8), land is granted by the emperor to his secular or ecclesiastic subjects according to the same practice as before. The architectural accomplishments in ↗Lalibäla bear witness to complex social organization and control over large material and human resources. The rock-hewing reveals advanced building and hydraulic techniques, sometimes originating from ancient traditions, most probably connected to the presence of foreign workers, coming perhaps from Egypt or Yemen.

From the 9th cent. onward, growing influence from the islamicized Arabian peninsula instigated a new development of ancient trade routes connecting the sultanates and the economic centres of the coast with the interior. From the ↗Dahlak islands and ↗Massawa, caravans moved to north Eritrea and east Təgray, bringing ↗Islam to the Bega, Sāho and ᶜAfar. From Zaylaᶜ and the Gulf of Aden a commercial expansion started toward Šäwa and the valleys of the Awaš and Webi, inhabited by the Sidaama. In 283 H. [896/97 A.D.] a sultanate, ruled by the ↗Maḫzūmī dynasty, was founded in eastern Šäwa. At the same time, the Christian state expanded into central Təgray, Wag and Lasta. These regions, already connected to Aksumite civilization, were in the hands of local pro-Zagʷe nobility, whose power was based chiefly on land ownership. The events of the late 13th cent. were the result of this economic, social and cultural competition. In the Christian state, the last Zagʷe rulers were deposed by ↗Yəkunno Amlak in 1270, and the myth of the Solomonic "restoration" was created. In Muslim Šäwa, in 1285, Wālī Asmaᶜ, founder of the ↗Walašmaᶜ dynasty, deposed the last Maḫzūmī and became the first ruler of ↗Ifat.

Through these political and social changes and a long series of conflicts which culminated in the campaigns of ᶜAmdä Ṣəyon and the conquests of Zärᵓa Yaᶜəqob, the Christian state stretched to the Eritrean coast in the north, Bägemdər and Goǧǧam in the west, and Amhara and Šäwa in the south. This expansion was the response to a growing need for new cultivable lands, resulting from the human-caused ecological problems on the one hand, and increasingly high costs of a social structure based on the privileges of leadership on the other. The rapid decrease of soil fertility in the fields forced villages to shift frequently, and the wars of conquest were a political solution. This was the time when the greater part of the northern highlands was deforested (↗Forests), in order to obtain larger areas of cultivable land and to produce wood for building and heating. Literary sources ascribe religious meaning to the process: e.g., in the hagiographic texts, the establishment of a new monastery is often followed by forest destruction, justified by the presence of non-Christian cults within it.

The conquered territories were integrated into the lands controlled by the empire, the nobility (↗*ç̣äwa*) and the ecclesiastic institutions (↗Churches and church administration). A village's common property (Amh. *yäwäl märet*, Tgn. ↗*desa*) formed the basis of the ↗land tenure system, quite possibly in a more ancient form, parental groups shared agrarian and pastoral resources through the annual allotment of the best fields. The notion, if not the institute, of hereditary land (Amh. ↗*rəst*, Tgn. *rəsti*) was probably introduced as early as the Aksumite period. From the Zagʷe period onward, military leaders, who were at the same time tax-collectors and nominal representatives of the emperor's authority over the new territories, received privileges for their services that were valid for both themselves and their sons. A larger part of new territories became crown property (Amh. *yänəguś märet*, Tgn. *mədri nəguś*), and they were often used as temporary grants to individuals, villages or ecclesiastic institutions (Amh. ↗*gʷəlt*, Tgn. *gʷəlti*). The assimilation programme for the subject populations was facilitated by establishing a network of new churches and monasteries, with the relevant privileges (Amh. *yämäsqäl märet*, Tgn. *mədri mäsqäl*) granted both by the emperor and by local political authorities. The population was charged with church maintenance through assigning the priests lands, which were previously in common possession (to be cultivated or rented), or through giving them a definite amount of goods (↗*Rim*).

In the first half of the 16th cent., the military campaigns of ↗Aḥmad b. Ibrāhīm al-Ġāzī and ↗Nūr b. Muǧahid, and the subsequent expansion of the ↗Oromo brought the economic and social system of the Christian state into a critical situation. The toponomastics and the land tenure system underwent a deep change because of the political and military events of this period. Particularly, the landscape was then shaped by the development of small landed property, due to the sedentarization of several Oromo clans. Thus, beside ↗monasteries (that also attracted non-ecclesiastics), large villages or "trade centres" with important markets, and small villages inhabited by farmers (mostly tenants of the surrounding fields), a new, fourth settlement type emerged and spread, i.e. the "open" villages, formed by scattered houses in which the owners of the small land-plots lived. This is typical of the wealthy areas around Lake Ṭana (Bägemdər and Goǧǧam), where in the first half of the 17th cent. the Christian emperors established their new capital. With the foundation of ↗Gondär, the Ethiopian court once again settled in a fixed place, after almost four centuries of "moving capitals". The Gondärine period, largely influenced by the contacts with the European missionaries (1557–1632; ↗Catholicism), saw a drastic development in their building techniques. Among the innovations of the time were stone bridges and two-storey houses (*därb* or *därb bet*), a prerogative of upper classes.

Ethiopia acquired its modern shape largely during the new economic and political phase that began in the second half of the 19th cent., chiefly with the reign of ↗Mənilək II, mainly as a result of conflicts with the European colonial powers (↗Colonialism). During this period, the introduction of technological and institutional innovations accelerated changes in many social spheres, from fire-arms to money, from land reform to scientific medicine. Many aspects of everyday life reflected European models. The Italian occupation changed the landscape of several Eritrean districts: foreign settlers introduced new species for cultivation, such as cotton and fruit-trees. At the same time, Eritrean and Ethiopian towns were re-organized to ensure segregation of local people. The period after ↗World War II was that of wild urbanization. Its consequences were depopulation of a great part of rural areas and the emergence of shanty towns and slums.

Geology and geomorphology

Geology

The geological makeup of Ethiopia is a product of tectonics and accompanying sedimentation and volcanic activities that have been operating since more than 950 million years ago (y.a.). The geological units of Ethiopia are categorised into four age groups: (1) the Precambrian (950–550 million y.a.), (2) the Paleozoic (550–230 million y.a.), (3) the Mesozoic (230–265 million y.a.), (4) the Tertiary to Quaternary (65 million y.a. to the present).

The Precambrian

Precambrian G. is characterised by metamorphic rocks, commonly known as basement rocks. These rocks are exposed in the northern, western and southern parts of the country, covering approximately 17 % of the landmass. The central and eastern parts of the country are covered by a thick succession of Paleozoic to Quaternary sedimentary and volcanic deposits, hence in those areas the metamorphic rocks are only exposed along deeply incised river valleys. Two distinct metamorphic rock types characterize the Precambrian basement rock types; the high-grade and low-grade metamorphic rocks. These rocks can be divided into three complexes; the Lower, Middle and Upper Complex.

The Lower Complex mainly comprises of high grade gneisses, schists, migmatites and minor granulites. This complex is exposed in southern and western Ethiopia.

The Middle Complex is characterised by medium metamorphic grade (amphibolite facies) gneisses and schists. It is exposed in Wadera area of southern Ethiopia.

The Upper Complex is characterised by low-grade meta-volcanic and meta-sedimentary rocks with numerous intrusive rocks. This complex is widely exposed in northern and western Ethiopia and also occurs as North-South trending linear belts sandwiched between higher grade rocks in southern and parts of south-western Ethiopia (Kazmin 1972; Mengesh Mengesh Tefera et.al. 1996). The Upper Complex also contains a few narrow (1 to 3 km across) linear belts of mafic and ultramafic rocks of ophiolitic character which are commonly confined to major shear zones marking the contact between the contrasting lithological units (Seife Mikael Berhe 1990; Tadesse Tarekegn et al. 1999).

Lower and Middle Complex rocks are considered part of the Mozambique Orogenic belt that extends from Mozambique to southern Ethiopia and Uganda (Kazmin 1972). The low grade Upper Complex rocks are stratigraphically and structurally equated to the Pan-African, Arabian-Nubian Shield which extends from Saudi Arabia and Egypt through the Sudan to Ethiopia (Kazmin 1972; Seife Mikael Berhe 1990). Current understanding on the lithological, geochemical, geochronological and tectonic setting of the Precambrian G. of Ethiopia indicates that both the Mozambique Belt and Arabian-Nubian Shield rocks are products of plate tectonic processes similar to those which are operational in Phanerozoic orogenic belts (Seife Mikael Berhe 1990; Tadesse Tarekegn et al. 1999). The process started with the rifting Archaean cratonic mass and subsequent opening of oceanic floor (at ca. 950 million y.a.) and ended with closure of the ocean through subduction, islands arc formation, lateral accretion of the island arcs by continuous compressional stress and final collision of the initially rifted continental mass that occurred ca. 500 million y.a. (Seife Mikael Berhe 1990; Stern 1994). The time span from 950 to 500 million y.a. is termed as Pan-African

(Seife Mikael Berhe 1990) and the orogeny that produced the Precambrian geological framework called East African Orogen to account for similar contemporaneous geological developments in eastern Africa and Arabia (Stern 1994).

The variation in Precambrian rock types and associated structures made it a favourable host for a variety of metallic and non metallic minerals including: gold, silver, zinc, lead, Colombo tantalite, volcanogenic massive sulfide, shear zone hosted multi metallic deposits, gemstones, industrial minerals and dimension stones (Jelence 1966; Solomon Tadesse et al. 2003; Tibabu Mingistu – Hailemichael Fantaw 2003). Of these, only one gold mine, one Colombo-tantalite mine and a number of small-scale stone (marble, granite) quarries are commercially mined.

The Paleozoic

The Paleozoic G. is poorly understood, with the exception of the well documented Permo-Triassic Karoo sediments at the base of the Ogaden Basin in Eastern Ethiopia and presumed Ordovician glacial deposit in northern Ethiopia (Kazmin 1972; Mengesh Tefera et.al. 1996). Because the Paleozoic rocks are overlain by the Mesozoic and Tertiary rocks, their real extent of areal coverage is not known.

The Karoo sediments were deposited in a Karoo rift, which subsequently gave rise to the sea floor spreading and birth of the Indian Ocean. Other occurrences are restricted to localised, North-South elongated basins within the Precambrian terrain. These are all non metamorphosed, mainly clastic sedimentary rocks which unconformably overlie the Precambrian Metamorphic rocks. The Karoo sediments at the base of thick Mesozoic sedimentary rocks in the Ogaden basin are potential source and reservoir rocks for hydrocarbon in the country. An economically important amount of natural gas has been discovered in the Calub area of the Ogaden basin (Mengesh Tefera et al. 1996; Solomon Tadesse et al. 2003; Tibabu Mingistu – Hailemichael Fantaw 2003).

The Mesozoic

The Mesozoic G. is characterised by thick marine and continental sedimentary sequences. Together with lower Tertiary sedimentary rocks (at the easternmost part of the country) it covers over 24% of the country's landmass. These sedimentary rocks are only exposed in areas that the Tertiary volcanic rocks did not cover during eruption and subsequent erosion. The major Mesozoic rock exposures are found in three areas: the Ogaden Basin, Mäqäle Basin and Blue Nile Basin. The base of the Mesozoic sequence is a clastic sedimentary rock unit (Lower Sandstone or Addigrat Sandstone). The Lower/Addigrat Sandstone is covered by thick marine sedimentary rock, which includes alternating layers of limestone, shale, marl and gypsum, that together make up the bulk of the Mesozoic sequence. These marine sediments were deposited as a result of Jurassic Indian Ocean transgression towards the east African landmass (Blanford 1870; Bosellini et al. 1997). Late Mesozoic to early Tertiary uplift of the landmass, due to mantle plume underneath the then united African and Arabian plate, triggered the regression of the Indian Ocean to south-east. During the regression, the upper clastic sedimentary unit (Amba Aradom Formation; Cretaceous-Eocene) was deposited on top of the Jurassic marine sedimentary sequence.

The Mesozoic sedimentary rocks unconformably overlie the Paleozoic sedimentary and the Precambrian metamorphic rocks. The G. of this era is an important source for construction and industrial raw materials. The region potentially hosts source rocks for petroleum and natural gas in Ethiopia.

The Tertiary-Quaternary

The Tertiary-Quaternary G. covers more than 60 % of the country's landmass. It comprises rock types of volcanic products including basaltic to felsic flows, tuffs, ignimbrigtes, rhyolites and scoria together with inter-volcanic, clastic and evaporitic sedimentary rocks, much of which are concentrated along the Main Ethiopian ↗Rift Valley. The Tertiary to Quaternary G. is related to the evolution of the East African rifting system. The voluminous basaltic eruptions that formed the Central Ethiopian Highlands erupted following the Afro-Arabian crustal uplifting and subsequent fracturing as a result of mantle plume ca. 30 to 22 million y.a. (Coulie et al. 1998; Chernet et al. 2003, Wolfenden et al. 2004). Following the eruption of basaltic lava, the three rift systems (the north-west–south-east Red Sea, east–west Gulf of Aden, north-east–south-west Main Ethiopian Rift) developed into a triple junction in the ᶜAfar region ca. 10–13 million y.a. Two of the rift arms (Red Sea, Gulf of Aden) have been active ever since, and caused the separation of Arabian and African plates. The third arm, the Main Ethiopian Rift segment,

although active, has been relatively quiet and is commonly referred to as a failed rift arm in the east African rift system.

The volcanic activity evolved from basaltic eruptions through fault controlled fissures that covered central and south-eastern plateaus of the country to alternating episodes of basaltic and felsic lava flows in restricted centres that resulted in outstanding relief such as the ↗Səmen mountains. Although volcanism began ca. 30 million y.a., the majority of the older eruptions covering the central and south-western Ethiopian plateaus began 30 million y.a. and continued for 4 million years in successive pulses (Courtillot et al. 1997). The volcanic activity migrated towards the rift centre with time (Aronson et al. 1990). At present, there is active volcanism in the northern sector of the Main Ethiopian Rift (s. Wolfenden et al. 2004) as well as in a series of volcanoes in the ↗^{c}Afar Depression. The presence of active volcanism in the Rift Valley is also exemplified by various hot-spot activities (e.g., hot springs and high geothermal gradient). Volcanic rocks also vary in composition from older plateau-forming flood basalt to the younger, rift floor succession, which is characterised by interflows of basalts, ignimbrites and pyroclastic falls. Within the thick volcanic pile, numerous intra-volcanic lacustrine sedimentary deposits (lake deposits) have been identified. These sedimentary rocks are now an important source of coal and oil shale occurrences for the country. Since

ʿAddigrat formation; photo courtesy of Robert Bussert, Technische Universität Berlin

the Main Ethiopian Rift Valley was initiated in the Late Miocene (15 million y.a.), the Depression created an ideal condition for the ponding of lakes and accumulation of sedimentary rocks from the plateaus and volcanic derived clastic materials into the low lands. Thick diatomaceous deposits, potash, soda ash, salt and marly deposits represent the major Quaternary sedimentary rock types of the Rift Valley. These thick sedimentary rock deposits interbedded with volcanic rocks in the Rift Valley reveal that it is one of the most active places on earth where G. is in the making. The geological, sub-surface hot spot activities and structural features of the Rift Valley sequence give it a tremendous potential for industrial minerals such as diatomite, potash and soda ash, as well as geothermal energy that the country has yet to exploit.

Tarekegn Taddesse

Geomorphology

The G. of Ethiopia and Eritrea is conditioned by their position within one of the most active extensional zones in the world (Wolfenden et al. 2004). Eritrea occupies the south-west margin of the ↗Red Sea, a branch of a triple junction area, the origin of three large plates (African, Somalian, Arabian), that has its centre in the ↗ʿAfar (Danakil) Depression. Another branch runs from west to east and originates in the Gulf of ↗Aden. The Red Sea and the Gulf of Aden have almost the same width of ca. 300 km. A narrower branch continues in a north-east–south-west and north–south direction creating the Main Ethiopian Rift, one of the longest tectonic depressions in the world. Its width varies between 50 and 100 km. Close to the Kenyan border, it splits into different minor branches joining Lake ↗Turkana. Lake Turkana occupies the northern part of the Western Rift, another very long tectonic depression that continues into Kenya, Tanzania and Malawi.

The G. of the Rift is quite similar: the centre part is depressed while the margins are uplifted. The uplifted parts are usually occupied by large plateaus (Somalian to the east and Ethiopian to the west). The plateau increases in elevation moving from Eritrea to northern Ethiopia, where it reaches mean elevations of ca. 3,000 m A.S.L. To the west (Sudan) and to the east (Somalia) the plateau decreases progressively down to large plains located below 500 m A.S.L. The presence of inselbergs, corresponding with harder rocks, interrupts the continuity of the plain, generating a landscape typical of Sudan (e.g., Kassala, Baro-Akobo area) and Somalia (Buur Region). Two main escarpments characterise the transition between the plateau and the depressions. These escarpments are usually subdivided by a series of minor escarpments, also with opposite down-throw, associated with a staircase of faults, sometimes over 20 km wide. The tectonic and the seismic movements along these lines are responsible for the activation of huge landslides, sometimes many kilometres long and wide and hundreds of metres thick.

The depressions in the Red Sea and Gulf of Aden are occupied by sea branches that are expected to enlarge and become oceans. Approaching the triple junction, the Red Sea and the Gulf of Aden become narrower and shallower until they reach the Strait of ↗Bāb al-mandab. To the north of ↗Massawa and to the east of Djibouti, the narrowing of the sea branches is compensated by the increase in width of the emerged lowlands. These consist of hilly terrain with large plains and isolated ridges and hills (e.g., Danakil Alps) but also with depressions located up to 110 m B.S.L. (Dolol-Asale district). There are also large lakes (↗Asälla, Afḍera, Abhe etc.) and a series of depressions with hyper-alkaline conditions and salt precipitation (Gasse — Rognon 1980). Diffusely preserved in this area are the oldest sediments in the world that bear ↗hominids (*Australopithecus*, *Homo erectus* and *Homo habilis*).

The Rift floor increases in elevation southward up to ca. 1,700 m A.S.L. The central part of the Rift, is occupied by a series of lakes: Turkana, ↗Awassa, ↗Langano, ↗Šalla, ↗Abyata, ↗Zʷay, ↗Abaya, ↗Čamo, Ç̣äw Baḥər etc. Some of these occupy deep tectonic depressions (Turkana, Abaya), but others have been created by the collapse or the deformations associated with large calderas (e.g., Šalla, Langano, Abyata) or by the damming of the valley by lava flows (i.e. Zʷay, ↗Qoqa; Le Tordu et al. 1999). The latter process also generated the larger Ethiopian lake outside the ↗Rift valley: Lake Ṭana. A series of large volcanoes rise above the plateaus (i.e. Mt Bada 4,139 m; Mt Batu 4,307 m; Mt Kaka 4,180 m; Mt Guge 4,200 m; Mt Gurage 3,721 m) or the Rift floor (e.g., Mt Alutu, Mt Zəqʷala). Ethiopia and, to a lesser extent, Eritrea, have plenty of smaller volcanoes, from strato-volcanoes, domes and calderas to small craters and cones, from ca. 4

The valley of the Wärʿi, traditional border between Tämben (here: Qʷälla Tämben, with Dəggəʿa Tämben mountains in the background) and ʿAdwa *awrağğa* (in the foreground) photo 2005, courtesy of Wolbert Smidt million years old to very recent ones (Woldegabriel et al. 1980). The recent activity is recognizable because of the fresh morphology and the scarce vegetation. Some of the oldest volcanoes have eroded down to skeleton shapes with only the necks below the old craters rising above the plateau (as, e.g., in the Däbrä Marqos, ᶜAdwa and Aksum areas).

The volcanic products of lava flows, ignimbrites and pyroclastic deposits occupy large areas. In the south-eastern part of the country the longest lava flow in the world is documented: the lava entered some major valley tributaries of the River Juba (↗Ganaalee) and continued to flow for over 400km almost reaching the Indian Ocean (Abdirahim et al. 1993). Nowadays the side of the old valleys has been eroded and deepened, the original valley bottom forming a ridge. However, the largest volcanic products came from fissural activity in the Miocene and Early Pliocene eras and generated the Ethiopian Traps, one of the largest basalt lava fields in the world. Earlier acid eruptions are evident from the immense ignimbrite fields. Lava fields and ignimbrites, more than 500m thick in places, occupy large parts of the west and the eastern plateau, and generated its very flat morphology. At the same time, a series of lava sheets (sills) intruded inside the basement and the sedimentary cover. The following dissection of the plateau by river erosion created a series of cliffs that correspond with the harder rocks (basalts and limestones) and flat surfaces (structural benches) over the softer marly terrain. This is the origin of the ↗*amba* landscape, typical of the Ethiopian highlands.

The smaller-scale morphology in the region is influenced by local factors and by their interaction with the dynamics induced by the Quaternary climatic changes. During the cold periods the higher mountains were glaciated, from ca. 3,200 m A.S.L. up (Kaser — Osmaston 2002). During Interglacials these regions were covered by a thick tropical forest to the south, alpine forest in the highland and dry-monsoonal forest to steppe in the lowlands. The Red Sea rose and deposited marine sediments inland from the present day coastline. During the glacial times the sea lowered again and rivers entered the now submerged part of the continental platform. During the last glacial maximum, and possibly also during previous glaciations, the area underwent severe dryness and the whole region was affected by widespread denudation processes that generated large pediments and alluvial fans. The larger ones are located at the feet of the main escarpments, in the Danakil lowlands and along the coast of the Red Sea, north of Massawa. Huge alluvial fan deposition also occurred out of the Rift, in the western lowland, where the rivers dissecting the plateau enter the Nile valley.

In the Rift, during the beginning of the Last Glaciation (80-40 thousand y.a.), severe dryness led to the widespread deposition of aeolian deposits. ↗Salt marshes and hypersaline lakes increased in the lowlands but precipitation of gypsum is documented also in the lake regions (Coltorti et al. 2002). However, the most common feature of this area was the rising and lowering of the lake levels that run parallel to the retreat and advance of the coastline. During the Interstadials (40–30 thousand y.a.) of the last glaciation, as well as at the beginning of the Holocene, a Megalake (Groove – Street 1975; Le Tordu et al. 1999) occupied the area between Qoqa and possibly Awasa, with Zʷay, Abyata, Šalla and Langano lakes joined together.

The investigations of the mollusc fauna and pollens found in lake cores constitute some of the most complete records of climatic and hydrological changes in Northern Africa (Lamb et al. 2000). These large basins began shrinking ca. 5,000 y.a. and the process is still active. At the beginning of the Holocene, along the coastline of the Red Sea, the corals kept pace with the rising sea level creating a continuous coral reef. Almost the whole country was covered with a dense forest and river incision was the main process at work. Travertines were deposited that corresponded to springs (Bard et al. 2000). A major change in these processes came with the arrival of the first agricultural and pastoral activities in the Neolithic and Eneolithic, possibly entering the country from the Nile Valley. A series of plants (*tef*, *ənsät*, etc.) were domesticated along the shores of the Ethiopian lakes of the Rift Valley. Since 6 million years, the progressive deforestation interrupted the travertine deposition and the incision of many rivers. This was due to the increased sediment loads coming from the erosion of the slopes that had been ploughed bare (Bard et al. 2000).

The deforestation (↗Environment) increased during the following millennia, parallel to the increase in population. This process was stronger in the northern most densely settled area. Many valleys were filled with sediments and the slopes, progressively deprived of natural fertiliser, were affected by increased soil erosion. Thin soil layers discovered inside the valley filling suggest that, at least in the Təgray plateau, this process was interrupted at the fall of the Aksumite kingdom (Bard et al. 2000). Today, with the increased population, these processes are even more widespread (Nyssen et al. 2004). In the highlands only a few pockets of the original forest, apart from the emperor's hunting reserve, Männagäša, survive in the less accessible areas. Along the very steep slopes, and inside church grounds, monasteries and cemeteries, huge figs, sycamores, podocarpus, junipers, acacias and olive trees constitute the relicts of the original forest, but their capacity to prevent soil erosion is extremely limited. The deforestation and the associated soil erosion is now at work along the flanks of the plateau as well as in the more depressed parts of the Rift Valley where, in the past, human expansion was blocked by the major diseases (malaria, yellow fever, tse-tse fly, etc.). Large areas (e.g., Ṭana-Bäläs) have been deforested and occupied by thoas who were forced to resettle during the *Därg* period. However, some successful interventions of re-forestation over large areas have now been undertaken in the northern region of the country, on the most bare and non-productive lands.

Mauro Coltorti

George of Lydda

Cult and Hagiography of St. George

The first information about St. G. (ጊዮርጊስ, Giyorgis), one of the most famous saints in both Eastern and Western Christian traditions, is given by Theodosios Periegetes (ca. 530 A.D.), who reports about the veneration of G.'s tomb in Lydda (Diospolis, Palestine). This was confirmed by the itinerary under the name of Antoninus of Piacenza (ca. 570 A.D.): a basilica was built on that tomb and dedicated to G., whose remains were believed to lie there. This basilica is considered by some scholars to belong to the age of Constantine the Great; the Greek ms. 954 in the National Library of Vienna containing the legendary *passio* of G. is dated to the beginning of the 5th cent. (s. Balboni 1965:512).

Among different versions of the Vita of G., the one in ms. Vat. Gr. 1660 (916 A.D.) had a large diffusion and was also translated into Arabic, hence possibly into Gəʿəz, in 1487/88 (GuiSLett 64). A shorter version of the Vita is included in the ↗*Sənkəssar* on 23 *Miyazya* (BudSaint 813f.; ColSyn XII, 563–69). It states that G. was born in Cappadocia (present-day central Turkey). At the age of 20, he went to king Dadyanus, "emperor of Persia" (Doḏiyanōs, Dacianus/Dacian in other traditions), to take over the military office of his father. But, having realised that the King was a worshiper of idols, G. decided to free his own slaves and give away his riches to the poor. Having done that, he professed to be a Christian himself and refused to worship the idols. He survived a murder attempt by poison from the magician Athanasius, who in turn also embraced Christianity and suffered martyrdom. G. was cut to pieces with a saw, boiled in tar and squeezed with a press. He died three times and on every occasion was raised up to life by Christ. Finally, he was beheaded and is said to have been received into the Kingdom of Heaven. His body was buried in Lydda by one of his slaves and a church was built above his tomb, where miracles were to happen. The story of the young girl who was freed by G. from a dragon seems to have originated at the time of the Crusades. Some scholars consider 284 A.D. to be the year of the Saint's martyrdom, whilst others date it much earlier: 249–51 A.D. Still, "others, identifying Dacian with Diocletian, move it to 303" (Balboni 1965:516). The last hypothesis seems to be the most plausible.

The beginnings of the veneration of G. in Ethiopia may date to Aksumite times; in later times the Saint was always popular in the country. Apart from the annual feast on 23 *Miyazya*, as in the cases of only a few of the most venerated saints, G. is honoured by the monthly commemoration on the 23th day. Many churches are dedicated to St. G., among them such famous ones as Betä Giyorgis, Lalibäla and Bilbola Giyorgis in Lasta (Bianchi Barriviera 1963:53–61, 74–77). St. G. Cathedral in Addis Abäba (↗Gännätä Ṣəge Giyorgis) was built in 1896 to commemorate the victory in the battle of ↗ᶜAdwa of the same year. In fact, the battle took place on 23 *Yäkkatit* (1 March, 1896), that is on the day of the monthly commemoration of G.; and, according to tradition, was won "through the power of the Lord and the aid of George, who appeared to the Italians in the guise of a giant riding a white horse" (Raineri 1998:99). G. is frequently included in the traditional depiction of the battle of ᶜAdwa (e.g., Girma Fisseha – Raunig 1985, no. 38).

The book of the Acts of G., very common in both manuscript and printed editions, which is read during the feast of the Saint (23 *Miyazya*), usually includes the following parts: 1) the homily (↗*Dərsan*) on the Saint ascribed to ↗Theodotos of Ancyra; 2) the Vita of G., attributed to his servant Səqraṭəs (both translated into Gəᶜəz from Arabic in the mid-15th- beginning of the 16th cent.); 3) a discourse called the *Book of Admiration* (መጽሐፈ፡ አንክሮ, *Mäṣḥafä ankəro*), an anonymous story about G.'s birth; 4) an anonymous homily called *Mäṣḥafä* ↗*aḫbəro*, commemorating G.'s and the Virgin Mary's bodies' translation (on 16 *Näḥase*); 5) Miracles (↗*Täʾammər*) of G.: there are 12 canonical miracles, but their whole number amounts to 80 (e.g., in ms. BritLib Orient. 716; s. Arras 1953), compiled in at least two stages – in the first quarter and end of the 15th cent.; 6); the story about the Virgin Mary healing G. during his martyrdom, found in the ↗*Täʾammərä Maryam* (s. Colin 2004:115ff.); 7) ↗*Mälkəʾ*, ↗*sälam* chants in honour of G. (Chaîne 1913), also included into the missal (↗*Qəddase*); prayers and supplications to G. are found in ↗magic scrolls.

Osvaldo Raineri

Iconography of St. George in Ethiopia

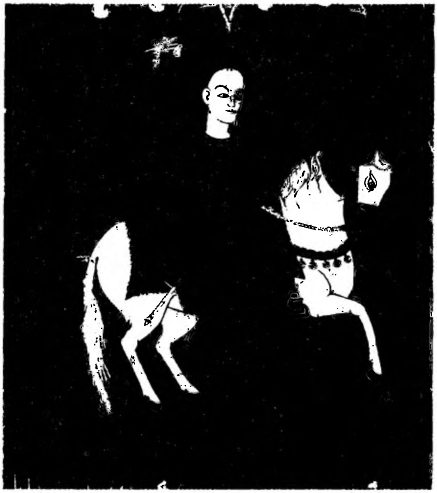
Although ↗Abū Ṣaliḥ mentions an image of G. in about 1200 in Ethiopia, the oldest presently known representations of him date to the end of the 13th cent. (some century-older anonymous ↗equestrian saints in the churches ↗Yəmräḥannä Krəstos, Lasta, and Betä Maryam, Lalibäla may very well refer to him). The 13th-cent. representations of G., on the murals in the churches of ↗Gännätä Maryam and ↗Ǝmäkina Mädḫane ᶜAläm near Lalibäla and ↗Waša Mikaᶜel, near Gašena (Wällo), show the Saint performing different miracles: delivering deacon George (i.e. the "youth of Mytilene") to his mother; getting a beam from the poor widow's hut to sprout leaves; punishing Euchius (the destroyer of G.'s church). Thematically similar wall-paintings are preserved in the churches of ↗Gärᶜalta dated to the 14th and 15th cent.: Mikaᶜel Harägwa, Abba

Danəʾel and Maryam of ↗Qorqor, and ↗Däbrä Ṣəyon (in the latter, G. is depicted killing a snake). One of the oldest miniatures of G., dated to 1382-88, decorates the ↗*Gädlä samaʿətat* executed in Däbrä Ḥamlo monastery near Aksum (EMML 2514, fol. 157v) and shows him as a mounted warrior armed with a spear. This type also appears in the earliest paintings on wood, from the end of the 15th cent. In some paintings G. wears a diadem or a crown, the attributes which recall his martyrdom.

The other formula, introduced at the end of the 15th cent. in many kinds of paintings, shows G. killing the dragon. The scene refers to the rescue of a "princess" or "the maiden of Beiruth" (Birutawit), which, according to G.'s Vita, occurred when he was still an army officer. When depicted, she holds the dragon by a cord; in the 18th cent. she is perched on a tree. Sometimes the formula includes G.'s attendant Səqraṭəs, the legendary author of the Saint's Acts (for the complex development of this motif s. Fiaccadori 2001:283ff.). In the 17th cent., G. is accompanied by his relative Ǝndrəyas (e.g., Addis Abäba, IES 315) who, according to a legend, founded the first shrine of G. in Lydda, and Lulis and Sirfas who helped to bury the body of G., as mentioned in the Homily of Theodotos.

Unlike the "rescuer-of-the-youth" type, which seems to disappear between the 16th and 17th cent. (to occasionally be back in fashion much later), the "dragon-slayer" type has lasted throughout the centuries. The representations differ in detail: in the 15th and 18th cent. G. may wear rich clothes and his horse has lavishly decorated trapping which reflect the dress of Ethiopian nobles, while in most of the pictures produced between the mid-15th and the beginning of the 16th cent. he is wearing foreign attire; the horse is trotting until the end of the 16th cent.; in the 17th cent. it stands on hind legs, the forelegs raised; while from the 18th to the late 19th cent. it is galloping. The dragon is depicted with or without wings; in the 17th cent. it often lies on its back, while in the 18th cent. a small figure of a demon emerges from its coils. A hybrid-dragon with the features of "six animals" is represented and "described" in a dyptich (ca. 1500; Mercier 2000:83).

The account of the martyrdom of G. was extensively illustrated. It cannot be excluded that this pictorial tradition was introduced to, or renovated, in Ethiopia by Nicolò ↗Brancaleone (cf. IES 4191). His choice of events was augmented by Ethiopian painters who tried to closely follow the text. In the absence of appropriate models, they used their own imagination and created scenes with curious torture implements. The selection of events depicted varies from work to work. Generally, every torment is introduced separately, but some scenes appear more often than others and the arrangements of pictures seems to be at random.

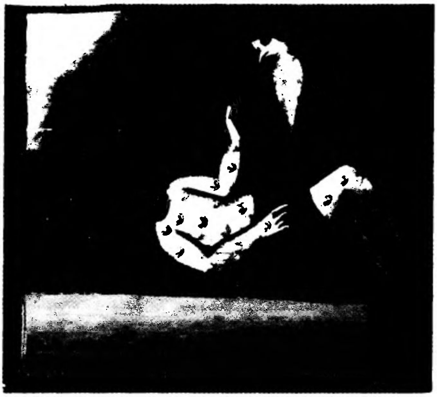


St. George on horseback; diptych, left panel; 15th cent.; Monastery of Samuʿel Zä-Qoyäṣa, Təgray; photo 2000, courtesy of Michael Gervers

Extensively illustrated manuscripts which include G.'s Vita, Martyrdom and Miracles appear from the middle of the 18th cent. and belong to the so-called second Gondärine style: 177 miniatures in a manuscript from Arhanä Kidanä Məḥrät, near Č̣əlga; 99 in a manuscript recorded in Mercier 2000:183 (no reference to the place); 55 in a manuscript from Kəbran Gäbrəʾel (Kebrān 17); 48 in a manuscript from Ṭəra Gädam, Bägemdər, and in mss. London, BritLib Orient. 713 and 715.

The paintings on wood of the 17th cent. always place G. as the dragon-slayer in the lower half of the left panel (diptych) or left wing (triptych). The martyrdom usually occupied the central panel of a triptych (e.g., IES, nos. 6724, 4191, 4432, 4233, particularly 4188, with 26 scenes of tortures), but is not represented in the 17th cent.

In churches with the outer walls of the ↗*mäqdäs* extensively decorated, G. is often represented three times: on the north wall among



Martyrdom of St. George: the Saint consoled by St. Mary appearing to him in the shape of a dove; miniature from the *Täʾammərä Maryam* ms., late 18th cent.; fol. 82v; Təgray, Maryam Tənsaʾe, treasury of the Trinity Church; photo 2004, courtesy of Michael Gervers

the equestrian saints and at both sides of the main entry to the sanctuary: on one side as the dragon-slayer and on the other as the megalomartyr, mounted and wearing a crown and rich attire (as in ↗Däbrä Sina, Gorgora). The martyrdom is rarely a subject of murals and rare examples date to the end of the 18th cent. (churches Wəqro Mäsqäl, Soqota; Qəddus Giyorgis, Fəčče; Abrəha and Aṣbəha, Ǝmmanuʾel, Balči).

From the 15th cent. the representation of a mounted G. sporadically appears on ↗crosses (cf. IES 6038 where G., assisted by an angel, kills the snake), but in the 18th cent. and later they are very common. Selected scenes of his martyrdom also are found from time to time.

G. spearing the snake or dragon belongs to the figures often present in ↗magic scrolls. The picture is usually added to a prayer for protection, which, according to the legend, the Saint uttered during his martyrdom. Since he endured many tortures, died and was resuscitated seven times, this prayer is believed to be particularly effective against misfortunes (cf. Paris, BN Éth. 432), while the Saint's depiction works as a visual equivalent of the popular spell "let the evil be pierced by the lance of George".

In many cases the image of G. is juxtaposed with that of St. Mary, particularly often on diptychs and on the western wall of the *mäqdäs* (in both cases G. is placed on the left side and Mary on the right), in possible connection with the translation festival. The recommendation of such an arrangement is clear in the *Sənkəssar* (16 *Näḥase*, s. GuiSyn III, 340f.).

Ewa Balicka-Witakowska

George the New

G. (Eth. ጊዮርጊስ፡ ሐዲስ, Giyorgis Ḥaddis; Arab. Ǧirǧis al-Muzāḥim; birth name Muzāḥim [Eth. Mäzaḥəm]; d. 13 June 978) was an Egyptian martyr. A son of Ǧāmi^c al-^{c}Aṭwi (Eth. var. Zamə^c), a Muslim from Darwā, in Damīra al-Qiblīya, Egypt, and of a Christian mother, Muzāḥim wanted to become Christian since early years. He converted by marrying a Christian named Siyūlā (Eth. Säwla). Denounced as a convert to Christianity, he and his wife were imprisoned, tortured and exiled. In Maḥallat Rūḥ (Məḥəla), he received baptism again, and took the name of "George the New", to honour ↗George of Lydda.

G. was again imprisoned by the governor of Dämira but despite pressures and tortures he preserved his faith. He was then transferred to viceroy ᶜĀdī (ᶜAddiy). It is said that in his prison G. was visited by Lady Mary who healed his wounds. The caliph ordered by letter to save the life of the prisoner. The viceroy intended to release him but the crowd insisted on having him killed. His remains were thrown into the sea. Some of them were collected by a Christian woman who took them to Siyūlā. The urn with his remains was then sent to a local bishop and became a pilgrimage attraction.

The cult of G. came to Ethiopia with the translation of two works from Arabic, ↗*Sənkəssar* and ↗*Gädlä Sämaᶜətat*. His Acts also form part of the Ethiopian tradition. His feast is commemorated in the Ethiopian Church on 19 *Säne*.

Gərar ↗Acacia

Gere

A G. is a rattle, in the form of a string of pods or pellets, found in Gambella and the surrounding region. Variants of this musical instrument can be seen throughout Ethiopia and Eritrea. It commonly consists of seedpods or metal-alloy pellets tied individually or strung together by a leather thong that is worn around the lower part of the leg, usually around the ankle. These pods or pellets, affixed or strung together, make concussive sounds when struck against one another, while the incised opening in the shape of an "+" amplifies the sound.

Gərmaččäw Täklä Ḥawaryat

G. (ገርማቸው፡ ተክለ፡ ሐዋርያት; b. 1915, Hirna, Harärge, d. 5 November 1987) was a novelist, playwright and a prominent member of the government. His father, *bäǧərond* ↗Täklä Ḥawaryat Täklä Maryam, instilled in him the values of discipline, hard work and patriotism. Educated at the Alliance Française of Dərre Dawa and Addis Abäba, he accompanied his father to France, where he served as minister. G. finished his high school studies in Grasse, southern France, and then attended the Collège Stanislas, near Nice, where he received his Bachelor's degree (Baccalauréate) in 1935, perfectly mastering French. When Italy occupied Ethiopia, in the spring of 1936, he fled to Djibouti. In early 1937, he decided to return to Addis Abäba and was soon arrested by the Italians, along with many others educated Ethiopians, following the attempt on ↗Graziani's life. He was sent to Italy and spent six years in prision.

G.'s desire to be a social reformer is reflected in his writings: the clash between forces of progress and conservatism is the theme of ↗*Arᵓaya* (1942); ቴዎድሮስ (*Tewodros*; 1950) is a historical drama centred on the struggle waged by ↗Tewodros II to unite and modernize Ethiopia; ዓድዋ (*ᶜAdwa*) is centred on the historic battle of ↗ᶜAdwa. G.'s unpublished book-manuscripts include *Arᵓaya II*, a continuation of *Araya* [*I*], which depicts the evolution of the society until the Revolution of 1974; *Al-Ḥabaša* (currently being edited), as well as his own autobiography.

G. persued also a prominent carreer in government, attaining a number of positions: Director of the Press (1943–45); Director General of the European Department; Ministry of Foreign Affairs (1945–49); Chargé d'affaires at the Ethiopian Embassies in Stockholm (1949/50-54/55) and Rio de Janeiro (1955–57/58); Ambassador to Italy (1958–60) and West Germany (1960–61); Minister of Information (1961–64); Governor

General, Illubabor Province (1964–65); Minister of Agriculture (1965–68); Minister of Public Health (1968–70); member of the ↗Crown Council (1970–74). Together with other officials of the ancien regime, the *Därg* confined G. in prison. After eight years, he was released as his health started deteriorating (MolLit 68).

Lit.: MolLit 62–72.

Daniel Kendie

Germany, relations with

G. appears in modern Ethiopian texts as Ǧärmän (from English); in the 19th cent. it was also known as Almanya (and similar spellings, from French via Arabic), or Nämsa (an older term of Slavic origin, introduced probably via Ottoman Turkish and signifying the German Empire; also used for ↗Austria in the 19th cent.). A history of relations between G. and Ethiopia starts with the scholarly interest German theologians took in this country in the late medieval period (↗Ethiopian studies). Much later, in the mid-19th cent., missionary undertakings became a crucial factor for the German-Ethiopian relations. Diplomatic and commercial contacts started comparatively late, with the permanent diplomatic relations being formerly established in 1905.

Ethiopians and their country occasionally feature in early medieval German literature, e.g. the 12th/13th-cent. Parzival epos (possibly adapting the Queen of Sheba myth), or travel literature dealing with crusades or pilgrimages to ↗Jerusalem (cp. the 15th-cent. pilgrims Rieter and ↗Breydenbach). The existence of a Christian people far south, with possibly Biblical origins (↗Prester John), aroused speculations whether their culture or language might have preserved the wisdom of the early Biblical fathers. The hope to discover the "lost" Chaldaic (Aramaic) language seemed to be confirmed when the first samples of the Ethiopic ↗script were published in G. (by Breydenbach in 1486), and later the first manuscript(s) reached German theologians. In the early 16th cent., Johannes ↗Potken from Cologne, who had learnt Gəʿəz from *abba* Tomas Wäldä Samuʾel in Rome (↗Santo Stefano dei Mori), believing that the language could in fact be identified with Chaldaic, published the Ethiopic ↗Psalter.

The German Reformation movement, directed against the supremacy of the Pope and the illiteracy of both clergy and lay population, also took interest in Ethiopia, a Christian country that did not acknowledge the Pope. Peter ↗Heyling, a lay missionary who lived at the Ethiopian court starting from 1634, translated several Gəʿəz manuscripts into Amharic and assumed high positions at the court. His followers (↗Zämaryam of Azäzo) played an important role in the controversies between the ↗*qəbat* and the ↗*ṣägga ləǧ* doctrines (they were called the *mänafqan däqqu ləǧärmän*, 'disciples of the German', in the early-19th-cent. [?] monastery records; s. Kindeneh Endeg 2004).

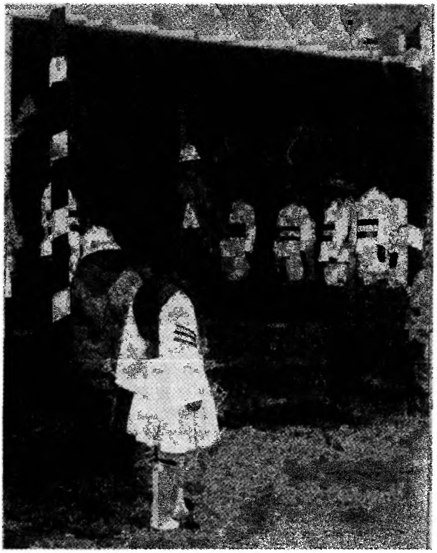
Several German Orientalists of the early modern period learnt Gəʿəz (e.g., Athanasius Kirchner, who wrongly claimed to have deciphered the Egyptian hieroglyphs). Among them, Hiob ↗Ludolf was the most prominent *Ethiopisant*. Following the invitation of the Duke ErnstI of Saxe-Gotha, his most important informant *abba* ↗Gorgoryos travelled to Thüringen in 1652 and stayed with Ludolf for months, laying the foundations for the latter's works. In 1683, the Duke tried, with Ludolf's help, to organize an alliance of Christian kingdoms, including Ethiopia, against the Turks, who had invaded the Austrian Empire.

In the context of a new philosophical-anthropological discourse in the 18th cent., led by Immanuel Kant (who created a modern classification of peoples and "races", with Africans judged as culturally inferior), Ludolf's research became crucial for the preservation of a positive image of Ethiopia.

German scholarly ↗expeditions started in the 1820s. The first ones reached only the coastal regions (Massawa, Təgray). In 1830–34, Eduard ↗Rüppell carried out metereological, zoological and ethnographical studies, in 1837 he was followed by the zoologist Wilhelm ↗Schimper, who even settled permanently in Təgray and became a governor of ↗Əntiččo under *däǧǧazmač* Wəbe Ḥaylä Maryam. He and his assistant Eduard ↗Zander later entered into the services of *aṣe* Tewodros II, Zander as a military advisor. The Deutsche Afrika-Expedition of 1861, led by von ↗Heuglin and the Swiss ↗Munzinger, was mainly carried out in Bogos (Bilin), Təgray, Kunama and Sudanese areas. Its results were published in Gotha, which, thus, once again became a centre of research on Ethiopia. In 1862, Duke Ernst II of Saxe-Coburg-Gotha as the first head of state visited the "northern borderlands of Abyssinia", on a hunting expedition, accompanied by several scholars.

The 1840s were a crucial period for the relationship between G. and the ↗Oromo, most of whose areas were still outside the control of the Ethiopian emperors. The liberation of Oromo slaves in this time could be seen in the context of the traditional interest of the German courts in "curiosities", their entertaining and "instructive" value. The Prince Pückler-Muskau, an adventurer at the court of Muḥammad ᶜAlī of Egypt, purchased and later married "Machbuba" (Bilillee), a kidnapped Oromo. Another noble traveller, John von Müller, brought a former Oromo slave (Pauline ↗Fathme) to G., who became a key figure for the first German Oromo mission, her published biography including a call for launching a mission to "Ormania".

Two South Germans induced a permanent public interest in G. in this people: Lorenz ↗Tutschek and Johann Ludwig ↗Krapf. Tutschek, funded by a prince, was teaching former Oromo slaves in Munich, the most important being "Osman" or Akaafadee Dallee and "Karl ↗Habasch", learning ↗Oromiffa from them and documenting their oral literature. He thus initiated Oromo studies. But it was mainly the German missionaries' interest into the Oromo, who were believed to have a culture similar to the ancient Germanic tribes, that led to the creation of the Oromo written literature (first in Latin characters, later in *fidäl*) and laid the basis for continued scholarly research. The first important contributions came from Krapf from Württemberg, who in the 1830s resided in ↗Ankobär and translated parts of the New Testament into Oromiffa together with his Oromo assistant Barkii. On his request, the German missionaries of ↗Mätämma sent an Oromo slave ↗Ruufoo from Guummaa to Krapf, in order to finalize the translation of the ↗Bible, the first portions of which were published starting from 1870. The idea of a future Oromo mission also accompanied the establishment of the ↗St. Chrischona Pilgermission in 1856, conceived as a first step on the way to the Oromo. In 1867 the first Protestant missionaries, Stamm and Deiß, reached ↗Beni Šangul and Oromo areas (Gubbe). In 1871 a permanent Protestant Oromo mission in Šäwa was established. It was headed by the Germans Johannes ↗Mayer and Greiner until their expulsion at the beginning of the Šäwa military campaigns against ↗Arsi in 1886. In 1927 the Oromo mission was re-initiated by the ↗Hermannsburger Mission.



Celebration of the Kaiser Wilhelm II's birthday at the German Legation in Addis Abäba, 1914, in the presence of consul Jensen and the Turkish envoy Mazhar *bey* (both left), German envoy von Syburg in front of the Kaiser's portrait; photo from the collection of Lorenz Jensen

Christian Ethiopia and the ↗Betä Ǝsraʾel attracted German missionaries, too. The British- and Swiss-funded Protestant mission in Ethiopia was mainly carried out by Germans. The first were Carl Wilhelm ↗Isenberg and Krapf in the 1830s in Təgray and Šäwa. Their mission was closed down after Isenberg provoked a doctrinal dispute, and reopened again in 1856 following an invitation of *aṣe* ↗Tewodros II, who was willing to introduce European technical know-how (cp. Arén 1999). German lay missionaries founded a German artisan's colony in ↗Gafat, and also settled in Ǧända among the Betä Ǝsraʾel, the "Falasha Mission" there being directed by Johannes Martin ↗Flad. The Emperor even married two of his relatives to the missionaries Theophil ↗Waldmeier and Karl ↗Saalmüller. The mission's aim was mainly the promotion of a reform of the Orthodox Church from within. They set up schools, at which also German was taught. Starting from 1865, however, Tewodros's discon-

German President Heinrich Lübke together with Ḫaylä Śəllase I in the Mäkʷännən Hall, Addis Abäba; photo 1964, courtesy of the German Cultural Institute, Addis Abäba

tent with European politics and the subsequent arrest of all Europeans resulted in the 1867/68 British military intervention (↗Napier) and the subsequent expulsion of the Europeans.

Several Ethiopian students were then brought to Jerusalem (to stay at a German-directed school, “Das Syrische Waisenhaus”), and later continued their education in St. Chrischona and Württemberg (among them ↗Mikaᵓel Arägawi, ↗Gäbrä Əgziᵓabəher Dästa and ↗Wäldä Śəllase Kənfu). The first to study in G. was Əngəda Əšät (son of the zoologist Schimper by his Təgrayan wife): after attending theological courses in St. Chrischona, he studied at the Polytechnicum at Karlsruhe (1872–77); later he worked as an engineer in Eritrea and served, e.g., as the interpreter of the ↗Deutsche Aksum-Expedition in 1906 and at the court of *aṣe* Mənilək II in 1907. The 1907 court interpreter ↗Gäbrä Ḫəywät Baykädañ, who had grown up in Austria and studied in G., was also known under his German-Austrian name “Gabrihet Soernej”. When G. formally established permanent diplomatic relations with Ethiopia, the Emperor sent a university teacher to the Oriental Seminar at Berlin University, *aläqa* ↗Tayyä Gäbrä Maryam. His only student, Lorenz ↗Jensen, later served as German diplomat in Addis Abäba, Harär and Däse (at the courts of *nəguś* Mikaᵓel and *ləǧ* ↗Iyasu).

The late 19th cent. saw the rebirth of Ethiopian studies in G. August ↗Dillmann created his Gəᶜəz dictionary, followed by a grammar, and laid a foundation stone for the modern philological ↗research; Franz ↗Praetorius published linguistic works on ↗Ethio-semitic languages which are still important today. Enno ↗Littmann during the 1905/06 Princeton Expedition recorded ↗Təgre traditions and songs, mainly together with ↗Naffaᶜ *wad* ᶜEtman. His Deutsche Aksum-Expedition carried out detailed archaeological and philological research at ↗Aksum in 1906 (↗Archaeology). The Semitist Eugen ↗Mittwoch in Berlin – closely collaborating with Ethiopian scholars like *blatten geta* ↗Ḫəruy Wäldä Śəllase – and the Africanist August ↗Klingenheben in Hamburg initiated Ethiopian studies at their institutes, the chair in Hamburg becoming the only purely Ethiopianist chair in Europe under Ernst ↗Hammerschmidt. The ethnological expedition of Leo ↗Frobenius in 1915 had scholarly but also political aims. His successors (e.g., Adolf ↗Jensen in 1934, ↗Haberland and the ↗Frobenius-Expedition in the 1950s) provided a valuable contribution to the development of anthropological thought in G.

Parallelly to the revival of Ethiopian studies, diplomatic connections were finally established. The involvement of G. started hesitantly, as it had no colonial or economic interests in the region. Since 1872 *aṣe* ↗Yoḥannəs IV tried to gain support of the emperors Wilhelm I and II for his claims over “lost territories” of his Empire (Bairu Tafla 1981:188ff.). The resulting diplomatic mission of the German envoy Gerhard Rohlfs in 1880/81 stayed without practical consequences. It was only in 1905 that G. concluded a Treaty of Trade and Friendship as a result of the diplomatic mission of Friedrich ↗Rosen, followed by the establishment of a permanent German Legation at Addis Abäba. In 1907 a diplomatic mission led by *däǧǧazmač* ↗Mäšäša Wärqe visited Berlin and was received by Wilhelm II; one consequence was the facilitation of weapons export to Ethiopia. Germans got quickly involved in Ethiopian affairs on different levels, encouraged by Mənilək. Following his demands, the economic consultant of the Rosen mission, Carl Bosch, sent artisans, among whom the architect Carl Haertel became a prominent personality at the court (building, among others, Mənilək's mausoleum in 1927, cp. ↗Graves). Concessions were also given to Germans, the first being Arnold ↗Holtz. The Halls, starting with Moritz ↗Hall and his wife ↗Wälättä Iyäsus (née Zander), who had become a court lady, were an important presence. Their son Jakob Hall become the Emperor's advisor and interpreter, and David ↗Hall greatly facilitated European-Ethiopian contacts in the 1930s-50s. The end Mənilək II's reign was marked by a permanent rise of German involvement, Mənilək using G. to counterbalance the (semi-)colonial interests of Great Britain, France and ↗Italy. After Alfred ↗Ilg had left, the Emperor appointed Alfred Zintgraff as the state councillor; Steinkühler became his personal physician, and Pinnow taught the heir to the throne, *ləǧ* Iyasu. The later alliance of Iyasu with Germans played a potentially dramatic role in ↗World War I, when Iyasu was preparing anti-colonial uprisals in the neighbouring states. The coup d'état of 1916 put an end to this alliance.

Political relations, with an interruption from the Italian occupation until G. regained its sovereignty (1936-54) were predominantly friendly. A high-ranking delegation of the regent Täfäri (led by his uncle *däǧǧazmač* ↗Ḫaylä Śəllase Gugsa) visited G. in 1924, and in 1954, ↗Ḫaylä Śəllase I himself became the first head of state to visit G. after World War II. The West-German Federal President Heinrich Lübke and his foreign minister Walter Scheel payed a return visit in 1964. Engineers, teachers, merchants and medical doctors from G. entered into the services of Ethiopia. Starting from the 1980s, this was followed by massive involvement in ↗development aid through inter-state agencies like the "Gesellschaft für Technische Zusammenarbeit" (GTZ) and private associations like "Menschen für Menschen" from the Western part of G., and technical, military and political consultants sent from the Eastern part after the ↗Revolution of 1974. In Berlin (East) talks between Eritrean rebel forces and representatives of the government took place in the late 1970s, but failed. The Medical College in Gondär, as well as numerous important industrial undertakings (a cement factory, the production of agricultural machinery etc.) were largely funded by the German Democratic Republic (GDR). In return, ↗coffee was exported to the GDR. A series of state visits from the unified G. starting from the 1990s, by two Federal Presidents and later by the Chancellor, underlined the continuation of the "special relationship" between the two countries.

Gerontocracy

Most societies of Ethiopia share an outstanding esteem for old people. Old men particularly are shown attention and privileges which can be regarded as features of a gerontocratic ideology. Old age is principally correlated with an advanced experience and wisdom, more or less regardless of the extent to which individuals of old age actually possess these qualifications. In tradition-oriented societies elders dominate the administrative and juridical councils and occupy key positions in political decision-making.

Younger people, even if better informed in the respective topics of a debate, are only allowed to talk in a public meeting when permitted by the elders. However, this principle was partly violated in the course of the so-called ↗*zämäča* ('raid') of 1975, when the government ordered the academic staff and the students to instruct the population all over the country about the aims of the Ethiopian ↗Revolution.

The acts of deference with regard to older people are manifold and to some extent standardized according to a pattern which seems to have been spread by the ↗Amhara. When older people enter a house, young people must stand up and remain standing until the old ones are seated. They have to rise whenever the older persons get up. Insulting an older person is severely punished. If the insult is reciprocated, the younger person is supposed to accept it in silence without retorting. The curse of older people and particularly grandparents was, and is, greatly feared. Elders are called to tell stories to people at social gatherings and to children on various occasions. They are expected to teach the "wisdom" of their groups, as well as to conserve their ↗oral traditions, genealogies and ↗customary law.

The elders authority is asserted through various levels of assemblies in the neighbourhood, the village or the clan. It does not necessarily require a special function or title, but its quality in this respect depends to a notable extent on the fact whether the respective society is characterized by a sophisticated socio-political hierarchy or by egalitarian standards.

The Amharic word ሽማግሌ (*šəmagəlle*) refers to a mature man who is an honoured member of his group and whose advice is respected. He may not be very old, probably in his forties, although his reputation usually grows with the number of his years. Similar concepts and equivalent terms of elder status are to be found in many Ethiopian societies, e.g., *loʾmanšo* 'old [and implicitly wise] man' as an honorary form of address among the ↗Hadiyya. The oldest brother within a family (Oromo: *angafa*) usually keeps a privileged position. It has to be emphasized that phenomena of G., mainly associated with the male and to a much lesser extent with the female sex, are deeply rooted in the socio-political life of Ethiopian people.

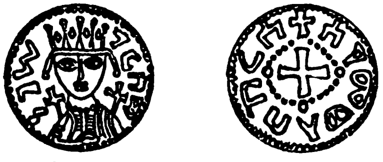
Gersem

G. (GRSM) was a Christian king of ↗Aksum who can tentatively be dated, together with ↗Ioel, ↗Ḥataz and ↗Armaḥ, to the later 6th or early 7th cent. A.D. He is in fact associated with the last period of coin issues – the sole evidence for his existence. The ↗coinage inscribed with the Biblical name of G. (cp. Ex 2:22), already divided between two different kings, is listed under one single reign in modern studies.



obverse reverse

Silver coins of Gersem, diametre from 20 mm to 15.5 mm, drawing courtesy of Stuart Munro-Hay

G.'s coinage consists of gold, silver and bronze specimens. There are two gold types (145, 146, s. Munro-Hay – Juel Jensen 1995:256ff.): one is a unique piece, while the other is known from six examples at least. Both have the Greek legend BACIΛI AZωMI [obv.] ΓΕΡCΕΜ [rev.], i.e. 'King of the Aksumites / G.'. The silver bear in unvocalized Gəʿəz script ገረሰመ [obv.] ነገሠ [rev.] (*grsm / ngś*), i.e. 'King GRSM' (Type 147, *ibid.* 258ff.). There are two bronze issues: one is labelled in the same way as the silver issue, its legend being occasionally vocalized (Type 150, *ibid.* 263f.); the other has the Gəʿəz inscription, also occasionally vocalized, ነገሠ፡ገረሰመ [obv.] በከረሰተሰ፡ የመወአ [rev.] (*ngś grsm / bkrsts ymwʾ*), i.e. 'King GRSM / (he) conquers through Christ' (Type 148–49, *ibid.* 260ff.). From the general quality and style – in some cases facing busts betraying a rather Byzantine imprint – it seems that G. may even have been the last of all kings of Aksum to issue gold coins.

Gəšän Maryam ↗Amba Gəšän

Gešo

Rhamnus prinoides, of the family *Rhamnaceae*, known as G. (ጌሾ), or related forms in many Ethiopian languages, is a small indigenous tree found at an altitudinal range of 1,400–3,200 m A.S.L. in grasslands, rain-forests and margins of evergreen forests. Its leaves, with finely toothed margins, are shiny and dark green and its berries blackish-purple when mature.

It is widely grown around homesteads or in cultivated fields, where it is reduced to a shrub by frequent cutting. The dried and pounded leaves, branches and stems are commonly sold at the market and are considered a cash crop. They are mainly used, like hops, as flavouring in brewing ↗*ṭälla* and ↗*ṭäǧǧ*. The fermentation-starter comes from the malt, which is usually germinated ↗barley, but can also be germinated ↗sorghum, or finger millet.

In traditional medicine G. is used as a laxative or diuretic and in syphilis prevention. The leaves are put in children's mouths to relieve pain after removal of the uvula. Crushed berries and leaves are rubbed on to the skin to cure ringworm and other mild fungal infections. The roots are used to purify the blood.

Gəṣṣawe: Mäṣḥafä gəṣṣawe

M.g. (መጽሐፈ፡ ግጻዌ, lit. 'Book of Exposition') is both a perpetual liturgical ↗calendar and a lectionary, either plenary, i.e. with the text of the biblical lessons written in full, or partially, i.e. in the form of an index or directory of the readings. It gathers two types of documentation, very different in nature and history: (1) the daily commemorations and feasts with the readings matching them, month by month and day by day (the Sanctoral), and (2) readings for, possibly, Fridays (evening), Saturdays and, always, Sundays. The current definition of the M.g. points to the daily commemorations and feasts of the Sanctoral and the seasons of the Temporal of the liturgical year, as well as the biblical lessons to be proclaimed at Mass on every Sunday and calendar day of the year and at Matins (↗*Maḫlet*) on the major commemorations, plus the ↗*wazema*, Matins and Procession of Palm-Sunday.

In association with *Mäṣḥaf* the term *gəṣṣawe* means 'explanation', 'exposition'. In lessons of the ↗*Sənkəssar* translated from Arabic (on 10 *Mäskäräm* [10 *Tūt*], Nativity of Mary the Mother of God; 17 *Ḫədar* [17 *Hātūr*], Death of John Chrysostom; 12 *Gənbot* [12 *Bašans*], Apparition of the Cross), it is found as a translation for the Arabic *dallāl*, used in the same sense. In fact, the spelling ግብጻዌ (*gəbṣawe*, cp. Gəʿəz: *Gəbṣ* 'Egypt', *Gəbṣawi* 'Egyptian') has also been found in an ancient source (Jeffery 1993:209, n. 32), which refers to the Coptic origins of this book. The Ethiopian work has widely preserved the system developed in the ↗Coptic Church (more probably that of Upper Egypt rather than that which is applied today: cf. Zanetti 1985:20f.). The cathedral Divine Office (mainly the ↗*Dəggʷa*), especially with its cycle of 20 fixed seasons of a distinct Ethiopian character (↗Calendar), in the course of time deeply affected M.g. and the liturgy of the Word of the Sundays, which best reflect those seasons, as well as the feasts of Ethiopian saints.

More modest lectionaries eventually came to be composed, as has been also the case in the Coptic Church, in order to offer liturgical readings at a minimum cost. This lesser work is the መጽሐፈ፡ አስልጢ (*Mäṣḥafä asəlṭi*; from አስለጠ, *asläṭä*, 'to accomplish, to make useful', hence the meaning 'handy manual'). Such works, infrequent in catalogues and occasionally simply called M.g., propose readings for a smaller number of occasions, which may vary from one work to another. Apart from the Virgin Mary, the readings for saints are grouped in "Commons" for angels, apostles, martyrs, virgins, the righteous, etc. Such commons may also be prepared for a whole particular liturgical season (e.g., "the Flower") or even several seasons (e.g., the Fasts). In the manuscripts, such works can be indexes or plenary lectionaries, but also may indicate the references of the lessons through their *incipit* (cf. Zanetti 1985:73). The principle used for the Commons is rooted in the Coptic tradition and is reflected in the Ethiopian monthly commemorations, also of Coptic origin (cf. Zanetti 1985:249ff.; ↗Calendar). Such a *Mäṣḥafä asəlṭi* prepared by *aläqa* Wäldä Rufaʾel of Däbrä Bizän, a plenary lectionary with readings for 34 occasions, happens to have been the first lectionary printed (cf. Fritsch 2001:44f., 359–70).

Two printed M.g. lectionaries are presently in use in the ↗Ethiopian Orthodox Täwaḥədo Church, published in 1953 and 1986 respectively.

The M.g. of 1953 is an index of 152 pages in 3 parts (cf. Fritsch 2001:45–48):
1) the Lectionary of the Days (ግጻዌ፡ ዘዘወትር, *Gəṣṣawe zäzzäwätr*); the Sanctoral (*Mäṣḥafä gəṣṣawe* 1953, 9–124). The lists of saints are older and relatively independent of the Synaxaries, as is the case with the *Dəggʷa*. The references of the different lessons follow, with *incipit* and *desinit*. On 112 occasions, there is a morning service (*Zänägh*), including a Psalm-versicle (↗*Məsbak* or *Qədmä wängel*, the latter term recalling the *prokeímenon* of the Greek Church and of the Sahidic lectionaries; Zanetti 1985:20) and a Gospel. The texts prepared for the mass (*Zäqəddase*) include passages from St. Paul, a Catholic epistle and the Acts of the Apostles; a Psalm-versicle and a Gospel; the mention of the anaphora;
2) a Supplement for the mobile Festivals and Fasts (*Mäṣḥafä gəṣṣawe* 1953, 125–27) is concerned with the days of the Cycle of the Resurrection that do not fall on a Sunday and the ↗*Məḥəlla*;
3) the Lectionary of the Sundays provides indications for both the *Mäzmur*, or Psalm-verse characteristic of the Sunday (128–49) to read and the relevant part(s) of the ↗*Dəggʷa* according to the liturgical year. The Sundays are inserted within this framework, from which the *Mäzmur* is drawn – hymn of reference of Matins proper to each Sunday and which always matches a specific set of readings. The *incipit* of the *Mäzmur*, therefore, serves as a title or name for the Sunday to which it belongs and helps in sorting out the variances brought about by the ↗*aqʷaqʷam* schools (cf. Fritsch 2001:87–90). The Sundays are numbered from 1 to 80, the expected number of 52 Sundays being well exceeded because of both the many provisions arranged for all the possible occurrences and the 10 supplementary sections of the office of Palm-Sunday.

The M.g. edition of 1953, besides its reprints, has received two other presentations, in 1984 and 2002.

The M.g. of 1984 (Fritsch 2001:48f.) is a plenary lectionary totally written in Gəʿəz (hardly in use since the readings are generally performed in Amharic). It corresponds to the 1953 edition of the M.g., which it corrects at places and complements with the *in extenso* inclusion of the Psalm and ↗*Sälam* of the Sundays, in modern print.

The M.g. edition of 2002 is original insofar as it features the musical signs (*mələkkətočč*, Amh. pl. of ↗*Mələkkət*) of the Psalm-versicle (*məsbak*), adds the Tuesday and Wednesday of Nineveh as well as the Wednesday and Thursday of Nicodemus, presents additional occurrences of feasts falling on a Sunday and a *Mäzmur* for the Assumption.

The M.g. of 1986 is the other lectionary (cf. Fritsch 2001:50ff.). Organized as a full lectionary, with very short readings with no connection to the Sanctoral (except for the great Feasts, which could not be left aside), it aims at having each year the whole of the four Gospels and of the Pauline epistles read, regardless of the repetitions in the readings of the Catholic epistles and the Acts of the Apostles entailed. Meant to replace the editions of 1953 and 1986, it does not seem to enjoy large success.

A third M.g. has been published (2004) at the initiative of *mämhər* Yared Fanta. It is a ferial index ignoring most of the saintly commemorations of the Days in order to develop the specific character of the liturgical year of the *Dəggʷa*. In addition, it features a daily reading from the O.T., which is meant to enrich the communities' evening or morning prayer, as well as the homilies.

The manuscript tradition of the M.g. has not yet been properly studied. A first list of 39 manuscripts (including both lectionaries and indices) has been provided by Fritsch 2001:40ff. Few ancient documents are shown there, all within reach since those not at the British Library or the Vatican Library have been filmed by EMML. Other ancient texts surely exist. It would be worthwhile to compare them systematically, both among themselves and with the Coptic documents, so as to assess the exact nature and contents of the Egyptian origins, as well as the lines along which the "Ethiopianization" of the M.g. has been achieved.

Emmanuel Fritsch – Ugo Zanetti

Gəšše

G. (**ግሼ**, also **ግሴ**, Gəsse) is a region situated in northern Šäwa, bordered by ↗Wärrä Illu (Wällo) in the north; it occupies the high plateau north of the Qaččine river and extended as far as the river Wänčit. Dayär, the local stronghold, is sometimes also called G. It is not impossible that the place was called G. by the Christian settlers who wanted to associate it with Gəšän of ↗Ambässäl (Wällo) and the monastery of ↗Amba Gəšän.

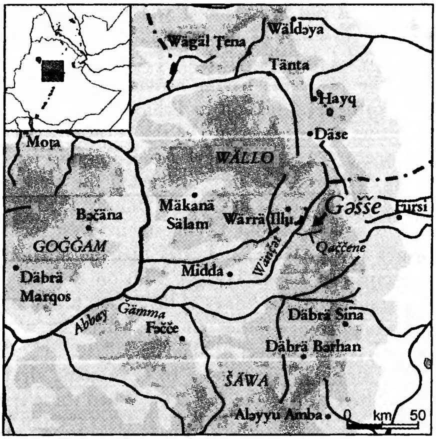
The history of G. is known only from the 14th cent. onward. Local tradition asserts that it was *aṣe* ↗Dawit II who Christianized this fringe of Šäwa as G. in the late 14th cent. In the 15th cent. *aṣe* Bäʿədä Maryam (1468–78) seems to have left Däbrä Bərhan around 1469 for ↗Däbrä Məṭmaq in Tägʷəlät to celebrate the annual feast of ↗*ʿƎräfta* on 21 *Mäskäram*. It was from there that he set out for Maʾəkäl Serfa in Mänz and went to G., where he was welcomed and received with joy by the ↗*säḥafe lam* of Amhara.

In the 16th cent., having arrived at Massawa, the Portuguese mission to Ethiopia set out attempting to visit the court of the "Prester John" – Emperor ↗Ləbnä Dəngəl. According to Francisco ↗Alvarez, the mission visited the church of ↗Mäkanä Śəllase in G. on 1 January 1520 (its ruin is situated about 12 miles southwest from Wärrä Illu). Alvarez indicates that his mission accompanied Ləbnä Dəngəl, who on that very day transferred the bones of his father, Emperor ↗Naʿod, from another church where he was buried, to rest forever in Mäkanä Śəllase.

The strategic importance of G. became clear in the first half of the 16th cent. When the wars of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") shattered the political and economic foundation of the Ethiopian empire between 1527 and 1543, part of the royal family seem to have taken their refuge in the valley of Žäma-Adabay river basin and into the inaccessible mountain ranges of G., Mänz, ↗Gədəm, Efrata and ↗Anṣokiya.

G. has occupied a key place in the history of the kingdom of Šäwa as the monastery of Gäme Giyorgis in Gəšše Däga seems to have hosted ↗Yaʿəqob the son of Ləbnä Dəngəl, to whom members of the Šäwan dynasty claimed their dynastic origin. Though it is sometimes indicated that Yaʿəqob was hiding himself in the monastery of Gäme Maryam, situated in the cliffs near ↗Afqära in Mänz. He may have stayed in Gäme Giyorgis of Gəšše Däga. The problem in the sources seems to be the confusion between Gäme Giyorgis of Gəšše Däga and Gäme Maryam of Afqära in Mänz. In fact, the young fugitive may have taken his refuge at both monasteries in Mänz and G. Both the areas of Mänz and G. can be recognized as the nucleus for the birth of the kingdom of Šäwa and its leadership, whose family dominated the Ethiopian political scene until the Revolution of 1974.

After Aḥmad Grañ's wars and the subsequent ↗Oromo population movements, Šäwa disintegrated into rival principalities. A mountainous area of G. at the time seems to have been a principality on the edge of Qäččine river as far as Wayet which separated it from Wällo. The hereditary ↗*balabbat* of G., who probably lived in the 17th cent., was Awsabe or Awsabəyos. It was an autonomous principality and known to have been a traditional rival for Mänz throughout the



17th and 18th cent. In the early 18th cent. G. was once ruled by *ras* ↗Dəmetros, the Gondärine royal appointee of *aṣe* ↗Tewoflos, who established his capital near the hill of Dayär. It was later controlled by the rulers of Šäwa though the traditional chiefs of G. had not always been loyal to the Šäwan kingdom; yet they gave support to the Imperial army of *aṣe* ↗Iyasu II of Gondär, under the command of *ras* ↗Waldä Ləᶜul and *ras* ↗Wädaǧo, during the war against *märədazmač* Abəyye of Šäwa. In late 18th and early 19th cent. G. was under the sway of *märədazmač* ↗Asfa Wäsän of Šäwa, who controlled it through the army of one of his officers (*abägazočč*) and his own skilful leadership.

Under *nəguś* ↗Śahlä Śəllase of Šäwa (r. 1813–47), G. was under warrior chiefs who could resist the challenges from the Oromo ↗Warra Qallu and ↗Argobba of Wällo. Sämmu Nəguś governed G. in 1835–40, he was then dismissed from power because he helped his rebellious brother to escape. In 1840 *ato* Zäwde, Śahlä Śəllase's other governor, was imprisoned for killing Ali Bərru, the son of Bərru Lubbo of Warra Qallu who, though in good terms with Śahlä Śəllase, had troubles with the frontier governor of G. Zäwde was succeeded by a certain Lenča (1841–42) who was, however, soon dismissed from the office and replaced. A certain Habtä Mikaᵓel and Ǧarra Mätäko were governors of G. at different times in 1842.

In 1870s G. was plundered by the forces of *aṣe* ↗Yoḥannəs IV; another important event was the appointment over G. of *ras* ↗Wälde Aššagari (d. 1908) by Mənilək in the 1880s, before the former was sent to Gurageland. The authority over this area and its environs including Mänz, Gədəm, Efrata and Anṣokiya remained in the hand of Wälde's son *däǧǧazmač* Mäšäša right throughout early 20th cent.; he also led the Amhara of G. and the surrounding region against *nəguś* ↗Mikaᵓel of Wällo and his son *ləǧ* ↗Iyasu in 1916. During the Italian occupation of Ethiopia in 1936–41, G. was a strong resistance base of the grandsons of *ras* Wälde such as *däǧǧazmač* Damṭäw Mäšäša and his brother Zäwgä as well as other local patriots. In the provincial administration of postwar modern Ethiopia (1941–74), it was a *wäräda* within the *awraǧǧa* of Mänz. A historical role of G. as a resistance base reappeared as such again in the 1970s following the fall of the imperial regime. It was a prominent stronghold of Bruke Dämisse, one of the stubborn enemies of the *Därg* Regime and the successor of the sons of *ras* ↗Bərru Wäldä Gäbrəᵓel, Märᵓəd and Mäsfən Bərru, who took up armed reistence in Afqära (Mänz); they all, however, were systematically defeated by the *Därg*.

Geta

Däǧǧazmač G. (ጌታ, full name ጌታ፡ አቢየ፡ ሥልጣን, Geta Abiyyä Śəlṭan; 18th cent.) was an uncle of *ətege* Məntäwwab (↗Bərhan Mogäsa).

He was the grandson of *ras* Niqolawos and the cousin of Ǝnkoyye, Məntəwwab's mother. The accession of *ətege* Məntəwwab's son, *aṣe* ↗Iyasu II, was opposed by a rebellion in 1732, in the suppression of which G. was active. In 1739, G. was appointed *däğğazmač* of Bägemdər, when he began to stand out as a prominent military campaigner. In 1755, he helped smooth the accession of *aṣe* ↗Iyoʾas I. In 1767, he was appointed ↗*bitwäddäd*, but in this leading office was unable to stem the tide running against his faction and faded from the scene in the 1770s.

Getaččäw Abatä

Ras G.A. (**ጌታቸው፡ አባተ**, b. Wällo, d. 1950) was the son of *ras* ↗Abatä Bʷayaläw and was also related to Empress ↗Mänän Asfaw, the wife of *aṣe* Ḫaylä Śəllase I. He grew up at the Imperial Court together with Iyasu, Täfäri and other sons from aristocratic families. He attended ↗Mənilək II School (MahHorse 287).

When his father died in 1917, G.A. was already an important official of the Zäwditu-Täfäri government, and was instrumental in Täfäri's consolidation of power afterwards. From 1917 to 1933 he received a number of quick promotions and soon became a leading dignitary, second to *ras* Kaśa Ḫaylu.

Before World War II, G.A. held various offices: minister, ambassador and administrator. In 1918 *däğğazmač* G.A. led a delegation, sent by the Ethiopian government, to congratulate the victors of the war. He was a signatory of the 1931 ↗Constitution, and in 1933 was promoted to *ras* and became governor of ↗Käfa. As governor, G.A. moved soldiers recruited from Käfa to the northern war front to defend the country against Italian assaults.

At the battle of ↗Mayc̣äw, G.A. was one of the three principal commanders Ḫaylä Śəllase designated to lead the Ethiopian army. After the Emperor's defeat, G.A. accompanied him to Addis Abäba. From there, he travelled with Ḫaylä Śəllase into exile in Palestine. During the summer of 1936, G.A. was selected as a prominent member of a secret imperial mission sent to Gore to help *ras* ↗Ǝmməru Ḫaylä Śəllase reorganize the Provisional Government there. But when he reached Cairo, G.A. submitted to the Italian authorities and returned to Addis Abäba. This incident transformed G.A.'s status as a war leader, before the occupation, to an obscure official under Italian viceroys.

In 1941 G.A. submitted to Ḫaylä Śəllase at Fəčče, on the latter's victory journey from Däbrä Marqos to Addis Abäba. He was sent to *gəzot* (banishment) in Ǧimma and then in Kämbata where he died on 8 September 1950. His remains were, however, later transferred to Addis Abäba (MahHorse 287).

Seltene Seyoum

Gəṭəm

G. (**ግጥም**) is an Amharic term meaning 'poetry, lyrics, poem, verse'. It has the verbal counterpart in the verb *gäṭṭämä* meaning 'to compose poetry', but, first, 'to join/be joined together, to match'. Ethiopian ↗poetry can most generally be divided into ↗*qəne* and G., the latter being defined as secular poetry composed in Amharic, oral or written. In practice, the division is not very sharp, as the Amharic poetry may well be religious and is also sometimes called *qəne*, the latter term, however, being mostly reserved by its definition for religious poetry in ↗Gəʿəz, composed upon traditionally established and precise patterns.

In a way, G. is a "modernizing" term, since G., being originally nothing else but the oral texts of (folklore) ↗songs, are usually sang or at least recited, and thus usually appear as an integrative part of the songs (Fäqadä Azzäzä 1999:84f.; cp. the neologism *qalgəṭəm* 'oral poetry'). Since the traditional Ethiopian culture has no clear-cut distinction between G. and the songs (except for the mode of performance), the term *gäṭṭämä* originally refers to the technical operation of composing verses (cp. DTWDic 252f.; GuiVoc 784), mostly rhyming them in the final syllable, carried out, e.g., by ↗*azmari* (who can immediately apply G. to a melody and sing or recite a song on a given subject), ↗*lalibäločč*, dirge-singers (*alqaš*; ↗Funerals) or less professional individuals involved in the event in which different songs are performed. At the same time, the scholars who describe traditional (Amharic) poetry and its metrical patterns usually give indications regarding the type of music or an instrument which accompanies these patterns (like ↗*bägäna*, ↗*mäsinqo* or ↗*kərar*).

The poetry (i.e. G.) plays a major role in the life of the Amharic-speaking highland agriculturalists (this being valid, in fact, for almost all societies of Ethiopia), and those who can recite traditional poems and compose new ones enjoy respect (about East Goǧǧam or Southern Wälläga, s. Pankhurst in PNCES I, 462; Getie Gelaye 2000). Consequently, people compose and recite different kinds of G. during the agricultural activities, journeys, at weddings and funerals and other important occasions, when feeling lonely or sad, when facing injustice, or to express their feelings and share them with the others. Therefore, a large variety of oral poetry genres appeared, defined as, e.g., **የሥራ፡ ግጥም** (*yäśəra gəṭəm*, 'work poetry'), **የሠርግ፡ ግጥም** (*yäśärg gəṭəm*, 'wedding poetry'; Taddäsä Mulat 1970), **የለቅሶ፡ ግጥም** (*yäläqso gəṭəm*, 'funeral poetry') or **የልጆች፡ ግጥም** (*yäləǧočč gəṭəm*, 'children's songs'; Getie Gelaye 1999, 2000:110; cp. Fäqadä Azzäzä 1991:87). The genres of oral poetry differ depending on the socio-political conditions of the people composing it. The semantic categories most recurrent in Ethiopian folk poetry are: love, death, God, suffering, bread, courage, violation of sex norms, time, land, cowardice etc. (Araaya Hailu 1972:339). According to the subject, Amharic poetry can be divided into, e.g., historical, love, educational and political poetry (KaneLit 16). Historical and political streams seem to be the most vivid and intensively exploited, with the use of the traditional ↗*sämənna wärq* technique, which is particularly suitable for expressing a critical attitude towards political reality by hiding it under the cover of metaphors, allegories, allusions and word plays.

Due to the scholarly efforts starting from the 19th cent. onward a large corpus of the Amharic poetry has been collected, but only a few analytical works have appeared since that time. During the same time, G., being originally oral, has undergone a process of diversification into written and oral compositions. Yet, we do not know exactly when the first written poem appeared. For example, oral poems in praise of some Ethiopian emperors known as "royal songs" (Guidi 1889) were probably composed as early as in the 14th cent., but were written down later. The rhymed "strophes" recorded by Antoine d'↗Abbadie point to the high skill of composing epic poems, but they were written down by chance only (Berhanu Abbebe 1970; 1985); the 19th-cent. "versed Vita" of St. Cyriacus in Amharic, composed by a certain Yämaryam Barya, appears to be one of a few exceptional cases (Sengal 1945; RicLett 854). Nowadays, though the tradition of written poetry is spreading in Ethiopia, speaking of G. we most often mean oral poetry composed by rural society which is mostly identified with "folk poetry".

Next to the "folk poetry", there is poetry composed in a written form by Ethiopia's intellectual elite. This poetry is represented, e.g., by ↗Mängəśtu Lämma's **የግጥም፡ ጉባኤ** (*Yägəṭəm guba'e*, 'Collection of Poetry'), ↗Käbbädä Mika'el's **ብርሃነ፡ ሕሊና** (*Bərhanä ḥəllina*, 'Light of the Mind'), ↗Däbbäbä Säyfu's **የብርሃን፡ ፍቅር** (*Yäbərhan fəqr*, 'Love of Light') and Sälomon Deressa, whose volume **ልጅነት** (*Ləǧənnät*, 'Childhood'), published in Addis Abäba in 1969 A.M., is written in blank verse.

Some attempts of classification have been done regarding the structure of G., i.e. the number of syllables, the type of rhyme, the rhythmical pattern and the number of lines in a verse. Starting from distinguishing G., modern Amharic poets came to the discussion on the theory of Amharic versification and developed its terminology (also drawing upon the technical terminology of *qəne* poetry). The following elements can be distinguished in G.: **ስንኝ** (*sənnəñ*) – the rhythm/run of a poem (lit. 'the well-sounding'); **ሐረግ** (*ḥaräg*) – a half of a *sənnəñ* (Märsəᶜe Ḫazän Wäldä Qirqos 1948); **ቤት** (*bet*) – the verse (lit. 'house', hense *betun mätta* 'to rhyme', lit. 'to hit the house'). *Bet* and *sənnəñ* have close meanings. One line of G., a *bet*, is counted according to the number of characters of the syllabary, whereas for the *sənnəñ* the number of syllables is counted (which is important to distinguish rhythmical patterns).

Märsəᶜe Ḫazän Wäldä Qirqos (1948:212ff.) defines eight patterns of G.; Mängiśtu Lämma presents 13 patterns of G., but reduces them to three basic rhythmical patterns, i.e. **ቡሄ፡ በሉ** (*buhe bälu*) with eight syllables in a two-line verse, **ደንበኛ** (*dänbäñña*) with twelve syllables in a verse and **ሰንጎ፡ መገን** (*sängo mägän*) with ten syllables in a verse. The same classification proposes an additional group of ten mixed rhythmical patterns which are combinations of the above three basic patterns, each mixed type being a representation of some sort of *zäfän* ('song'). For example, the *bägäna sälamta* G. pattern is a combination of all the three basic patterns; a *ḥəgä-wäṭ bet* is a combination of *sängo mägän* and *dänbäñña bet*. Neither *bägäna sälamta* or *ḥəgä-wäṭ bet* rhymes (Mängəśtu Lämma 1963: 148f.). In fact, the list of mixed patterns is not yet closed: in the process of collecting oral literature, new examples of G. and *zäfän* are provided. On the basis of Märsəᶜe Ḫazän Wäldä Qirqos 1948 and Klingenheben 1959, Kane recognizes up to 19 G. patterns (KaneLit 25f.).

Getesemane Maryam

G.M. (**ጌቴሴማኔ፡ ማርያም**, also Getisemani) is a monastery in the Gonč̣a gorge (Moṭa), in the extreme north-east of ↗Goǧǧam (approximately 11°10'N, 38°40'E).

Once an important monastic establishment, it is now in decline. The early history of G.M. has been little studied, and the monastery seldom visited by Ethiopian or foreign travellers or scholars. Documents in manuscripts at ↗Däbrä Wärq indicate that the area around G.M. was given to the former by *aṣe* Dawit II (ca. 1380–1412), while traditions of ↗Däbrä Libanos attribute the foundation of G.M. to ↗Naᶜod Mogäsa (late 14th/early 15th cent.). Yet, the monastery seems to have been established only after the middle of the 15th cent. as a satellite of Däbrä Wärq. Hagiographies kept at the latter place mention the names of two monks active in its early period: the monastery's founder *abunä* ↗Śärṣä Peṭros from the district of Ǝnnäbäse, a disciple of *mämhər* Täklä Maryam of ↗Märṭulä Maryam, who lived during the reign of *aṣe* ↗Bäʾəda Maryam I, and *abba* Robel, who may have been a younger brother of Śärṣä Peṭros. An iron abbot's staff shown to visitors at G.M. is said to have belonged to abbot Robel. G.M. soon came to enjoy royal favor, for the Chronicle of *aṣe* ↗Ləbnä Dəngəl mentions his visit to it in the 21st year of reign, i.e. 1529, in the course of a royal tour that included several other monastic formations of north-eastern Goǧǧam. The monastery's importance is attested by the fact that it was selected to receive one of the St. Luke icons allegedly brought by *aṣe* Dawit "from Egypt".

G.M. appears to have attracted the Italian artist Nicolò ↗Brancaleone, who was active in Ethiopia in the late 15th-early 16th cent. and may have spent several years there. Icons signed by him and others unsigned but in his style have been discovered there. Several of these are now in the possession of the Museum of the ↗Institute of Ethiopian Studies in Addis Abäba. Brancaleone's richly illustrated 33-folio modelbook is kept in the nearby monastery of Wafä Iyäsus. It has close affinity with the G.M. icons. The register of ↗*gʷəlt* possessions in the church at Däbrä Marqos reveals a late-19th-cent. dispute over seniority among the monasteries of north-eastern Goǧǧam to which G.M. was a party. It seems to have been settled by *nəguś* ↗Täklä Haymanot of Goǧǧam.

Geto

Geto language

The G. language (one of the *Säbat bet* ↗Gurage, s. map for Gurage) is known as G. by linguists, while its speakers, as well as the other *Säbat bet* Gurage, call it *Gʸäta*, or *Gʸät-ina*. G. is classified as part of the Peripheral Western Gurage branch of the South ↗Ethio-Semitic languages. G. is spoken south of ↗Čaha, east of ↗Ǝnnämor and west of ↗Səlṭi.

Palatalized and labialized velar consonants are phonemic. Some suffixes trigger processes of palatalization and labialization of all velar consonants. E.g., the suffix of the 2nd pers. sg. fem. subject causes palatalization, the suffix of the 3rd pers. sg. masc. brings about labialization and the impersonal suffix occasions both palatalization and labialization.

The verb agrees with the subject and with a efinite object. There are no case-, number- or gender-markers on the noun. However, there are few words where the singular is different from the plural, e.g. *äraŋ*, 'a cow' vs. *array*, 'cows'.

The independent pronouns are: *əya*, 'I', *ina*, 'we', *aḫä*, 'you (masc. sg.)', *aḫʾa*, 'you (fem. sg.)', *aḫwa*, 'you (masc. pl.)', *aḫma*, 'you (fem. pl.)', *ḫʷuta*, 'he', *ḫʾita*, 'she', *ḫuno*, 'they (masc.)' and *ḫənäŋa*, 'they (fem.)'. Demonstrative pronouns are: *zə*, 'this, these' and *ḫa*, 'that, those'.

The copula in its present tense is suffixed to its complement: *gʷad-u* 'it is white', *dengʸa-no* 'they are boys'. In the past and future tenses, it is an independent word: *gʷad banätä* 'it was white', *dengʸa yiḫrošä/yiḫärote* 'they may/will be boys'.

The G. elementary ten word-list is: *aat* 'one', *ḫʷet*, 'two', *soʾost*, 'three', *əsaat*, 'fire', *iḫa*, 'water', *ayät* 'sun', *bänä* 'moon', *däŋ*, 'blood', *anäät*, 'tongue', *šən*, 'tooth'.

G. is a Subject-Object-Verb language, e.g.

Maruta	*diinča*	*qäpärä*
Maruta	potato	plant

'Maruta planted potatoes'.

Degif Petros Banksira

Geto ethnography

The G. (also Gʸeto, Gʸäta, Geta or Yäč̣ärät) were a member-group/district of the confederation of *Aməst bet* ↗Gurage ('Five Houses of Gurage') and later joined the *Säbat bet* Gurage ('Seven Houses of Gurage') confederation. The G. district is surrounded by the territories of the ↗Gumär, ↗Ǝndägañ, ↗Ǝnnämor, ↗Čaha and Azärnät-Bärbäre (↗Səlṭi). Today G. is part of Gumär and Geta *wäräda* of Gurage Zone (formerly it was part of the ↗Č̣äbo – Gurage *awrağğa*). The G. part of the *wäräda* is formed by around 13 *qäbälä*. The most important settlement is Qabul on the Ǝndəbər–Hossäyna road. Other significant locations in G. are Qʷante Səgba, the place of the traditional G. assembly, and the churches of Abo Giyorgis and Agata Maryam. In the 1920s G. was the residence of the Soddo Gurage princess *wäyzäro* Wällätä Śəllase, a mistress of *aṣe* Mənilək II (Azaïs – Chambard 1931:151ff.). The most-important river in G. is the river Wenqe. G. is characterized by a high population-density (today 366 inhabitants per km^2), and intensive agriculture with a strong role for ↗*ənsät* cultivation.

The G. migrated from Čaha and over a long period of time expanded eastwards, starting from Qʷante Səgba. The G. maintained a constant peaceful as well as hostile relationship with their neighbours, such as the Gumär and Azärnät-Bärbäre (and other Səlṭi-speaking groups), with whom they competed for the fertile highland west and north of Mount Mugo.

Like the other Gurage "houses", G. is composed of a number of sub-groups of different origin which have inter-group/inter-ethnic clan-relations with other regions in Gurage and beyond. The two main ancestors of the G. are Märawədäñe, who, in oral tradition, is linked to the army of *aṣe* Zärʾa Yaʿəqob (r. 1434–68), and a certain Bäräsəye. Bäräsəye's origin is said to be either "Arabic" via *šayḫ* Bašīr, a co-combatant of Umär, the father of *ḥāǧǧī* Aliyye of Səlṭi, or, less supported by oral tradition, Oromo (Dənbäru Alämu et al. 1987:85f.; ShGurage 104). The Idik clan, which has a certain sacral role in traditional Gurage religion as well as in Islam, also derives itself from the line of *šayḫ* Bašīr.

Trimingham (TrIslam 186; cp. also ShGurage 36) reports a majority of "paganism" and (Orthodox) Christianity, but additionally Islam is the most recently established since the campaigns of *imām* ↗Ḥasän Ǝnǧamo and the conversion to Islam of the late G. leader *abagaz* (then *imām*) Hamdəno from the Humarad clan at the end of the 19th cent. Today, various Protestant and Catholic denominations are to be found as well. In the G.-Gurage folk-religion the spirit ↗*Waq* is called *Mando* (Shack – Habte Mariam Marcos 1974:54, note).

Gəyon ↗Wäliso

Geyz

G. is a rural production-oriented institution which serves as the ↗Gurage counterpart of the ↗*däbo* or *qərre* system common in other parts of Ethiopia (Aspen 1993; Kebebew Daka 1978). G. is an institution by means of which interested farmers pool together labour and other resources such as farm implements and construction tools in a work party that they organize, usually on a neighbourhood level. The main purpose of G. is to facilitate help among farmers during peak agricultural seasons. A G. work party could also be organized to help poor households or others who may need the help of such a group. Thus, households headed by women and others that have capacity constraints may get help through G.

According to a study conducted in 1998, among 300 households surveyed in the Čaha *wäräda* of Gurage zone, 91 % of farming households relied on others' help to perform major agricultural activities. From among the various labour sources, the largest proportion of households' labour access is facilitated by collective work arrangements. In the main agricultural production season preceding the survey, G. constituted the main labour source in land preparation for 37.2 % of the respondents, in ploughing/digging for 38.1 % of them, in planting/sowing for 23.4 % and in weeding for 28.1 % of them (Getinet Assefa 1999).

In a typical G. group, an average of 8 to 12 men work jointly in main agricultural activities. G. operates on a tacit understanding and agreement between people who want to help each other on such activities. A neighbourhood level of organizing G. is a common practice, although all neighbours may not necessarily work together in such an institution. It could be observed that the formation of a G. at a neighbourhood level offers advantages of economy of time and better access to farm animals and implements (author's own field-notes).

G.-based work is performed for group members on a rotational basis. When ready with his land, food and drinks to be provided on the work party, an individual member requests his G. partners to help him on a particular day. Usually, work schedules are agreed upon in advance. Most G.-based works are started in the morning and last for several hours, depending on the amount of work. A particular work party is concluded with coffee and *qolo* (roasted grain or beans) or *wusa* (*koččo*, s. ↗Bread) at the host's house. While having the coffee, the participants discuss the program for the next G. work and anything related thereto.

Gəzaw Ḫaylä Maryam

G. (ግዛው፡ ኃይለ፡ ማርያም; b. 1910 Kabi, d. 1989, Addis Abäba) was a scholar and politician. Son of ↗Ḫaylä Maryam Śärabiyon and *wäyzäro* Mirgiya Zämädkun, he was baptized in Seyadäbrä Lədätä Maryam, northern Šäwa. After completing the first grade of traditional church education and Mənilək II Elementary school, G. was sent to Switzerland in 1923 for studying. From there, G. moved to Germany to pursue his education in agricultural science, but soon had to return to Ethiopia due to the political turmoil following Nazi accession to power.

During the Italian occupation (↗Italian war 1935) G. had to flee to a remote village in the district of Gəndbärät (western Šäwa) where he founded the first water mill and a dairy farm. Upon Ḫaylä Śəllase I's return G. got a post in the Ministry of Pen; later on he was transferred to the office of ↗Täʾammərat Amanuʾel as a senior advisor. In a few years G. was transferred to the Department of Antiquities and National Library.

From 1954, G. took an active part in the French-Ethiopian archaeological investigation, cooperating with Francis Anfray, Roger Schneider and other French archaeologists – mainly due to his good knowledge of Gəʿəz, Sabaic, Amharic, Təgrəñña and Oromiffa, as well as of foreign languages such as French, German, English and Italian. The historical and archaeological activity took him to historical places of Aksum, Yəḥa, Zula, Gondär, Sidamo, Harär and Šäwa (Awaš, Mälka Qunṭure) for over 16 years.

As a result of these archaeological expeditions and painstaking work G. produced several historical works and articles (e.g., his manuscripts on the History of Oromo or the History of Aksum); he also translated the resumes of Anfray's and Schneider's articles into Amharic for the ↗*Annales d'Éthiopie*.

After the collection of ancient manuscripts, coins, statue, and various artefacts assembled during the archaeological expeditions had been recorded in the *Annales d'Éthiopie*, a museum where the items could be displayed and safeguarded was conceived. G. was the founder of the Ethiopian National Museum and its first Director. The museum was located in the present Bankers Club, which was close to the office of the Archaeological Institute.

G. retired in 1972. During his service as a governmental civil servant he was awarded two Gold Medals and a certificate of Merit from the Ethiopian Government. He was buried at the Gännätä Ləʿul Iyäsus Church in Addis Abäba.

Mekonnen Retta

Gəzrät ↗Circumcision

Ghistele, Joos van

G. (b. 1446, Gent, d. 17 April 1516, Zuiddorpe) was a Flemish nobleman and knight in the service of Charles II the Bold, Duke of Lorraine. In Cologne Cathedral, where the supposed relics of the

↗Magi (Mt 2:11) were kept, he read a booklet in which it was said that any pilgrim from the Low Countries would be well received in the land of the ↗Prester John if he were to bring gifts which had been in contact with the relics of the Three Wise Men. Together with the chaplain Jan (van) Quisthout and his friends Joris van Ghistele, Jan van Vaernewijck and Joris Palijnck, G. decided to travel to ↗Abyssinia. He departed on 15 September 1481 and returned on 23 June 1485. He travelled to Palestine (↗Jerusalem), ↗Egypt, the Sinai, Perim (Aden; ↗Yemen), Syria, Northern Persia, the Greek Archipelago and North Africa, never reaching the realm of Prester John. From 1492 to 1494 G. was the Lord Chamberlain of Gent. The coat of arms of his home town of Zuiddorpe (in Axel), three exotic plants on a yellow field, is meant to illustrate G.'s travel.

G. recorded what he saw and heard in the account he completed upon his return, ca. 1490. *Tvoyage van Mher Joos van Ghistele* consists of eight books, subdivided into altogether 210 parts and containing many details he collected from the Ethiopians he met in Cairo and Jerusalem. In Book I, 2 (Gaspar 1998:34f.), dealing with Oriental Churches, G. gives a description of the "Abassinen" or "Indians" (↗"India"). Christians living in various kingdoms of Ethiopia and Nubia under the jurisdiction of "pape Jan" (Pope John, i.e. Prester John), they grow black in the course of life because of the burning sun, but are never as dark as the Saracens i.e. the ↗Moors. Healthy-looking, fine-limbed, lean and womanlike, they are sparing with words, usually barefooted, hard-working and living frugally.

G.'s "Abassinen" are devout and resemble the Jacobites in many respects. Their ↗eucharist is made of leavened bread, they give communion to young children, and at their services three stand together at the altar in honour of the three Magi, who are kept in high reverence because they came from their lands. Laymen, priests and clerics perform the ceremonies with chanting, jumping and hand-clapping, most of them holding sticks in their hands (↗*Däbtära*). At all their services they use censers (↗*Maᶜətänt*) to please the Lord with the ↗incense.

G. finds the Ethiopian church in Jerusalem most resembling a northern European one. He praises the Ethiopians' austerity and abstinence which they esteem above all other virtues and remarks upon their practices of ↗circumcision (in reverence of Christ who was also circumcized) and scarification (to mark off Christians; ↗Body ornamentation). The Christian "Indians" always carry or wear a ↗cross and are privileged in comparison to the "pagans" in everyday life. The priests wear black cloaks which remind G. of Portuguese style (↗Clothing) and headwear ("draped blue bandages"). In Book II, 18 and 24 (Gaspar 1998:88, 96) G. describes the Ethiopian monastery in Jerusalem (↗Dayr as-Sulṭān) and the chapel inside the church of the Holy Sepulchre.

G.'s account (Book III, 18, Gaspar 1998:192) mentions the role the Nile (↗Abbay) played in relations between Abyssinia and Egypt. The *sulṭān* greatly fears "pape Jan's" alleged ability to change the river's course – for if the Nile would not flow across Egypt most of the country would be inhabited and barren – and therefore tries to entertain friendly relations with the Christian ruler by sending him every year fine gifts and presents. Abyssinians in Egypt also enjoy great privileges. In Book III, 27 (Gaspar 1998:207ff.), G. provides a detailed description of a large monastery in "De Almarach" (↗Dayr al-Muḥarraq; Gaspar 1998:231 n. 139) where Mary and Jesus are said to have lived during their stay in Egypt, with ca. 30 "Abassinen", Greeks and Jacobites.

G. writes that from Aden merchants travel to Hormuz, and southwards to the lands of Abyssinia, in particular to the city of "Senwa" where "pape Jan" usually resides (Book VI, 12; Gaspar 1998:253ff.). The designation "Senwa" resembles "seuwa" of the 14th-cent. *Historia Trium Regum*. Gaspar (1998:269, n. 53) brings this latter term in relation with "Saba" which on the basis of Psalm 68:30 and 72:9–10 may be considered as the place of origin of the Three Wise Men. If, however, Senwa/Seuwa, as the latter form suggests, can be identified with the well-known kingdom of ↗Šäwa, G.'s information appears extraordinarily accurate.

Another merchants' destination is "Egrijsohulla", a place south-south-east of Aden where the body of St. Thomas is said to rest. According to Johannes van Hildesheim (ch. 11, cp. Gaspar 1998:269, n.54), it was a very famous island in the former kingdom of king Caspar of Tharsis. Gaspar (1998:149, n. 5) states that according to the legend St. Thomas first preached on the island of ↗Soqoṭra and successively in India.

Ǧibälla

The Ǧ. (ጂበላ) mountains, to the south-west of ↗Däbrä Marqos, are part of the volcanic plateau of ↗Goǧǧam (2,400 m A.S.L.), crossed by rushing streams that join the ↗Abbay more than 1,000 m below. The Ǧ. are flanked by the Mutara mountains, which give way to the canyon of the Blue Nile. This region belong to the Däbrä Marqos *awraǧǧa* until the administrative reforms of 1991. Today, it is part of the Däbrä Marqos *wäräda* in the East-Goǧǧam zone (Amhara *kəlləl*).

G. (ጊቤ) is the name of the ↗Omo river north of ↗Wälqiṭe. It is an endorheic river with a basin of 67,450 km^2 (second largest in Ethiopia), which flows into Lake ↗Turkana at the end of its 829 km course. The Gəlgäl G. ('Little G.') is formed by the Lagamara G. originating in Mount Goroçän (3,276 m A.S.L.) to the north, of the Ǝnnarya G. to the west and of the Ǧimma G. to the east, both running down the Sadderro mountains, which overlook the town of Ǧimma. The three G., after winding across the marshy ↗Guduru and Ǧimma plateaus, run through a number of falls, particularly downstream from Ǧimma.

The hydroelectric power-plant at Gəlgäl G. was planned to make use of the important level differences and of the abundant flow of the G., which are supplemented by their left bank tributaries, such as the Walga river descending from the Dändi-Wänči. This plant is now in use, a high voltage line linking the capital to Ǧimma has been erected and taken in operation.

The Oromo kingdoms of ↗Gomma, ↗Guummaa, ↗Geeraa, ↗Ǧimma Abbaa Ǧifaar and ↗Limmu Ǝnnarya emerged from 1810 to 1830. They nest in the loop of the G. which act as a protection to the north and they are separated from the former kingdom of ↗Käfa by the deep ↗Gogäb valley. To the east the former kingdom of Ǧanǧäro, where an Omotic language is spoken, enjoys the same natural protections. Their prosperity has relied upon the trade of coffee, ivory, slaves, musk, hides and skins sold in important markets (Sappa, ↗Hirmaata) in the hands of the ↗*afkalas*. These gradually converted to Islam the kings (↗*Mooti*), who, however, welcomed the Catholic mission of Guglielmo Massaja. Frequently at war, the sovereigns never united either behind ↗Abbaa Bagiboo I or behind the kings of Ǧimma in order to resist the Šäwan conquest. From 1882 to 1891 they had to submit to Mənilək II's generals (*ras* ↗Gobäna Dači; *ras* ↗Wäldä Giyorgis Aboyye). ↗Abbaa Ǧifaar II, by paying a heavy tribute to the Emperor, kept his state autonomous up to his death in 1932.

Ǧibrīl

Gärad Ǧ. (d. 1569) belonged to the Somali tribe of ↗Garre. He was the brother of ↗Nūr b. Muǧāhid's wife. Ǧ. is first mentioned in the legendary *History of Nūr b. Muǧāhid* (Getatchew Haile – Wagner 1989) as one of the generals of Nūr, who participated in a battle near Burqa, in the Čärčär, against the Christians. This must have happened when Harär was raided by the army of *aṣe* ↗Gälawdewos (the legend speaks anachronistically of Zärᵓa Yaᶜəqob), between 1550 and 1559.

The next information can be found in the so-called *History of the Kings* (*Storia dei re*; s. Cerulli 1931). After Nūr's death, in 1567/68, *gärad* Ǧ. remained a defender of the strictly Muslim policy of Nūr. Such a policy was to be in complete contrast to that of Nūr's successor, the Ethiopian renegade and former slave, ↗ᶜUṯmān. ᶜUṯmān was licentious with respect to Islamic law. He negotiated a treaty with the non-Muslim Oromo which gave them permission to hold a market in the territory of ↗Harär. He appointed *gärad* Ǧ. to supervise the Oromo market. Ǧ. did so, but once the market was over he did not return to Harär. Instead, in 1569, he went to ↗Awsa, where he started a protest against ᶜUṯmān's non-Islamic behaviour.

An open conflict broke out when a woman, who originally had been Muslim, left the Oromo, sought refuge with Ǧ. and finally converted back to Islam. The treaty between ᶜUṯmān and the Oromo had a paragraph that obliged the inhabitants of Harär to extradite all Oromo deserters. But Ǧ. called ᶜUṯmān's attention to the Qurᵓānic prohibition of handing over Muslims to the enemy. Although ordered by ᶜUṯmān to implement the treaty, Ǧ. refused to do and rebelled against him.

Ǧ. successfully gathered followers from Awsa and ↗Zaylaᶜ. He managed to defeat ᶜUṯmān's army under the command of the *sīm garād* Bäläw Muḥammad near Zaylaᶜ (May 21, 1569) but died in the battle. ↗Ṭalḥa b. ᶜAbbās proclaimed himself head of the rebellion and brought it to a final victory. Ǧ. was buried near the sanctuary of ↗Barḫadle Yūsuf al-Akwān, on the road between Harär and Fadis.

Such is the conflict between ᶜUṯmān and Ǧ. as told by the *Storia dei rei*. The legendary *History of Nūr b. Muǧāhid*, however, gives a totally different account: ᶜUṯmān resigned and Ǧ. took over the rulership in Harär. Shortly afterwards Ǧ. killed ᶜUṯmān. Bäläw Muḥammad retreated into the country of the Nole Oromo (↗Qottu). Ǧ. fought against him and forced him to flee into the Erär Valley. There Bäläw Muḥammad was captured by Ǧ. and died shortly after in prison.

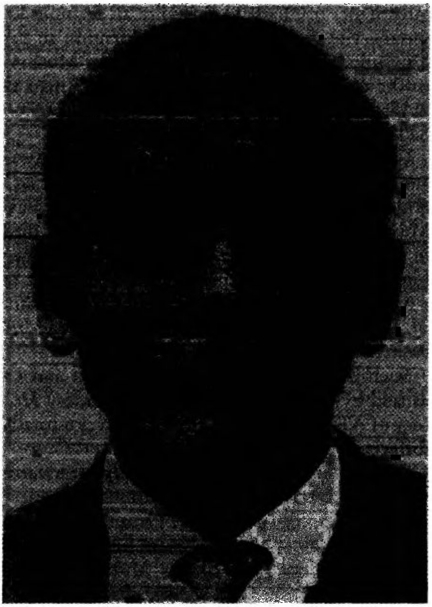
Gidaada Solon

Qes G.S. (b. 1901, Aläqa Sotalo, near Sayyoo [Dambi Dolloo], Western Wälläga, d. 25 January 1977, Dambi Dolloo) was a prominent evangelical pastor. He lost his eyesight at the age of five as a result of a smallpox infection; two of his brothers and his sister died in the same epidemic. All attempts of his parents to have his sight restored through the *qaallu*-priests were costly and without result. As a boy G.S. spent some of his time with his grandmother, who had a remarkable memory for Oromo folklore and local history. The young G. steeped himself in these memories, becoming himself an authority on the history of Western Wälläga. At the age of 20 he encoun-



Gidaada Solon; photo courtesy of Nagaaso Gidaada

tered Thomas ↗Lambie. G.S., who wanted to beg for money from him, was deeply impressed by the words of the American missionary. G.S. started attending the Bible lessons for beggars.

When the missionaries became aware of G.S.'s proselyting skills, they invited him to move to the mission compound and preach to the patients at the clinic. He was enrolled in school, learned Amharic and English and, later, to read Braille in English and Oromo. During the rainy season he preached at Burka Badessa, on the main trade route to Gambella. G.S. became an influential evangelist and counsellor. He was ordained priest on 3 March 1940. On 8 August 1940 G.S. was arrested by the Italian authorities and taken to Ǧimma, together with *qes* ↗Mammo Čorqa, both accused of espionage. They were freed by the British troops on 3 June 1941.

During the 1940s G.S. did not merely render pastoral and educational services in Qəlləm *awrağğa*, he also played a leading role in founding the Evangelical Church Bethel in 1947 and in the Conference of Ethiopian Evangelical Churches, which tried to form a United Evangelical Church in Ethiopia. After much local harassment and even arrest for his religious activities, he got a chance in 1953 to talk to *aṣe* ↗Ḫaylä Śəllase I and obtain from him permission to reopen eight of the evangelical churches in the Sayyoo area.

In 1954 G.S. volunteered to go to Gəmira and take up pastoral and evangelical work there. Based in Gəmira, he also visited other places for preaching, counselling and teaching. In 1965 G.S. retired and returned to his native Dambi Dolloo, where he continued advising people until his death.

G.S. and his wife Dinse Šoli (whom he married in April 1924) had eight children. Three died in early childhood; the remaining sons held leading positions in the Federal Democratic Republic of Ethiopia. One of them, Solomon, became Ethiopian ambassador to London (d. 17 June 2003), another, Nagaaso, was President of the Federal Democratic Republic between 1995 and 2001, and the third, Elsai, was an administrator in Wälläga.

Johannes Launhardt

Gidaamii

G. (or ጊዳሚ, Gidami, 1,928 m A.S.L.) was previously the centre of G. *wäräda*, part of the Qälləm *awrağğa* in the ↗Wälläga province. Since 1991 it has become the capital of the Ǧimma-Gidaamii *wäräda* in the East Wälläga zone in Oromiyaa. It is a small town on the first slopes of Tulluu-Wälläl, a sacred mountain for the Oromo ↗Leeqa Qälləm, in the very west of Oromiyaa close to its border with the Beni Šangul-Gumuz *kəlləl*. It is poorly connected to the regional centre, ↗Dambi Dolloo.

The inhabitants of the surroundings of G. are agriculturists. They grow cereals on the territories cleared from forest. Coffee has been increasingly cultivated in the area, but progress is being hindered by the lack of proper infrastructures.

The area was already under Ethiopian domination in the 1890s and it was used as the base in the offensive against the ↗Beni Šangul, led in 1898 by *ras* ↗Mäkʷännən Wäldä Mika'el. To the south of G., *däğğazmač* ↗Ǧootee Tulluu launched the attack against the Italian expedition of 1897 in which its leader, Vittorio ↗Bottego, was killed (Guida 507). During the Italian occupation the place was only a "large village". The population then grew considerably till the 1980s, reaching 3,540 in 1984 (CSA 1984); since then it has stagnated: in 1999 the number of inhabitants was 3,762 (CSA 2000), in 2004 it reached 4,557 (CSA 2004).

Gidāya

G. (arab. جداية, Ǧidāya, Amh. ግዳያ, Gədaya) is a historical Muslim region mentioned in the 14th-cent. Chronicle of *aṣe* ↗ᶜAmdä Ṣəyon and in the ↗*Futūḥ al-Ḥabaša* (BassHist I, 99 = II, 173). The Emperor reportedly sent his army to all the lands of the Muslims, those "which are called ↗Kʷəlgora, G., Kubät, Fadse [Fadis in today's Harär?], Qädse, Hargaya and Bəqulzar" (HuntAmdS). These regions might have been part of the ↗Ifat and later of the ↗ᶜAdal states. Most of them have not yet been identified. Wright suggests that all of them were located between Kʷəlgora and Bəqulzar (the latter being a Harari term, meaning 'vegetation along a river'; HuntGeogr 90).

In ↗Harär G. still exists as a family name, with oral traditions connected with it. According to the research of Mahdi G. Gadid (1979), G. and Hargaya were two Muslim principalities which were predominantly populated by Hararis, until they were absorbed by the Oromo and Somali. Oral tradition (as related by *āw* Abū Bakr) reports that these two principalities were located in the area of Ǧaarso-Oberra. Braukämper (2002: 33) places Hubat, G. and Hargaya on the Harär plateau as sub-provinces of ᶜAdal. According to Mahdi, these names have survived in the Nole region.

Mahdi also reports the oral tradition of a certain *amīr* G., a brother of Hargaya, who was fondly remembered in Harär for putting on a big marriage ceremony. A popular wedding song is also associated with G.:

Gidāya šamina	'G. is from Sham [Syria]
Aminina	He was an honest man
Märtuw zišeläwa	Decorated his daughter's hair
Wäśaraw zäborüda	And performed a wonderful marriage for his daughter called Sara.'

Tradition links the destruction of Šäwa, Sim, G. and Hargaya with a 16th-cent. famine and Oromo expansion after the wars of ↗Aḥmad b. Ibrāhīm al-Ġāzī. Wazir Muhammad Hargaya was appointed by *amīr* ↗ᶜUṯmān b. Badlāy for the rule of Harär in his absence.

Ahmed Zekaria

Gideᵓo

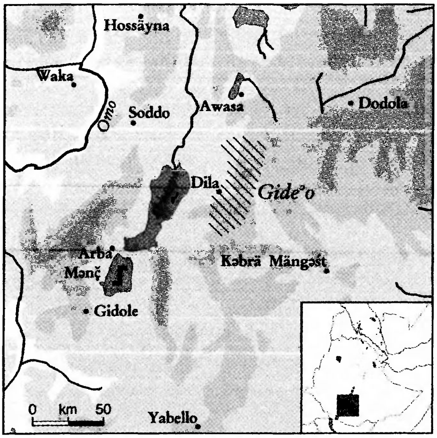
Gideᵓo language

G. (also Gedeᵓó, Gedeo, in Amh.: Därasa) belongs to the Highland East ↗Cushitic languages, formerly called the Sidaama group, and is therefore closely related to Sidaama, ↗Kambaata, ↗Allaaba, ↗Hadiyya, and ↗Burǧi.

The at least 700,000 G. speakers live in the western part of what was ↗Sidamo province, south of the ↗Sidaama people and east of Lake Abbayya (called Gidiččo by the G.).

The phonological system of G., besides voiceless emphatic stops (*p̣*, *ṭ*, *q*) and an emphatic affricate (*č̣*), contains an implosive *ɗ*, e.g., *roop̣o* 'hippo', *geɗebo* 'sheep'. Vowel length is distinctive. G. is not a tone language. Stress placement depends on grammatical/syntactical functions and vowel length (*ᵓisó* 'he' vs. *ᵓisóóᵓo* 'him').

The personal pronouns are (with object and subject case): sg.: 1st pers. object *ᵓané*, subject



ʾaní, 2nd pers. object *ʾaté*, subject *ʾatí*, 3rd pers. object *ʾisó*, masc. subject *ʾisí*, fem. *isé*, pl.: 1st pers. *noʾó*, 2nd pers. *haʾnó*, 3rd pers. *insaʾné*. The demonstrative pronouns for near objects are: masc. object *konne*, subject *kunni*, fem./coll. object *tenne*, subject *tinni*; for far objects: masc. object *ʾokkone*, subject *ʾikki*, fem./coll. object *ʾettene*, subject *ʾitti*. The *k/t* dichotomy is found elsewhere, but cf. masc. *anki* with fem. *anṭi* 'mine'. A noun is determined by *-a* (object case), *-i* (subject case): object *woraabeessa*, subject *-i* 'hyena(s)'. There is a singulative suffix: *haqqe* 'wood' > *haqq-iččo* 'stick, tree', *garba* 'slave' > *garb-ičča*.

The suffixes of the present-future tense are characterized by *-a*, *e.g. barat-a*, 'I learn, study', *-ta*, 'you', *-a*, 'he', *-ta*, 'she'; (**barat-na* >) *baranta*, 'we learn', *barat-tina*, 'you (pl.) learn', (**barat-na* >) *baranta*, 'they learn'. In the past tense the characteristic final vowel is *-e*: *barat-e*, *-te*, *-e*, *-te*; *barante*, *barat-tina*, *barante*. The jussive has final *-o*: *barat-o*, *-to*, *-o*, etc. To these basic forms several suffixes and auxiliary verbs are added, cf. the actual present form: *barat-a-ʾenne*, 'I really learn, I am learning', *barat-ta-ʾette*, 'you', *barat-a-ʾnee*, 'he', *barat-ta-ʾnee*, 'she' etc.; the actual perfect form: *barat-e-ʾenne*, 'I (have) learnt', *barat-te-ʾette* 'you', *barat-e-ʾee* 'he', *barat-te-ʾee*, 'she' etc. The suffixed *-t* (of 2nd pers. sg. and pl. and 3rd pers. fem. sg.) is assimilated to the final consonant of the root morpheme: *bt* > *bb*, *ṭt* > *ṭṭ*, *ɗt* > *ṭṭ*, but *mt* > *nd*, *lt* > *ld*, *ʾt* > *ṭ*; *-n* (of the 1st pers. pl.) undergoes a metathesis with the preceding root consonant: *gn* > *ng*, *tn* > *nt*, but *rn* > *rr*, *ln* > *ll*.

Derived verb stems are formed through affixation of *-(i)s(s)/-sis/-išš/-ess/-čč* (causative), *-(e)ɗ* (reflexive) and *-em* (passive); e.g., *meʾʾ-* 'go' > *meʾʾ-išš-* 'cause to go', *ʾib-* 'fall' > *ʾib-is-* 'cause to fall'; *ʾanš-* 'wash' > *ʾanš-eɗ* 'wash oneself' (**ʾanš-eɗ-nanne-n* > *ʾanš-eʾ-nanne-n* 'we washed ourselves'), *fil-* 'comb' > (**fil-ɗʾ-* >) *fiʾl-* 'comb oneself'; *ʾeebb-is-* 'bless' > *ʾeebb-is-em-* 'be blessed'.

The word order is typically Subject-Object-Verb. Adjective, relative clause, genitive etc. precede their head-noun. There are postpositions, e.g. *hadi-ʾa* 'at (*-ʾa*) home', *hiyy-a-ʾni* 'as (*-ʾni*) he said (imperfect-present) so'.

G. ten-word list: *mitte*, 'one', *lame*, 'two', *sase*, 'three', *giira*, 'fire', *wedeʾe*, 'water', *ʾarisso*, 'sun', *ʾagenǧo*, 'moon', *ʾisso* (sg. *ʾissiččo*), 'tooth', *munde*, 'blood', *ʾarrabo*, 'tongue'.

Rainer Voigt

Gideʾo ethnography and history

The G. (also Därasa) are a people and territory along the eastern slopes of the Rift Valley escarpment, directly opposite Lake Abbayya, which constituted Därasa (after 1974 – Gideʾo) *awraǧǧa* in Sidamo province of the Southern Nations, Nationalities and Peoples' Region. The *awraǧǧa* consists of Dilla, Yərga Çäffe and Amaaro *wäradas* with Dilla as the administrative centre. Ethnically G. borders the ↗Sidaama to the north and the ↗Guǧǧi Oromo elsewhere. Population pressure, land expropriation and economic opportunities pressured G. expansion towards the town of Hagärä Maryam and Lake Abbayya in recent generations.

The G. claim descent from a common ancestor, Därässo, and his seven sons, who fathered the G. clans (*torbanigosa*): Darašša, Gogošša, Hanoma, Doobba, Hembaʾa, Lagoda and Bakarro (Wedekind 1990:22), or in Gasparini's version (1994: ii): Gedeʾo, Rikʾata, Subbo, Bakarro, Hanuma, Dobboʾa, and Gorgorša. Cerulli (1965:119) gives the following seven tribes: Emma, Logoda, Bakarro, Darašā, Dobbo, Anuma, and Gorgoša. Two asymmetrical moieties of three and four clans respectively resided dispersed over three territorial divisions (*sasseroga*). Each clan claimed territory, but migration and intermarriage have disguised settlement patterns. Only males inherited land; unique G. land-measurement units existed. Under the rule of the Ethiopian Empire, these traditions gave way to cultural practices originating in the north.

The G. shared many similarities with the Guǧǧi. They practised their autochthonous religion, centring on the god of creation (↗ *Waaqa*). Mediums remain important, expediting interaction with spirits. Historically, the most powerful religious figure was the Guǧǧi ↗ *qaalluu* the G. consulted and gave gifts to. Like the Oromo, the G. maintained a ↗ *gadaa* system. Although unique, theirs compared strikingly with that of the Guǧǧi in organization, ideology, and function. The ↗ *abbaa gadaa* and subordinates influenced politics substantially. The *abbaa gadaa* bore responsibility for G. well-being and mediated, but the *heiyča* (esteemed elders who performed the function of local ritual leaders and mediators) handled local affairs, resolving most ordinary conflicts. Their relevance outlasted that of the *abbaa gadaa* under the rule of the Ethiopian Empire, and they remained vital late into the 20th cent.

Traditionally subsistence farmers, the G. cultivated primarily ↗ *ənsät*, in addition to sorghum, corn, potatoes, yams and other vegetable crops. Sheep, goats, and chickens were domiciled in G. homesteads with an occasional cow, horse or donkey, providing easy access to manure, essential for *ənsät* production. G. farmers exchanged *ənsät* with the Guǧǧi for bovine products and also for animal-salt (*bolee*) from the Lake Abbayya marshes. In the early 20th cent., coffee became an important G. cash-crop as farmers semi-domesticated wild trees to meet increasing Ethiopian and international demand.

Events in the late 19th and early 20th cent. brought considerable change to the G. The conquest in 1890 by *aṣe* ↗ Mənilək II forced the G.'s incorporation into the Ethiopian Empire, requiring dramatic social, political and economic reorientation. Following the Italian War of 1935–41, Western Christianity arrived. Although resisted initially, Christianity was fully embraced by some, an effort to "modernize", while resisting "Ethiopianization". Western Christianity eroded traditional G. institutions such as polygamy, *gadaa* and animism. Missionaries introduced the first Western schools and clinics, building a strong and vibrant Western-Christian presence. Lastly, the overthrow of the Ethiopian imperial system after 1974 also weakened traditional institutions, substituting new ones that have not taken (and may not take) permanent hold. The G. aspire to fuller integration into the nation as equals, while resisting domination from the centre, particularly policies that destroy or diminish their unique culture, language and local economic resources.

Charles W. McClellan

Gideon Force

On 7 November 1940, Major Orde ↗ Wingate, Royal Engineers, arrived in Khartoum and started to organize an army that he called G.F. The unit eventually comprised 50 British officers, 20 British non-commissioned officers, the 2nd Ethiopian battalion (800 troops) and a Sudan Defence Force Frontier battalion (800 troops).

In late January 1941, the unit crossed into Ethiopia at Umm ʿƎdla, where *aṣe* ↗ Ḥaylä Śəllase I joined the G.F. Less than four months later, on 5 May 1941, Wingate accompanied the Emperor on his triumphant return into Addis Abäba. On 1 June 1941, General Alan G. ↗ Cunningham, fearing that Wingate would get involved into Ethiopian politics, informed him that G.F. no longer officially existed.

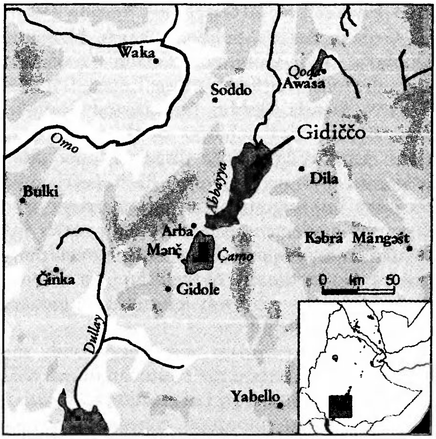
Gidiččo

G. (ጊዲቾ) is a mountainous island (mainly basalt relief with rhiolotic arees) in the northern part of Lake ↗Abbayya. According to McClellan (1988: 24), the ↗Gide'o use the word "G." to refer to the entire Lake Abbayya. The highest elevation of the island measures 1,242 m A.S.L., 73 m above the lake. The soils are rather poor and shallow and subject to very intense erosion, both in the mountains and at the coastal part.

Haberland (VSAe II, 688) reports having seen traces of terraces and thus presumes an ancient intense agriculture. According to Raunet (1977), only the eastern part is suitable for some land use. The natural milieu here consists of semi-humid combretum-savannah while thorn thicket (↗acacia, ↗euphorbia, aloe, sansevieria) presides in the western part. In 2000, the dry surface of the whole island distinguishes it clearly from its neighbouring islands, which are covered with thick forest. Streams or sources are not mentioned, while the salty lake water is hardly suitable as drinking-water.

The island is inhabited by two ethnic groups, ↗Bayso (sometimes also referred to as G.) in the villages of Bayso and Šigima and Haruro (↗Harro) in the village of the same name. All three villages are situated at the eastern shoreline.



While the B. cultivate small fields on the island and trade ↗cotton-cloth to either side of the lake, the Haruro are said to live on ↗hippopotamus hunting, ↗fishing and ↗weaving (Haberland – Straube 1979:110). Goats, sheep and donkeys are left running free on the whole island.

G. is also the name of the local variety of the ↗Harro language.

Gifts

The fact that the giving of G. or G. exchange is not only part of an economic system, but also a social system in which the items exchanged take on a social significance beyond their net worth was one of the most important insights Marcel Mauss provided in his seminal anthropological work *Essai sur le don* (1925). By giving G. one demonstrates that one is generous and worthy of respect; by accepting them one shows respect for the giver; by reciprocating the G., one shows that one's honour is equal to that of the original giver.

G.-giving and G.-exchange in Ethiopia is, therefore, best understood as a prism for the understanding of social and political relations. Among the Arbore, the transition of power from one ↗age group to another is marked by the act of rewarding with a G. of coffee the generation leaving power. Among the Muguǧi (Kʷegu-Muguǧi) and the Hor (Arbore) bond-friends or partners traditionally exchanged G., in the case of the former most commonly ↗honey because it is their special product. The Betä Ǝsraʾel gave G. of knives to their Christian neighbours' weddings, while the Christians bring live sheep as G. to weddings of the Betä Ǝsraʾel.

One of the most common occasions of G.-giving in Ethiopia is at the time of ↗marriage. According to the ↗*Fətḥa nägäśt* (Paulos Tzadua 1968:138–41), presents are given both to mark an engagement and on the day of the marriage. The former belong to the betrothal and if the marriage does not take place they are to be returned to her intended spouse. In contrast, G. given on the day of the marriage belong to the bride. Similarly, betrothal G. can be taken by creditors, but not the dowry. In Dokko, the bride's clan-sisters do not let her be taken away by the groom until they receive G., traditionally butter (↗Milk and milk products) and more recently money. Pankhurst (2002:135) notes that the practice of grooms offering brides G. of clothing was disrupted during resettlement under the *Därg* but re-instituted (in some cases even retroactively) as a sign of commitment to marriage.

Another occasion for G.-giving is the birth of a child: neighbours and relatives provide good food (e.g., chicken, flour for *gänfo* porridge, yoghurt) or money. In different areas (e.g., in Goǧǧam, Səlṭi) it is common to give a cow (*yäʾaras lam*) as a present for the new-born child to supply it with milk. A child is provided by the godfather with clothes, including the cloth in which it is wrapped after baptism. For the occasion the guests bring different kinds of food.

The *Fətḥa nägäśt* distinguishes between donations which are made to those who are not poor and ↗alms which are given to the poor. The former is considered less commendable than the latter (Paulos Tzadua 1968:156ff). Prominent in this respect were offerings given to churches and other ecclesiastical institutions (↗Donors). These ranged from royal donations of land (↗*Gʷəlt*), books and church vessels to G. of money, food and animals offered by even the very poor on feast days and other holidays. In the 15th cent. Zärʾa Yaʿəqob forbade payments to priests in return for services such as baptism, but permitted the giving of presents (Getatchew Haile 1992:136–39).

Among the Oromo votive G. brought to a ↗*qaallu* represent an important contribution to his income. ↗Salt bars are often given by those who seek his advice or assistance.

The refusal to accept G. implied a criticism of the honour or legitimacy of the giver. Thus, in the 14th and 15th cent. rebel clergy seeking to express their independence of secular rulers often refused their benefices. In the course of time, as relations improved, G. were accepted.

G., however, should not be idealized or romanticized. Items exchanged and labelled as G. are often a form of taxation or other payment described as a G. to disguise the less-than-voluntary nature of the giving. In northern Šäwa on the eve of the 1974 revolution, it was customary for landlords and government officials to receive G. of sheep, butter, wood, *dəfo dabbo* (a kind of bread) and honey on holidays, ↗weddings etc. Peasants who did not submit such G. could be evicted from their land.

Among south Ethiopian peoples, such as the Bäšada and Hamär, the custom of *miska* shows how G.-giving defines social relations and even serves as a form of economy. Bäšada women can ask each other to give goods they are in need of (salt, coffee or pepper). There is only general reciprocity, things just can be given to other women. The one who does not take part in the *miska* circulation causes *wupha* ('gossip'; Epple 1995:83f.). In times of poor harvest, people visit relatives and bond-friends in other regions as their *miska* partners. Preferably, relatives are asked for a *miska* G., but also unrelated women can be asked. The amount of G. demanded can be considerable. In a case observed by Epple

(1995:83f.), *miska* demanders from a starving area stayed for an entire week and took one-third of the sorghum.

Although G. are mentioned in many ethnographies of Ethiopian peoples, they have yet to be the subject of systematic study, either as the organizing theme of a work or as a comparative theme.

Gigar

Wag šum G. (ጊጋር, r. 1747–71) was the son of *wag šum* ↗Nä'akʷǝto Lä'ab. When *aṣe* ↗Iyasu II led an expedition to subdue Wag, Nä'akʷǝto Lä'ab and his son G., who was an official under his father, confronted the Emperor's army. They were defeated, however, and retreated into the region of Wäfla, east Wag. Iyasu then removed Nä'akʷǝto Lä'ab from office and appointed one of the latter's kinsman as *wagšum*. Within a very short while, G. and his father submitted to the Emperor, and G. was appointed *wagšum*.

In the early period of the ↗*Zämänä mäsafǝnt*, G. refused to pay tribute to *ras* ↗Mika'el Sǝḥul, king maker in Gondär, instead he joined forces with the governor of Bägemdǝr. G. frequently changed alliances, and in December 1770 he allied with *ras* Mika'el and allowed Mika'el to march through Wag to Gondär. In the final struggle against Mika'el at the battle of Sarbakusa (1771), G. assembled his troops on the side of Mika'el. Nevertheless, G. did not want to fight against his countrymen, the troops of Lasta – under *däǧǧazmač* ↗Wänd Bäwäsän, rival of Mika'el – and was instead positioned against the Amhara soldiers. According to James Bruce, the defeat of Mika'el was due to the Lasta troops' defection, who joined the side of their kinsman, Wänd Bäwäsän. These soldiers could very well be the troops of G.

Gigar

Aṣe G. (ጊጋር, r. 1821–26, 1826–30) claimed Solomonic descent from *aṣe* ↗Fasilädäs. He was a brother of his predecessor, *aṣe* ↗Iyo'as II. G. ruled at the height of the ↗*Zämänä mäsafǝnt*, when power was held, not by the emperors, but by a constellation of regionally-based nobles.

G. was placed on the throne by *ras* ↗Gugsa Märsa. He was briefly displaced, in 1826, in the struggles which followed the latter's death in 1825, but then restored to rule until 1830, when he was deposed by *ras* ↗Dori Gugsa.

The only European to meet G. was Samuel ↗Gobat, who claimed that G. had previously been a monk. Gobat was told that G. was 86 years old, but estimated rather that he was "somewhere between 65 and 70". Gobat's summary judgement was that "... he has neither temporal grandeur, nor spirit, nor heart" (Gobat 1834:89f.).

G. made a number of land grants which are recorded both in the *Liber Axumae* (*Mäṣḥafä* ↗*Aksum*) and in the marginalia of manuscripts in the British Library. Some of these grants were made to individuals, the most prominent of whom was *däǧǧazmač* ↗Säbagadis Wäldu of Tǝgray, a grant which G. made in consort with *ras* Gugsa Märsa (CRAxum 54f.). He made grants directly to churches, one of them in Tǝgray. A number of his grants to individuals were on behalf of the Gondär churches ↗Däbrä Bǝrhan Śǝllase and Gǝmǧa Bet Maryam. There is essentially no literature about him.

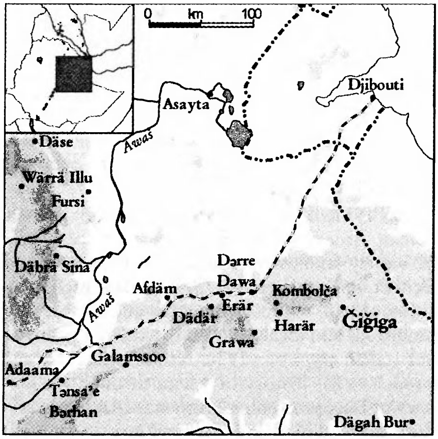
Ǧiǧǧa

Ǧ. (Amh. ጂጂጋ, Somali Jigjiga, 1,696 m A.S.L.), is the capital of the Ǧiǧǧa zone in the ↗Somali *kəlləl*. It is located on the piedmont of the Harär mountains, at the edge of the Ogaden plateau. It lies 150 km east of Harär and 150 km west of the Somali–Ethiopian border. Thus, it is an important strategic point on the road to ↗Hargeisa, capital of Somaliland, and ↗Berbera, principal port of the area. Ǧ. is also the starting point of the road, laid by the Italians, that connects the valley of the ↗Wabi Šäbälle and Mogadishu.

Before the conquest of Harär by ↗MəniləkII in 1887, Ǧ. was a significant commercial crossroad, visited by stock-breeders and farmers of the ↗Daarood clan-family, who inhabited the valley of the seasonal Ǧärrär river. *Ras* ↗Mäkʷännən Wäldä Mikaʾel made Ǧ. the base for his expeditions to Ogaden to subjugate the Somali. In 1900, *sayyid* ↗Muḥammad ʿAbdallāh Ḥasan (known by the British as the Mad Mullah) defeated the Ethiopian garrison of Ǧ. At the time of the Italian–Ethiopian war (1935–36), *däǧǧazmač* ↗Nasibu Zäʾemanuʾel, commander of the Ethiopian army in Harär, made Ǧ. his headquarters. In 1938, the town, then attached to the government-general of Harär, had 11,000 inhabitants, a high estimate which also included the Italian garrison (*Guida*). In 1940, the Italian troops left the place to conquer British Somaliland, which had been pre-emptively evacuated by the British. The next year, they positioned at Ǧ. to stop the advance of the liberation armies coming from Mogadishu.

Following the Italian defeat, Ǧ. was ruled by a British officer who controled the "Reserved Areas" before their return to Ethiopia in 1948. This was the occasion for violent Somali demonstrations, which were renewed when Ethiopia recovered Hawd in 1954. Ǧ. was then divided into two areas: the Somali town, with its mosques and tombs of saints, and the town that housed the Ethiopian army, with its own barracks, bars, churches and schools (Nega Mezlekia 2001). During this time the road to Harär suffered several attacks by Somali guerrilla fighters, who enjoyed the support of the population. Smuggling was also a flourishing activity, especially to Somalia and Djibouti. In July 1977, the Somali offensive forced the Ethiopian troops to evacuate their garrison. However, in the spring of the following year, a parachuting counter-offensive, with Soviet, Cuban and Ethiopian troops, forced the Somali army to withdraw. Until the signing in 1988 of the peace treaty between the two countries, Ǧ. (23,183 inhabitants in 1984) remained a garrison town, also having camps for refugees driven out by the drought and the civil war in Somalia. In 1987 it was attached to the Somali autonomous area of Dərre Dawa.



Since the federal administrative reform of 1991, the town belongs to the Somali region; Ǧ. replaced Gode in Ogaden as the capital of the regional state. Its population reached, in 2004, 89,531 inhabitants, having, thus increased by nearly four times since 1984. The military activities remain paramount (barracks, deposits, aerodrome, residences). The place is used by the Ethiopian army to keep a watch on the political instability in Somalia. Besides, the town shelters many assistance agencies and non-governmental organizations engaged in helping the refugees fleeing from food-shortages, famines and from the fights in Ogaden. Hotels, garages, restaurants and representatives of the Ethiopian administration are also found in Ǧ.

Alain Gascon

Giglio, Carlo

G. (b. 1911, Apecchio, d. 1976, Milano) was an Italian historian of Africa and ↗colonialism. G.'s early studies were dedicated to Britain and British imperialism. He praised the high performance of white civilization and shared the ambitions and ideals that led to the foundation of the Italian empire in 1936. Nonetheless, G.'s approach to the history of Africa through the history of European colonialism was adamantly scientific, based on documents and written sources. He engaged later in a fierce polemic with Sven Rubenson on the legal effects of article 17 of the Wəčale Treaty (↗Italo–Ethiopian convention; s. Giglio 1965).

After the end of the Italian empire, he presided over a committee for selecting, publishing and editing documents on Italy's presence in Africa; a number of volumes concern Ethiopia and the Red Sea. G. held the first chair of African History at the University of Pavia, thus introducing in Italy the teaching of Africa's history from a post-colonial – albeit not necessarily anti-colonial – perspective.

Ǧihād

According to Islamic tradition and law, the world is divided into two spheres. The first, *Dār al-Islām*, the 'land of Islam', is the part in which Muslim rulers implement the law and traditions of Islam. The other, *Dār al-ḥarb*, the 'land of war', represents the part that remains to be annexed to the land of Islam, preferably by peaceful persuasion (دعوة, *da*^{c}*wa*), but alternatively through the holy war, Ǧ. (جهاد). The "holy war" against non-Muslims was accepted at the very beginning of Islam as one of its fundamental principles and continued to determine much of Islamic foreign relations. In this context, however, Ethiopia, though a Christian state, has enjoyed a special status.

The uniqueness of Ethiopia in Islamic tradition stems from the initial story of ↗Muḥammad's mission. All Islamic sources agree that the Prophet was appreciative of Ethiopia as a land of a monotheistic religion. When his first group of followers, the *ṣaḥāba*, were persecuted by Mecca's rulers, he told them to seek asylum with the *nağāšī*, the *nəguś* of Aksum "a king who oppresses no-one". The first emigration of Muslims (الهجرة الاولى, *al-Hiğra al-ūlā*) left for Ethiopia in 615 A.D. and was given shelter by *nägāśi* ↗Aṣḥama. The Ethiopian King righteous not only saved Islam, but, according to Islamic sources, later in 628 A.D. personally accepted Muḥammad's call and embraced Islam. In gratitude, the Prophet ordered his believers to "leave the Ethiopians alone as long as they leave you alone" (Abū Dā'ūd 1988:4, 112 [*ḥadīṯ* 4309]; s. van Donzel in StudAeth 109–14). This *ḥadīṯ* was interpreted by most Islamic jurists as implying that Ethiopia was exempted from Ǧ., that she had the right to exist in spite of her Christianity, as long as she does not take the offensive against Muslims. Thus Ethiopia constituted a third case, in between the two aforementioned spheres, usually called *Dār al-ḥiyād*, 'land of neutrality'. There were very few similar cases, namely, neutrality declared by the Muslims themselves, and the Ethiopian case was considered the classical one.

None of the major Islamic dynasties declared a religious war on Ethiopia. The *rāšidūn*, the immediate successors of the Prophet, turned their attention away from the Red Sea area. They avoided invading Ethiopia because of military and practical considerations and also because of the aforementioned legal and moral exemption. The same was true of the Umayyads of Damascus and the Abbasids of Baghdad. The Islamic dynasties of Egypt, the ↗Fāṭimids and the ↗Mamlūks, never sent armies to the Horn of Africa. Because of their concern for the Nile as a water supply, they were more appreciative of Ethiopia's power. The Ottomans (↗Ottoman Empire) also "left the Ethiopians alone", with the exception of their occupation of Massawa (1557) and establishing the *Habeš eyaleti* ('Province of Ethiopia') along the coast. However, the Ottomans invested little in this enterprise with respect to both manpower and religious motives and were duly defeated.

The next invasion of a Middle Eastern army occurred three centuries later. Egypt's *ḫidīw*

Ismā^{c}īl (1863–79) dreamt of a Nile–African empire and threatened to occupy northern Ethiopia before he was defeated by *aṣe* ↗Yoḥannəs (the battles of ↗Gundät and ↗Gura^c, 16 November 1875 and 7–9 March 1876). However, this Egyptian campaign was initiated by a spirit of western Imperialism and was not a religious conquest, nor a declaration of Ǧ. on Ethiopia.

The early formative story of the *naǧāšī*–Muḥammad dialogue, however, also left a different message: Ethiopia's illegitimacy. Two elements in the legacy of that episode combined to justify a Ǧ. against Ethiopia. One was the contention that the *naǧāšī* converted to Islam and that Ethiopia was therefore already a part of the "land of Islam". The refusal of the Ethiopians to follow their Muslim king was seen by the Muslim radicals as Islam's first defeat. They advocated the *Islām an-naǧāšī* policy, calling for the installation of a Muslim king over Ethiopia. The second element was the conditional nature of the famous *ḥadīṯ* to leave the Ethiopians alone "as long as they leave you alone". Since Christian Ethiopia departed from the righteousness of the *naǧāšī* and oppressed Muslims, she must face Ǧ.

This counter-argument about Ethiopia's illegitimacy was raised by the more militant Muslims whenever the country was on their agenda. But it was mainly Ethiopia's immediate Muslim neighbours who actually declared holy wars against her. The most important instance occurred with Ethiopia's conquest (1529–43) by *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ), who had united the Muslims of today's southern Ethiopia and was inspired by both the rise of the Ottomans in the Red Sea and the influence of Muslim holy men from Arabia. The chronicle of the conquest, ↗*Futūḥ al-Ḥabaša*, is replete with Ǧ. phrases (e.g., BassHist vol. 2, 32, 40). Another important instance was the war on Ethiopia launched in 1888 by *ḫalīfa* ^{c}Abdallāhi at-Ta^{c}āʾišī, the leader of the ↗Mahdist state in the Sudan. The Mahdi's chronicler of the war left a description of a discussion held in the *ḫalīfa*'s court on the principal issue of Ǧ. against Ethiopia. The *ḫalīfa* announced that the Prophet told him in a dream that, in spite of the *ḥadīṯ* to "leave the Ethiopians alone", he could and should fight Ethiopia because of her aggression. A somewhat different justification to islamicize Ethiopia given in a dream through special authorization from the Prophet himself was described by the chronicle of Grañ.

Notwithstanding modern nationalistic concepts of the 20th cent., Middle Eastern–Ethiopian history continued to recycle this old inner-Islamic argument about Ethiopia's legitimacy. It was forcefully raised in the 1930s when Mussolini declared war and destroyed the Christian Empire. With the resurfacing of radical Islam in the mid-1970s, the proper interpretation of the *naǧāšī*–Muḥammad story continues to fuel the discussion of Ethiopia and Ǧ.

There is no evidence that throughout history any Ethiopian statesman was aware of this Islamic conceptual complexity regarding Ethiopia. Many Ethiopian rulers conceived Islam uni-dimensionally, acting on the premise that Islam was just after waging a holy war against them. In modern times this was especially true of *aṣe* Tewodros II, Yoḥannəs IV and Mängəstu Ḫaylä Maryam.

Gihon

According to the ↗Bible, the G. (Gə^{c}əz ግዮን, *Gəyon*) is one of the four rivers of Eden or Paradise: Pison, Hiddekel (or Tigris), Euphrates and Gihon (Gr. Γιών, Lat. *Gehon*, *Gyon* with variants; Hebr. *Gîḥôn*). In Gen 2:13, the G. flows round the land ↗Kush, the name of which is rendered in Gə^{c}əz version as *Ityopya*

('Ethiopia'; ↗Aithiopía): **ወስሙ፡ ለካልእ፡ ፈለግ፡ ግዮን፡ ዘየዐውድ፡ ኵሎ፡ ምድረ፡ ኢትዮጵያ** (*wäsəmu läkaləᶜ fäläg Gəyon zäyäᶜawwəd kʷəllo mədrä Ityop̣ya*, 'And the name of the second river is Gihon, which flows round the whole land of Ethiopia'). In the Bible G. has also connections with Jerusalem (2 Chr 32:30, 33:14; in 1 Kings 1:33, 38, 45 it is a toponym). In the Ethiopian tradition, G. was used as a name for the ↗Abbay, i.e. the Blue ↗Nile.

Interested in the earthly identity of the four rivers of Eden (which appear frequently in early Christian art as life-giving streams flowing from the foot of the Cross or from the Fountain of Life), the Church Fathers locate the G. in Ethiopia (e.g. Severianus of Gabala, *De creatione mundi*), and equate it with the Nile, as do Josephus (Arbel 2000:105), St. Ambrose and St. Augustine (Vantini 1999:343). Medieval writers seek out the source and stream of the Nile in the Red Sea and Ethiopia respectively. In the 12th cent., Gervase of Tilbury openly states: "The Gihon, also called the Nile, rises near Atlas but is soon absorbed back into the earth, and runs through a hidden channel underground until it re-emerges again on the shore of the Red Sea; it then heads eastwards and flows round Ethiopia, and so it comes to glide through Egypt until, dividing into seven channels, it enters the Great Sea near Alexandria" (*Otia imperialia*, II, 13, after the *De imagine mundi* of Honorius Inclusus in Leibnitz 1707:911; s. also Gervase of Tilbury 2002:182f.). In the first half of the 14th cent., Jacob of Verona did not hesitate to qualify the Nile as "Giyon, one of the four rivers of the paradise" (*Liber peregrinationis*, 5, in Monneret de Villard 1950:60). The 15th-cent. Anonymous of Loos simply says: "Le fleuve que l'en dit en Latin Gion et en commun parler le Nille, qui part du Paradiz Terrestre ..." (Moravillé 1905:83f.; CerPal vol. 1, 225). The equation G./Abbay was accepted by European travellers to Ethiopia until the 17th cent. (Lobo 1728:105; Pais 1945, vol. 1, 214; BecRASO I, 274). Hiob ↗Ludolf was the first to distinguish between truth and legend, considering the Nile just as a most significant, but earthly river (Ludolf 1681:76–102).

In the Ethiopian tradition, apart from the Bible, there is a number of texts referring to the G. as a river of Eden, cp., e.g., the pseudo-epigraphical *Book of ↗Jubilees* (Jub 8:15, 23; Vanderkam 1989:52–55). In local commentaries to the O.T. (↗*Tərgʷame*), especially to Gen 2:13, and some other works, such as the ↗*Aksimaros* (Trumpp 1882:190, 234) or the Vita of ↗Filmona (de la Fuÿe 1958:12) the G. is equally deemed to be one of the rivers of Paradise.

In some sources the geographical dimensions of the G. appear more precise: in a miracle of Mary (↗*Täʾammərä Maryam*) the G. is mentioned as a river the Virgin saw from above when flying on a cloud over Ethiopia (Six 1999: 55). In fact, the Ethiopian apocryphal *Vision of Mary* (↗*Dərsanä Maryam*) depends upon the Apocalypse of Paul (chs. 13–44), in which the G. is described as a river flowing through Egypt and Ethiopia (chs. 23, 45; s. Duensing 1989:668; Chaîne 1955:65; Erbetta 1981:455–70). The identification of the biblical G. with the Nile could also mirror the belief that Ethiopia had the authority to interrupt the Nile's flow (UllBibl 2, 5; Pontani 1985:324; Six 1999:66).

In this connection, and hardly fitting with its origin from Paradise (yet directly applying the name G. to the Abbay), some Ethiopian documents present the G. as a source of troubles and a border-river or natural frontier separating the Christian empire, mainly ↗Gondär, from the non-Christian regions, such as that of the Mäč̣č̣a Oromo. The "short chronicle" describes how in 1682 *aṣe* ↗Iyasu I arrived at the bank of the G., looking for the Oromo (DombrChr 213, 235, 244). In addition, in Ethiopian history the G. is chiefly related to the province of ↗Ač̣äfär and the Gəlgäl Abbay ('Little Abbay'), important for the province of Goǧǧam (Bairu Tafla 2000:156). According to a local tradition still known around Lake Ṭana, G. is a name for the Nile springs (UllBibl 2). G. also designates a small town to the south of ↗Addis ᶜAläm.

Ğiila

Ğ. is an Oromo word for any sacred ceremony or festival, of which normally an animal ↗sacrifice is an essential component. Ğ. range from short and simple family festivals to complex national ritual journeys and ↗pilgrimages which require a series of ceremonies and sacrifices and may last several months as, for example, those to the ↗*abbaa muudaa* or ↗*qaalluu*. The word Ğ. has been reported as also being applied to the pilgrims themselves. Since the time of d'Abbadie most travellers and ethnographers have mentioned pilgrimages (Knutsson 1967:142–55). The Imperial Government actively discouraged pilgrimages but nevertheless the ↗Boorana, ↗Gabbra, ↗Guǧǧi- and ↗Arsi, using discretion, managed to maintained those to the *abbaa muudaa*. Since the fall of the *Därg* pilgrimages, along with other aspects of Oromo tradition, have been enthusiastically and actively revived in some parts of Oromo lands.

Paul T.W. Baxter

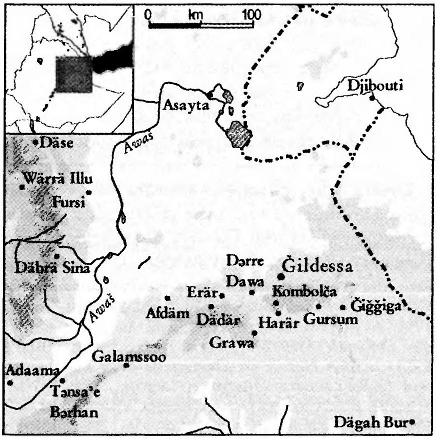
Ğildessa

Ğ. (Amh. ጂልዴሳ, also ጃልዴሳ, Ğaldessa,) is a small town situated about 45 km north of ↗Harär at 9° 42' N 42° 10' E and at an elevation of 1,065 m A.S.L. Its name is derived from the Oromo word for monkey (*jaldeessa*, 'monkey, baboon'; GraggDic 232), which were plentiful in that area. Its population is mixed and consists of Somali, Oromo, Amhara and other peoples.

The town was founded by the Egyptians after their conquest of Harär in 1875 as a fort to secure their logistics from the coast. They chose a place in a valley naturally provided with water, though of poor quality, in the territory of the ↗ᶜIssa Somali, just bordering on Nole (↗Qottu) lands. Here the camels and the drivers had to be changed because the Somali were not allowed to enter Oromo territory and vice versa (Harris 1894:359). The Egyptians built a caravanserai or fortification of stones and thorn-hedges (*ẓarība*) in which they stationed a contingent of Sudanese soldiers with an Egyptian officer.

The place soon emerged as an important centre of trade on the route from the coast to Harär, Šäwa and Käfa. A market was established and people erected their huts, the Somali on one side of the caravanserai and the Oromo on the other. Also, the *ugas* of the ᶜIssa, Roble Farah, transferred his kraal to Ğ. The number of inhabitants grew to 1,500, which doubled or tripled on market days.

When the Egyptians had to leave Harär in 1885, the British took possession of Ğ. and placed there a garrison of 19 Indians and about



20 Arabs and Somali. These soldiers, however, were taken prisoner by the troops of the *amīr* ↗ᶜAbdullāhi b. Muḥammad of Harär when they proceeded northwards to fight the ↗Porro expedition. Before the massacre of the Italians on 9 April 1886, Ǧ. was the place of some unsuccessful negotiations between the commander of the Harär troops and Umberto Romagnoli from the Italian side. Shortly afterwards, the ᶜIssa revolted in Ǧ. and freed the British soldiers.

After *aṣe* ↗Mənilək's occupation of Harär in 1887, Ǧ., along with Darmi and ↗Ǧiǧǧiga, became one of the Ethiopian border forts against the Somali. It often had governors of foreign origin (Harris 1894:359), like the Armenian Sarkis Terzian, who led from Ǧ. several successful campaigns against the ↗Ogaden (Pankhurst 1981:367f.).

Though much afflicted by the ↗famine in the early 1890s (Harris 1894:360), Ǧ. remained an important place of trade on the route from ↗Zaylaᶜ to Harär. The route is mentioned in several treaties of the European powers, which proposed that Ǧ. should be open for international traffic. Though this was repeated in the Anglo–Italian Protocol of 5 May 1894, Ǧ. itself was ceded to Italy as part of its sphere of influence (Buonomo 1894:62). Already in 1890 Crispi had asked Mənilək to be allowed to hoist the Italian flag in Ǧ. to prevent a British or French advance in that area (Salimbeni 1956:151f.). The Italian aspirations, however, were not realized at the time. The building of the ↗railway up to ↗Dərre Dawa in 1902 diverted part of the trade from Ǧ. The custom was transferred from Ǧ. to Dərre Dawa (van Gelder de Pineda 1995:269ff.). Even then, the transit traffic did not totally collapse at once because the British subsidized the camel caravans from Zaylaᶜ to Harär, to make them cheaper than the railway (Rozis 1908:473). In the long run, nevertheless, the importance of Ǧ. diminished, together with that of Zaylaᶜ.

During the Somali–Ethiopian war, Somali troops conquered Ǧ. in the fall of 1977. It was reconquered by the Ethio–Cuban offensive in February 1978 (Valdés 1980:55).

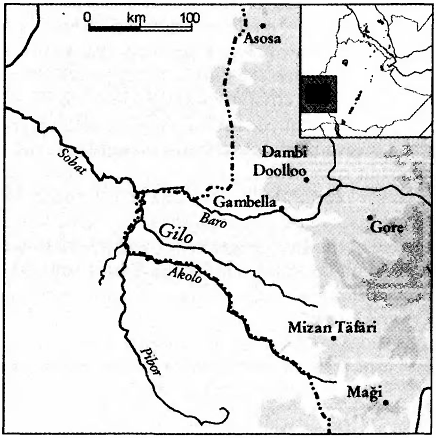
Ewald Wagner

Gilo

The river G. is, together with the Akobo, Pibor and Baro, a tributary of the ↗Sobat, which downstream joins the White Nile at Malakal in the Sudan. With a length of more than 300 km, it collects the abundant rainfall over the western highlands of ↗Illubabor (now divided between the Oromiyaa and the Gambella regions to the east and west, respectively). The G. flows westwards, leaving on its right bank the swamps covering most of the Baro salient. This area was



annexed to Ethiopia at the end of the 19th cent. by *ras* ↗Täsämma Nadäw.

Up to the Italian conquest, coffee and skins produced in the western regions were exported along the Baro and the Nile to Khartoum through the fluvial port of Gambella. The banks of the upstream G. are inhabited by the Oromo. The plains are the home of the Nuer, whilst in the confluence with the Akobo dwell the Añwaa (*Guida* 510). These Nilotic-speaking peoples are mainly dedicated to agro-pastoralism and, during the high waters of summer, to fishing. Although they have recently acquired the status of a national park, the swamps are gradually being eroded in their outer parts by cotton-plantations and Sudanese refugee settlements.

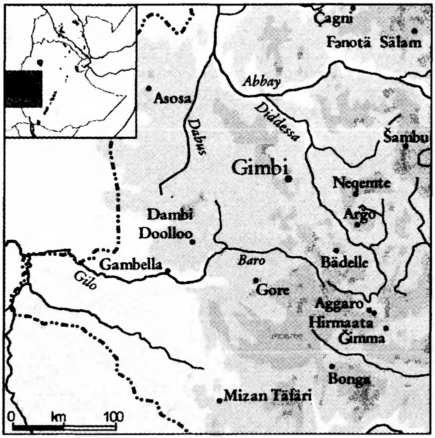
Gimbi

G. (Amh. ገምቢ Gəmbi, also Giimbii; 1,930 m A.S.L) is a town in western Ethiopia, built on a plateau between the Diddessa basin to the east and the Dabus basin to the west. G. is where the road from Neqemte and Addis Abäba divides into two branches, the northern leading to Asosa and the southern to Gambella.

According to d'Abbadie (AbbGeogr 232), G. was the name of a king. It first appears on the 1903 map by Hughes Leroux as Mount G. The town was most probably founded in the 1910s. First it served as a *gəbbi* of the local Oromo *Leeqaa* administrators of ↗Gäbrä Ǝgziʾabəḥer Moroda (cp. Balsan 1947:131). During the time of the Italian occupation, there was a Catholic mission in the vicinity.

G. is one of the larger collecting-centres of coffee, hides and skins. The Oromo of western Wälläga have been forced to extend coffee-cultivation, mainly by the new masters of the land, who were granted concessions by the conquerors from Šäwa. Cattle-breeding is practised on the lowlands to the west, near the Dabus river. The area also boasts deposits of precious and rare metals, which are occasionally mined.

G. had as many as 6,000 inhabitants in 1938 (*Guida*). It was a well-known market which attracted foreign merchants, mostly Greeks. After the war of 1936–41 the population-growth slowed down considerably so that there were only 13,098 inhabitants in 1984 (CSA 1984). The census of 2003 counts 33,329 inhabitants (CSA 2004). It was primarily a result of the competition with Neqemte and Ǧimma: both closer to Addis Abäba, the towns overshadowed G., which at that time had no administrative function at the provincial level (Neqemte being the capital of the Wälläga region). It was only the capital of the G. *awrağğa*, a subdivision of the region. In 1991, however, G. became the capital of the *wäräda* by the same name in the West Wälläga zone of Oromiyaa *kəlləl*.



Despite its important coffee production, West Wällägga suffers from its location next to Beni Šangul-Gumuz and to Gambella. These two peripheral *kəlləl* are sparsely populated and have been land-locked since the closing of the Sudanese border.

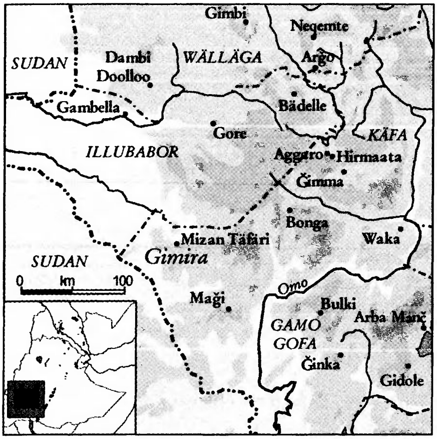
Gimira

G. (Amh. ጊሚራ, also ገሚራ, *gəmira*) was the name given by outsiders to three Omotic-speak-



ing groups in south-west Ethiopia, who called themselves ↗Benč̣, ↗Še and Mer (also known collectively as Dizu). The Šeko (Čako), Nayi (Na'o) and Ç̣ara are also considered G. groups (also named Tolu). The Benč̣ are the largest group, with ca. 173,000 people (CSA 1998:66), while the Še and Mer are numerically modest and are being absorbed among the Benč̣ and the ↗Käfa. The Ethiopian census (*ibid.*) identified 13,290 people as "Še" and 1,370 as "Mer". In addition to the groups mentioned above, across the G. area lives a hunting-caste, called the Band or Menǧa.

Since the conquest and inclusion of these peoples into the Ethiopian Empire in 1897–98, their territory has been referred to as G. The term probably derived from the old word "Gimbir", a word that several neighbouring peoples, such as the Me'en, use for the Benč̣ and related highland people, but without a derogatory intention. Others assert that G. was the name the Oromo applied to the local people when they arrived (Lange 175:4f.). Today G. has meaning only as a historical term and its use is widely rejected. The district town of Šäwa-G. was renamed Šäwa-Benč̣ in 1994.

About a century ago, the G. region was considered an "uncivilized" country of dark-skinned people from which slaves and serfs could be taken. Before that, G. was the area where the kingdom of Käfa took most of its slaves. The post-1898 imperial domination and exploitation by highlanders and traders seriously affected the region, leading to a severe economic disruption and substantial loss of life. At this time the G. country was also raided for other resources, such as cattle and various forest products (e.g., civet cats for their musk and skins). Soon after imperial rule was established, the ↗*gäbbar* system was introduced. The plight of the G. people was recorded by Montandon, a contemporary observer who travelled the area in 1910. A notorious event in G.'s history was the large slave-raiding expedition led by *ləǧ* ↗Iyasu shortly after he was designated ↗Mənilək II's successor (1912). After a devastating campaign, tens of thousands of G. (mostly Benč̣ and Nayi) were taken away to the north (BZHist 93; GebMolIyas 335).

Within the G. area, spirit-possession cults such as ↗Gäramanǧo were widespread. The cult-leaders played an important role in redistributing the area's economy. Apart from spirit-mediums, the Benč̣ and Čako in particular also had powerful local chiefs who, unlike those in the Ometo-speaking areas, were not considered divine kings. Most peoples in the G. area had a dual structure of high, aristocratic clans and commoner clans.

Today, the G. country is a densely populated, productive farming area in which most of the original forests have disappeared. The people are predominantly sedentary subsistence-cultivators who also keep livestock and engage in small-scale trade. A form of shifting cultivation is also practised, the main products being *ənsät*, maize, beans, pumpkins, cereals, fruits, tubers, cabbages and peppers; some cotton and coffee are produced as cash-crops and apiculture is also widespread. The *ənsät* culture, while important, is much less developed than among the Gamo and Gonga peoples. Some large state coffee-plantations are also found in the area, e.g., Bebeqa. Until ca. 1992, G. was an *awraǧǧa* in the Käfa Region. At present there is no longer any administrative division or group called G.

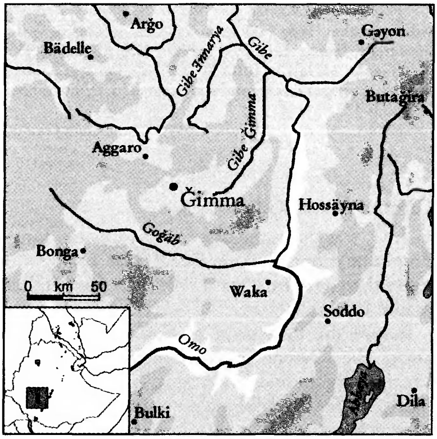
Ǧimma

Located 335 km from Addis Abäba at 1,750 m A.S.L., Ǧ. (ጂማ, or ጅማ, Ǧəmma, 144,748 inhabitants in 2004) is the most important town in south-western Ethiopia and one of the biggest urban centres in Oromiyaa. It is the capital of the Ǧ. Zone, which has a population of 2.4 million inhabitants on an area of 18,000 km², hence a density of 127 inhabitants per km² (in three *wärädas* it reaches over 240 inhabitants per km²).

The present attraction of this urban area goes beyond the limits of the Zone and of the former kingdom of ↗Ǧimma Abbaa Ǧifaar to cover part of the territory of the ↗Käfa region, of which it was the capital from 1942 to 1987. (This is not to be confused with the kingdom of Käfa south of the ↗Goǧäb river, which had Bonga as its capital.) Ǧ.'s exclusive influence stretches over the Highlands, limited by the course of the Goǧäb to the south, of the ↗Didessa to the west and of the loop of the ↗Gibe river to the north. The mountains, which seldom culminate above 3,000 m, have largely kept their forest cover. Small farms which were partly developed at the expense of pre-existing forests and are still dotted with the occasional huge remnant of a sycamore, produce cereals and ↗*ənsät* as staple crops, but mainly coffee as a very lucrative cash-crop. These products are harvested in the rich region of western Oromiyaa as well as in the Southern Nations', Nationalities' and Peoples' region and reach the town through a converging network of roads and tracks.

In order to promote the modernization and expansion of the agricultural sector, the Ǧimma College of Agriculture (second in importance in Ethiopia after ↗Alämayya) was founded and served as a nucleus for the development of the University. Ǧ.'s airport has daily flights to Addis Abäba and is also the gateway to other towns further west. In the town-centre a monumental cityhall, topped by a lofty bell-tower, overlooks a rectangular piazza. The surrounding arcade and the converging wide and straight avenues could not offer a better setting for military parades and reviews. This urban character, which boasts a cinema as well as the urban landscape, in general bears the lasting imprint of Italian-inspired architecture.



It has to be remembered that in order to build their capital of the "Governo di Galla e Sidama", the Italians had restored the kingdom of Ǧimma Abbaa Ǧifaar, already annexed by ↗Ḫaylä Śəllase I in 1932. The European town was to be erected a short distance away from the traditional market of Hirmaata, and the Royal Residence at Ǧiren. In accordance with the 1938 racial laws, a grandiose urban plan was to establish a strict segregation between the Italians and the natives. This architectural heritage, which was unfinished due to the fall of the ↗Africa Orientale Italiana, was taken over by the Ethiopians, who find it difficult to maintain in a hot and humid climate all year round. Nevertheless, it gives Ǧ. a decisive advantage in imposing itself as a capital, not only of western Oromiyaa, but also of the highlands and lowlands as far as the ↗Abbay to the north and the Rift to the south.

No other town south-west of Addis Abäba, with the possible exception of Awasa much further south, can hope to rival Ǧ., which relies on its prosperous agricultural area. In this context the recent opening of an all-weather road between Ǧ. and Soddo through the spectacular Omo gorges provides a new outlet for its surplus agricultural production.

Ǧimma Abbaa Ǧifaar

Ǧ.A.Ǧ. was the name of a famous Oromo kingdom that flourished in the ↗Gibe region for more than a century (ca. 1790–1932; for detailed map s. Gibe).

Before the formation of the nucleus of the state, the Oromo clans Diggo, Badi, Lalo, Harsu, Hagalo and five other clans had a common ↗*čaffee* assembly at a strategically located place known as Hulle. Every eight years the ten clans elected *gadaa* leaders, who settled disputes among themselves, marshalled their resources for common cause, declared war and concluded peace. Their territory was known as Ǧimma Kakka ('Ǧimma of common oath'), probably because the ten clans had taken an oath to defend each other and their territory. The ten clans of Ǧimma Kakka had common ↗*abbaa gadaa* (i.e. ↗*abbaa bokkuu*) and, correspondingly, a common ↗*bokku*. While the *abbaa gadaa* was the president of the *čaffee* assembly, the *bokku* was the emblem of his authority. As such, the *bokku* represented the independence of the ten clans of Ǧimma Kakka and served as a symbol of their unity, common government and common law.

King Abbaa Ǧoobir of Ǧimma Abbaa Ǧifaar, Ǧirän; photo 1972/74 by Werner Jürgen Lange; courtesy of the Frobenius Institut, Frankfurt am Main (37–La045–14 M–ON)

During the second half of the 18th cent., all major clans, such as the Diggo, the Badi, Lalo, Harsu, Hagalo and five others, each started having their own *bokku* and *abbaa bokkuu* (Guluma Gemeda 1996:72). This growing disassociation of the clans undermined the peace in Ǧimma Kakka: to deal with inter-clan conflicts, wars replaced the peaceful dialogue. Under this circumstances during the last two decades of the 18th cent. the institution of *motumma* ('kingship') developed in the Ǧimma Kakka area.

The nucleus of the state was formed some time in the early 1790s. According to a popular tradition, all the clan members assembled at the Hulle *čaffee* assembly, where they chose Abbaa Farroo, probably an ↗*abbaa dulaa* of the Diggo clan, as their new leader (Guluma Gemeda 1996:17; Tesema Taʾa 1986:87f.). Oral tradition presents Abbaa Farroo as a humble person; however, he was able to provide what the *čaffee* assembly failed to ensure: safety, security, law and order. The *čaffee* had no unified army to enforce its decisions. With the support of the Diggo clan, at that time the most powerful clan in Ǧimma Kakka, Abbaa Farroo was able to maintain a permanent military force (Guluma Gemeda 1996:72). The army not only helped him execute his power by establishing systems of taxation, corvee labour and trade, it also ensured his success in the conquest of further territories. The first to be conquered was that of the Lalo clan (Guluma Gemeda 1996:73, Tesema Taʾa 1986:88). On their land, in ↗Ǧirän, Abbaa Farroo established his capital (Tesema Taʾa 1986:88f.). After Abbaa Farroo's death, his eldest son, ↗Abbaa Magaal, succeeded to power, legitimizing hereditary rule in Ǧimma Kakka. He defeated the Badi clan, with its fertile lands around the great market of ↗Hirmaata. Abbaa Magaal was succeeded by his son Sanna (↗Abbaa Ǧifaar I), who gained considerable experience in the war of his father. His military abilities and diplomatic skills enabled him to defeat all the Ǧimma Kakka war leaders one after another (Abbaa Ǧoobir n.d. 33; MHasOr 111f.). Gradually, the name of Abbaa Ǧifaar eclipsed that of Ǧimma Kakka, and the kingdom became known as Ǧ.A.Ǧ. after its king.

The fertility of the soil, combined with intelligent activities in the fields of agriculture, commerce, industry and trade, made Ǧ.A.Ǧ. a land of great wealth and the centre of Islamic learning during the second half of the 19th cent. (cp. Grühl 1922:166). It was with that wealth that ↗Abbaa Ǧifaar II was able to obtain internal autonomy from *nəguś* Mənilək of Šäwa in 1882. The autonomy was abolished in 1932, when *aṣe* Ḫaylä Śəllase I detained King ↗Abbaa Ǧoobir Abbaa Dulaa and appointed Amhara governors over Ǧ.A.Ǧ., which became an *awraǧǧa* of the Käfa region; but then restored by the Italians (↗Ǧimma).

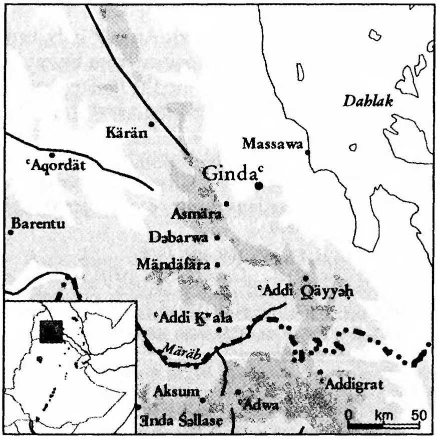
Gindaᶜ

G. (**ጊንዳዕ**, ital. Ghindà), a small town and railway-station in Sämhar, Eritrea, lies half-way between Asmära (50 km) and Massawa (70 km), in the mountains between the highlands and the hot ↗Sämhar plains, 890 m A.S.L. The city's name is etymologically connected to the *gindaᶜ* plant (*Calatropis procera*), a slightly poisonous bush with air-filled green fruits, which grows abundantly in the area.

G. enjoys a favourable climate. Due to its geographical position, in May and July to September it receives the highland rains and in November to February the rains of the rainy season of the lowlands. Therefore, it has a rich vegetation. In 1904 G. is described as lying in a valley, surrounded by forests of sycamores, acacias, fig trees etc. (Schoenfeld 1904:23). In addition to different grains, sisal was produced in an agave plantation (Istituto della Enciclopedia Italiana 1956:333). The population (1,250 in 1956, 15,000 in 1998, s. KilHDic 232) originally was Sāho and Təgre, but today it is composed mostly of Təgrəñña speakers, the first of them having migrated to G. during the construction of the railway, which reached G. in 1904. The workers lived in an area called today still Färobiya (from It. *ferrovia*).



In 1874 G. became the capital of a new province. *Aṣe* ↗Yoḥannəs IV accorded the "life-governorship of Ghinda" to his general (*däǧǧač*) John Charles ↗Kirkham, as a reward for his diplomatic efforts to obtain support against Egyptian expansion in the 1870s. This title was an implicit challenge to Egypt, G. being a border town claimed by ↗Egypt (Longrigg 1945:107; KolTrad II, 165). Kirkham's governorship included the coastline from Annesley Bay to Anfile Bay, Zula, the Sāho and Arho country up to the edge of the highlands, joining the district of G. south of ᶜAylät. This appointment was, however, partially theoretical, the coast being controlled by Egypt. The project of a new sea province, tributary to Ethiopia, aimed at the creation, as an alternative to Egyptian Massawa, of an Ethiopian port with British help (↗United Kingdom of Great Britain and Northern Ireland). Kirkham established his seat in G. and in December 1874 ran up the British flag. The idea of establishing a neutral British territory between Ethiopia and Egypt in this new G.-Anfile province, however, was not followed by Great Britain (Dye 1880:127).

Facing growing tension with Egypt, Kirkham was called to *aṣe* Yoḥannəs's capital ᶜAdwa in October 1875. Only a few days later G. was occupied by the Egyptian forces under Colonel Arendrup and the English flag substituted with the Egyptian (ibid. 128). After the ↗Egyptian-Ethiopian war of 1875-76, G. was claimed by *ras* Alula. *Ras* ↗Wäldä Mikaʾel of Ḥamasen, who joined the Egyptians, stayed for some time in 1876 in G. (KolTrad II, 169). After ↗Italy had taken over the Massawa province from Egypt in 1885, G. was incorporated into the Italian *protettorato* (later Colonia Eritrea) and a fort was built above G. in 1889 (KilHDic 231). Later, agriculture in G. was promoted through concessions, e.g. for citrus crops. The railway, destroyed in the 1970s, has partially been reconstructed and reached G. in 1999.

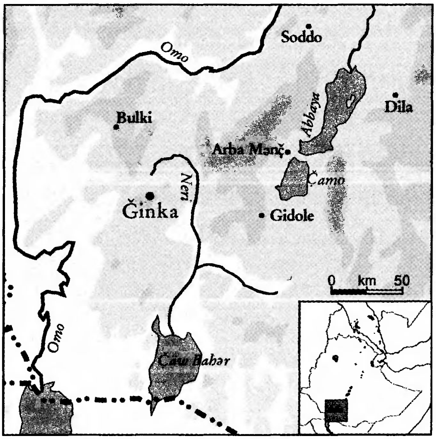
Wolbert Smidt

Ǧinka

Ǧ. (ጂንካ, also Alga) was the administrative capital of the Gäläb and ↗Hamär Bakko *awraǧǧa* of ↗Gamo Gofa province. When Gamo Gofa in the late 1980s was divided into the provinces of North and South Omo, Ǧ. became capital of South Omo. Today Ǧ. is the administrative capital of South Omo Zone within the Southern Nations', Nationalities' and Peoples' Regional State.

Ǧ. is a small thriving town established in the early 1950s along the Neri River, which flows through the town to the lowlands to join the Maki and later the ↗Omo River. Located on the south-western edge of ↗Aari country, Ǧ. is 785 km by road from Addis Abäba and today has a three-time weekly flight connection with Addis Abäba via Arba Mənč̣ and a daily bus service connecting it with Arba Mənč̣.



Ǧ. was preceded by the nearby Bakko as a political and military centre. The southernmost garrison-settlement on the Buska hills, Koke, received commands from Bakko. It was later totally abandoned and left without a trace in favour of Dimeka and Turmi. From Bakko many *däǧǧazmačes* (governors) have taken turns to manage the area between Bakko, Lake Č̣äw Baḥər (at that time Lake Stephanie) and the borderlands to colonial Kenya and the Anglo-Egyptian Sudan. Ǧ. was established as an inheritor of that tradition, but its role was limited. Its mandate was the pacification of the pastoral peoples of the region.

Prior to Ǧ.'s constitution under the Gamo Gofa province, it was administered by the governor-general of the ↗Käfa province from the then capital Ǧimma. It was the late *däǧǧazmač* Amməro Śəllase Abäbbä who negotiated with the imperial court for its proclamation as administrative capital of the Gäläb and Hamär Bakko *awraǧǧa*. The choice of Ǧ. instead of Bakko brought hope to the people, who associated Bakko with their traumatic experiences after Mənilək II's conquest, such as the loss of their autonomy, terror, slavery and fief-service, only a few decades earlier. At the initial stage, Ǧ.'s role was that of a police-garrison from where attacks could be launched on pastoral peoples whenever there were inter-group clashes.

The ultimate expression of state power in Ethiopia, that of confining people crudely in a prison for pastoralists, has been one defining feature of Ǧ. The prison, located across the Neri River since the establishment of Ǧ., became a way through which members of pastoral groups could understood not only the meanings of state power, but also what other distant pastoralist groups are. As inmates in the Ǧ. prison, they, as the first of their communities, learned the Amharic language, weaving, sewing, basket- and mat-making.

With the increasing number of students from pastoral areas and of educated former pastoralists holding government positions, Ǧ. is beginning to be more friendly and welcoming to the surrounding people.

Ǧ.'s attracts the surrounding pastoralists and the Aari and ↗Maale agro-pastoralists with the weekly market, where they sell honey, cattle and small stock, coffee, butter, spices, clay pots and pans and various natural products. In exchange, the Ǧ. market offers people various essentials, "exotic" meals and alcoholic beverages. Former slave-traders and ivory-poachers have gradually evolved into ivory-, spices- and coffee-traders and have added old-style rifles and Kalashnikov assault rifles to these trade goods. A small Muslim group of merchants controls much of the trade in Ǧ. and in the pastoral lowlands as itinerant firearms-traders.

Today Ǧ. accommodates a number of religious institutions, such as Protestant chapels, a newly built mosque, a number of Ethiopian Orthodox churches, a museum (the South Omo Research Centre), a hospital built by the Mekane Yesus Church with Norwegian assistance, a Catholic Mission, around four hotels and a couple of petrol stations.

For the tourists, Ǧ. has recently become the window to the indigenous cultures of the South Omo area, who have not yet begun fully to reap the benefits from this development. Ǧ. is increasingly becoming the gateway to the Mago National Park and Omo National Park (↗National Parks), which are abundant with game and cattle.

Wolde Gossa Tadesse

Ǧinn

Ǧ. is an Arabic word occurring in the Qurʾān, together with its synonym *ǧānn*, with a collective meaning (sg. *ǧinnī*; fem. *ǧinniyya*) and of very uncertain etymology (Arab lexicographers have it derive form *iǧtinān*, 'to be hidden'; the hypothesis of a loan-word from Latin genius is not entirely to be dismissed; cf. Nöldeke 1910:63, who highlights the link between *ǧinn/ǧānn* and Ethiopic *ganen* [↗Demons] without going any further).

According to preserved Islamic tradition, as kept in the Qurʾān, the Ǧ. are a group of reasoning beings God created from smokeless flame (*sūra* 55:15 – *min māriǧin min nār*). They are made of vapour, air or fire, are normally invisible, but show themselves to humans by appearing under different forms. Ǧ. can not be seized, but can work and they can even manage to do hard tasks.

The Prophet Muḥammad, after he came back from his unfortunate stay in Ṭāʾif in 620, was sent to preach to the Ǧ. (*sūra* 46:29). Some of them consequently accepted Islam (*sūra* 72:1) and in their turn spread the faith among their kin (*sūra* 46:29–32). These Muslim Ǧ. will therefore enter paradise. The Qurʾānic data are not univocal about the relationships between the Ǧ. and Iblīs (*sūra* 2:32; 18:48), thus giving way to the flourishing of conflicting hypotheses and legends.

On the basis of the Qurʾānic passages, Islamic tradition even nowadays fully recognizes the existence of the Ǧ., at its learned as well as at its popular level.

In particular, Islamic Law discusses the legal status of the Ǧ. As they are considered to be able to have relations with human beings and also to have sexual intercourse with them, questions related to marriage and property are examined in detail. Saints are considered to have a privileged way to get in touch with the Ǧ. Many different classes of good and evil Ǧ. are believed to exist, especially in popular belief (*ġūl*, *ʿifrīt*, *siʿlāt*) and their role in magical practices of healing, fortune-telling and governing the future of individuals cannot be overestimated (Panetta 1940:16–59).

As for Ethiopia, the available data (Griaule 1930:135ff.; Leris 1934:339; 1934b:99; 1958:14; Rodinson 1967:60f.) seem to indicate that the word ጅን (*ǧənn*, also ጂን *ǧinn*, ጂኒ *ǧinni*,), a loanword from Arabic, lost its Islamic religious connotation and is currently used in magic to name the spirits of waters, that dwell in rivers, brooks, pools, lakes and the like.

These spirits sometimes make their presence known by the sound of a kettledrum. Ethiopian *ǧənn* may attack people who cross water, who wash their clothes and who go to take water. They prefer to strike at noon and their favourite targets are travellers and foreigners. The person possessed by Ǧ. fells ill and must have recourse to a magical medical treatment. People try to gain the favour of the *ǧənn* in order to avoid their possession by throwing grass in the water before crossing a river or a pool.

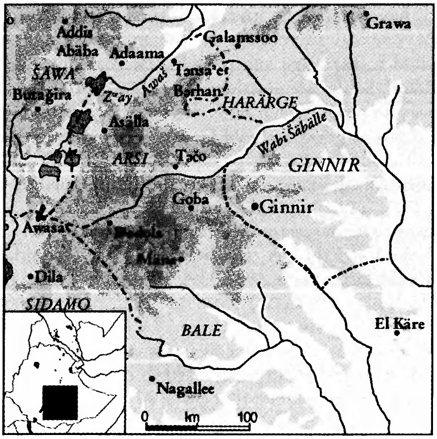
Ginnir

G. (**ጊኒር**; 1,986 m A.S.L.) is a town, a *wäräda* and an *awraǧǧa* in the ↗Bale *kəflä hagär*. In 1978 the *awraǧǧa* took the name of Wäbe (**ዋቤ**) after the river ↗Wabi Šäbälle, whose higher course forms its northern and eastern borders. Its territory is bordered to the south-west by the course of the Wäyb in the high plateaus of carstified limestones crossed by the caves formed by the underground river of the Sof Omar.



The G. *awraǧǧa* is inhabited by the Oromo, mainly farmers. Its present borders coincide with the historical areas occupied by the Oromo before the migrations of the 17th and 18th cent. The tomb of *šayḫ* ↗Ḥusayn is the centre of a great pan-Oromo pilgrimage which gathers together all the Muslims of southern Ethiopia. Between 1963 and 1967, the province was the scene of combats between groups menaced by deportation and the army. The G./Wäbe *awraǧǧa* covers an area of 27,000 km², and its population grew from 181,000 inhabitants (6.5 inhabitant/km²) in 1970 to 184,800 in 1984 only. The stagnation of the population was due to the disorders caused in the province by the settlement in the area of a few troops of the Somali-Abbo Front. In addition, the government of Mängəśtu Ḫaylä Maryam banned for a time the pilgrimage to ↗Šayḫ Ḥusayn.

The G. town, a caravan station, had 3,500 inhabitants in 1938. It was not connected by an asphalt road until the 1970s. In 1984, there were 8,594 inhabitants (11,200 in all the Wäbe). By 2000, the population doubled and reached 16,225. Before 1991 it was the capital of G./Wäbe *awraǧǧa*, today it is the administrative centre of eastern Bale. The disparities in the density of population between the different *wärädas* are significant: 50 inhabitants/km² in G., 45.1 in Gasära – Gololča and only 7.7 in ↗Läga Hida.

Alain Gascon

Giovio, Paolo

G. (b. 1483 or 1486, Como, d. 1552, Florence), after studying medicine, was active first as a teacher and then as a diplomat at the pontifical court in Rome since ca. 1512, under the protection of Popes Julius II and Leo X; ↗Clement VII appointed him bishop of Nocera de' Pagani (today Nocera Inferiore, Salerno). He had the opportunity of travelling widely abroad at the service of Cardinal Ippolito de' Medici, after whose death in 1535 he was protected by Cardinal Alessandro Farnese. Pope Paul III refused to give him the bishopric of Como, where from 1537 to 1543 he had his "Museo" built, a gallery of painted portraits of famous men, including *aṣe* Dawit III, i.e. ↗Ləbnä Dəngəl, whose deeds he had described in short inscriptions or *Elogia* ('Encomiums') – first appended to the portraits and then published in two series (Basle 1546 and 1551). G. left Rome in 1549 and spent his last years in Florence at the court of Cosimo I.

As an erudite collector and a man of large political and international experience, G. wrote numerous works devoted to the history, politics and biographies of personalities of his time. In his main work, the *Historiarum sui temporis libri* (2 vols., Firenze 1550–52), on contemporary history (1494–1544), he devoted a large part of book XVIII (ed. Visconti 1957:415–56) to Ethiopia, mixing reliable news with medieval legends and beliefs (cf. Lefevre 1941). In his *Elogia* (1551) he gives a physical, moral and historically reliable portrait of Ləbnä Dəngəl (ed. Meregazzi 1972: 473f.; cf. Tedeschi 1985:105ff., 1989).

G. also has a part in the fortunes of ↗Alvares's materials and writings on Ethiopia: on the occasion of the Bologna concistory in 1533, where he also met the Portuguese envoy, he translated into Latin Ləbnä Dəngəl's four Portuguese letters brought by Alvares and addressed to the kings of Portugal Dom ↗Manoel and Dom ↗João III, and Pope Clemens VII (and then published by Damião de ↗Góis in his *Fides, religio moresque Aethiopum*). G. seems to have been also charged with the never-accomplished translation of a large work in five volumes devoted to the geography, nature, history and institutions of Ethiopia, written by the same Alvares and presently lost, the long-disputed existence of which seems now well established (cf. Tedeschi 1985:97–102; Beckingham 1987:174f.).

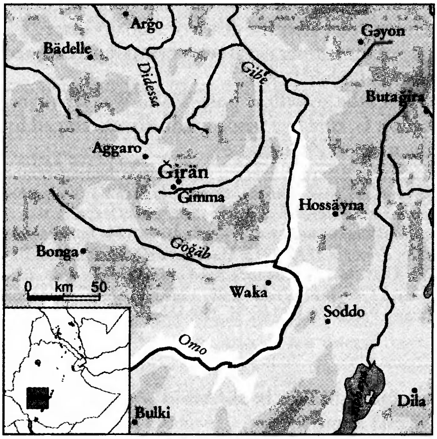
Alessandro Bausi

Ğirän

Ğ. was a royal settlement 5 km north-east of modern ↗Ğimma. Established by the early-19th-cent. Oromo leader ↗Abbaa Magaal, founder of the Ğimma Abbaa Ğifaar kingdom, on the flank of the Ğinčo mountains, the town expanded significantly during the reign of his son ↗Abbaa Ğifaar I, also known as Muḥammad b. Dāwūd.

Ğ. was not, however, described until the late 1880s, when it was visited by Jules Borelli and Leopoldo Traversi. The town, on a small hill, was then the site of many houses. The most important, the palace of ↗Abbaa Ğifaar II, was an immense circular structure, with a tall pointed thatched roof. The building was divided into two concentric rooms. The inner, presumably the monarch's abode, was occupied by the chief eunuch and servant girls; the outer, a large gallery with columns, served as the throne, reception, and dining room. It was decorated with carpets, coloured curtains, mirrors, and buffalo horns, and had Abbaa Ğifaar's favourite rifle and spear on the wall. The ruler sat on a throne cut in the wall, his courtiers on three-legged wooden stools in two or three lines to his right and left. In the palace he devoted his time to government affairs, receiving visitors, and dispensing justice. In close proximity to the main building, were those of the king's



Ǧirän, palace of the *sulṭān* of Ǧimma; photo 1972/74 by Werner Jürgen Lange, courtesy of the Frobenius Institut, Frankfurt am Main (37–La045–68)

wives, separated from each other by tall fences, and, on slightly lower ground, smaller houses for the principal chiefs, head of the provincial governors (↗*Abbaa qorro*), and the king's brothers. The finer structures were decorated with ostrich eggs, which, Traversi says, gave a "fantastic effect". The palace compound was surrounded by a high bamboo fence, and divided into five large courtyards. The central were for the king, courtiers and palace personnel, the last but one for travellers under royal protection, and the outer for the soldiers. Each palisade had a gate, guarded by armed guards. The palace compound like that of other Ethiopian potentates, was crowded by hundreds of people, including courtiers, merchants and envoys, servants, eunuchs, and labourers.

Herbert Lewis noted in 1965 that because Ǧ., with a diameter of about one kilometre, has existed "only to serve the king" and had never been "a centre of trade", it had soon declined. Thirty years after the death of Abbaa Ǧifaar "little" of the former royal settlement thus remained (Lewis 1965:61f., 72).

With the growth of post-World War II urbanization Ǧ. is in fact being gradually enveloped by the town of ↗Ǧimma.

Girirra

The G. (also sp. Gariirre, Garirrä, Gherirre, and Gērīrē) are a little-known Somali tribe whose main group lives near ↗El Käre, between the ↗Wabi Šäbälle and the ↗Weyb in present-day southern Oromia. According to Mohamed Abdi Mohamed (1990:961) they are one of the so-called "pre-Hawiye" lineages that claim to be direct descendants of Samaale, like the better-known Irir, Mayle, Yahaabur, Gardheere and Garre. Cerulli (1957:67, 164) mentions local traditions depicting the G. as the offspring of ↗Digil groups that did not move further south into the interriverine plains of central Somalia.

The G. are farmers and pastoralists. Besides sorghum and maize, they also cultivate barley and wheat, which are said to have been introduced only in the first decades of the 20th cent. by Ḥasan Ali of the Zenbur subclan, when he was their *ugaas* (chief). There are also tanners, blacksmiths and potters, as well as adopted groups of different origin, called *giši*. According to Abdurahim Aden (1993:1) the G. are looked down on by the surrounding Somali and Oromo, with whom they do not intermarry. Yet this may apply only to the lower castes of the G. Small groups of G. are also known to live among the ↗Boorana as traders and herdsmen. According to Askale Lemma (1994:1) their main political gatherings take place at the *Badɗana*, while their most important religious meeting-place is the *Obowu-sanbur*, where they also come together every five years for the initiation ceremonies of young people. Yet they are all Moslems and several religious settlements (Somali *ǧamē*^{c}*o*) were founded by them.

Aspects of the language of the G. were described only by Abdurahim Aden (1993), who also provided a short word list, and by his wife Askale Lemma (1994). Their data show that G. has lost the pharingeals **ḥ* and *ᶜ, e.g., in *madi*, 'head', *siddi*, 'three', *migi*, 'name', *gini*, 'hand', and has causatives in *-š-* and *-s-* like *ga-š-*, 'to cut' or *k'ib-is-*, 'to break'. Its peculiar palatalization pattern is shown by *šeᵓ-*, 'stand up' (cf. Rendille *kah-*, Somali *kaᶜ-*, Oromo *ka'-*), while the original velar stops are preserved in *kᵓib-is-*, 'to break' (cf. Rendille and Somali *ǧeb-i-*, Oromo *cab-s-*), *kᵓanin-*, 'to bite' (cf. Rendille *khaniin-*, Somali *qaniin-*, Oromo *cinin-*), and *gilib*, 'knee' (cf. Rendille and Somali *ǧilib*, Oromo *ǧilba*).

The items of the ten-word list are the following: *hal*, 'one', *namo*, 'two', *siddi*, 'three', *dab*, 'fire', *biyi*, 'water', *eri*, 'sun', *bil* or *hidgini*, 'moon', *diig*, 'blood', *enrab*, 'tongue' and *ilig*, 'tooth'.

More research is needed both on their language, that seems to have rather peculiar features within the Somali cluster, and on their culture. Almost no other Somali group has periodic initiation ceremonies that mark entrance into adulthood.

Giorgio Banti

Giulietti, Giuseppe Maria

G. (ᶜAfar *Kulēdá*; b. 18 December 1847, Casteggio [Pavia], d. 25/26 May 1881, Đaḍḍāᶜṭó [ᶜAfar]) was an Italian traveller and explorer. He studied at the Collegio Nazionale in Pavia; in 1866 he volunteered for Giuseppe Garibaldi's military campaign to annex the Austrian Trentine region to the newly-born Italian state. Since 1870, he devoted himself to commerce in Genoa. There he frequented the cultural milieu around the Museum of Natural History, befriending with the illustrious naturalist Giacomo Doria, later president of the Società Geografica Italiana, and the Lazarist Father Giuseppe ↗Sapeto. On account of these acquaintances, G. was able to join at ↗Zaylaᶜ the expedition that was led by Count Pietro ↗Antonelli and supposed to reach Marquis Orazio ↗Antinori in Šäwa and return to ↗ᶜAsäb via the ↗Awaš valley. As the opposition of ↗Abū Bakr Ibrāhīm Šaḥīm made the project unfeasible, G. crossed by himself the desert from Zaylaᶜ to ↗Harär, producing an impressive report of his journey (Giulietti 1880b).

G. moved to ᶜAsäb where he was to direct the local activites of the ↗Rubattino company – which gave him the opportunity to perform geological and natural surveys of the neighbouring regions. In June 1880 he had to return to Italy, but towards the end of the year he was appointed secretary to the "regio commissario" of ᶜAsäb, Giovanni Branchi.

G. was entrusted with preparing a mission to ↗Muḥammad "Illálta" (Ḥanfaḍé) of ↗Awsa, so as to open a new trade-route from ᶜAsäb to Šäwa trough the Oromo territories. The diffidence of the local rulers, who had even mistaken G. for a brother of Werner ↗Munzinger (killed by the ᶜAfar in 1875) impeded the mission. It was only on 10 April 1881 that G., escorted by ten sailors from the ship "Ettore Fieramosca" under the command of Vessel Lieutenant Giuseppe Biglieri and accompanied by two Italian workers, a Sudanese interpreter, a servant and two local guides, could set off. Ten days later G. and his companions arrived at ↗Baylūl, then under Egyptian sovereignty, and on 2 May they headed to the ᶜAfar sultanate of Bīḍu advancing into the Gʷalima valley. At the beginning of June it became known that the entire group had been massacred by the ᶜAfar in the night of 25 May. The slaughter might have been a result of underevaluated divergences with the *sulṭān* of Baylūl, Muḥámmad Akito, and his son Omar, possibly offended by G. undiplomatic and tactless manners.

The two subsequent Egyptian enquiries into the matter proved to be useless. In 1929 Riccardo ↗Franchetti, crossing the ᶜAfar/↗Danakil territory, found the exact place of the massacre at Đaḍḍāᶜṭó, in the zone of Egrerr (where he left an inscribed memorial stone), and took the remains of the victims to Italy. The nearby Lake Afḍera was then renamed Giulietti in memory of G.'s unfortunate expedition.

Gianfranco Fiaccadori

Giyorgis

G. (**ጊዮርጊስ**, Ar. Ğirğis), a monk of Dayr Anbā Maqār (Wādī Ḥabīb), was consecrated Bishop of Ethiopia by Patriarch ↗Michael IV of Alexandria (1092–1102) in the year 818 of the Coptic calendar [1102 A.D.]. According to the *History of the Patriarchs*, his appointment was meant to comply with the urgent request for a metropolitan by an unnamed Ethiopian emperor. G. was probably the immediate successor of *abunä* Sawiros. Yet, as soon as he reached Ethiopia, his behaviour caused him to be arrested by the king of Ethiopia for "infamous affairs and ... vile deeds" unbecoming to his rank (SawHist 394). He was then sent back to Egypt by the same emperor, with an explanatory note asking that he be punished. Thus, the Egyptian *wazīr* al-Afḍal consigned him to the "Prison of the Guard" in Cairo, where G. remained for several years.

Stuart C. Munro-Hay

Giyorgis

G. (**ጊዮርጊስ**) was a ↗Zagʷe-period bishop who appears in two interesting contexts. He is mentioned in the colophon of the ↗*Kəbrä nägäśt* as the bishop at the time when the colophon was written during the reign of Lalibäla Gäbrä Mäsqäl, year of Mercy 409 [1224/25 A.D.]. He is also named with the three ecclesiastics *qalä pappas* Abet, the *qes haṣani* Zäᵓdonaya and the *eppisqoppos* Harayo, in a 16th-cent. copy of a land grant of ↗Lalibäla on 25 March 1225. He apparently was the successor of Metropolitan ↗Yəsḥaq I, consecrated on 11 *Barmahāt* [4 *Mäggabit*] 926 [1202] A.M. [7 March 1210 A.D.]. The date of the end of his metropolitanate is unknown.

Giyorgis the Egyptian

G. (**ጊዮርጊስ፡ ዘግብጽ**, *Giyorgis zä-Gəbṣ*) was a member of the delegation which, in 1744, during the reign of *aṣe* ↗Iyasu II, was sent to the Patriarch of Alexandria in order to obtain a new metropolitan to replace ↗Krəstodolu III, who had died in 1735 or 1738. Iyasu II's chronicle suggests that a special role was played by Iyasu's mother Məntəwwab (↗Bərhan Mogäsa). From all over the country 450 ounces of gold had been collected as a present for the authorities in ↗Egypt. Other members of the delegation were *aläqa* Tewodros of Däbrä Ṣälalo, *abba* Lukyanos of ↗Azäzo and three Muslims (*Ǝslamočč*): Ǝmädᶜali (Aḥmad ᶜAlī), ᶜAbdäla (ᶜAbdallāh) and ᶜAbdalqader (ᶜAbdalqādir). They travelled from Gondär to Ḥamasen where they spent the rainy season because the Muslims refused to proceed to ↗Massawa. No reason is given for the refusal. Fearing to disobey the Emperor's orders, the Muslims finally descended to Massawa, where they quarreled with *abba* Tewodros because he had gone to Massawa without them. While they were there, Iyasu and Məntəwwab ordered *ras* ↗Mikaᵓel Səḥul, *däǧǧazmač* Basəlyos and *baḥər nägaš* Solomon to attack Massawa. When the news reached the ↗*näᵓib* – the Annals call him "a devil incarnate" (*Šäyṭan səggawi*) – and the merchants of the port, they put the members of the delegation, said to be five in number, in chains and threatened them with their weapons. If the delegation, while in Massawa, indeed counted five members only, it would seem that G. was no longer among them. After six months they were released because Iyasu in a letter had promised to spare the inhabitants if the envoys were set free. Half of the Emperor's money, which had been taken from them, was then restored.

The journey to Jedda took a month and seven days. The ships for Egypt had already left. A few days on their arrival, *abba* Lukyanos embraced Islam because of a disagreement with Aḥmad ᶜAlī. Lukyanos made many allegations against *abba* Tewodros and the three Muslims before the *šarīf* of Jedda, but without success. The envoys also quarrelled with ᶜAbdalqādir because he had squandered the Emperor's money. The *šarīf* ordered him to return the money and, when he refused, put him in chains for a year and six months. After a ten-months stay in Jedda, *abba* Tewodros, ᶜAbdallāh and Aḥmad ᶜAlī embarked for Egypt. ᶜAbdallāh died at sea and Aḥmad ᶜAlī in Suez, on the seventh day of the journey. The delegation spent three months and seven days at sea. In Alexandria the remaining part of the Emperor's money and his letter were handed over to the Patriarch Yoḥannəs. After three months, the Patriarch, in an assembly of the metropolitans, bishops, priests and deacons, appointed ↗Yoḥannəs, a monk of the monastery of Scete (Askät), against his own will, Metropolitan of Ethiopia.

With *abba* Tewodros Yoḥannəs left for Jedda, from where they took ᶜAbdalqader in chains with them to Massawa. They informed *aṣe* Iyasu, *ətege* Bərhan Mogäsa and *ras* ↗Wäldä Ləᶜul of their arrival, but the *naʾib* held them in custody. After five months *abba* ↗Ewosṭatewos and *abba* Gäbrä Maryam arrived from Däbra Bizän. At the demand of *abba* Tewodros they assisted Metropolitan Yoḥannəs in escaping from Massawa during the night. He took with him the meron or Holy Oil, priestly garments and the Book of Rituals for the consecration of the *tabot* and the ordination of priests and deacons. He stayed in Däbrä Bizän for two months. Meanwhile the *naʾib* had put Tewodros in shackles for having assisted Yoḥannəs in his escape and several times threatened to kill him. After two months *abba* Tewodros, by paying a ransom of sixty ounces of gold to the *naʾib* and the Turkish *paša*, was able to leave Massawa by way of Dägsa. The Metropolitan in his turn went from Däbrä Bizän to Ḥamasen, where he remained for a few days. In Särawe (↗Säraye?) he met with *abba* Tewodros. Both were well received by At Anbäsa and then by Ǝmḫabä Ab, who accompanied them as far as Adyabo. They finally met the Emperor in Šire.

Emeri van Donzel

Giyorgis

Balambaras G. (ጊዮርጊስ; Greek: Geórgios Fotis; b. ca. 1815/30, d. between 1910 and 1920, Neqemte) came from ↗Greece to Ethiopia at a young age, between 1865 and 1870. There he met Kaśa Mərč̣a (later *aṣe* ↗Yoḥannes IV). Accused of stealing something from Kaśa's camp, he was expelled from Təgray and arrived in Gondär. There he married Bogaläčč, by whom he had more than six children, and pledged allegiance to *aṣe* ↗Täklä Giyorgis II.

In July 1871, in ᶜAdwa, G. fought with Täklä Giyorgis against Kaśa, but Täklä Giyorgis was defeated and Kaśa was crowned as Yoḥannəs IV. After a short exile in the Sudan at Kässälä, G. came back to Gondär. He was then under the protection of *ras* Adal Täsämma, governor of Goǧǧam, the future *nəguś* ↗Täklä Haymanot. At the end of the 1870s, when G., during his fighting against the Oromo in Ǧimma, defeated the governor of Nunu, *fitawrari* Qädida Wänabet, Adal granted G. the title of ↗*balambaras* .

Later on, G. had close relationships with *däǧǧazmač* ↗Gäbrä Ǝgziʾabəḥer Moroda. In 1888 G. initiated the construction of the Däbrä Ṣəyon church in Neqemte, but during the work he quarrelled with Gäbrä Ǝgziʾabəḥer. In 1896 he was still present on the battlefield at ↗ᶜAdwa on Mənilək's side. After the ᶜAdwa battle the Emperor gave him a pension and G. lived for some years in Addis Abäba with his family.

G. had been a very close friend of the Irishman MacKelby, who assisted him in his numerous activities. Together they had been gunsmiths and also merchants, selling weapons, hides and skins and antiquities, among other goods.

As he knew Greek, Gəᶜəz, Amharic, Arabic and Italian, G. was employed as an interpreter, but also worked as a physicianand wrote some historical and astronomical texts (mss. Addis Ababa National Library 199; Vat. Aeth. 128) and four autobiographical works. Two of these are composed of pictures (ms. BN Éth. 205; 210) and the other two are collections of songs (ms. Vat. aeth. 113; 118).

Giyorgis Ḥaddis ↗George the New

Giyorgis of Sägla

G. (**ጊዮርጊስ**) of Sägla was one of the most prolific Ethiopian authors of religious texts in Gəᶜəz, with liturgical and pastoral works as well as doctrinal tracts. This profusion of works may have been one of the sources of confusion concerning G. of Sägla and G. of Gasəčča, Sägla and Gasəčča being historical sites in Šäwa lying next to each other (Schneider 1983:106; ↗Däbrä Bahrəy). Today it is generally believed that there was only one G., a contemporary of emperors Dawit II, Yəsḥaq and, maybe, Zärᵓa Yaᶜəqob (cp. TadTChurch 222; EMML V, 339; Colin 1987:VI–IX; Derat in OrbAethChoj 51). Some scholars, however, still contend that G. of Gasəčča was another person who lived during the time of ↗ᶜAmdä Ṣəyon I, several decades before his namesake from Sägla (YaqBeyGiy I, v).

G. is venerated as saint. His life is recounted in his Acts (↗*Gädl*), written in the 15th cent., shortly after his death. His father, Ḥəzbä Ṣəyon, was a "priest of the tabernacle" (*kahənatä däbtära*), one of the clergy at the royal court. His mother, Ǝmmənä Ṣəyon, came from the ruling family of ↗Wäläqa. G. was educated in the monastery of ↗Däbrä Ḥayq Ǝsṭifanos. He succeeded his father as a *kahənatä däbtära* and became the tutor of the Emperor's sons and their companions. His appointment as ↗*nəburä əd* of ↗Däbrä Damo by Dawit II permitted him to travel the country visiting monasteries and hermits. From his childhood, G. demonstrated a unique devotion to the Virgin ↗Mary, reflected in certain of his writings and in the *sälam* dedicated to him in the *Sənkəssar* for 7 *Ḥamle* (GuiSyn II, 209).

In opposition to the communities of ↗Däbrä Libanos of Šäwa and Däbrä Ḥayq Ǝsṭifanos, G. played an active part in the establishment of the celebration of the first ↗Sabbath, a practice enforced by *aṣe* ↗Zärᵓa Yaᶜəqob. On account of his theological views and court intrigues, G. was imprisoned. When pardoned, he received a land grant at Gasəčča, the site of ↗Bäṣälotä Mikaᵓel, where he became the abbot of the monastic community and was buried.

G.'s writings pose a problem. His principal work is undoubtedly the *Mäṣḥafä* ↗*məsṭir.* Written ca. 1424, this voluminous theological opus, which shows a deep acquaintance with ancient sources and can be in some ways considered the Ethiopian *Summa theologica*, had a remarkable impact on Ethiopian culture and religious thought. Numerous copies of the text went quickly into circulation and its language influenced that of G.'s Acts. Some of its arguments were used in the 17th cent. during the religious conflicts between the ↗Jesuits and the ↗Ethiopian Orthodox Church.

Besides, G.'s Acts ascribe the following works to the Saint: *Arganonä wəddase* (↗*Arganonä Maryam*); ↗*Fəkkare haymanot*; *Wəddase mäsqäl* ('Praise of the Cross'); *Wəddase dəngəl* ('Praise of the Virgin'); *Wəddase ḥawaryat* ('Praise of the Apostles'); *Mäṣḥaf səbḥat zämäᶜalt wäzälelit* ('The Book of the Glory of Day and Night', usually identified as the *Mäṣḥafä* ↗*säᶜatat*, the work to which the problem of G.'s "double identity" is linked) and *Ṣälotä fättəto* ('The Prayer of the breaking [of the bread]'). There is also a reference to some (untitled) minor ↗hymns and homilies of G. (s. Colin 1987:xf.). One particular type of the ↗*Ǝgziᵓabəḥer nägśa* is also ascribed to G.

Other sources provide slightly differing lists of G.'s works (s. EMML V, 339f.; KurMoa 35); in many cases, the attributions remain uncertain whereas some texts mentioned in the sources have not been yet identified. It cannot be excluded that more G.'s works will be discovered. A thorough study of his writings, with the analysis of language and style, remains a desideratum.

Gérard Colin

Giyorgis Wäldä ᶜAmid

G. (**ጊዮርጊስ፡ ወልደ፡ ዓሚድ** or Ar. جرجس المكين بن العميد, Ǧirǧis al-Makīn b. al-ᶜAmīd, or Ibn al- ᶜAmīd, Al-Makīn; b. 1206, Cairo, d. 1273) was a Christian Arab historian, whose works were incorporated into Ethiopian tradition (↗Gəᶜəz literature).

There is limited information about G.'s life. A descendant of an Iraqi merchant, he held, like his father, high offices in the military administration under the Ayyubids in Egypt and in Damascus. In Syria he spent several years in prison. The reasons for that are unknown, but there seems to be a connection with the takeover of the Mamluk sultan ↗Baybars I in 1260. Although he never returned to his homeland, G. remained in close contact with other Egyptian scholars like the Awlād al-ᶜAssāl (↗*Fətḥa nägäśt*).

Between 1262 and 1268 G. wrote his universal chronicle المجمع المبارك (*al-Mağmaᶜ al-mubārak*, 'The Blessed Collection'), generally known by the title of *History*, which was translated during the reign of *aṣe* Ləbnä Dəngəl (1508-40) as ታሪከ፡ ወልደ፡ ዓሚድ (*Tarikä Wäldä ᶜAmid*, 'The History of Wäldä ᶜAmid'). The work is divided in two major sections: the pre-Christian history from Adam to Tiberius Caesar and the Christian history with a description of the life of Jesus Christ followed by the succession of Roman emperors down to Heraclius. The sources of this part are above all biblical, but also literary data of Hellenistic, Roman and Byzantine origin are involved.

The second part of the *History* seems largely dependent on the famous Arab historiographer aṭ-↗Ṭabarī (838–923). It describes the history of Islam from the life of the Prophet ↗Muḥammad to the succession of the Umayyad and Abbasid caliphs and the Muslim dynasties in Egypt, ending with Baybars II. Besides, G. used more recent sources concerning the history of Egypt and Syria. There are also frequent correspondences between Ibn ar-Rāhib's *Kitāb at-Tawārīḫ* ('The Book of Chronicles'), another Christian universal history written in Arabic from the 13th cent., and G.'s own work.

Chronological lists concerning historical events outside Ethiopia are integrated with Ethiopian dates from the conversion of the Aksumite kings to Christianity to modern times (↗Chronography). Further to the lists of kings, the *History* provides information on political and ecclesiastical history in Ethiopia. The section dealing with the series of the Patriarchs of Alexandria is extended by the Ethiopian translator to the 95th patriarch Gabriel, "who sat in the time of *aṣe* Ləbnä Dəngəl". The information about the ↗Zagʷe dynasty, otherwise rather scanty, is complemented by a legend emphasizing that this dynasty was descended from Moses.

In order to refute the allegation that their own dynasty was illegitimate and usurpatory, the Zagʷe rulers circulated a legend focusing on the Biblical passage (Num 12:1) in which Moses married an "Ethiopian" woman. Details of this marriage are given in the history of G.: while Moses was in Egypt war broke out between Ethiopians and Egyptians. The Ethiopians tried to divert the course of the ↗Nile by building a dam on the Täkkäze River. The Pharaoh called Moses to lead an expeditionary force with 200,000 men against the Ethiopians, defeated them and destroyed the dam. Moses then married the daughter of the Ethiopian king (SerHist 241; for the relevance for Ethiopian ↗historiography s. also Kropp 1986:319).

Different parts of the *History* (chronology or historical notes) are found in several manuscripts, especially in connection with lists of kings and other chronological items (e.g., mss. EMML 2114, fol. 32b-33b; 2345, fol. 54b-62a; 3981, fol. 102a, 145a; London, BritLib, Orient. 814, 815). The text also indicates its source for the biographies of Alexandrian patriarchs: e.g., ↗Cyril of Alexandria and ↗John Chrysostom.

The book shows the interest the Ethiopians of the time took in this kind of literature, which is attested not only by the transmission into Gəᶜəz of Arabic historiographical works, but also by the composition of indigenous chronicles.

Ute Pietruschka

Ǧizya

Ǧ. is an Arabic term (جزية,'tax', from the verb جزى, *ǧazā*, 'to reward', but probably originating from Aramaic) used to indicate the poll-tax which, according to the traditional Islamic law (↗*Šarīᶜa*), has to be levied on individuals of the communities of the so-called *ahl al-kitāb* ('people of the Book', i.e. adherents of a revealed religion, Jews, Christians and Zoroastrians) who live under Islamic rule.

The origin of the term and of the legal concept is most likely to be found in the Qurʾānic passage 9:29. The last section of this verse contains the theological basis of the practice of taxing non Muslims permanently dwelling in the Islamic world. The passage has long been subject of interpretations by traditional Islamic commentators and Western Islamologists. The most reliable exegetical hypothesis is that the Qurʾānic verse intended the Ǧ. as a concrete sign of gratitude due by non-Muslims, for they had their lives spared by the Islamic government and they could remain followers of their ancestors' religion. Ǧ. could also represent a kind of compensation that non-Muslims had to pay as they did not embrace ↗Islam. It is true that by paying the Ǧ. non-Muslims living in Islamic territories were granted the status of *ḏimmī* ('protected'), which allowed them a certain religious freedom and personal security. Converts to Islam were automatically exempted from the payment of the Ǧ. The Ǧ. as a poll-tax was levied every lunar year on mentally and physically sound adults, free men, women, children, slaves, lunatics, old, handicapped, poor people, beggars, whilst needy monastic communities were exempt. Non-Muslim foreigners who did not stay permanently in lands under Islamic rule were obviously not obliged to pay the Ǧ. Christians, who were sometimes enrolled in the Islamic army, were also exempted from it during the period of their military service.

Ǧ. was normally collected at the beginning of the Islamic lunar year (under the Mamluk rule in ↗*Ramaḍān*) and was paid in cash (but payment in kind was also possible). Since the tax was imposed on individuals, the collection of the Ǧ. was carried out by the financial administration on the basis of a previous census of the non-Muslim population. From the political point of view, the payment of the Ǧ. represented for each non-Muslim the acknowledgement of being a subject of Islamic rule and a citizen of an essentially lower status.

In Ethiopia, we may logically surmise that Muslim rulers conformed to the traditional Islamic practice of levying on non-Muslim subjects Ǧ. whenever they had the political and military strength to do so. However, many of them were often obliged to pay a tribute to the Christian emperor. After ↗Aḥmad b. Ibrāhīm al-Ġāzī's conquest of the Christian lands, Muslims had the opportunity to collect Ǧ. (TrIslam 88) and the ↗*Futūḥ al-Ḥabaša* bears witness of the circumstances in which non-Muslims submitted to such a rule: the people of Wag and Gäbärge, who surrendered without fighting (BassHist 267 [text] = 363 [tr.]); after the conquest of Abba Gärima (*ibid.* 321 = 425); in the region of Däbrä Hallelo (Däbrä Halleluya), whose inhabitants were given full security (*amān*; BassHist 335 = 445:46); after the final conquest of Säraye (*ibid.* 337 = 448); the Fälaša (↗Betä Ǝsraʾel) in Səmen (ibid. 343 = 459; in this passage the Qurʾānic verse 9:29, related to the Ǧ., is expressly quoted); the whole of conquered Bägemdər (*ibid.*); as for Aksum, the *Futūḥ* (322 = 428) relates that the monks asked the *imām* to extend his stay in the town so that they could pay him the Ǧ. in gold, but Aḥmad rapidly moved on to Mäzäga.

Alessandro Gori

Glaser, Eduard

G. (b. 15 March 1855, Deutsch-Rust, Bohemia, d. 7 May 1908, Munich) was an Austrian orientalist and explorer of South Arabia. G. studied Arabic, other Semitic languages, especially ↗Epigraphic South Arabian, and astronomy in Vienna. Between 1882 and 1894 he made four extensive journeys to the ↗Yemen, where he explored the country, acquired Arabic manuscripts and collected nearly 1,800 Sabaean, Minaean and Qatabanian inscriptions. After his travels, G. lived in Munich, evaluating his researches in the Yemen, publishing inscriptions and writing works on the history and geography of Arabia.

In his book *Die Abessinier* (1895), G. reasonably compared the proper name *ḥbšt* in Sabaean inscriptions with the Arabic *al-ḥabaša* and thus provided the explicit epigraphic proof for the connection of these two terms (↗Abyssinia; ↗Ḥabašat). He also made the first detailed reconstruction of pre-Aksumite Ethiopian history with particular reference to South Arabian sources. In the publication *Zwei Inschriften* (1897) he treated for the first time the famous inscription CIH 542 of King ↗Abraha from the year 544 A.D. which reports on the restoration of the Mārib dam and other historical events.

Walter W. Müller

Goa

G. is a town in India and former capital of the Portuguese dominions in the East. Its situation at the centre of the west coast of the Indian subcontinent (15° 48' –14° 53' N, 74° 20' –73° 40' E), natural resources, and privileged commercial links were strategically important for the builder of the Portuguese empire in the east, Afonso de ↗Albquerque, who conquered the town on 25 November 1510 from the Sultan ᶜĀdil Šāh of Bijapur, after a failed attempt some months earlier. Prior to the Portuguese, the town had seen over a dozen different ruling dynasties, both Muslim and Hindu. G. was the first territory in the East to come under direct Portuguese sovereignty. In 1530 it became the headquarters of the Portuguese "Estado da Índia", in 1533 was created the G. Diocese, raised to Archdiocese in 1577, with suffragan dioceses scattered all over the East, as part of the Portuguese "Padroado" (ecclesiastical jurisdiction) in the Orient. G.'s jurisdiction extended to four provinces until the late 18th cent., when seven other provinces were added as "New Conquests".

The "Old Conquests" of G. were subject to an intense missionary drive, particularly since the arrival of the ↗Jesuit Francis Xavier in 1542. The first printing-press reached G. from Portugal in 1567 (Rodriguez 1931:537, n. 3). Originally meant for the Jesuit Ethiopian mission, due to political problems it was retained in G. and contributed to the intensification of the missionary activities. In the Jesuit College of St. Paul (created about 1541) resided the first contingent of missionaries aiming at Ethiopia, together with the "Patriarcha" João Nunes Barreto (d. 1562). The college became a main regional centre that provided education to a multiethnic community – including "Abyssinian" children (s. Wicki 1948:89) – and offered as well a full university curriculum (theology, arts and pilosophy) to most of the missionaries sent to preach the Orient. Among the Jesuits who preached in Ethiopia having studied there were Manoel de ↗Almeida, ↗Barradas, ↗Lobo and ↗Paez (on the role of G. for this mission s. Pennec 2003:73–100).

The suppression of the Society of Jesus in 1759 resulted in a decline of the missionary activity. This was further reduced later with the rise of liberal politics in Portugal and the suppression of other religious orders in 1832–34. Portuguese colonial rule ended on 19 December 1961 and in 1974 Portugal's new democratic regime recognized the integration of G. into the Indian Union renouncing its Padroado rights over the Indian Church. In 1986 G. became the 25th State of the Indian Union, with Konkani as its official language.

Gōbaʿád

The ↗ʿAfar Sultanate of G. occupied approximately the western territory of the present-day Republic of ↗Djibouti. This old traditional chiefdom was populated by the pastoral ʿAfar groups Debne and ʿAbdarrasūl. The Debne and ʿAbdarrasūl belong to the ʿAdohyammára 'white men', who constitute one of the two moieties into which the ʿAfar society is divided, the other being the ʿAsahyammára 'red men' (↗ʿAdohyammára and ʿAsahyammára).

The Debne were nomads dwelling in the plain of G. and the plateau of Dakka. The ʿAbdarrasūl populated the south of Hanlé, an important date-grove in ↗Dikhil, with a well and pasture, the plain of Gaggadé and the area of Ghoubet and Lake Assal. Besides pastoralism (with herds of goats, sheep and camels), trade was also an important activity: the ↗salt collected from the salt-works of Lake Assal (↗ʿAfar Depression) was transported abroad in caravans; merchandise from the port of ↗Tağūra was transported to central south-western Ethiopia; and the area also forwarded exports from Šäwa and ↗Awsa (cereals, butter, leather, slaves etc.).

The political evolution of G. has gone through several ups and downs, before its definitive decline in the 1930s due to the French colonization. Until the end of 15th cent., the ʿAfar "nation" was split into two kingdoms: ↗Dankali in the north and ↗ʿAdal in the south. With the fall of these two kingdoms in the 16th cent. came the emergence of the sultanates as autonomous political entities. The southern border of the territory suffered also a double pressure, from the ↗Oromo and the ↗Somali. After the defeats endured by the *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ) against Christian Ethiopia, the southern ʿAfar were confronted with Oromo expansion. At the end of the 16th cent., following Oromo invasions into the Harärge, the *amīr* of ʿAdal took refuge in the Awaš area, taking the name of "*sulṭān* of Awsa".

During the 18th and 19th cent., the ʿAfar re-occupied large regions of G. south-east of Lake Abbe and in the valley of the Awaš. The Debne gained control from there of one of the trade routes which, with the aid of caravans using the pass of Yokobi and the Abbé depression, connected the port of Tağūra, via Lake Assal – where salt was and is still today collected – with the Awaš. This was a period of prosperity for the sultanate, which – with Tağūra, Raḥayta and Awsa – was one of the four powerful ʿAfar chiefdoms.

The sultanate was a political and territorial unit, with the *sulṭān*, chosen from the Arbahinto family (not by direct father-son but by collateral succession, the brother succeeding the late *sulṭān*), as the supreme head. The *sulṭān* had a fixed residence in the date-grove of Dikhil and, assisted by a council of elders, governed, decided on issues of peace and war and refereed litigations. In addition, he had an assistant, the vizier, who was one of his younger brothers. The *sulṭān*, as protector of the country, was also a landlord. After payment for a right of use and keeping for himself a right of way on the caravan traffic, he granted the use of the lands to tribes and factions.

The G. sultanate, which covered the south of the ʿAfar area up to the gulf of southernmost Tağūra, to the depressions of Lake Abbe, was a buffer zone. Stockbreeders from G. were there in direct contact and shared pasture areas both with the ʿAfar from the sultanate of Awsa and with the ↗ʿIssa, which was a cause of rivalry and disputes. Frequent clashes used to arise between, on the one hand, the ʿAdohyammára of G. and, on the other, the ʿAsahyammára of Awsa and the Somali ʿIssa. However, at times, alliances between the ʿAfar from G. and the ʿIssa devoted against the powerful sultanate of Awsa were also secured.

French colonization profoundly affected traditional polities. Initially, the relations with the French were peaceful. Thus, the governor Léonce de ↗Lagarde, a month after his arrival at ↗Obock, contacted *sulṭān* Hummad ↗Loʿoyta, and on 9 August 1884 signed a friendship-treaty by which the *sulṭān* engaged himself to protect the passage for French caravans as well as to facilitate their recruitment of caravaneers. In exchange, the *sulṭān* would receive a thaler per animal and per European traveller. However, on 2 January 1885 a second treaty was signed, transforming the former declaration of friendship into an official donation. There the *sulṭān* obliged himself "to give his country to the French government who in its turn would protect the *sulṭān* from foreign intruders". This was a direct reference to the ʿIssa and ʿAsahyammára ʿAfar who, stronger than the G., used to invade the Debne lands and make raids on herds.

The protectorate was finally transformed into a colony in 1896 and new political borders were drawn. Whilst the southern border ratified the separation between the ʿAfar of the Côte française des Somalis (CFS) and the Somali of Somaliland, its concrete design, ratified in the convention of 20 March 1897, stipulated that "the border between Ethiopia and the CFS is fixed according to a line on the basis of the Anglo-French border at Djalelo, passing through Kahali, Gobaad, Airoli, the edge of Lake Abbé, Mergada, the edge of Lake Alli ...". This meant the de-facto division of the territory of the sultanate of G. and the placement of the summer-pasture areas within Ethiopian territory. In addition, the opening of the railway (↗Railways) connecting Djibouti to Dərre Dawa in 1902 had a negative effect on Dikhil. The new railway-station at ↗Ali Sabieh drained the trade, to the detriment of the caravan trade which used to call at the traditional halt in the oasis of Dikhil. As a consequence, the resources and means of control of the *sulṭān* dramatically deteriorated.

As long as colonial administration was distant, focused in the capital Djibouti, *sulṭān* Loʿoyta and his vizier Ḥāǧǧ ʿAlī showed a good disposition towards the French. However, as from 1924, the interest of the governor Capon-Baissac in the interior areas became manifest: in March 1928, a colonial station was opened in Dikhil, where the *sulṭān* of G. resided, a move that encountered the opposition of the *sulṭān*. Following this, France replaced the traditional authorities in control of the strategic area, in the limit of the zones occupied by ʿIssa and ʿAfar groups and the borders of the contiguous CFS of Ethiopia. Beside territorial control, the colonial authorities aimed at stopping the slave-trade, which still existed in the area of Dikhil. The position and power of the *sulṭān* was therefore in jeopardy. His territory was jammed between the ʿIssa and the ʿAsahyammára of the sultanate of Awsa, the latter ruled by Muḥámmad Yāyyó (who in 1927 had succeeded his father Yāyyó Muḥámmad Illalta Ḥanfaḍé), a skilled player both with the French established in the CFS and the Italians from ↗Eritrea. The *sulṭāns* of G. of the Arbahinto family were fervidly hostile to any direct negotiation between the Awsa and the French administration, because it would have reduced their role as intermediaries.

As a consequence, Loʿoyta, hostile to the French presence, fomented resistance among his subjects. In 1930, he and his vizier Ḥāǧǧ ʿAlī were deposed and, accused of endangering the safety of the State, were convicted to ten years of detention and deported to Fort Dauphin, Madagascar. The *sulṭān* died in exile on 19 July 1932. Since his death, both the titles of *sulṭān* and of vizier ceased to exist and the sultanate was abolished.

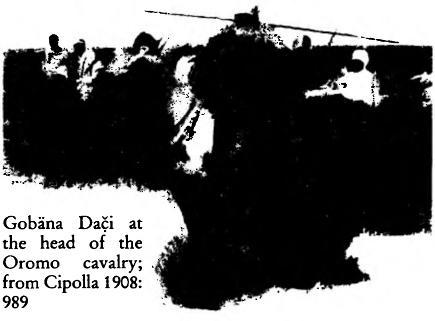
Gobäna Dač̣i

Ras G.D. (ጎበና፡ ዳጪ, Orom. Goobana Daacii, horse name Abba Ṭəgu; b. 1821, d. 1889) was an Oromo military and political figure who played an important role in modern Ethiopian history. He was born to an Oromo chiefly family that was converted to Christianity and was allied by marriage to *nəguś* ↗Śahlä Śəlasse of Šäwa. When *nəguś* Mənilək (later *aṣe* ↗Mənilək II), the grandson of Śahlä Śəlasse, escaped from *aṣe* Tewodros's prison in 1865 and returned to Šäwa, G.D. not only submitted to him but also put his wealth at the disposal of Mənilək. Mənilək, in return, invested G.D. with the title of ↗*abägaz*. This was the beginning of G.D.'s spectacular rise to power. Mənilək, perceiving G.D.'s remarkable talent, promoted him to the rank of ↗*däğğazmač*, commander of the armed forces. In 1878 G.D. was made ↗*ras*, the highest title below the rank of prince. He was probably the first Christianized and culturally Amharized Šäwan Oromo to receive such a title.

Inspired by his own career, G.D. launched the conquest of his own people, becoming Mənilək's greatest empire-builder. He won for Mənilək the battle of ↗Ǝmbabo in 1882 and was responsible as well for the peaceful submission of all Oromo leaders in the ↗Gibe region, in ↗Wälläga and ↗Illubabor – the three richest regions which henceforth became the economic backbone of Mənilək's empire. Mənilək rewarded G.D. by entrusting him with the administration of the Gibe region and also appointed him *nəguś* of ↗Käfa, a province which was not yet conquered.

His popularity and rapid career-growth aroused envy among the officials around the Emperor. As a result, Mənilək not only withdrew the title of *nəguś* of Käfa from G.D., but also removed him from the administration of the Oromo Gibe region. A rebellion of the Oromo followed. After it was suppressed, only the kingdom of Ğimma survived. The territories of Limmu Ǝnnarya, Gomma, Guummaa and Geeraa became a part of Mənilək's empire.

G.D., whose son Wädağo was married to the daughter of Mənilək and whose descendants were integrated into the heart and soul of the Ethiopian system, is a controversial historical figure. On the one hand, as a general and a foremost empire-builder he is regarded as a hero in modern Ethiopian history. On the other, for the Oromo he is a traitor, who worked against the interests of his people. For Oromo nationalists G.D. was the "Trojan horse" that was planted at the heart of Oromiyya to destroy the unity and the nation from within.



Gobäna Dači at the head of the Oromo cavalry; from Cipolla 1908: 989

The policy of working against the interest of its own people is still known among the Oromo as the "Gobanist phenomenon".

Mohammed Hassen

Gobat, Samuel

G. (b. 26 January 1799, Crémines, Switzerland, d. 11 May 1879, Jerusalem) entered the seminar of the Basel Mission, then in close contact with the ↗Church Missionary Society (C.M.S.) in England, at the age of 22. In 1825 G. was sent to London to prepare for a C.M.S. mission to Ethiopia. As part of his preparation G., who already knew Arabic and Hebrew, studied Gəʿəz. In 1826 he and his colleague Christian ↗Kugler arrived in Alexandria. During the trip G. learnt Amharic from an Ethiopian monk.

In February 1830 the missionaries reached ʿAddigrat and were cordially received by the ruler of Təgray, *däğğazmač* ↗Säbagadis Wäldu, whose friendship G. immediately won. In March he travelled to Gondär in order to see the country and distribute the Amharic Bibles the missionaries had brought with them. There G. committed himself to persuading priests and lay people of the need to reform the Orthodox Church. He spent his time discussing religious questions, most prominently the nature of Christ and the sinfulness of the Virgin Mary.

The reforms G. advocated comprised the institutionalizing of theological education, the renewal of the establishment of several Ethiopian-held bishoprics (s. ↗*Eppisqoppos*), the removal of images from Ethiopian churches and the abolition of the veneration of saints. Despite being a convinced Protestant, G. won the sympathy of many Ethiopians; as a result he was even considered, according to his own account, as a candidate for the vacant Ethiopian bishopric (Gobat 1884:149). The missionary's ample knowledge of the Scriptures attracted the admiration of the Ethiopian clergy, among them *əč̣č̣äge* Filəp̣p̣os. In Gondär G. made the acquaintance of Habtä Śəllase, son of the Šäwan ruler ↗Śahlä Śəllase, who asked him to send a mission to the "heathen" Oromo in Šäwa, a task that was to occupy G. and his successors for many years.

G. left Gondär in October 1830 and returned to ᶜAdwa, Təgray. There, the circumstances were less favourable to his mission. Since G. did not understand Təgrəñña, he remained isolated from the population. Soon after G.'s return, Kugler died in a hunting-accident. In early 1831 Säbagadis Wäldu fell in battle. His death threw Təgray into turmoil and G. had to flee ᶜAdwa and spend the following months hiding in ᶜAddigrat and in the monastery of ↗Däbrä Damo. His missionary activity was more or less confined to two young men of respectable background, Ḥädarä and Kidanä Maryam, whom he had accepted as disciples.

When his health deteriorated during 1832, G. returned to England. There he managed to gain support for his plan to renew missionary activity in Ethiopia.

In 1834 he and his young Swiss wife left for Ethiopia with the intention of setting up a missionary station. They were accompanied by Carl Wilhelm ↗Isenberg, another Basel Mission graduate. During the journey, G. fell seriously ill and subsequently had to give up his dream of being a missionary in Ethiopia.

Nonetheless, Ethiopia remained central to his missionary outlook. In 1846 he was chosen as bishop for the newly established Anglican Lutheran bishopric of ↗Jerusalem, which included "Abyssinia" as well. In this function he was asked by *ras* ↗Ali Alula in 1850 to supervise the Ethiopian Convent in Jerusalem. Under G.'s direction, four young missionaries of the ↗St. Chrischona-Pilgermission near Basle took up missionary work again in Ethiopia in 1856. Yet contact between the brethren and the mission-board in Jerusalem headed by G. was only sporadic. In 1868, after years of political unrest, in the course of which *aṣe* ↗Tewodros II imprisoned the missionaries, the mission had to be abandoned. Only a few months later G. undertook a last attempt at evangelizing the Ethiopians by sending the Pilgrim missionaries Christian ↗Bender and Johannes ↗Mayer back to Təgray. Their work, however, bore no fruit. During his last years G. concentrated on missionary work in the Levant.

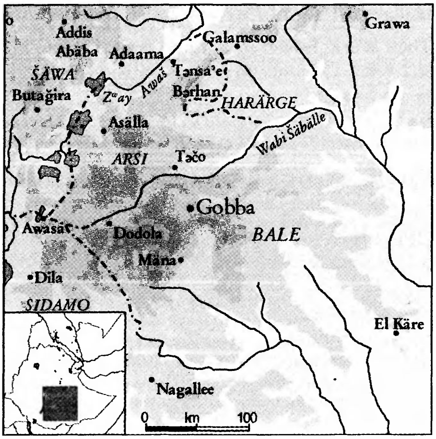
Gobäze Gäbrä Mädḫən ↗Täklä Giyorgis II

Gobba

G. (**ጎባ**, also Goba) is the capital of the G. *wäräda* and the Bale zone within the Oromiyaa *kəlləl*, housing the administrative and commercial services of a still-remote highland region. It is located at 2,500 m A.S.L., on a mountain pass between the upper ↗Wabi Šäbälle to the west and the basin of the Wälmäl and Wäyb rivers running east towards the Juba. Standing at the bottom of the Mount Batu range in the ↗Bale National Park, G. boasts a new touristic function due to its proximity to the Sof Omar caves in the Wäyb valley.

G. was the capital of the Bale region and of the ↗Fasil/Mändäyo *awrağğa* from the late 1950s to 1991. It was not served by an all-weather road until the mid-1960s, when the road from Šašämänne was opened, while aeroplanes had to land on a field in the middle of the town. Between 1963 and 1970, following a rebellion of Oromo farmers who had only survived precariously as tenants since they were defeated by Mənilək's troops, Ḫaylä Śəllase I's government used G. as a military base. The town, for a time, regained the status of a fortified settlement, as it had been during the Šäwan conquest at the end of the 19th cent. (Dehérain 1931:56, 79; Gascon 1989).

In 1901, the du Bourg de Bozas scientific mission described it as a "a crowded sprawl of huts housing a dense population … The 'guébi' [↗*Gəbbi*] stood on top of a hill with the town climbing up its slopes" (Maurette 1906:144). *Däǧǧač* Ləʿul Sägäd was still living in the fortress, which, at an altitude of 3,020 m A.S.L., overlooked and controlled the town down below. With the imposition of the "Pax Aethiopica", the authorities abandoned both *gəbbi* and *kätäma*.



In 1938, G. had a population of 3,000 inhabitants (Guida 464) and in 1970, after the revolt was over, the figure stood at 11,776. In 1984, like the population of the Mändäyo *awrağğa* as a whole, it had doubled to 22,693 inhabitants. The 1987 administrative reform confined the Oromo-populated territory of Bale to the highlands. The 1991 federal partition kept these boundary lines, but reduced Bale to the status of a "zone". A few Oromo Liberation Front fighters have sought to settle in the mountains, but they seem to be a lesser threat than the fires which damaged the forests on the outskirts of the town in 2000. The expansion of G. has continued and the population reached 38,089 inhabitants in 2000 and 46,106 in 2004, with an increase-rate higher than the rest of the *wäräda* (CSA 2004). Administrative buildings, hotels and housing, both planned and spontaneous, have gradually urbanized the former airfield.

Gobədra

G. (**ጎበድራ**, also Gobo Dura) is a prominent 200 m-high rocky ridge/hill area located approximately 4–6 km west of ↗Aksum, just north of the main Aksum–Gondär road in Təgray. G. contains a variety of archaeological sites ranging from Stone Age lithic scatter areas to post-Aksumite settlement sites. Re-deposited Early Stone Age (late Acheulian) and Middle Stone Age lithic artefacts are documented at localities on the north-eastern and southern flanks of G. hill, suggesting early human occupation of the zone. Several rock shelters and a number of Late Stone Age lithic scatter areas recorded by archaeological surveys in the early 1970s and mid-1990s suggest a significant late-prehistoric human presence at G. In 1974 the deepest strata of a 4-m² test excavation of the "G. rock shelter" on the southern side of G. hill revealed a *Mode 4* long-blade lithic industry, which was dated by an associated charcoal radiocarbon sample to 8,000 ± 140 B.C. This Late Stone Age *Mode 4* industry is overlain by a microlithic industry with two phases, the more recent of which is associated with pottery and dates (via associated bone apatite) to ca. 5,000 B.C. Non-carbonized seeds of finger-millet and a single camel tooth were found in the earliest ceramic-bearing stratum of the G. rock-shelter test excavation. However, a subsequent accelerator mass-spectrometry (AMS) date of the finger millet suggests that the seeds are intrusive to the stratum and, rather, date to the post-Aksumite period. Possible cattle faunal remains (genus *Bos*) were found in association with pottery, microliths and scrapers in the upper portion of the rock-shelter test excavation and may date to the first millennium B.C.

A number of other archaeological sites have been documented in and immediately adjacent to G. A regional archaeological survey investigation performed in 1974 located 15 archaeological sites dating from the pre-Aksumite, Aksumite, and proto-Aksumite culture periods. Among these sites are hamlets (less than 1ha) and village-sized settlements (1–3ha), lithic workshops and elite residences. A large carving of a lioness on the face of a boulder at G. measures 3.27m long and may date back to the Aksumite period. Research performed in the mid-to-late 1990s suggests that five ancient rock-quarry locations are also present at G. These quarries most likely provided raw materials for the monolithic stone stelae of Aksum. In addition, some of the quarries may have provided material for building-blocks, lintels and ceiling- and paving- slabs used in the construction of buildings in the Aksum area.

Matthew C. Curtis

God-kings ↗Kingship, divine

Godinho, Nicolao

G. (also Godigno, b. 1561, Lisbon, d. 7 December 1616, Rome), albeit not a missionary, produced the first comprehensive history of the ↗Jesuit mission to Ethiopia. G. joined the Society of Jesus in Coimbra when he was 14 years old. In this renowned University he taught Humanities, Philosophy and Theology. Later he was called to Rome, where he worked for his last ten years as censor of the works written by the Portuguese Jesuits. In the papal capital he had access to the numerous accounts from the overseas missions, among which were those coming from Ethiopia. G. published in 1612 a history of Gonçalo da Sylveira, a Jesuit missionary martyred in Monomotapa (Makaranga, nowadays Zimbabwe).

Three years later, stimulated by the *cartas annuas* he was encharged to revise and by ↗Urreta's "anti-Jesuitic" diatribe (1609), G. issued his *De Abassinorum rebus* (1615). This was a global Latin compilation of facts on "Abyssinia" and the Jesuit missionaries, the first of its kind, as until then this had only been partially treated by such chroniclers as de ↗Barros or the historians of the order, Giovanni Pietro Maffei and Fernão Guerreiro. The *De Abassinorum rebus*, in three books, opens with an accurate overview chapter on all the material so far published on Christian Ethiopia. G. is particularly critical of ↗Ṣägga Zäʾab's *Confessio* (s. Uhlig – Bühring 1994:49–52; ↗Góis) and Urreta's book. 18 chapters follow, which contain extensive treatments of the geography, political nature and structure of the "Abassinorum Imperium", as well as hints at flora and fauna.

With its 414 pages, the *De Abassinorum rebus* is an outstanding work, an intelligent summary of the main informations Europe had so far gathered on the Ethiopian Christian kingdom, and an example of the erudition and literary skills of the Jesuits. The work also provided Europe with some of the first references to Ethiopian literary works, such as the ↗*Kəbrä nägäśt* (Budge 1932: xxxii). It can be seen as the starting point of the subsequent comprehensive accounts on Ethiopia by Manoel de ↗Almeida, Pedro ↗Paez, Alfonso ↗Mendes and others.

Andreu Martínez

Gofa

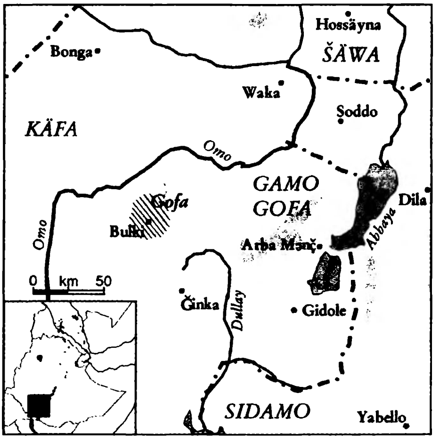
Gofa language

G. belongs to the North-Ometo branch of Omotic. It is spoken by 230,685 speakers in south-west Ethiopia (CSA 1994). According to Bender (2003), G. shares 100 % lexical correspondence with Wälaytta and Gamo, 96 % with Kullo and 94 % with Dorze. The only published materials on G. are Moreno (1938) and Alemayehu Abebe's preliminary analysis, published on the website of SIL. Data for the present report are drawn from these two sources and from the comparative notes of Cerulli (1929) and Alemayehu Abebe (1993).

The (common) Ometo five short vowels, *i*, *u*, *e*, *o* and *a*, and the longer counterparts of these are present in G. The consonant inventory includes bilabial and alveolar implosives (*ɓ* and *ɗ*) and a series of ejectives and affricates (*ṣ*, *ʦ*, *č*, *č̣*, and *q*).

Two morphological core cases are identified: 1) the nominative, which is marked by *-i* on masculine singular and all plural nouns and by *-a* on feminine nouns; 2) the absolutive, which is marked by *–a* on masculine singular and all plural nouns and by *–o* on feminine nouns. The Genitive is marked by juxtaposition, in possessor-possessed order. Peripheral cases ("adpositions") include: instrumental *–ra*, Ablative *–pe*, dative *–s* and locative *bolla*. Nouns are marked for plural-number (singular is unmarked) by the suffix *–ta*, e.g. *ketta* 'house' vs. *kettata* 'houses'.

The verb in G. makes person, number and gender distinctions of the subject as well as imperfective, perfective and future tense/aspect distinctions. For example, for *b-* 'go', the following perfective forms are reported: ***badsi*, *badsa*, *bidsi*** and ***badsu***, respectively, used with 1st, 2nd, and 3rd (masc./fem.) pers. sg. subject ('I/you [sg.]/he/she went'). The plural counterparts of these are: ***bidsa*, *bidseta*, *bidsona*** 'we/you[pl.]/they went'. The imperfective form of *b-* 'go' differs from the perfective only by the absence of *-d-*, thus: ***basi*, *basa*, *bisi*, *basu*, *bisa*, *biseta*, *bisona***, 'I/you/he/she/we/you[pl.]/they go'. The future form is invariably marked by *-ana*. Accordingly, ***baana***, 'will go' is used with all subjects. 2nd pers. sg. and pl. imperative is indicated by *-a* and *–ite*,



whereas the optative mood for 3rd pers. sg. masc., fem. and pl. are respectively marked by *–oo*, *-uu* and *–ona*. Examples: *ma* 'eat [2nd pers. sg.]!', *mite*, 'eat [2nd pers. pl.]!'; *moo*, *muu* and *mona*, 'let him/her/them eat!'.

The following subject, object and possessive pronouns are reported for G.: *tani/tana/ta* (1st pers. sg.), *neni/nena/ne* (2nd pers. sg.), *ʾi/ʾa/ʾa*(3rd pers. masc. sg), *ʾa/ʾo/ʾi* (3rd pers. fem. sg.), *nuni/nuna/nu* (1st pers. pl.), *ʾinte/ntena/ʾinte* (2nd pers. pl.) and *ʾenti/ʾentina/enti* (3rd pers. pl.). Question words in G. include: *ʾone*, 'who?', *ʾays*, 'why?', *ʾode*, 'whose?', *ʾawde*, 'when?', *ʾawna*, 'where?' and *ʾaybe*, 'what?'. Only two demonstrative forms are reported in Alemayehu's work: *ha* and *hini*, used as in *ha miizza/miizzata*, 'this cow/these cows', *hini miizza/miizzata*, 'that cow/those cows'. However, in Moreno (1938) we also find *háysa*, 'this [masc.]'.

The word order in simple clauses is Subject–Object–Verb; accordingly modifier-head order is attested in noun, adjective and verb phrases. An example from Moreno (1938:71):

ta gúʣa mač̣č̣a naʾ-íya hayq-ana-s han-aus
1sg:GEN village fem. child-F:ABS die-FUT-DAT happen-3FS:IPF
'In my village a girl is going to die'

Sample word-list of G. from Alemayehu (1993):

'one'	*issino*	'moon'	*agena*
'two'	*nammʾa*	'sun'	*awa*
'three'	*heeʣa*	'blood'	*suʦa*
'fire'	*tama*	'tongue'	*inʦarsa*
'water'	*haʦe*	'tooth'	*ačča*

Gofa ethnography

G. (ጎፋ) is one of southern Ethiopia's least-known ethno-cultural groups that linguistically forms part of the wider North Ometo unit (within Omotic). The 1994 Ethiopian census mentions the G. as a subdivision of the Wälaytta, numbering 241,530 people (CSA 1998:67). The population of the "Gofa Zuriya *wärädä*" (with its capital Bulki) was listed at 166,050 (CSA 1998:27), the vast majority of whom can be presumed G. The G. region is bordered by the Omo River and the ↗Dawro, ↗Malo, ↗Basketo and Zala (↗Gamo) people. The country is densely populated, and the highland area is well watered, providing fertile soils and good pasture for livestock. The G. keep a limited amount of livestock and cultivate *ənsät*, maize, *ṭef*, sorghum, taro, yams, potatoes, tobacco and cabbage. Iron bars (*marǧo*) were used as an important means of exchange and could effectively be described as the local ↗currency of the past.

G. was a kingdom with a sacred or "divine" king whose court was in Lote. Legitimacy for this ↗kingship was based on claims of supernatural origins from the *Gošanaa*, a trans-ethnic clan also found among neighbouring peoples like the Konta (Dawro). Though G. had contacts with the Ethiopian highland state and was partly inspired by its religious and kingship ideology, G. was an independent state. Since the mid-17th cent., G. notably expanded towards the south from its original core area of Wurki, near the Omo River. Its biggest expansion, however, occurred after the late 18th cent. under the kings Gamo and Ole. The last king of the Gofa, *kawo* Kamma, who descended from a long royal line – Gamo, Goba, Zulla, Kanṣa, Dada and Quste, – was killed fighting *aṣe* Mənilək II's army in 1891, and the expansion stopped. Kamma's son Ayge was baptized and became the local ↗*balabbat*. Also the other successors in the line, Loqa and Sinṣa, later served as representatives of the Ethiopian emperor.

The old leadership-system of the G., like among several related Ometo-speaking societies such as the Dawro and Gamo, was marked by a dual structure with a "land chief" or king (*kaʾo* or *kati*) and a "rain king" (*ira-kati*) responsible for rainfall, with the latter predominantly residing in the lowlands (the former developed into the G.

divine kingship). Each represented a different descent-line within the dominant clan. The *kati* had a range of advisers and administrators below him. When G.'s existence as a political entity ended, the position of the rain king increased in importance. They were, however, prohibited from performing their ritual activities during the *Därg* period, but have staged a cautious revival since 1991.

G. was an hierarchical society, with the potters (*oto mana*), tanners (*wogatše*) and blacksmiths (*gita mana*) occupying the lowest ranks, despite their importance in performing ritual functions. The G. have ca. 60–70 patrilineal clans, six of them "indigenous" and the remainder "newcomers". They had an intricate customary legal (*woga*) system, which has now been largely superseded by modern state law.

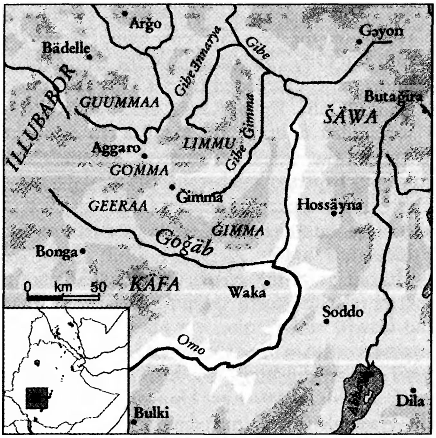
Goǧäb

The G. (ጎጀብ) is a major tributary of the ↗Omo. It has its source in the north-western hills of Käfa (Mt. Gešа or Gäsäya) at about 7°30' N and 35°40' E. After flowing for about 230 km eastwards, forming border between the Käfa and Oromiyaa provinces, the G. joins the Omo. The G. is home to ↗fish and ↗hippopotamus. A town on the G. northern shore bears the same name.



The Goǧäb river bridge, from Bieber 1948:127

The G. (which some scholars identify with the Gädäb of historiographic sources) had historical significance for Käfa kingdom as its northern border (with ↗Ǝnnarya and later with the Gibe states, namely those of ↗Geeraa and ↗Ǧimma Abbaa Ǧifaar). After the ↗Oromo migration of the 16th cent., the G. played a role as a line of defence against many intruders of the north, particularly from the Oromo that occupied the Ǧimma area during their south-westerly migration. Many Oromo, on the other hand, fled to Käfa across the G. escaping internal rivalries and wars. G. was also an important trade route for the ↗Afkala and ↗Ǧäbärti traders, in particular the former during the first decades of the 19th cent., enjoyed a near monopoly of the trade beyond the G.

One of the miracles of *šayḫ* ↗Ḥusayn of Bale tells that on his flight from Käfa to Gomma he crossed the flooded G. by striking the waters with his staff and dividing them.

Amanuel Karlo Gano

Gogälä

A group called G., personified by the ↗Hadiyya title ↗*gärad*, is referred to in the Chronicle of *aṣe* ↗Zärʾa Yaʿəqob. It is listed among the allies of the Muslim Hadiyya leader Mahiko who revolted against the rule of his Christian sovereign. After Mahiko's defeat, the G., unlike most other groups of this alliance, do not seem to have persisted as an important territorial or ethnic entity. The name is not remembered in the oral traditions of the Hadiyya or neighbouring groups.

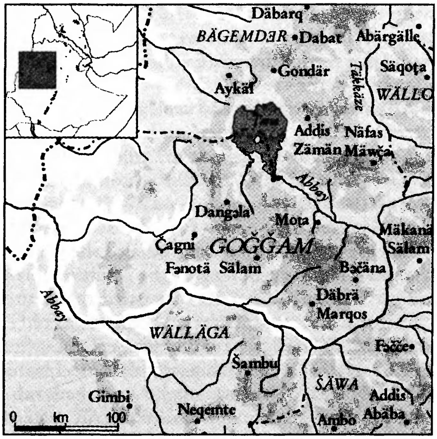
Goǧǧam

G. (ጎጃም, also Gʷäzzam, Gʷäžžam or Gožžam) is a major region of Ethiopia, immediately to the south of Lake ↗Ṭana. It is separated from the rest of the country in the north-east, east and south by the immense curve of the ↗Abbay, or Blue Nile, which takes its source around the lake and, after running ca. 1,000 km in the deep gorge, crosses the Sudanese border. To the west of Lake Ṭana, the river Šinfa, a tributary of the Abbay, rising some 15–20 km west of Lake Ṭana, forms the border of G. with ↗Čəlga *awraǧǧa* (historical ↗Qʷara). The landscape of the western part of G. is shaped by the ↗Čoqqe mountain chain (with the peaks of Arat Makaraka, 4,150 m and Amädamit, 3,619 m A.S.L.), which are intersected by the Abbay's numerous tributaries. To the east, the mountain slopes crossed by the ravines of the Gəlgäl Abbay ("Small Abbay"), Tämča, Dura, Bäläs, Dinder and other rivers open into the Sudanese plains.

The remarkable ethno-linguistic composition of the Goǧǧame population is a product of several large-scale migrations and many centuries of intermixing. At least as early as in the 14th cent., the name G. seems to refer to the eastern and south-eastern part of the later province only – the area along the Abbay, populated mainly by the Semitic- (Amharic-) speaking people who were migrating from beyond the Abbay. The account about *aṣe* ↗ʿAmdä Ṣəyon's campaign against the Muslims mentions the *nägaśi* of Goǧǧam (MarAmdS 52f.) as the monarch's official in the area, possibly having submitted in ca. 1316–17 (TadChurch 189f.). Later, the troops from G. were included in ʿAmdä Ṣəyon's army (MarAmdS 114–17), though he had to carry out a (punitive?) campaign against G. before the campaign against ↗Ifat in 1332 (*ibid.* 86–89; TadChurch 190). Besides, one should recall also Zan Ḵəmər of G. in the old-Amharic "soldier songs" (Guidi 1889: 62f.; Zankəmər may also be an old title of the traditional G. rulers, cp. *ibid.*, 64).



Around the same time, monks from the monasteries on Lake Ṭana initiated the Evangelization of the "proper G." – the area from Lake along the western bank of Abbay up to the river's curve to the west. Occasionally, Zan(a)kəmər, who was ruling around 1323/24 (TadChurch 191, n. 2, referring to a record in the 17th-cent. ms. Kebrān 19), appears to have been unfriendly to *abba* ↗Yafqərannä Ǝgziʾ (Wajnberg 1936:18f.). Ǧan Čuhay, the local *śəyyum* of the ↗Agäw, arrested *abba* ↗Zäyoḥannəs and imprisoned him at Adämamit; but he was killed by the host of ʿAmdä Ṣəyon (Schneider 1972: 15ff.). Wədəm, another *nägaśi* of G., seems to have greatly respected *abba* Yafqərannä Ǝgziʾ (Wajnberg 1936:24–27). The same Wədəm is likely to appear as a commander of troops from G. in the army of ʿAmdä Ṣəyon (MarAmdS 114f.; cp. TadChurch 192, n. 1, 2). The Vita of Näʾakʷəto Läʾab mentions yet another traditional ruler of G., Ṣärä Qəməs – a name "translated" by the hagiographer as 'the enemy of God' – and his son Mäʿat Goni (s. Conti Rossini 1943:141). In fact, "Ṣärä Qəməs" may be an epithet for Zankəmər (TadChurch 191), but Mäʿat Gone appears as the "*nägaśi* of Gozzam" and a contemporary of *abunä* ↗Bärtolomewos also in *aṣe* ↗Dawit II's decree concerning the commemoration of his father Säyfä Arʿad (s. ms. Kebrān 1, fol. 3ra).

Though in the 15th cent. "the proper G." was neither a political nor a religious centre of the Ethiopian monarchy, it certainly was one of the important provinces. In the 15th cent. royal governors were sent to G., but there was apparently a political equilibrium with the local ruling family (perhaps represented by the *nägaśi/nägaš*). G. seems to have been relatively stable and less involved in the political upheavals. While the "proper G." and the areas around Lake Ṭana were dependencies of the Christian monarchs, large territories to the west and southwest, populated predominantly by the Agäw, were out of the Emperor's reach.

Attempting to unify and centralize the administration of the provinces, *aṣe* ↗Zärʾa Yaᶜəqob appointed a governor with the title *raq masäre* (↗*Ṣärag masäre*) in G. and settled contingents of ↗*čäwa* there; later he appointed over G. his relative *wäyzäro* Aṣnaf Sämra (PerrZarY 15, 47, 95). When *aṣe* ↗Bäʾədä Maryam revealed the plot of the *čäwa*-regiment of Tannač, he resettled them from ↗Bale to G.; later he entrusted the future emperor Ǝskəndər to Anbäsa Dawit, *nägaš* of G. (PerrZarY 160f.). However, Taddesse Tamrat (in: PICES 12, vol. 1, 959) suggests that *aṣe* Ḥəzbä Näñ (↗Täklä Maryam), might have had substantial support through family ties in eastern G., unlike his successor Zärʾa Yaᶜəqob. When Ḥəzbä Näñ was enthroned, he brutally punished *abba* Sinoda of Däbrä Ṣəmmuna as a supporter of Zärʾa Yaᶜəqob.

Although 15th-cent. hagiographies sometimes mention G. as a region where the spread of ↗Christianity was hampered by the deeply rooted traditional beliefs and magical practices, important monasteries, churches and royal residences were established there. Gonč (Gonǧ) and ↗Qʷälala were the old domain of *ətege* ↗Ǝleni while her residence was at the church of Mängəśtä Sämayat. Later, *ətege* Säblä Wängel hid the young Śärṣä Dəngəl there from the rebellious nobles. Mängəśtä Sämayat still was a royal residence in the time of *aṣe* ↗Minas. The church of ↗Mərṭulä Maryam (in Ǝnnäbäse) was founded – or rather refounded – perhaps around 1510 by *ətege* Ǝleni (s. Bell 1988), who is reported to have been associate to the local nobles of Ǝnnämay and Ǝnnäbse (Taddesse Tamrat in: PICES 12, vol. 1, 959). Other local foundations were ↗Getesemane Maryam (in Moṭa, traced to ↗Naᶜod Mogäsa, but probably not prior to the 15th cent.), ↗Däbrä Mäwiʾ (Yəlmana Densa), ↗Dima Giyorgis (Ǝnnämay, ↗Bəčena) and Däbrä Ṣəmmuna. While ↗Däbrä Wärq (and then a few other monasteries) claimed affiliation to *abba* ↗Ewosṭatewos and the movement of the ↗Ewosṭateans, most local foundations considered themselves to belong to the monastic line of ↗Täklä Haymanot; as early as the 16th cent. ↗Däbrä Libanos of Šäwa exerted some direct influence on the south-eastern part of G., in Šäbäl (EMML 2134, fol. 139). Among few Goǧǧame saints, the most celebrated is *abunä* ↗Zärʾa Buruk of Ṣima, whose cult pivots around the source of the Nile – Gəš (Gəlgäl) Abbay, and may have origins in the old Agäw religious practices (Kriss – Kriss-Heinrich 1975:56–66).

Imām ↗Aḥmad b. Ibrāhīm al-Ġāzī's troops invaded G. in 1534 and 1536, each time coming from Dämbəya. According to the *Futūḥ al-Ḥabaša*, Gregory (Gorgoryos?), the *goǧǧam nägaš*, was captured by the Muslims in the battle of Ayfärs (31 March, 1531); he soon managed to fle but later was killed (BasHist 203, 205). Another *goǧǧam nägaš*, Täklä Ḥawaryat, was also killed (BassHist 264f.) while fighting in the south of the Empire. But on the whole, G. suffered from the wars less than the other regions of the Empire due to its natural isolation through the Abbay.

After the Muslim wars, the first consequence of the large-scale migrations of the ↗Oromo during the Mulʾata *gadaa* (1578–86) was the resettlement of portions of the "old" ↗Damot population across the Abbay, establishing the "new" Damot. They were followed by some other Omotic-speaking communities (such as the ↗Gonga) and the ↗Gafat people, who settled, apart from the territory that became known as Gafat, also in ↗Wämbärma, ↗Ačäfär and Damot (MHasOr 50f.). In 1587, *aṣe* Śärṣä Dəngəl struck a heavy blow on the Warantiša Oromo (*History of the Galla*, in: BeckHuntAlm 122; CRHist 127; DombrChr 186) who penetrated deeply into G. territory. Later the emperors utilized G. in their campaigns across the Abbay, but from the late 16th cent. onwards Oromo pressure was growing. As the centre of the Christian monarchy moved to the Lake Ṭana, the situation in G. was more stable than in the southern provinces.

The emperors were frequently successful in their fight against the Oromo, though the raids could not be stopped for all. In 1603 *aṣe* ↗Zädəngəl defeated the Liiban in G. (DombrChr 189; yet it was also in G. that *ras* Zäśəllase organized a mutiny against the Emperor, *ibid.*, n. 284). *Aṣe* ↗Susənyos undertook expeditions against the ↗Awŋi-Agäw of Dangəla and also against the Oromo, who regularly invaded G. The stone bridge over the Abbay, built around 1626, improved communications between G. and Dämbəya, the royal domain, yet some time around 1628 the Oromo killed *däǧǧazmač* Buko, *säḥafe lam* of Damot (DombrChr 195). Already Zädəngəl's campaign against the Liiban demonstrated a new pattern: having fought the Liiban, Zädəngəl led his troops against Agäw Anbäs Gama, to reward the soldiers with booty. While the Oromo danger remained vital, this event marked the extension of the Christian monarch's power into the Agäwland, which was intensified during the reign of *aṣe* ↗Fasilädäs. One can recall, e.g., the combined campaigns of 1639–41, with the invasions led into ↗Mätäkkäl behind the Agäwmədər and Dura rivers and repeated attacks against the ↗Šanqəlla (↗Šinašša), further to the west of the Agäw. In 1644 Fasilädäs went through the entirety of G. and crossed the Abbay, successfully fighting the Akako-Oromo; in 1645 he defeated the Hankäša-Agäw and returned to ↗Zage, Ṭana (DombChron 199). The later Gondärine emperors intensified their raids against the Agäw: in 1671–72 *aṣe* ↗Yoḥannəs I invaded Mätäkkäl, pillaging Dən, Säqut, Banǧa and Gam, and repeated the raid in 1672 when he learnt that the Agäw of Č̣ara and Mätäkkäl rebelled. However, in 1680 "Čəhway, chief of Mätäkkäl", together with some Oromo, was dispatched by the King to raid the Šanqəlla (GuiIohan 14f., 17, 46). In the Chronicle of ↗Iyasu I, Čəhway is depicted as the King's true servant, providing a secure base for his campaign against the Šanqəlla and Gonga (GuiIohan 114, 142, 178, esp. 225).

Some Oromo groups remained in G. and in the next two centuries were gradually involved in the politics of the ↗Gondärine kingdom, allying with the emperors and fighting in their campaigns, but sometimes participating in the mutinies against them or in feuds. They were gradually assimilated, intermixing with the Amhara, Agäw and Gafat: the Ǧawi of Damot, Basso, Gudru, Mäč̣č̣a and Elmana Densa. The flourishing of the Gondärine kingdom influenced G.: new churches and monasteries were built, especially around Lake Ṭana; e.g., after successful campaigns, Fasilädäs founded Gəmǧa Bet (Maryam) and Iyäsus churches in Dərdəra and gave large land grants to ↗Däbrä Daga Əsṭifanos and ↗Kəbran (DombrChr 200). ↗Yəbaba on the southern cost of Lake Ṭana became the place of important church councils. In the 18th cent., however, the political struggle in Gondär and religious controversies in which G. remained the fortress of the ↗*Qəbat* movement (↗Christology; ↗Ethiopian Orthodox Täwaḥədo Church) started to charge G. with heavy costs. After Iyasu I's assassination on 10 October 1706, the bridge of Fasilädäs was destroyed by the adversaries of *aṣe* ↗Täklä Haymanot I. He himself was killed in Agäwmədər only two years later, this having been preceded by an almost full-scale war and the defeat and massacre of the allied forces of Täklä Haymanot's Goǧǧame enemies in October 1707 (DombChr 245).

From the 18th cent. onwards, the ruling family of G. became prominent, stemming from the marriage of ↗Wälättä Əsraʾel (daughter of Məntäwwab [↗Bərhan Mogäsa] and *grazmač* Iyasu, son of *aṣe* Iyasu I) and *däggazmač* ↗Yosedeq Wäldä Abib, obviously of Basso-Oromo origin (GuiIyas 12; BTafA 426–29, 994). His son *daǧǧazmač* (later *ras*) ↗Ḫaylu Yosedeq "the Great" was one of the principal rulers of the ↗*Zämänä mäsafənt*. *Ras* Ḫaylu's son ↗Märəd died in 1799, fighting, along with *ras* ʿAśrat, the latter's brother *ras* ↗Wäldä Gäbrəʾel – an event which endorsed the establishment of the ↗Yäǧǧu dynasty's direct influence in Gondär. Märəd was succeeded by his son *däǧǧazmač* Gʷalu, who was waging war with *däǧǧazmač* ↗Zäwde of Damot. After Tädla Gʷalu, G. was ruled by *däggazmač* ↗Goššu Zäwde, son of Dənqənäš, daughter of Märəd, until he fell in November 1852, fighting *däǧǧazmač* Kaśa, the future ↗Tewodros II. Tewodros appointed over G. Tädla Gʷalu, who soon rebelled. Adal Täsämma (since January 1881 known also as *nəguś* ↗Täklä Haymanot) was the great-grandson of Dənqənäš, in childhood being cared at by Tädla Gʷalu, who, in fact, was never subdued by Tewodros. Already the age of 19, Adal started to fight Tädla, enjoying popular support, especially in Damot.

After the short reign of *däǧǧazmač* Nəguśe (one of Tädla's sons), prolonged rebellion and a number of battles, Adal Täsämma captured *däǧǧazmač* Dästa, Tädla's other son, and delivered him to *aṣe* ↗Täklä Haymanot II. Adal Täsämma was than appointed governor of the entire of G., and married the Emperor's sister in 1870. He was loyal to *aṣe* Yoḥannəs IV too, gradually becoming the most powerful local ruler of Ethiopia. This brought him to serious rivalry with Mənilək of Šäwa, also in the matter of territorial expansion (cp. ↗Däräso Tabo, ↗Gobäna Dač̣i), which culminated in the 1882 battle of ↗Əmbabo. After defeat, he withdrew and spent some years consolidating the administration of his realm, building his capital ↗Däbrä Marqos (↗Dämbäč̣a and ↗Moṭa being two other important settlements) and churches and improving the state of trade and communications (e.g., the second bridge across the Abbay was constructed, with the help of Gustavo ↗Bianchi, cp. Guidi 1891:285–91). Due to the isolated position of G., communications with the European powers were somewhat difficult. The position of Täklä Haymanot deteriorated after his unsuccessful campaign against the ↗Mahdists (followed by the destruction of Gondär in January 1888). Angered, Yoḥannəs invaded G., but had to interrupt his punitive expedition to go to ↗Mätämma for his last battle (Bairu Tafla 1973). As to Täklä Haymanot, he managed to preserve his authority and the status of G. also in Mənilək II's time.

During a period of instability in the time of *ras* ↗Bäzzabbəh Täklä Haymanot, Mənilək made cautious attempts to dismantle the large province, but due to his illness he could not complete this task. *Ras* ↗Ḫaylu Täklä Haymanot, one of the most controversial figures in Ethiopian history, was able to consolidate his power over the entire province of G. (with a population of ca. 2 million) in *ləǧ* ↗Iyasu's reign. A powerful and cruel ruler, he accumulated immense wealth, but was hated because of his heavy and sophisticated taxation. Ḫaylu was engaged in a strategic game with *ras* Täfäri Mäkʷännən; his strategic miscalculation led him to participate in the attempt to organize *ləǧ* Iyasu's escape, which resulted in Ḫaylu's deposition and imprisonment in 1931.

Subsequent events demonstrated that G. is much more than its ruling house. During the Italian occupation, G. soon became an area where the ↗Resistance raged, producing such outstanding leaders as *daǧǧazmač* ↗Bälay Zälläqä, and the guerrillas managed to keep large territories out of Italian control. In January 1941 Ḫaylä Śəllase I entered Ethiopia through G. and went to Addis Abäba via Däbrä Marqos. However, soon the joy at the Liberation gave place to bitterness and resentment, as in the subsequent years the population of G. witnessed exploitation and a growing tax burden, as well as arrogance, corruption and large-scale abuses by the police and imperial administrators (such as *däǧǧazmač* ↗Ṣäḥayu Ǝnqʷä Śəllase, the governor of G. in 1960–68). The imperial officials were tightening their grip on the province (formed, in the early 1960s, by Agäw Mədər, Baḥər Dar, Bəčäna, Däbrä Marqos, Moṭa and Mətəkkəl *awraǧǧas*), considering it one of the most independent and obstinate regions. This state of affairs resulted in prolonged peasant revolts that reached their peak in 1968–69 and, in the end, contributed to the fall of Ḫaylä Śəllase's regime.

Denis Nosnitsin

Gogot

G. is the term that comes from the Səlṭeñña language where it means "alliance for waging war between ethnic groups" (Gutt — Hussein Mohammed 1997:813).

The decline of the central power during the *Zämänä mäsafənt* (ca. 1769–1855) affected also the ↗Gurage region. Quarrels regarding the usage of land, cattle-raiding and religious campaigns yielded a situation of ongoing warfare between the several Gurage groups and between the Gurage and their neighbours (s. Dənbäru Alämu et al. 1987 A.M.:216f.).

In the second half of the 19th cent. ↗Mənilək II used these quarrels in his expansion policy towards the south and started to rule in this area. At least at this time Gurage elders and famous warriors (bearing the title of *abägaz*) from several subdivisions of the Gurage started to struggle for a unified Gurage people and the establishment of peace in the area. The Kəstane (↗Soddo) Solla Odda (also Sill Odda) played an important role among them. Probably at the end of the 19th cent. Solla Odda persuaded most of the Gurage to take part in a peace assembly (Dənbäru Alämu et al. 1994/95:218). The first assembly of all Gurage-speaking groups – except the ↗Mäsqan and ↗Səlṭi, who were quarrelling on border matters at that time – took place at the Mulg plateau in Mount Zäbidar in the bordering area of the ↗Dobbi and ↗Muḫər (ibid. 218). This assembly was named G. (ibid. 219).

The main result of this assembly was a treaty to stop the mutual raids. If now one group tried to invade its neighbour's territory, all of the remaining members of the G. alliance had the duty to punish the invader (Dənbäru Alämu et al. 1994/95:218f.). This treaty was re-established during a second assembly in Božžäbär and again during a third meeting in Atazo in the ↗Geto region (ibid. 219). The last G. assembly, known as the "Big Gogot", was held in ↗Ənnäqor in 1928 A.M. [1935/36 A.D.]. All Gurage groups, as well as the neighbouring Hadiyya, Allaaba, Kambaata, Qabeena and the Amhara governors or representatives took part in it. Beside the reconfirmation of the peace treaty in the Gurage area, possibilities of resistance against the Italian invaders were also discussed (ibid. 219ff.). After the last assembly no further meeting of the G. took place but as a term G. is sometimes used also for later military alliances.The existence of G. as a unification alliance of different Gurage groups and their neighbours is not commonly accepted. Except Dənbäru Alämu (1994/95) only Braukämper (BrHad 185) mentions the G. alliance.

Gogot

G. (or Goggot) is the name used by linguists (s. Grimes 2000; Hetzron 1977; Leslau 1979) for the language spoken by the ↗Dobbi, who refer to their language as *yädobbi qal* or *yädobbi q^wanq^wa* ('language of the Dobbi'; s. map for ↗Gurage). The name G. originates from a unity-treaty of several Gurage groups. Alternative names are Däga-Dobbi, Dobbi-Gogot. G. is spoken by approximately 4,000 people (Grimes 2000) in an area west of Butağira. The entire population is bilingual. Besides G. they know ↗Muḫər, ↗Wäläne, ↗Soddo or ↗Mäsqan and also ↗Amharic as second languages. G. is not used as second language by other Gurage peoples and due to this sociolinguistic situation it belongs to the endangered languages of Ethiopia.

G. is a Gunnän-Gurage language but its genetic affiliation is still controversial (cf. ↗Gurage languages). According to Hetzron (1972:119) G. and Soddo build a subgroup within the *n*-group of Outer South Ethiopic, which is relatively far from the Western Gurage languages. Leslau (1992 [1968]:248), however, classifies G., Muḫər and Mäsqan together as one branch of Western Gurage. Based on typological features, especially on the survival of the so-called main verb markers, Hetzron (1968; 1972:6, 57ff.; 1977: 23f.) postulates a convergence area consisting of Soddo, Muḫər and G., which he called Northern Gurage. Furthermore, Grimes (2000:109ff.) classifies Kəstane and G. together as two varieties of a single Soddo Gurage group.

G. has seven vowels (*ä, a, e, ə, i, o, u*) and two vowel clusters (*e^{y}ä, e^{y}a*; Leslau 1979:xvi). The vowel clusters emerged due to the phonetic reduction of the lateral **l* to *e^y* in base-final position, as in *däbbe^y-ä* 'add, repeat' < **dbl* (Leslau 1979:liii; also Hetzron 1977:76). With regard to consonants, the existence of rounded labials (b^w, f^w, m^w) and velars (g^w, k^w, q^w, x^w) is remarkable. In some verbs a diachronic change from geminated *ll* to *n*(*n*) took place (s. Hetzron 1968:157), e.g. *bänna-m* < **bälla-m* 'he ate' vs. *ʾambeya* < **ʾan-bäla* 'he did not eat'. The sound change from **l* to *n* also occurred with the benefactive complement suffix (*-n-* < **-ll-*) and with the negative marker in the perfective (*ʾan-* < **ʾal-*; s. Hetzron 1968:157, 162; 1972:121; 1977:40).

The so-called main verb markers (MVM) are a remarkable feature in the morphosyntax. They are suffixed to a main affirmative verb in the perfective and imperfective to make it finite. The shape of the MVM (*-i, -u* or *-n*) is phonologically conditioned (Hetzron 1968:158f., 1977:88ff.).

The verb can appear in three different paradigms that are basically used to express a perfective, an imperfective and a jussive/imperative (Hetzron 1977:83ff.). G. has an innovative suffix *-nä* as an additional marker for the 1st pers. in the imperfective and jussive (s. Hetzron 1972:119ff.). Subject agreement markers distinguish gender in the second and third persons singular and plural. There are two sets (light and heavy) of object agreement markers on the verb (Hetzron 1968:161).

While affirmative type A verbs in the perfective have a geminated second radical, negative type A verbs do not geminate (*säç̣ç̣ä-m*, 'he drank'/*ˀan-säç̣ä*, 'he did not drink'). Type B verbs are either marked by a vowel *e* after the first radical (*seffä-m*, 'he sewed') or by a palatalized radical word initially or medially (Hetzron 1977:70). The negative marker for the 3rd sg. masc., for the 3rd pers. pl. masc., and for the 3rd pl. fem. in the imperfective and jussive, is *ˀe-*: *ˀe-säbər*, 'he will not break'. All other persons have the negative marker *ˀa*(*n*)-, which assimilates to the prefixed subject marker: *ˀattəsäbər* (< **ˀan-t-säbər*), 'she/you [sg.masc.] will not break' (Hetzron 1977:87). The main verb in the affirmative perfective can either appear with suffixed MVMs to express a perfective (e.g. *säbbäro* < **säbbärä-u*, 'he broke') or with a suffix *-m* to express a perfect (*säbbärä-m* 'he has broken'; s. Hetzron 1968:158f). The suffix *-m* is also used as converb marker.

With regard to nouns there seems to be no morphological plural marking. The plural marker *-očč* mentioned in Hetzron (1977:52) is most probably an Amharicism. Plural is often indicated by the quantifier *bəžžä*, 'many': *bəžžä säb* (many man), 'men'. Some nouns and adjectives, however, mark plurality by reduplication: *gälləf* (sg.) vs. *gällalləf* (pl.), 'long' or *gobbe* (sg.) vs. *gobbabit* (pl.), 'brother'. Certain nouns have a lexical plural form, e.g., there exist different words for singular and plural of the same entity, e.g. *təkä* (sg.)/*denga* (pl.), 'child' (Hetzron 1977:53).

The definite article is a suffix *-i*. The accusative marker is an optional prefix *yä-*: *käbbädä yä-ˀalmaz wäddä-na-m* (K. ACC-A. love:PV: he-her-PF), 'Käbbädä has been loving Almaz'. This prefix functions also as genitive and dative marker (Hetzron 1977:54).

The basic word order is Subject–Object–Verb. Genitives, relative sentences as well as adjectives precede the head noun. There are prepositions and postpositions. The preposition *bä* is used to express both locality 'in, inside, from' (e.g. *bä-bet*, 'inside the house') as well as the instrumental (*bä-qällät*, 'with the spear'). A prepositional phrase can be also marked by using postpositions: *bä-bet-kuta ˀiftlift* (from-house-his in front), 'in front of his house', *bä-čəbān-i mʷärä* (from-pillar-the around), 'around the pillar'. Direction is expressed by a circumposition *tä-…-t*, 'towards': *tä-gäbäya-t*, 'to the market'.

The personal pronouns for the third persons are: 'he' *kʷa*, 'she' *kiya/kʸa*, 'they (fem.)' *kənnäma* and 'they (gender unmarked)' *kənnämʷ*.

A gender distinction seems only to exist in regard to humans. Female animals agree with the 3rd person masculine on the verb: *ˀənnam-i ˀäga yə-säç̣-u* (cow-the water 3sg.masc.-drink:IPV-MVM) 'The cow is drinking water'.

Demonstrative pronouns do not distinguish gender. The pronoun *zi* refers to near and *za* to far object(s) or individual(s): *zi məss*, 'this man', *za mišt*, 'that woman'. Plural can be optionally marked by prefixing *nä-* to the respective demonstrative pronoun: *näzi ˀənšəta*, 'these women'.

The present tense copula consists of an element *-n*(*ä*)- with suffixed agreement markers (s. Hetzron 1977:105). In the 3rd pers. sg. masc. no agreement marker appears: *kʷa näggade-n* (he trader-COP), 'he is a trader'. For the negative the verb *kʷänä* 'to be' is used in the negated perfective: *kiya näggade ˀan-kʷän-ät* (she trader NEG-be:PV-3sg.fem.), 'She is not a trader'.

Question words can appear as basic interrogative pronouns (*məˀe* 'what', *ma* 'who', *ˀet*(*t*) 'where (direction)', *mäčä* 'when') or as derived forms (*yä-ma* 'whose', *yä-məˀe* 'why', *mən-käm* 'how', *b-et*(*t*) 'where'). The basic word list contains the following items: one *ˀatt / quna*, 'two' *ḫʷett*, 'three' *sost*, 'fire' *ˀəsat*, 'water' *ˀäga*, 'sun' *č̣et*, 'moon' *ṭärraqqa*, 'blood' *däm*, 'tongue' *ˀallämät* and 'tooth' *sənn*.

There exists no comprehensive grammar of the language. However, there is some scattered information available, especially in Hetzron (1968, 1972 and 1977) and Leslau (1979 and 1992 [1968]; 1979:531ff. contains a word list on G.). The only published texts in G. are three folktales (s. Hetzron 1977:158–67).

Goha Ṣəbah

G.Ṣ. (**ጎሃ፡ ጽባሀ**, 'The Dawn') is a book written and published in 1919 A.M. [1926/27 A.D.] by *blattengeta* ↗Ḫ̮əruy Wäldä Śəllase. With 294 pages, the work is composed of eleven major sections. In the preface, the author lauds the quest for knowledge through the reading of diverse books, idea that forms the foundation of the entire work.

The title can be said to reflect Ḫəruy's view of the epoch in which he lived: the opening of a new era. He used it in other ocasions: in a literary journal he published in 1917 and that knew only one issue (Pank Econ 677); in the establishment of the Goha Ṣəbah printing press, that he helped to found (MolLit 18); in the paper entitled *Aṭbiya Kokäb*, which was run by the well-known Greek Kavvadias (↗Greece, relations with).

The various essays in each section of the book deal with an assortment of worldly and spiritual issues of seminal importance to the author. Chapter one deals with Genesis, the Ten Commandments, the six commandments of the Gospels (Matt 5:21–24), and the books considered holy in the Orthodox Church. Chapter two deals with an assortment of religions and beliefs, including matters concerning: prayer, fasting, *səgdät* ('genuflection'), alms, love, *təḥtənna* ('modesty'), and *fərhat* ('fear of God'). The third chapter concentrates on the palace and the church. Numerous issues are addressed in the fourth chapter: a brief history of Constantine's life and the feud between Christians and pagans, the power and honour of bishops, the education and the knowledge of the kings, the light of the Gospel, and marriage and hermitage. Chapter five focuses on married life and issues related to fertility. Matters associated with spiritual and bodily health, the idea of rulers and the ruled in this world, the merits and demerits of health, and the value of good and bad news are treated in the sixth chapter. The seventh deals with the natural tasks of animals, while the eighth covers issues pertaining to the nature of growth and change in both knowledge and ignorance. Chapter nine addresses slavery and being black, and the tenth chapter concerns the futility of worldly life. The last chapter is about the reward of Heaven, the punishment of damnation, and the place where one performs penance and purgatory.

Fekade Azeze

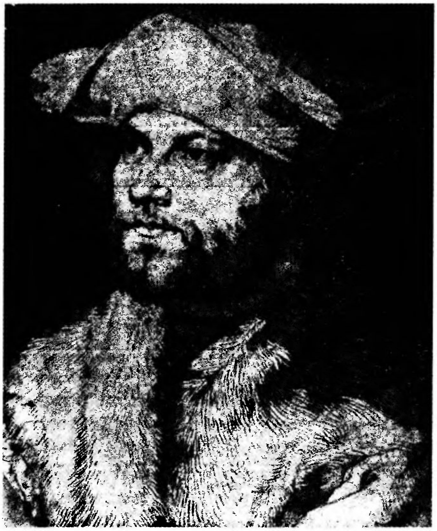
Góis, Damião de

G. (also Goes; b. 1502, Alenquer, Portugal, d. 30 January 1574), agent of the Portuguese crown and Renaissance humanist, was the author of one of the first comprehensive narratives on Ethiopian Christianity.

The son of Rui Dias de Góis and Isabel de Limi, of Flemish origin, G. was born to a noble family serving the Portuguese kings – his grandfather, Gomes Dias de Góis, had been in the entourage of Prince Henry the Navigator. In 1511, G. joined the service of Dom ↗Manuel I, first as page and later as moço da câmara. In 1523, Dom ↗João III sent him to Ambers as secretary and treasurer of the Portuguese feitoria (commercial office). Thereafter, carrying out different missions for that king and guided by his curious and open mind, G. travelled widely (Poland, Lithuania, Denmark, Germany, Sweden, France, Italy) and met important figures, including Sebastian Münster, Erasmus – who entertained him in Freiburg, – Ramusio, Melanchthon, Luther, Albrecht Dürer, Joan Lluís Vives and Pietro Bembo; in Portugal he was a friend of the writers João de ↗Barros and André de Resende. G. attended courses at the Universities of Louvain and Padua, wrote on a variety of topics (e.g., the condition of the Laponians) and translated some classical works (including Cicero's *Cato maior* or *De senectute*) into Portuguese. He was also a composer with some musical pieces to his credit and the owner of a private collection of paintings.

At the request of his friend Johannes Magnus (Gothus), archbishop of Uppsala, G., always interested in the Portuguese overseas exploits, translated into Latin a Portuguese opuscle on ↗Mateus's embassy to Portugal. The translation appeared, without his consent, in 1532 in the book *Legatio Magni Indorum Imperatoris Presbyteri Ioannis* (Góis 1532; s. 1540:16f.), which also included a summary of Ethiopia's faith and the famous "Letter of Prester John": i.e. ↗Ǝleni's letter to Dom Manuel I (1509). John More, the son of another "utopianist", Thomas More, produced an English edition of it (London 1533; the two are published in Blackburn 1967; s. Uhlig – Bühring 1999:31, note 59).

In 1533, during an official visit to Lisbon, G. met and befriended ↗Ləbnä Dəngəl's envoy ↗Ṣägga Zäʾab (Góis 1926, part III, chs. 40–41). The latter engaged himself in writing a treatise on the Ethiopian faith that G. should translate into Latin. The text, an extraordinary and solid defence of Ethiopia's religious traditions, reached G. in Padua, where he studied from 1534 to 1540 (Góis 1926, part III, ch. 40), and was published



Possible portrait of Damião de Góis attributed to Albrecht Dürer, Österreichische Staatsgalerie Albertin, from Hirsch 1967, frontispiece

in 1540 as the main section of his famous *Fides, religio, moresque Aethiopum* (Góis 1540:54–88). In the book, Ǝleni's letter to Dom Manuel I was reprinted, along with four other missives of Ləbnä Dəngəl (1521, 1524) translated from their Portuguese version by the Italian humanist Paolo ↗Giovio. Thus, the *Fides*, written in Latin and more than an original account, was a "stage" from which Ethiopian personalities were enabled to reach the wider European public. G. held at the time an exemplar of Francisco ↗Alvares' text (Góis 1540:51), which was to serve as the main source for Ramusio's edition (BeckHuntAlvar 5–9). However, he does not seem to have positively met Alvares whilst the later was in Bologna (on a possible use of Alvares's text by G. s. Uhlig – Bühring 1999:164, n. 42).

The *Fides* enjoyed widespread diffusion in Europe, in both Catholic and Protestant circles, and had subsequent editions (Uhlig – Bühring 1999: 34). Its main section by Ṣägga Zäᵓab, however, also earned G. the criticisms of the powerful cardinal infante Dom Henrique, who, as *inquisidor geral* of Portugal, banned its circulation in the kingdom (ibid. 36f.). The ↗Jesuits proved to be equally critical; G. was accused of Lutheranism before the Inquisition by their Portuguese provincial, Simão Rodriguez, and in 1545 a process was opened against him – he was soon acquited, though. Likewise, Jesuit historians like ↗Godinho and ↗Tellez openly refuted Ṣäga Zäᵓab's religious contentions as "false" and "heretical".

In 1548, G. was named head keeper ("guarda mor") of the Torre do Tombo (Royal Archives) and ten years later was entrusted by Cardinal Dom Henrique to write the chronicle of Manuel I's reign. The work, completed in some seven years, was his major achievement. It unfolds further details on Christian Ethiopia and the Portuguese relationships with the Solomonic dynasty (Góis 1926, part III, chs. 58–62). In 1571, a new inquisitorial process opened against G., who was then sent to jail. He died shortly after, free but ill, in obscure conditions. G. had eight sons.

Andreu Martínez

Gold

The presence in Ethiopia of both local and imported G. is attested to in the archaeological evidence from pre-Aksumite and Aksumite sites (↗Aksum), mostly in the form of coins (↗Coinage). In the 6th-cent. account of the Aksumite kingdom by ↗Cosmas Indicopleustes, caravans of local and foreign traders went to exchange iron, cattle and salt to the "G.-panning country of Sasu" – region along the Sudan border southwest of Lake Ṭana (cp. Fiaccadori 1992:76f.). A

Berta women washing gold; photo courtesy of Christof Herrmann

round-trip journey from Aksum required six months (Wolska-Conus 1968:362; Munro-Hay 1989:210, 221; MHAksum 35, 146, 174). Trade for G. from the south using cattle, salt and other commodities is also reported in the 17th-cent. account of the Jesuit Manoel de ↗Almeida (BeckHuntAlm 149).

Except for references to the Sudan borderlands, the precise locations of G. and other mineral deposits in Ethiopia are not well documented. Most early travellers referred only to G. coming from the "interior". Mansfield Parkyns in the 19th cent. is the most specific, noting that the G. found in Ethiopia came in three distinct forms: rings or links that he called Sinnār G. from the Sudan; G. in grains or beads; and also in ingots from Ethiopia (Parkyns 1856, vol. 1, 338; Silverman – Sobania 2004). Areas where G. was found in the past may be indicated by locations of G. deposits known today: central and western Eritrea, the western borderlands of Goǧǧam and the Sudan, central and western Wälläga, the lowlands of western Käfa and central Sidamo (EMAtlas, map 56). Historically, the vast majority of G. found in Ethiopia was obtained by searching along, or panning, in river-beds, and not from mines (PankEcon 232). Only in Sidamo is G. mined, at sites that today include Adola and Laga Dimbi (Ofcansky – Berry 1992:192).

Throughout the 19th cent., G. was among the most sought-after items that traders from Gondär procured from the Gibe states, Käfa and Ǧanǧero, in exchange for salt, mules and sundry imported textiles (PankEcon 351–55). Similarly, G. was also reported as a principal export-item passing through ᶜAdwa in the second half of the century (PankEcon 355f.), but, as with the trade that passed though Gondär, the actual value and extent of this trade in G. is difficult to assess. When ↗Mənilək II expanded his empire, especially to the west and south in the last two decades of the 19th and the first of the 20th cent., he granted mineral concessions to European interests to prospect and mine G., silver, iron, copper and nickel. These concessions were located principally in central and western Wälläga where both alluvial and reef-G. was found along the many tributaries of the Abbay, Dabus and Baro rivers. In none of the concession-areas, however, were foreign interests to prevent the local peoples from searching for and collecting G. as they had always done (PankEcon 231–35). Under ↗Ḥaylä Śəllase I, the mining industry expanded further and for the first time included individual Ethiopian concession-holders (PankEcon 235ff.). Today individuals in parts of Ethiopia still pan for G. and exploration to discover new fields continues, but there are no large-scale deposits and G. makes only a small contribution to the country's overall economy.

G. was used in the past, as it continues to be today, for adornment (↗Goldsmiths; ↗Jewellery), coins and for the fabrication of ecclesiastical and ceremonial objects, although iron, bronze, brass, copper and silver were more commonly employed. When G. was used for processional ↗crosses, it was rarely the entire cross, but used instead to gild other metals. Likewise, crowns of G. used in coronation rituals are described in some chronicles, as is the scattering of G. among the people, but the authenticity of such accounts is sometimes questionable. What is clear is that G. was hoarded, used in long-distance trade and worn for the prestige.

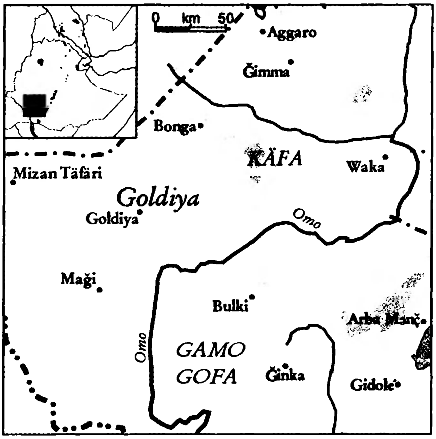
Goldiya

G. (**ጎልዲያ**, also Golda) is the name of a district in the ↗Käfa area. Up until 1991 it formed an *awrağğa* together with the ↗Maği district. According to the Ethiopian census of 1970, the Goldiya-Maği *awrağğa* covered an area of 15,900 km² and had 131,200 inhabitants. The 1984 census only lists 59,974 inhabitants, with the density of population down from 8.2 to 3.7 inhabitants per km².

The name G. probably originates from the ↗Konta people who live east of the G. region, across the Omo River. The ↗Meʾen agro-pastoralists who moved into the lowlands along the Omo in the early 19th cent. were called "G." by the Konta. *Ras* Wäldä Giyorgis Abboyye, a general of *aṣe* Mənilək II, conquered the area in 1898 and founded the present village of Bačuma. This village was later also called G. by local people living east of the Omo.

The meaning and origin of the term G. is not certain, but one tradition claims it was the name of a small river in the Meʾen country south of Bačuma that formed the border between the Benç and the Meʾen in the 19th cent. The Käfa and some of the Ometo-speaking groups also used the term G. for the Meʾen people, who were then powerful and often raided the highland peoples.



Very few written sources referring to the G. exist. It first appears as a reference to the territory of the Meʾen (called "Šuro") in Antoine d'Abbadie's *Géographie de l'Ethiopie*, an account of his travels in Ethiopia during the 1840s (AbbGeogr). Bulatovitch (1900), citing local oral traditions, refers to the G. as a powerful territorial unit. The oral traditions of the Konta people recorded by Haberland in 1974 (Haberland 1981) frequently refer to the G. (even to a G. king) and state that the Konta kingdom finally defeated them and drove them to the western lowlands along the Omo river; from this position of retreat, however, they continually raided the Koyša highlands.

After the 1991 political changes in Ethiopia and the concomitant redrawing of local administrative boundaries, the term G. disappeared, although the Konta and ↗Dawro peoples in the Koyša area still refer to the lowland Meʾen as such. The latter are still feared as raiders, and the last major confrontation between these groups occurred in 1999. In spite of the Konta and Dawro's reference to the lowland Meʾen, there is currently no official G. people or identity.

Goldschmidt, Lazarus

G. (b. 17 December 1871, Plungiany, Lithuania, d. 1950, London [?]) was a versatile Jewish Semitist who in his early career made a number of contributions to Ethiopian studies.

G., whose original Jewish name was Eliezer ben Gabriel, received a traditional rabbinical education in a reputable Talmudic school in Slobodka (Kaunas) in his native Lithuania. Thus shaped by one living Semitic tradition, he went to Berlin in 1890 to study Semitics academically. G. remained in Germany (Berlin?) until 1933 when, after the

Nazis' ascent to power, he emigrated to London.

G.'s early scholarly preferences lay with Gəʿəz and Ethiopian literature, to which he devoted himself under the guidance of August ↗Dillmann. As a result, between 1892 and 1897 in quick succession he published four works concerned with topics from these fields (Goldschmidt 1892; 1893; 1897; Goldschmidt – Esteves Pereira 1897).

After 1897 G. turned away from Ethiopian studies. From that time onwards he devoted his scholarly efforts mainly to the monumental task of translating into German, for the first and only time, the entire Babylonian Talmud; this was achieved in 1936. Another major accomplishment of G., in yet another linguistic and cultural domain of Semitics, was his translation of the Qurʾān into Hebrew (1916).

Michael Kleiner

Goldsmiths

Evidence of the fabrication of ↗gold objects in the northern highlands of Ethiopia reaches back to the last half of the first millennium B.C. Archaeological research has yielded gold finger rings, earrings and beads from the pre-Aksumite sites of ↗Yəḥa and ↗Ḥawəlti (MHAksum 240ff.). More abundant evidence of local goldworking has been found at Aksumite sites (↗Aksum; ↗Aksumite culture). To date, the most important find is a cache of gold ↗jewellery discovered at ↗Mäṭära in a 6th-cent. A.D. bronze vase that included gold necklaces, pendant ↗crosses, beads and Roman coins fitted with small suspension loops. These and other finds demonstrate that pre-Aksumite and Aksumite smiths utilized a number of metalworking technologies, including hammering, gilding, casting, wire-pulling, riveting and soldering/welding.

Until recently, gold has been a prerogative of the political and religious elite in the Christian highlands. Silver, which today sells for roughly one-twelfth of the price of gold, has been the metal of choice for commoners, especially those living in rural areas. Three categories of gold or silver objects are produced by G. (Amh. **አንጥረኛ**, *anṭəräñña*; Tgn. **አንጥረይና**, *anṭəräyna*): political regalia (including crowns), ecclesiastical paraphernalia (including processional crosses, hand-crosses, neck-crosses, "golden drums", which were most probably made of silver and gilded, chalices, ornaments for processional umbrellas and the baskets that hold the Sacrament, gilded silver covers of religious texts and prayer-stick finials), and a wide variety of jewellery (including different types of bracelets, armlets, anklets, necklaces, pendants, earrings, rings, pins and ear-picks). The price of objects made of gold (and silver) is based on weight — all G. sell their wares at a regulated fixed price (per gram) that incorporates the cost of the metal, labour and overheads.

With the exception of archaeological material, the oldest surviving examples of gold (and silver-work) are processional crosses dating from the 12th–13th cent. that are maintained in various churches in Ethiopia and in museums and private collections around the world. These early crosses, being products for the Ethiopian Orthodox, share affinities with objects coming from other parts of the Orthodox world (i.e. Eastern Mediterranean). However, many forms unique to Ethiopia have evolved over the centuries. Jewellery, similarly, reveals a mélange of local and foreign traditions. Some of the most sumptuous works utilize filigree designs that were introduced by Greek and Armenian G. who emigrated to Ethiopia in the 18th cent. Some of these foreigners lived and worked in ↗ʿAdwa and Aksum, two towns in Təgray that are renowned for their fine goldwork. Indeed, these two towns have been for several centuries the source of the country's best G. A recent survey (Johannes Kinfu 1997:73) on G.-working in Addis Abäba showed that the majority were from Təgray.

Proscriptions against the use of gold in Muslim societies are manifest in the use of silver instead of gold in Muslim communities throughout Ethiopia. The melding of foreign and local traditions is seen in the jewellery worn by the ↗Harari, ↗Somali and ↗Argobba in eastern Ethiopia. Jewellery, worn primarily by women in this region, has close affinities with forms produced by Bedouin and Jewish silversmiths of the Arabian Peninsula, evidence of a long history of exchanges between Muslim peoples from both sides of the Red Sea.

Throughout the highlands of Ethiopia, G. traditionally have been members of an endogamous group of artisans with whom the concept of the "evil eye" (↗*Buda*) is associated. Despite their importance in the towns in which they live, they have been socially marginalized, often forced to live in segregated communities and denied many of the rights (such as owning land) aforded to farmers and the clergy. At present, the antiquity of these cultural values is unknown, however there is documentary evidence that they are at least as old as the 15th cent. It seems that the social stigma attached to working gold and silver has relaxed to some extent. Today, one finds non-hereditary G. working in cities and towns who have taken up the trade because of its economic benefits.

Outside Addis Abäba, most jewellery produced by G. shows forms that have been popular for at least several hundred years. However, new "modern" designs are also part of the G.'s repertoire. But in the capital, the preferences seem apparently to have changed. Recent discussions with several G. working in Addis Abäba revealed that, whereas ten years ago roughly 70 % of the jewellery they sold was locally produced, today 90 % of the sales are imports that the G. resell.

Golǧa Nablä

G.N. (ጎልጃ፡ ናብለ; b. ca. 1863, Zaydäkolom, Säraye, d. 1939, Mändäfära [ᶜAddi Wəgri], Säraye) was one of the trusted followers of *däǧǧač* Kəfläyyäsus, one of the major Eritrean resistance leaders during the Italian occupation. The personal attachment and harmonious relationship with him lead to a family bondage: G.N. became Kəfläyyäsus's son-in-law.

After all Eritrean resistance was suppressed and *däǧǧač* Kəfläyyäsus, together with several other Eritrean chiefs, had been made prisoner in Nak̠ura, G.N. submitted to the Italian governor of Eritrea. He joined the Italian army and the governor appointed him *šaläqa* in the 4th Italian Battalion. With the Italian army G.N. took part in the battles of Koᶜatit, Ḥalay, Mäqälä, Ambalage, ᶜAqordät and ᶜAdwa. For his brave actions, which later gave birth to legends about his military skills and physical strength, he was awarded several silver and bronze medals.

In 1897, G.N. was made the head of Dämbälas district. Later, between 1899 and 1928, he served in the same position in Zaydäkolom, his native district. He received several important titles from the Italian authorities, including those of *barambaras* (1896), *azmač* (1902) and *däǧǧazmač* (1920). In 1928, accused of abuse of authority, G.N. was dismissed from the office.

Gomma

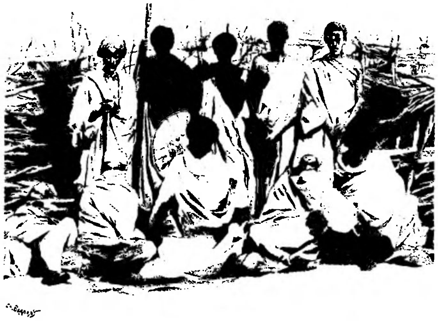
G. was one of the earliest Oromo ↗Gibe states to be formed – probably before the 1770s – and the first whose ruling dynasty accepted ↗Islam and championed its cause. According to tradition, the founder of the G. state and its ruling dynasty, Awalani, was a Muslim ↗holy man. In reality, Awalani was the clan that started the dynasty, one of the nine G. clans (each with its own ↗*çaffee* and leaders elected every eight years). The tradition was invented to enhance the Islamic credential of a dynasty instrumental in the spread of Islam in the Gibe region.

The founder of the nucleus of the state of G. in the second half of the 18th cent. was Abbaa Bokke, ↗*abbaa dulaa* of the Awalani clan. Oral tradition depicts him as a wise and respected man (Guluma Gemeda 1984:50), with power, wealth, knowledge of Oromo law, organizational capacity and the ability to inspire his followers and take timely decisive action. He was able to defeat every rival clan leader, emerging as the most powerful leader in the land. Abbaa Bokke made himself a hereditary leader, thus challenging and ignoring the ↗*gadaa* principle of rotating office. The *çaffee* assembly recognized the land he captured in military campaigns as his private property so he could distribute it among his followers and those who sought his protection (The Jimma Interview Program 1974:17, 35). Thus, in G., like in other Gibe states, the state power crystalized around access to land and the struggle to control more lands (MHasOr 11).

The task of uniting the region of Qottu with G. was left upon Abbaa Bokke's death to his youngest and ablest son, Abbaa Maano. He came to power at the mature age of 40 in 1800 (Guluma Gemeda 1984:50) and ruled for four decades. He provided G. with ideological unity, political stability and economic prosperity. With its agriculture, rich coffee fields, extensive trade and abundant cattle, G. earned a reputation for a high degree of civilization (CecZeila 238f.).

Abbaa Maano also immortalized his name in the history of the Gibe region as the promoter of Islam. He built mosques, established schools and attracted Muslim scholars to G. and other states, provided land to the *Qādirīya* and *Tiğānīya* brotherhoods and encouraged them to intensify proselytization.

Abbaa Maano found in Islam an ideological justification for abolishing such Oromo traditional celebrations as ↗*buttaa* festivals, which were pivotal to the *gadaa* system and the traditional religious cycle. He also first stopped sending gifts by the hands of ↗*ğiila* who went to the land of ↗*abbaa muuda* in southern Ethiopia. G. was the first Gibe state to ban offerings to ↗Waaqa, marking the definite transition to an Islamicized society, and to abolish slavery. Following G.'s example, all the Gibe kings abandoned the practice of enslaving their own people.



Abbaa Fuugi, the king of Gomma in the late 19th cent.; drawing by Henry Audon, 1889; from the collection of Volker Matthies

G. thus became the first state in the Gibe region where Islam became a universal religion (HarAeth vol. 3, 601), profoundly altering the spiritual life and ideological orientation of the people, having fully replaced the traditional Oromo religion.

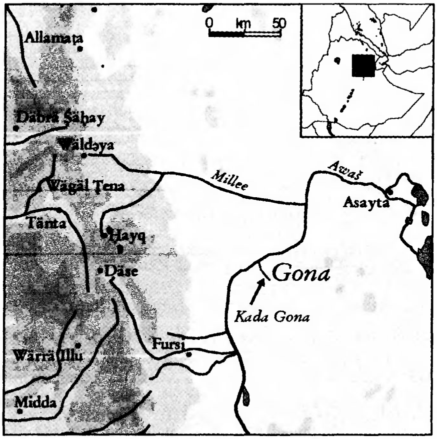
Gona

G. (ጎና) is an area of more than 500 km^2 in the west-central ᶜAfar region, Ethiopia. The G. area contains sedimentary exposures of the ↗Awaš River basin and includes Plio-Pleistocene sediments with abundant artefact and fossil-bearing deposits. Between 1992 and 1994, the Paleoanthropological Research Project's (GPRP) archaeological and geological surveys and excavations recovered more than 3,000 lithic artefacts of the Oldowan tool tradition from 15 site locations east and west of the Kada Gona river. Radiosotopic (^{40}A/^{39}A) and magnetostratigraphy dating suggest that the Oldowan assemblage from G. dates to between 2.6 and 2.5 million years ago. The Oldowan lithic assemblage from G. is characterized by simple cores, whole and broken flakes and angular fragments; it is generally similar in composition and form to Plio-Pleistocene



Oldowan assemblages documented elsewhere in eastern Africa.

Gondär

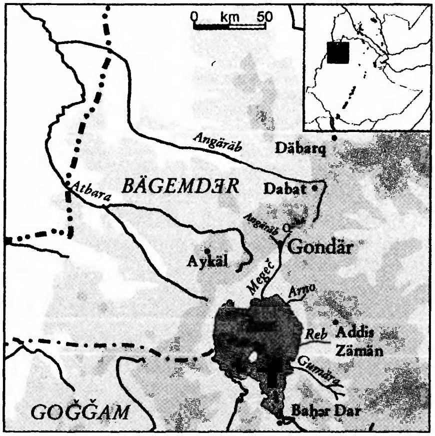
The town of G. (ጎንደር, also ጐንደር, Gʷändär; 12°61' N, 37°46' E), one of the largest cities in Ethiopia, is located in the historical ↗Bägemdər province (today North Gondär Zone). It evolved from an obscure 17th-cent. market-town into the flourishing capital of the Ethiopian monarchy, passed through an era of decline and destruction and underwent a slow renaissance in the mid-20th cent.

The term "G.", apparently of ↗Kəmant origin, is first mentioned during the reign of *aṣe* ʿAmdä Ṣəyon (1314–44) as the name of a regiment of soldiers stationed most probably in ↗Wägära to guard nearby trade routes and to control a restive population (MarAmdS 68f.; TadTChurch 91, 192f.). It subsequently designated a small-market town inhabited by Muslim traders and Fälaša craftsmen (↗Betä Ǝsraʾel). In 1636/37 *aṣe* ↗Fasilädäs selected G. as his camp, certainly for the purpose of directly supervising the collection of customs on the Red Sea – Ṭana – Ǝnnarya trade routes. This was seemingly the same reason that induced his immediate predecessors, beginning with *aṣe* ↗Särṣ̌ä Dəngəl in the 1570s, to locate their capitals on Lake Ṭana's north-eastern flank, along with a concern for safety in view of ↗Oromo conquests in the central highlands. Situated about 35 km due north of the lake in the midst of Kəmant country, G. was on, or close to, the point at which the main caravan track from ↗Mätämma to Ṭana joined the route from Ǝnnarya to the Red Sea. Other advantages were a semi-circle of mountains that afforded protection, nearby fertile agricultural lands and a permanent water supply. Popular legends, however, maintain that Fasilädäs was led to the site by prophecy and miraculous events.

Tradition holds that Fasilädäs purchased land on a small plateau between the ↗Angäräb and Qaha rivers from two peasants, Wäyne and Sayne, on which he constructed a stone castle. Close by he founded two churches, Gəmǧa Bet Maryam and Ǝlfəñ (also Makkabäbiya) Giyorgis, and surrounded the whole with a stone wall, the beginning of what would become a substantial royal enclosure during the next century. Further afield, he established five other churches, including Mädḫane ʿAläm and Fit Abbo (the latter close to the church of Arbaʿətu Ǝnsəsa, one of the four local churches that predate G.'s founding). The pleasure-pool with stone pavilion beside the Qaha river known as the "Bath of Fasilädäs" and several bridges are also commonly attributed to him. In 1648 a Yemeni envoy, ↗Ḥasan b. Aḥmad al-Ḥaymī, found Christians and Muslims residing in separate communities and living in straw huts, whereas the castle was "... a lofty structure, among the most wonderful of splendid constructions and ... built of stone and lime ... This castle ... is on the outside of the city and at the highest spot in it; it comprises numerous buildings and large squares" (DonHaySirat 149, 151). Fasilädäs's son, *aṣe* Yoḥannəs I (1667–82), and grandson, *aṣe* Iyasu I (1682–1706), elected to remain at G., building their own castles and churches. By the late 17th cent., G. had become a permanent and sizeable settlement where Ethiopia's rulers resided when not campaigning and where the Empire's pre-eminent commercial, political and religious classes gathered around the throne, in contrast with the peripatetic camps of pre-17th-cent. rulers.

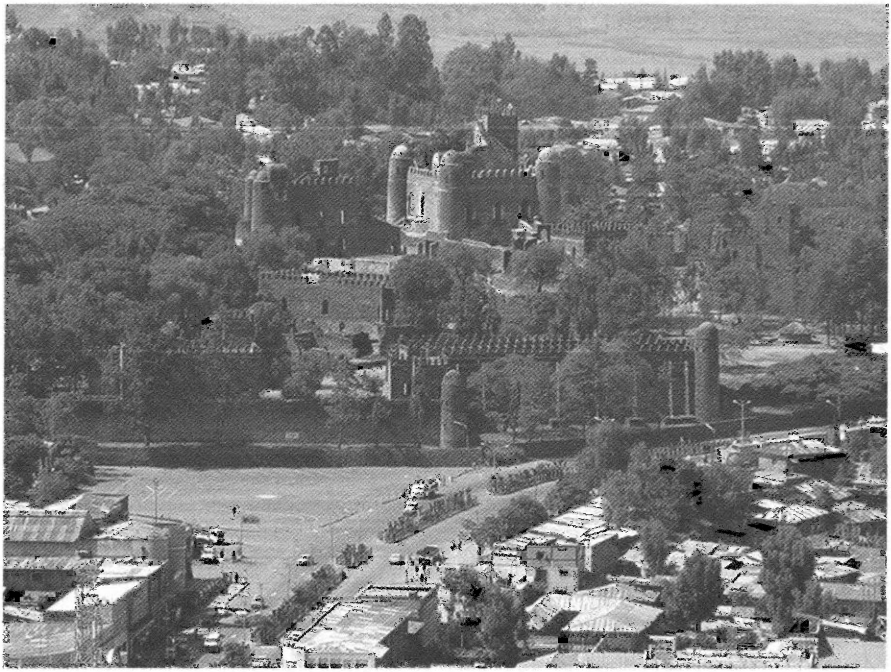
From the beginning, the population of G. fell into two broad groupings – the royal household and nobility, on the one hand, and merchants, craftsmen and commoners, on the other, all eventually residing in separate neighbourhoods. In 1668 Yoḥannəs decreed that the Muslims and the Fäläša (Kayla) should live separately from Christians throughout the whole ↗Gondärine kingdom. The decree, reissued in 1676, meant that almost all Muslims in G. subsequently resided in the lower part of the town beside the Qaha, a quarter known as Ǝslam Bet or Ǝslamge. The Betä Ǝsraʾel were assigned four quarters, two of them, Abärra and Kayla Meda, beside the Qaha. Aside from the royal enclosure, known as the Makkabäbiya or Fasil Gəmb, other significant quarters were the Addäbabay, a public square on the south of the royal compound, a place of assemblies and the Monday market; ↗Abun Bet, north-west of the castles, residence of the *abun*, or Metropolitan, and a place of asylum; ↗Ǝč̣č̣äge Bet, west of the castles, residence of the ↗*əč̣č̣äge* and also a refuge for offenders; Qäññ Bet, east-south-east of the castles and home to many nobles; and Dəngay, further south-west and inhabited by Christian merchants. To the far south-south-east lay the main (Saturday) market and beyond it, Ǝslamge at the foot of the G. plateau.

Trade and commerce, the economic mainstay of the city, lay in the hands of G.'s Muslims (↗*Ǧäbärti*). They organized the caravan trade north to the Red Sea coast, west to Mätämma and south to Ǝnnarya, as well as trade within the kingdom. They made G. the major emporium of northern Ethiopia beginning in the 17th cent., importing foreign manufactures in exchange for civet, coffee, gold, hides and slaves. By the mid-19th cent., G. was home to a large number of traders, the majority Muslims. Retail transactions lay in the hands of Christians as well and were carried out partly by itinerant hawkers in weekly markets and partly in merchants' houses. Salt bars (↗*Amole*) served as the medium of exchange. Aside from long-distance traders, the commercial class encompassed Muslim weavers, tailors, millers, weapons-makers, tanners and leather workers and Fäläša potters and smiths. G.'s Muslims also organized royal military expeditions but were not themselves warriors. Muslims belong either to the Ḥanafī or Šāfiᶜī law school. The Ḥanafīes venerate a number of shrines dedicated to local sheikhs, most of them in Ǝslamge, a source of tension with the Šāfiᶜīes, who object to such veneration.



G. gained fame for its churches, which served as educational and cultural centres, as well as havens of asylum and refuge. Ecclesiastics, a prominent part of the population, attracted large numbers of students, who studied reading, calligraphy, law, theology and such liturgical specialities as ↗*aqʷaqʷam* and *sankʷa* (clerical chant with instruments and movement). A distinctive style of painting evolved that was used to illuminate icons, manuscripts and interior walls of churches. ↗Crosses, sistra (↗*Ṣänaṣəl*), and other liturgical implements were locally manufactured to supply the large demand. Churches and their parishes determined the geographic bounds of G. At its greatest extent, "G." encompassed parishes within the city itself, on the mountain ridges to the east, west and north of the city and as far south as Mənzaro, a distance of almost 30 km. These parishes, 44 in all, became known as the "44 churches of G.". Among them was Azäzo Täklä Haymanot, home of the monastic community of ↗Däbrä Libanos that, like the royal court, relocated from Šäwa to Lake Ṭana region.

Two officials, both appointed by the reigning monarch, helped to administer the city. The ↗*näggadras*, "head of the merchants", was a Muslim who resided in Ǝslamge. He organized all caravans, collected customs from traders and adjudicated civil, but not criminal matters. The ↗*käntiba* was the governor of ↗Dämbəya before becoming in effect the mayor of G. in the 17th cent. He supervised local markets, levied taxes, dispensed justice and maintained public order with a force of up to several hundred soldiers. As central authority declined during the 19th cent., the *käntiba* assumed responsibility for the city's defence.



Gondär, view from the Goha–Hotel on the palaces and a part of the city; photo 2004, courtesy of Merdassa Kassaye

During the 18th cent., the royal compound was completed with the construction of castles by ↗Dawit III (r. 1716–21), ↗Bäkaffa (r. 1721–30) and ↗Iyasu II (r. 1730–55), the church of Aṭṭaṭami Mika᾽el by ↗Dawit III and various subsidiary buildings, the whole surrounded by a double wall with twelve gates and reinforcing towers. The castles and churches in G. were constructed almost entirely by local Fälaša craftsmen, assisted by Kəmant and Muslim workmen and by at least some foreign artisans and architects. Although fashioned in an architecture of semi-military style known today as Gondärine architecture, the castles were not intended as defensive structures. Rather, these two-storey, stone- (basalt) and mortar- buildings with domed corner towers and battlements were seemingly designed to celebrate the identity and achievements of each of the kings who built them and to enhance the "image" of Solomonic kingship. Royally commissioned churches, built of stone and mortar and encircled with battlemented walls with towers as at ↗Däbrä Bərhan Śəllase, enhanced their founders' claims to distinction and piety.

By mid-century, additional G.-style structures had been built close to the "Fasilädäs Bath" on the Qaha and *ətege* Məntəwwab (↗Bərhan Mogäsa), wife of Bäkaffa and regent to Iyasu II and Iyo᾽as (1755–69), had completed a third complex farther west at Qʷəsqʷam consisting of a reception hall, small apartments and the adjacent church of ↗Däbrä Ṣäḥay Qʷəsqʷam. North-east of the royal enclosure, a miniature castle known as the Ras Bet or Ras Gəmb served as headquarters for various noblemen who, by this era, effectively governed the kingdom. In 1770 the Scottish traveller James ↗Bruce reported that "Gondar … consists of about ten thousand families in times of peace; the houses are chiefly of clay, the roofs thatched in the form of cones … On the west end of the town is the king's house, formerly a structure of considerable consequence … [a] great part of this house is now in ruins" (BruNile vol. 3, 380). Bruce mentions that other quarters, including Ǝslamge, comprised of 3,000 dwellings (elsewhere he speaks of only 1,000), "some of them spacious and good" (ibid. 198).

No more castles were built after the reign of Iyasu II, although at least nine major churches were commissioned in the later 18th cent. (among them, e.g., Bäʾatä Lämaryam). By then, control of the city had passed into the hands of a provincial nobleman, *ras* ↗Ali Gʷangul, and his heirs, who governed from Däbrä Tabor from the second decade of the 19th cent. G. remained the ceremonial, commercial and religious centre of the ↗Gondärine kingdom, but emperors were reduced to figureheads without means for maintaining their courts or the city's monuments. Pillaging and destruction became common. In the early 1830s, the German traveller Eduard ↗Rüppell found only abandoned ruins in the royal compound, the reigning monarch holding court in quite modest quarters beside the Fasilädäs castle. The city had shrunk to about 1,000 houses with perhaps 6,500 inhabitants, 2,000 in Ǝslamge, 1,300 in Ǝč̣č̣äge Bet, and 400 in Kayla Meda. The population doubled or tripled on market-days or in times of trouble, when the city offered a measure of security to a fearful populace (cf. PankHist; Crummey in CentAddis).

G.'s fortunes declined further as the locus of the kingdom shifted south-east to Šäwa. After the mid-1850s, no more emperors reigned in G. *Aṣe* ↗Tewodros II refused to live there and he suspected its population of disloyalty. In early 1864, he sought to compel Muslims to convert to Christianity, a decree that fell heavily upon G.'s numerous Muslims, most of whom complied, if only nominally. Later that year, Tewodros sent his soldiers to sack the city. Confronted with further opposition, Tewodros and his army plundered and burned G. in December 1866. Most churches were looted and destroyed and their treasures – gold and silver crosses, chalices, nearly 1,000 manuscripts etc. – were carted off to Däbrä Tabor, Tewodros's capital, that he intended to become the "new G." (most of these manuscripts eventually ended up in the collections of the ↗British Library). Yoḥannəs IV, renewing Tewodros's drive for religious uniformity, razed the mosque in Ǝslamge in 1881 and in its place built the church of Ǝgziʾabəḥer Ab. In response, many Muslims fled both the city and the kingdom. Yoḥannəs also compelled the metropolitan and *əč̣č̣äge* to reside in his camp, so that they, like him, were henceforth absent from G.

In January 1888 and again in June 1889, the Sudanese Dervishes (↗Mahdists) burned what was left of G., including even Ǝslamge. By the early 20th cent., the population had dwindled to perhaps 1,000 or fewer. Muslims still controlled the caravan trade, which was confined mostly to the regional level, and some had begun to settle in the upper town close to the castles. A German traveller Felix Rosen labelled G. "a dead city that belongs wholly to the past" (1907:399). The 1920s, nonetheless, brought some rebuilding of churches and also, it appears, of Ǝslamge, known by now as ↗Addis ʿAläm. The population of a few thousand was clustered around Ǝč̣č̣äge Bet and the Saturday market.

On 1 April 1936, Italian troops occupied G. For the next five years, the city served as the capital of Amhara Province, one of six that formed the ↗Africa Orientale Italiana. Italian colonial officials set about remoulding the city along lines that are familiar even today. Local inhabitants were segregated into districts west and south of the castle enclosure, Italians settling in northern and north-eastern areas. New commercial and government buildings were erected north-east of the castles and a retail district, known henceforth as the "piazza", was laid out adjacent to the castle compound, all in 1930s "modernist" architecture. A central artery linked the Italian quarters, piazza, Ethiopian merchant quarter, and Saturday market. Another new road ran west of the Fasilädäs "bath" and on to Azäzo, where a landing-strip provided an air service with Asmära. Other new roads connected the city with Goǧǧam and with Eritrea, the latter a paved, all-season roadway. Colonial authorities, seeking to curry favour with local Muslims, built a mosque (for the first time with minaret) beside the Saturday market, authorized the appointment of a *qāḍī* for matters involving the ↗*Šarīʿa* and permitted Muslims to settle outside Addis ʿAläm. The castle enclosure was converted into a park and in May 1938 restoration work was initiated on the Fasilädäs castle and "bath" and later on the Ras Gəmb, seat of the Italian Vice-Regal authority. In 1938 G.'s population totalled 14,000, 2,000 of them Italians.

After the defeat of the Italian forces in 1941, G. became the capital of the Province of Bägemdər and Səmen. The imperial government took over the Italian government buildings and established a municipal administration under a *käntiba* and a council with both Christian and Muslim members. Muslims and, increasingly, Christians engaged in commerce and trade and the city's markets continued to flourish. Although Addis

Gondär, royal enclosure; sketch after Monte della Corte 1938, adapted from Doresse 1972: 64f.

^{c}Aläm remained the principal Islamic quarter, Muslims began to diffuse throughout the upper city. Primary schools and a new secondary school were opened and in 1953 a public health college was established on the grounds of the former Italian Consulate. In April 1946, ↗Ethiopian Airlines initiated a service to G. and in early 1964 the last segment of the all-weather road to ↗Baḥər Dar was completed. Foreign tourists began to visit the city's monuments, which in 1969 were undergoing major restorations with the help of UNESCO. By 1974 G. had an estimated population of 43,000 (ca. 81,000 in 1980) and had begun to recover from two centuries of neglect and decline.

Betä Ǝsra'el in Gondär

The city of G., founded in the early 17th cent., played a key role in transforming the relationships of the ↗Betä Ǝsraᵓel with the Ethiopian state and broader society. The city was in fact built in the midst of the area of the Betä Ǝsraᵓel, who since the 14th cent. had had contact and conflict with the State.

After their final military defeat in the 1620s, the Betä Ǝsraᵓel began to be incorporated into the political-economic structure of the new city. They continued their previous occupations as blacksmiths, potters and weavers, but also developed somewhat more prestigious roles as carpenters, masons and soldiers, working under royal patronage. Both oral and written sources suggest that they provided the skilled carpenters and masons building the royal castles and churches for which G. became famous. They also formed separate squadrons of soldiers under Emperors Fasilädäs, Yoḥannəs I and Iyasu I.

A secular elite among the Betä Ǝsraᵓel in the greater G. area was rewarded with new land rights, titles such as ↗*azmač* and ↗*bäǧərond* and a degree of respect from the dominant society higher than they had at any time before or since. Despite these roles and rewards, the Betä Ǝsraᵓel even in the city area maintained a high degree of physical, social and cultural separation, enforced by their own desires and by royal segregation decrees when necessary, such as those by Yoḥannəs I.

They lived in three major enclaves – Kayla Meda, Abwara and Däfäça – near the two rivers that enclose G. They also lived in two areas near the Christian churches, a little further out of town, of Abba Ǝnṭonyos and Gondäročč Maryam.

Despite their working for and close to the emperors, and a certain degree of social interaction with Christians and others in the urban environment, their traditions assert that they kept their societal integrity, including an indigenous ↗Agäw language and special religious practices. The Betä Ǝsraᵓel outside of greater G. maintained an even higher degree of separation under the leadership of their traditional priests and monks.

The strength of the State and the royal support for the Betä Ǝsraᵓel in the G. area left them with positive memories of the period. In their only written chronicle, dating from the time of ↗Mənilək II, they recalled that "during the reign of all the kings of Gondar, Israel lived in peace and welfare" (Leslau 1947:80).

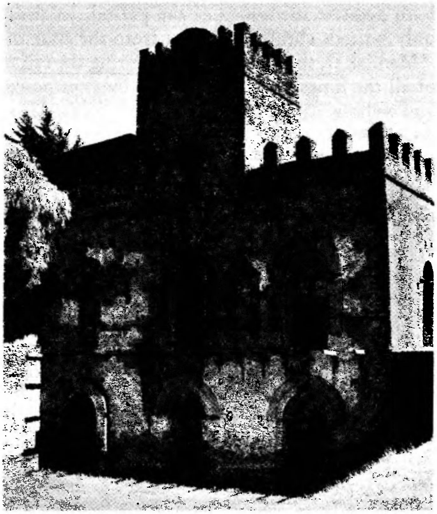
Gondär-style architecture

G.a. initially appeared in the later 16th cent. in the Lake ↗Ṭana basin, so far as present evidence indicates. Almost all Gondär-style buildings were subsequently built on the northern, eastern and southern shores of Lake Ṭana during the next two centuries, although a few examples of the style are found as far north as ↗Aksum, as far south as central ↗Goǧǧam, and on Lake Ṭana's western shore. Some construction may have continued into the 19th cent. bridges, castles, and churches were erected in this monumental style, but the castles embody the features of the style most completely and are themselves a major innovation associated with this architecture. Building-materials consisted of rough brick-sized pieces of basalt and lime mortar, the latter in use in the northern highlands for the first time in perhaps a millennium. Walls are uncoursed and were left in the rough, the brown basalt and white mortar producing a mottled, sombre appearance characteristic of Gondär-style construction. Some interior walls were finished with lime plaster.

Castles resemble two-storey keeps and feature round corner-towers with domes and a slight batter, battlemented parapets, square towers that rise high above terraced roofs, monumental entrance staircases, doors and windows in full, decorated arches resting on double-bracket capitals, string courses, wooden balconies and barrel-vaulting. Churches, both round and rec-



Gondär, Palace of Məntəwwab; photo 1993, courtesy of Michael Gervers

tangular (↗Church buildings), are noteworthy for encircling stone-walls with battlemented towers and monumental entrance gates, the same as those surrounding the castles in ↗Gondär. Among the few still extant, ↗Aksum Ṣəyon, Däqʷa Kidanä Məhrät and Gondär Aṭṭaṭami Mikaʾel resemble fortresses more than churches, whereas Kəbran Gäbrəʾel and ↗Narga Śəllase in Lake Ṭana typify the graceful aspect of the style. Bridges, all in ruin today, consisted of roadways resting on arched piers strengthened by buttresses. Other features included parapets and bastions, possibly battlemented, at one or both entrances. The oldest is probably the single arch over the Gärno (Arno) River in Ǝnfraz.

The earliest G.a. seems to be the castle that *aṣe* ↗Śärṣä Dəngəl built ca. 1575/76 at Guzara (↗Gubaʾe) in Ǝnfraz (traditions that attribute the present church of ↗Baḥrəy Gəmb Qəddus Mikaʾel at Mənzəro to the early 16th cent. are in all likehood apocryphal). Although it displays all of the distinguishing features of G.a., the building is not well proportioned and looks as if it were an experiment in new materials and design. Subsequently, castles in stone and mortar were constructed at ↗Ayba for *aṣe* Śärṣä Dəngəl in 1589/90 and at ↗Dänqäz for *aṣe* Susənyos in 1628/29, the latter by Egyptian, Indian, and Levantine workmen, who introduced innovations not duplicated in later constructions. The castle of *aṣe* Fasilädäs in Gondär, ca. 1640, is a virtual copy of Guzara except that it is larger and better proportioned. It was the first of eight castles, numerous churches and subsidiary buildings constructed during the next century in or near the royal enclosure, on the Qaha River, and at Qʷəsqʷam (↗Däbrä Ṣäḥay Qʷəsqʷam) an ensemble so prominent that the architecture has become known as "Gondärine style", even though its earliest examples lie elsewhere.

The origins of G.a. remain to be investigated, but it was clearly imported into the kingdom. It has no direct antecedents in Ethiopian monumental architecture. No developmental or intermediate stages in its creation are known and, when it first appeared, it did so in full-blown form. The style underwent only minor evolution in its two-century course. It is probably no accident that it appeared within two decades after the Ottoman Turks arrived in the southern Red Sea and fortified the island of ↗Massawa, Dəḥano on the opposite shore and ↗Dəbarwa on the edge of the Təgrayan escarpment, all on the main trade route into the northern highlands. These Turkish fortifications may have inspired or served as models for the new style of architecture. Merchants and soldiers would have brought news of them to Śärṣä Dəngəl's camp, and "Turks" are sometimes identified as having built some Gondär-style buildings. Whatever the specific models or agents, it seems clear that G.a. drew on eclectic architectural traditions of the Red Sea-Indian Ocean area traditions with which it shows strong affinities.

The builders were Ethiopians and foreigners. Fälaša (↗Betä Ǝsraʾel) masons and carpenters, particularly from the Kayla clan, certainly played a large role, as did the ↗Kəmant and doubtless local skilled Muslims. ↗Indians, Egyptians, ↗Armenians, ↗Greeks, "Arabs", "Turks" and others were also involved at various times, perhaps most importantly in the architecture's early stages. By the mid-17th cent., design and construction seem clearly to have lain in Ethiopian hands, at which time an Ethiopian master builder, Wäldä Giyorgis, erected castles for the Emperors ↗Yoḥannəs I and ↗Iyasu I.

The significance of G.a. appears to be twofold. First, each Gondär-style castle and church testifies to the achievements and status of its sponsor. For this reason, all Gondär-style buildings are individually distinct. They are monuments to the reign and deeds of the specific emperors who built them. Second, and more importantly, the architecture seems to have been consciously used to enhance the image of Solomonic kingship, an institution that enjoyed a reputation of near-military invincibility before the disastrous Muslim wars of the mid-16th cent. By the reign of Śärṣä Dəngəl, the reconsolidation of the kingdom was well under way. At this crucial point, a semi-martial style of architecture was introduced into the kingdom. Śärṣä Dəngəl, apparently realizing its symbolic potential in the reconstruction of the royal office, seems to have enlisted the new style in an effort to restore the warrior image of the kingship and to strengthen his possession of it. He seems to have employed it in a deliberate effort to impress and overawe his subjects by raising first one, and then a second castle that, like all later such buildings, projected an image of might and majesty, even if the martial aspects of the architecture were purely decorative and not functioned. His successors apparently understood these twin applications of the architecture, for during the next two centuries every monarch who could afford to build a castle and one or more churches in the Gondärine style, did so, producing the panoply of monuments to be seen in and around Gondär today.

G.a. was a royal prerogative. When the monarchy lost all pretence to power and military function in the mid-18th cent., the patronage that had sustained monumental construction evaporated as well, resulting in the abandonment of the G.a. tradition. It survives, however, in some motifs of contemporary art and architecture that are reminders of deeply held cultural values and of the achievements of the Gondärine age.

LaVerle B. Berry

Gondärine kingdom

From the 1630s to the 1760s, the city of ↗ Gondär was the capital of the Ethiopian empire, its instituons being, in large part, in continuity with those of the first Solomonic period (1270–1527). In addition to political capital, Gondär played the role of religious, cultural and intellectual capital, retaining the latter status into the 1850s, long after the G.k.'s political eclipse. The kingdom lasted roughly 130 years, a period which, combining both political and cultural criteria, we may subdivide into three: 1) foundation, 1630s to 1706; 2) transition and insecurity, 1706 to 1720s; 3) revival, 1720s to 1760s.

1) Gondär was founded by *aṣe* ↗ Fasilädäs, son of *aṣe* ↗ Susənyos. The accession of Fasilädäs was preceded by intense conflicts arising from his father's formal conversion to Catholicism and his attempts to impose the new faith on his subjects. These conflicts continued into the new era and it was not until 1646 that Fasilädäs succeeded in suppressing the violent opposition of his rebellious brother ↗ Gälawdewos (Wion 2005). Prior

to the 1630s, Gondär was already a site of some importance, marked both by a major market and by a church dedicated to Jesus (Merid Wolde Aregay in PICES 8). Its choice, in the mid-1630s, as a new capital was built on these assets, was also driven by the desire to escape from the increasing outbreaks of disease (principally ↗malaria), which now afflicted the lower regions, closer to Lake Ṭana, favoured by Ethiopia's rulers beginning with *imām* ↗Aḥmad b. Ibrāhīm al-Gāzī ("Grañ"). Gondär is situated over 400m above the level of the lake and less susceptible to malaria. For much of the period, certainly throughout the 17th cent., Gondär was essentially a rainy-season residence, the court re-enacting the ancient practice of dry-season itineration. Associated with Gondär were two dry-season royal camps, ↗Aringo and ↗Yəbaba, similarly positioned on the high plateau east and south-east of the Ṭana basin. History remembered these as the sites from which the court drew seasonal tribute and sustenance from different hinterland territories (ZanLitTheod 27ff.). In founding the town, Fasilädäs built a castle, which was to become the centre of a royal compound, and established, near to the castle, the Church of Mädḫane ᶜAläm (CrumLand 77). His successors, to the bitter end, emulated him by building palaces and establishing churches, starting with his son *aṣe* ↗Yoḥannəs I and grandson *aṣe* ↗Iyasu I. Iyasu I founded the rich and influential ↗Däbrä Bərhan Śəllase. These foundations were essential features of the G.k. and created the greatest, fixed concentration of political and cultural resources since at least the days of ↗Lalibäla, and possibly since ↗Aksum.

The throne passed peacefully from Fasilädäs to his son and grandson. However, a major expedition by Iyasu south of the ↗ᶜAbbay, in 1704 (GuiIohan 220ff. [text] = 233ff. [tr.]), made clear just how radically the territory under the rule of the Gondär kings had shrunk to the lands within and north of the great bend of the ᶜAbbay. None of Iyasu's Gondärine successors were to venture so far. The Christians of Šäwa were now cut off from Gondärine rule by intervening lands controlled by the Oromo. The core of the G.k. was the land within the great bend of the Abbay, the highlands east and north of Lake Ṭana, and central Təgray, including ᶜAdwa and Aksum, where Fasilädäs re-built the church of Aksum Ṣəyon of Zion, which had been destroyed during the Aḥmad Grañ's *ǧihād* of the 1530s, although its reach extended to the northern edge of the plateau. With the movement of the centre of the kingdom towards the north-west, the lands on and below the western escarpment acquired new strategic importance and Iyasu campaigned regularly there.

2) The death of Iyasu I in 1706 brought to the fore the factionalism and conflict (Berry in PICES 5b), which had simmered since the death of Fasilädäs. Iyasu was assassinated at the instigation of court figures associated with Goǧǧam and with the ↗*Qəbat* doctrinal tendency, which was particularly strong in Goǧǧam and amongst the ↗Ewosṭateans (the monastic followers of *abba* ↗Ewosṭatewos). It was generally opposed by the monastic followers of *abunä* ↗Täklä Haymanot, the house of Däbrä Libanos (of Šäwa), with their centre established at ↗Azäzo. Conflicts internal to the Ethiopian Orthodox Church over ↗Christology had broken out during the reign of *aṣe* Susənyos and grew in intensity through the century. None of the Gondär rulers proved able to master these controversies, although some tried to avail themselves of the support of one or another of the parties to the disputes. Continuing intense conflict within the church was a major factor undermining the G.k. Iyasu was succeeded by three sons (↗Täklä Haymanot; ↗Dawit III; ↗Bäkaffa), a brother (↗Tewoflos), and a more distant relative (↗Yosṭos). Their reigns were unsettled, marked by social unrest and by the appearance of rebels and pretenders. For a period the palace guards determined the succession. Like his father, Täklä Haymanot was assassinated. Tewoflos and Dawit both supported *Qəbat*, doctrinal conflict reaching a pitch of intensity at the end of the reign of Dawit in an episode in which as many as one hundred monks of Däbrä Libanos were killed by palace troops (BassEt 73, 187–90; Guidi 1899:19f.). The accession of Bäkaffa in 1721 inaugurated five decades of dynastic stability.

3) Bäkaffa contributed less to this achievement than did his consort (she was never his wife), Məntəwwab (↗Bərhan Mogäsa), mother of his son Iyasu II. On Bäkaffa's death, Məntəwwab and her kin controlled the succession and, with the coronation of her son, Məntəwwab followed suit and had herself crowned as ↗*ətege*, with the regnal name of Bərhan Mogäsa. Məntəwwab, through the skilful deployment of kin, known collectively as the *qʷäräññočč* (the Qʷarans) after their home province of ↗Qʷara,

dominated the G.k. throughout the reigns of her son *aṣe* ↗Iyasu II and grandson, *aṣe* ↗Iyoʾas I. Her major ecclesiastical foundations, ↗Däbrä Ṣ̂äḥay Qʷəsqʷam and ↗Narga Śəllase, were notable contributions to the tradition of royal churches. They were also *Qəbat* in their doctrinal orientation. The rich lands with which they were endowed provided for the support, not only of the clergy serving these churches, but also of Məntəwwab's numerous kin and retainers (CrumLand, ch. 4). She was an active patron of the arts and fostered the flowering of what has become known as the second period of Gondärine ↗painting. Of particular interest is the portrait of herself and her family, which she commissioned (Bosc-Tiessé 2005). With the marriage of her grandson, Iyoʾas, to an Oromo woman from Wällo, the Oromo were integrated into the factional conflicts of the court. However, the death of key *qʷaräññočč*, not least Məntəwwab's brother, ↗Wäldä Ləʿul, in 1767, and of her cousin, Ǝšäte, the following year, and the ageing of Bərhan Mogäsa herself meant an increasing loss of control and a gradual descent into conflicts no longer centred on the court, but driven by the ambitions of powerful regional nobles, the prototype of whom was *ras* ↗Mikaʾel Səḥul of Təgray, who, called to Gondär by Məntəwwab to strengthen her hand against the increasing influence of Iyoʾas's Oromo in-laws, ended up by assassinating the king and provoking still more intense opposition, and initiating a downward spiral in the power and prestige of the royal court (GuiIyas 221–27; BruNile vol. 2, 660–700).

Gondär came to have a notional 44 churches, of which at least 14 were richly endowed with agricultural lands, the revenue from which allowed them to retain hundreds of clergymen. Leading foundations of the Gondärine period were: Mädḫane ʿAläm (Fasilädäs); Ṭädda Ǝgziʾabəḥer Ab (Yoḥannəs I); Däbrä Bərhan Śəllase (Iyasu I); Ḥamärä Noḫ (Tewoflos); Lədäta (Yosṭos); Aṣṣaṣṣame [Aṭṭaṭṭame] Qəddus Mikaʾel (Dawit and Bäkaffa); Däfäča Kidanä Məhrät (Bäkaffa); Däbrä Ṣ̂äḥay Qʷəsqʷam (Məntəwwab); Bäʿata (Täklä Haymanot II); and Däbrä Məṭmaq (Täklä Giyorgis). The lands which they received for the support of their clergy were known as ↗*rim*, and, from the 1740s onwards, a lively market in *rim*-land developed (Crummey in PICES 5b; Bausi – Dore – Taddia 2001). Many of the clergy were distinguished scholars of Ethiopia's Christian tradition and their presence made the town a centre of religious learning, a status which it retains to this day. The patronage of the royal court and the churches supported a flowering of the arts-building (↗Gondär-style architecture) and painting most notably, but also music, poetry, metal-working and weaving.

Politically, the G.k. turned away from the West, epitomised by Roman Catholic Jesuit missionaries, and back to the Solomonic legacy. *Aṣe* Fasilädäs pursued an active foreign policy, seeking links with the Yemen (DonHaySirat) and to the major regional Muslim powers: the Turks in Istanbul; and the Mughals in India. The 17th-cent. rulers were also interested in commercial relations with the Dutch (DonMurad). By the 18th cent. the rulers Yosṭos and Məntəwwab were again prepared to entertain the possibility of relations with the European Catholic powers, but their overtures in this direction were rapidly curtailed by popular opinion (CrumMis 7ff.; Prutky 1991:306-23). Political and religious conservatism did not, however, preclude innovation in many fields, including that of Orthodox theology, the entire period being marked by the strife of clerical factions. At the height of the G.k., the Gondärine market was probably the largest market anywhere in the highlands. The G.k. declined rapidly in the late 1760s and, in 1769, it plunged into decades of political conflict, power now being held by provincially based noblemen.

Gonğ Tewodros

The monastery (*gädam*) of G.T. (full name ጎንጅ፡ ቴዎድሮስ፡ ደብረ፡ ጥባብ, Gonğ Tewodros Däbrä Ṭəbab) is located in western Goğğam, Addet *wäräda*. The main *tabot* is dedicated to Tewodros, the second to ↗Kidanä Məḥrät. G.T. has a renowned ↗*qəne* school, following the tradition of Täwanäy, which is entitled to confer a diploma (*yäqəne məsäkər*). G.T. rivals the other prominent and near-by *qəne* school of Wašara. As far as ↗*zema* is concerned, G.T. used to sing *qomi zema,* but is now turning to *betäləḥem zema.*

There are no written sources for the history of its foundation, the oral tradition dating it back to the 13th cent. A *Mäṣḥafä näbiyät* ('Book of the Prophets') of G.T. contains a list of the first 49 *liqawənt.* The first *mämhər, abunä* Gərma Śəllus, is commemorated on 10 *Mäskäräm.*

G.T. has been mentioned in literature since the early 17th cent. Its head, *abba* Ləbso or Ləbsä Krəstos, headed the ↗*Qəbat* party at the council of Fogära, held in 1620 by *aṣe* ↗Susənyos (PerChron I, 237, II, 182). In the years to follow, G.T. became a Catholic stronghold (BecRASO IV, 15; XII, 277). Ləbsä Krəstos was even ordained a Catholic priest by the Jesuit patriarch ↗Mendes; on account of that, in ca. 1636 he was sentenced to death and executed by *aṣe* ↗Fasilädäs (BecRASO XIII, 110). A giant sycamore on the cliff above G.T. still bears his name: Abba Ləbso. It also marks the place where the first Kidanä Məḥrät church is said to have been erected. After the restoration of the Orthodox faith, *aṣe* Fasilädäs and above all ↗Yoḥannəs I donated numerous objects and manuscripts to the church. The patriarch *abunä* ↗Krəstodolu is buried there. His grave is located in the northern part of the *qəddəst.*

During *aṣe* ↗Iyasu I's reign, religious councils turned to the advantage of the Unionist doctrine and in 1686 a strong religious and political crisis, headed by *däğğazmač* Wäle from Mäčča, erupted in Goğğam. The spiritual leader of the rebels was *mämhər* Ṭäbdän Dəngəl from G.T., also a head of the *Qəbat* party at this time. In 1688, after a long and difficult synod, Ṭäbdän and his followers were excommunicated and exiled (GuiIohan 99, 103–07, 110–17, 121–26; BassÉt [II] 294ff.). Following this defeat, G.T. lost its leadership in the *Qəbat* party and never again played an important role in synods opposing *Qəbat* to ↗*Täwaḥədo.*

During Iyasu II's reign, *mämhər* Ṣewa Dəngəl of G.T. was chosen to represent the monastery. He found a place in the monastic ↗genealogy of famous *qəbat* intellectuals as the spiritual son of the sons of the monks Zəkre and Pawli, active during *aṣe* Gälawdewos's reign (GuiIyas 16). The monastery possesses a short modern manuscript with *mälkəʾ* and *sälam* to Gərma Śəllus and Ṣewa Dəngəl (ARCCH no. G-IV-346). The two monks are depicted together on 18th-cent. mural paintings. This association of the first *mämhər* Gərma Śəllus with Ṣewa Dəngəl can be interpreted as a way of dismissing the unpleasant memory of Ṭäbdän. An exceptional portrait of *abba* ↗Ewosṭatewos, present among the murals that ornate the western wall of the *mäqdäs,* confirms the rehabilitation of the *Qəbat* commitment of G.T.

The monastery was looted in 1862/63 after the defeat of ↗Tädla Gʷalu by the forces of *aṣe* ↗Tewodros. G.T. still managed to preserve its patrimony, including two triptychs of the Virgin with the Child, possibly of Italo-Cretan origin, dating to the 15th or 16th cent., at least one of them being a royal endowment (ARCCH nos. G–III–20 and 38).

Gonga

Gonga languages

G. (Amh. ጎንጋ, also Käfoid) is a small ↗Omotic language family of west and south-west Ethiopia. There are three main varieties, following information mainly from Bender (2000:96f.; 2003: 2) and Hudson (1999): 1. so-called Southern G., comprised of ↗Käfa, with ca. 570,000 speakers, including its dialect ↗Šakačo (s. Fleming 1976); 2. Central G.: ↗Anfillo, with ca. 500 speakers

(Grimes 1996:257); 3. Northern G., including ↗Šinašša, a dialect cluster of south-west Goǧǧam and west Wälläga as well as the dialects or regions Amuru, Guba, Naga, Wämbära, spoken by ca. 20,000 people (Hudson 1999).

The above varieties form a language family, not a dialect cluster. In Bender (2003:156), the three varieties are calculated to share from 50 % to 57 % common basic lexicon, well below the mutual-intelligibility level.

Of the three varieties, Käfa has been designated as an official literary language and has some translated ↗Bible portions. The sources on G. languages may be second in quantity only to those on Ometo within Omotic. (The bibliography to this article is not intended to be exhaustive. Brief mentions with little linguistic content are not included here. For more details, s. the individual languages: Käfa, Anfillo, and Šinašša.)

A Proto-Käfoid segmental phonology, based on Fleming (1985), is presented in Bender (2003:181ff.):

Stops: *b, p, d, t, g, k,* ʾ
Ejectives: *p, t, (t)ṣ, č̣, q*
Implosives: *ɓ, ɗ, ɠ*
Affricates: *ʦ, č*
Fricatives: *f, z, s,* $\check{s}_1$, $\check{s}_2$, *h*
Nasals: *m, n*
Liquids: *l, r*
Semivowels: *w, y*
Vowels: *i, ii, e, ee, a, aa, o, oo, u, uu*

The consonant inventory is somewhat extensive, but Fleming lists as "probable" alternatives: *p* or *f*; *p* or *ɓ*, *s* or *ʦ*, *ṭ* or *ɗ*, *č* or *ʦ* , *q* or *ɠ*, and as "possible" *r*. In addition, $\check{s}_1$ may merge with *s*. The vowels are a typical system for the area. Gemination of consonants is probable in Proto-G. and a two-tone system is likely.

G. languages share the well known *ta-ne* characteristic of having independent pronouns 1st/2nd pers. sg. of form *ta/ne*. 3rd pers. sg. usually has *b*, while plural is typical Afrasian 1st/2nd pers. pl. *no/i(n)t*. Gender-marking in nouns masc./fem. *o/e* is strong, though not universal. The attempt to correlate this with Afrasian *k/t* is unconvincing for lack of supporting evidence. Several derived forms are reconstructable in G.: infinitive/verbal noun *+o, causative **s*, passive/reciprocal **y*, and perhaps others (Bender 2000:142). Syntax is based on the universal Subject–Object–Verb order of Omotic languages (↗Ethiopian Language Area).

Lexically, Bender (2003) is more concerned with larger groupings and there is no listing of distinctive G. lexical items. But Lexicon 4 (ibid. 158–78) reveals many candidates. Among the list of ten used for comparison in these articles, three stand out: 'blood' *ṣaʦ+*, 'one' *ikk-*, and 'two' *gut-*. Others are not hard to find: 'ashes' *tull+*, big *oog-*, 'black' *aaq-*, 'bone' *šawuš+o*, etc. Within the *ta/ne* family, G. is found in a group with Macro-Ometo and Gimira, but a bit closer to Gimira than to Macro-Ometo, while ↗Yäm is more distant.

Gonga ethnography

The name G. (**ጎንጋ**) is essentially a linguistic term and refers to a number of related Omotic-speaking peoples, some of whom formed independent states in south-central and western Ethiopia: the ↗Käfa (Käfiččo), Boša, ↗Šinašša, ↗Ǝnnarya (called by the G. Hinnaryo), ↗Anfillo, ↗Šakačo (or Moča) and Šeka. The original G. area was between the Blue Nile (↗Abbay) and the Omo River.

In his monograph (1982) Lange mentions four important G. states: Boša, Käfa, Hinnaryo and Šeka, which were not natural allies, but often vied for supremacy. The G. were one of the few groups—along with a few of the Gurage—who resisted the large-scale Oromo migrations and conquests of the 16th and 17th cent. In 1540, for instance, the Käfa kingdom defeated a large Oromo army, forcing them to move northwards. In subsequent years, however, a series of victories by the Oromo caused many of the G. groups to be incorporated into Oromo society; only Käfa escaped this process. Hinnaryo was defeated by the Oromo in the early 18th cent. and Boša in ca. 1880 by the Ǧimma Oromo (after that date it was called Garo). Šeka, the most western G. state that surrounded today's Bonga, was defeated by the Oromo in the mid-18th cent., but survived and revived as a state. In 1898, however, the Šeka king, Teči Goˀeči, had to succumb to the imperial Ethiopian army.

G. kings were the symbolic centre of the state and had several golden regalia (bracelets, rings, breast plates, necklace etc.) and a gold-plated throne. They had to appear physically and mentally perfect and were usually separated from the common people when eating and travelling.

Among the G., the kingdom of Käfa was the most important state; it had a fully-fledged centralized state with an elaborate court and hierarchical structure in addition to a "divine" king. There was a free peasantry, but also extensive slave- and serf-labour, as in the other G. states. Many surrounding peoples paid tribute to Käfa. The Käfa state under its last king ↗Gaki Šeročo was conquered in 1898 by the imperial forces of Mənilək II.

Historically, the G. states were densely populated, intensely hierarchical and had a high level of agricultural development. Their agriculture was characterized by stone-terraced fields, crop-alternation, irrigation, natural fertilization and a rich diversity in crops (e.g., coffee, fruits, *ənsät*, grains, cabbage, spices and various tuber-crops). In addition to the high-quality wood from indigenous trees, bamboo was plentiful and much used for house-building, fencing and furniture. Other aspects of G. material culture were also well-developed; for example, Käfa and Šeka had their own centres for iron-smelting and gold-production. Animal husbandry (cattle, sheep and goats) was an important subsidiary activity and often performed by lowland peoples. Overall, the Käfa kingdom was an especially rich and important regional centre, respected by many of the surrounding kingdoms.

The G. religion recognized a sky god (*Yero*), a caste of priests and ritual officiators and a variety of initiation- and possession-cults. The G. states were partially introduced to Christianity via trade and other contacts with the central Ethiopian highland state from the late 15th cent. onwards – before the Oromo expansion – but especially since the late 18th cent. The political elite was predominantly of immigrant origin (the Bušašo and Minǧo).

The G. states declined after domination and conquest by the Oromo (from the 16th cent. onwards) and the imperial Solomonic state (late 19th cent.), after which the memory of Hinnaryo and Boša was virtually extinguished.

During *aṣe* Ḫaylä Śəllase I's reign (1930–74) and the *Därg* (1974–91), Käfa was a province of Ethiopia. In the post-*Därg* period, Käfa ceased to be an administrative designation and the region was incorporated into the Southern Ethiopian Nations, Nationalities and Peoples Regional State in 1994. Pockets of G.-speaking people still live across western Ethiopia. Lange (1902:1) mentioned that in the 1970s a small community of Hinnaryo existed in central Käfa just south of Goǧäb river. The Käfiččo and Šakačo and other groups still exist, but the ethnic term G. is only used in the oral traditions of the oldest generation: there is no longer an ethnic or territorial unit of that name.

Jon Abbink

Ǧoote Tulluu

Däǧǧazmač Ǧ.T. (Amh. ጆቴ፡ ቱሉ; d. 1918) was the ruler (↗*Mooti*) of the ↗Leeqa Oromo of

↗Qälləm in western ↗Wälläga during the second half of the 19th cent. It is reported that his father, who was from Goğğam, left Ğ.T.'s mother who then married a ↗Leeqa. Ğ.T. grew up among the Leeqa. Bartels (1970:146) suggests that Tulluu was the name of his "adoptive father". Ğ.T.'s centre of power first was Qumbabi and later the nearby market settlement of ↗Gidaamii.

Ğ.T.'s opponent in the north was *šayḫ* ↗Ḫʷāğalī of Asosa who frequently made slave raids into his territory, especially the Beggi area. Nonetheless Asosa was an important counterpart for the maintenance of trade to the Sudan. Ğ.T. had, initially, little military power, but succeeded to gather wealth by gradually gaining control over trade routes, which he exploited vigorously. Probably in the early 1880s, Ğ.T. submitted to *nəguś* Mənilək of Šäwa and started to pay tribute to him but retained partial independence. He helped *ras* ↗Gobäna in extending the Šäwan power in the region.

In 1886 the ↗Mahdists started a *ğihād* against Ğ.T. For a short time he accepted Mahdist supremacy and, according to some oral traditions, for some time nominally converted to Islam. Trapped between Mahdist oppression and ↗Anfillo attacks Ğ.T. had to flee to his father-in-law, the Leeqa leader ↗Moroda Bakaree. The joint forces of Gobäna, Moroda and Ğ.T. defeated the Mahdist forces and subjugated the area including the territory of ↗Anfillo. In 1896 Ğ.T. was granted the title of *däğğazmač* and a year later his troops killed Vittorio ↗Bottego.

Ğ.T. became a promoter of Orthodox Christianity in Qälləm. His family was the first to be baptized and some of his kinfolk and subjects followed. During his rule twelve churches were built in the area.

In the course of time Ğ.T.'s reign became increasingly oppressive and cruel. His harsh treatment of his own subjects, oppression of the Busase dynastic clan of Anfillo and his overweening ambition led to his downfall. His territories were taken from him and he was summoned to Addis Abäba where he was kept in prison until after the death of Mənilək in 1913. Ğ.T. was reinstalled as ruler of Qälləm in the same year and *ləğ* Iyasu even married his daughter Askalä. When Iyasu lost his power this affected Ğ.T.'s position and in 1917 he was deposed. In March 1918 *däğğazmač* Bərru established direct Amhara rule in Qälləm. In the same year Ğ.T. died.

Merdassa Kassaye – Red.

Gordon, Charles George

G. (b. 1833, d. 1885) was a British soldier and administrator who became arguably the most-important figure in the history of the 19th-cent. Egyptian presence in the ↗Sudan and the ↗Horn of Africa. Having distinguished himself in the Crimean War and in the service of the Chinese government (1860–64), Colonel G. was appointed by Khedive ↗Ismāʿīl in 1874 as the Egyptian governor of the Equatorial Province of the White Nile sources. In early 1877 he was made governor-general of the entire Sudan, to which later that year were annexed also the Egyptian-occupied territories of the Red Sea. After the deposition of Ismāʿīl by the Powers in 1879, Gordon was re-appointed by Khedive Tawfiq, but soon after, in early 1880, resigned and returned to British service. In January 1884, as the ↗Mahdist forces were defeating the Egyptians in the Sudan, G., now Major-General, was sent by London to evacuate the besieged garrisons. Re-appointed by Tawfiq as governor general, G. reached ↗Khartoum, but instead of evacuating as instructed, he decided to defend the capital, hoping that London would come to the rescue with enough forces to defeat the Mahdīya. In January 1885 Khartoum fell to the Mahdi and G. was killed. British forces, under the Egyptian flag, would come to destroy the Mahdīya state only in 1896–98.

G.'s relevance to Ethiopian history was twofold: firstly, in the context of the border dispute between the Egyptian Sudan and Ethiopia in the territories of today's Eritrea. While *aṣe*

↗Yoḥannəs IV, especially after the ↗Guraᶜ victory over the Egyptians, demanded ↗Massawa and the country of Bogos (↗Bilin), G., well familiar with the vitality of these lands to the Egyptian imperial presence in the Nile Valley, refused to compromise. He fortified the Massawa – Bogos line and came twice to negotiate. In March 1877 he met with *ras* ↗Alula in Guraᶜ and offered free trade in Massawa, the importation of some arms, facilitating the sending of a new Patriarch (↗*abun*) and arresting *ras* ↗Wäldä Mikaᵓel, Alula's Egyptian-supported local rival in ↗Ḥamasen. Yoḥannəs, however, insisted on Bogos and Massawa and the situation along the undemarcated border went on deteriorating. In September 1879, following indirect negotiations, G. came again to see Alula and then Yoḥannəs. He was equally uncompromising, insisting that he be not seen as a British mediator: "Here I could only be looked as the Envoy of the Khedive, and a Mussulman for the time". When G. resigned upon returning to Khartoum, the Ethio-Sudanese border dispute remained unsolved and would disastrously influence the histories of Egypt, the Sudan, and Ethiopia.

The second Ethiopian aspect of G.'s impact was more indirect. After the Red Sea possessions were annexed to his government, G. in May 1878 inspected the coastal towns and ↗Harär. Harär had been captured by the Egyptians in 1875 and had since been governed by the tough and efficient soldier ↗Muḥammad Raᵓuf *bāšā*. Raᵓuf managed to subdue the Oromo around Harär and introduced the modernization of nearly all systems, striving to make the town a model for Egyptian imperial progress. G., however, was less impressed with Raᵓuf, whom he had dismissed from office in the Equatorial Province. G. hastily blamed Raᵓuf for being a slaver and a corrupt administrator and summarily removed him from office. After G.'s visit the Egyptian enterprise in Harär never regained its initial drive. In 1884, as the British decided to evacuate the Egyptians from the Sudan, they did the same in Harär. Following the Egyptian withdrawal of 1885, the exhausted Harari community was ripe to be annexed to Ethiopia by Mənilək II's army (January 1887).

Brilliant and capricious, courageous and paternalistic, pious and self-righteous, efficient and erratic, G. has caught the imagination of many interested in African history. A vast amount of literature dealing with his legacy has been produced in various languages. For Ethiopians he was the kind of Western imperialist they met as a neighbour, rather than a ruler.

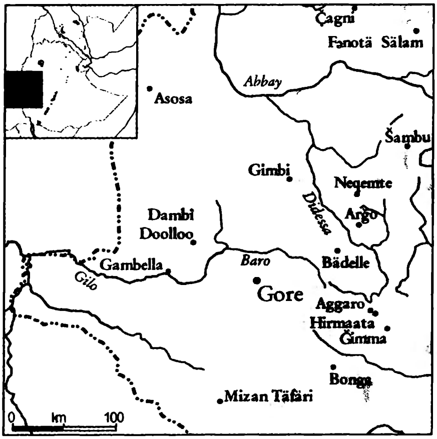
Gore

The town of G. (8°09' N, 35°33' E) is situated in Illubabor province and is the capital of the G. *awrağğa*. G. lies on a narrow ↗*amba* of 2,007 m A.S.L. which barely leaves enough space for an airfield. Founded by *ras* ↗Täsämma Aśmärom to be a ↗*kätäma*, it overlooks the watershed between the ↗Baro and ↗Diddessa rivers.

Until the Italian invasion G. served as a grouping centre from where foreign trading companies exported goods to the Nile through the British free port of ↗Gambella in the banks of Baro river. At the end of 1936, the ↗Ṭəqur Anbässa resistance movement attempted to establish a provisional Ethiopian government in G.

The decline of the town started with the end of the free zone and the construction of roads which were to channel products (coffee, hides and skins) towards the ↗Red Sea ports. The Italians, and later the Ethiopian government, could not allow that trade and customs duties were in danger of being lost for them to the benefit of the Sudan. The political situation in Southern Sudan prevents any revival of this export route. From 1938 to 1970 the population of G. declined from 25,000 inhabitants to 8,381 and again to 6,642 in 1984, before rising to 11,568 in 2004, the sign, perhaps, of a recovery.

The airfield is the only activity remaining from the brilliant past of the town, now the capital of the Ale *wärädа*. All the administrative services have moved to ↗Metu, the capital of the Illubabor zone of the Oromiyaa state-region. Nowadays, when the visitor stands outside this small town clustered on its *amba* almost like a "ghost-town", he finds it difficult to imagine it was once



the commercial capital of Western Ethiopia, where even a consular agency resided.

Gorgora

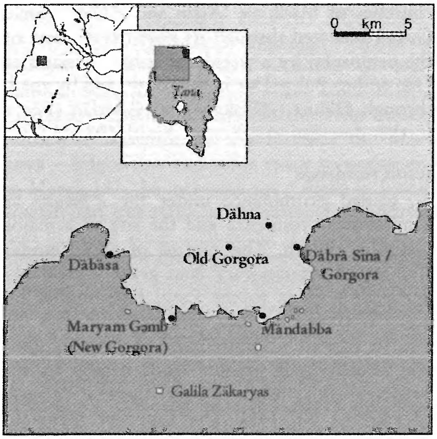
G. (**ጎርጎራ**, also **ጐርጎራ**; 1,850 m A.S.L) is a peninsula on the north of Lake ↗Ṭana (s. Duchesne-Fournet 1908, map); it has some 12 km of width in its southern part and stands on a strategical location, an elevated rocky promontory overlooking the lake and next to a series of islands suitable for providing shelter. The region, now populated predominantly by Christian Amhara, in the past was home to pagan ↗Agäw populations, and formed part of the ↗Dämbəya province. The name G. is attested as early as in *aṣe* ↗Bä'ədä Maryam I's time, when the site probably started playing an important role in the expanding politics of Christian Amhara up to the 17th cent. (Tedeschi 1991:177). A church and a monastery are found in the nearby island of ↗Gälila Zäkaryas, whilst the peninsula is the site of the monastery of Mändabba and the important churches of Mädḫane ᶜAläm and ↗Däbrä Sina. G. is connected through its port (to the east of the peninsula) by a weekly boat to the island of Däq and to Baḥər Dar in the south, and by road, through Dähna (↗Dəkana), to Gondär. (For a further description s. Berry – Smith 1972:1f.).

Jesuit residence

G. gained prominence under the ↗Jesuits as a missionary residence and the site of a major Catholic church. The origins of this foundation lay in a temporary land grant – probably a ↗*gʷəlt* – given to the Latin missionaries by *aṣe* ↗Susənyos in 1607, immediately after his rise to power; a community of "Portuguese" had already been granted lands nearby by his predecessors ↗Śärṣä Dəngəl and ↗Yaᶜəqob (BecRASO XI, 145). The Emperor seems to have soon turned the right into a perpetual one – *rəst* – through an ↗*ᶜawaǧ*, described in detail by ↗Paez (Pais 1945–46, Livro IV, ch. 23). Thanks to the involvement of Susənyos's fervent pro-Jesuit brother *ras* ↗Səᶜəlä Krəstos and to a number of skilled priests, G. became, along with ↗Fəremona in Təgray, an active missionary center (s. Tewelde Beiene 1983:103).

G. had a "bilingual" seminary (education was provided in Portuguese and Amharic), serving mainly offspring of the Portuguese and rivaling with Fəremona in the number of students: around 1614 it had 34 children and ten years later, ca. 50 (Arquivo Distrital de Braga, doc. XVII, 107v; doc. XXXV, 258r). The missionaries officiated initially in a church made of straw and adorned with European images: the Roman Virgin of St. Lucas from Santa Maria Maggiore and a portrait of St. Ignatius (BecRASO XI, 414). In 1618 works began on a new church designed by Pedro ↗Paez (Braga doc. XXIII, 32r), which was completed in 1621 and dedicated to the Virgin of the Assumption. Built in stone and mud, it collapsed shortly after (BecRASO XI, 402f., 485).

Following a move of the epicentre of the Christian empire to the north-west, in 1611 Susənyos abandoned his sites at Qoga and Dəkana and established a ↗*kätäma* at G. From there he conducted several raids on neighbouring groups of the Agäw, ↗Gedewon, chief of the Betä Ǝsra'el, and the Boorana Oromo, as well as into distant areas in ↗Šanqəlla and around ↗Sinnār (Perruchon 1897). The area was also important for trade with Sinnār (↗Funǧ; PerChron, chs. 39–46).



This in fact placed the Jesuit residence at the heart of the Christian empire. Its lands were increased – the fathers owned also an island where they sheltered in times of war (BecRASO XI, 416) – and generous royal fundings were provided (Archivum Romanum Societatis Iesu, doc. 31, f. 352r; s. also Pennec 2003:167ff.). The Jesuits, in their turn, acted as "royal clergy" when by 1617 Susənyos (Perruchon 1897:174) and some noblemen reportedly began to communicate "in secret". As the residence of the head of the mission, G. became the focal point of a network of Jesuit posts in Dämbəya and Goǧǧam (↗Azäzo, ↗Dänqäz, ↗Ǝnfraz, Qʷälläla) and witnessed a fervent intellectual activity, with Paez composing his *História* and Luis de Azevedo and Antonio Fernandez translating – with the help of *abba* Akalä Krəstos – Spanish Jesuit treatises into "Ethiopic", i.e. Amharic (BecRASO I, 126f., 352; XI, 415, 419f.).

Around 1621, Susənyos asked the Jesuits to build a royal palace a few kilometres to the south-west, a strategically better place, where probably his *kätäma* was already located (PankHist I, 103f.; in a royal text the date is 1618, Perruchon 1895:175). Once the missionaries from "Old" G. moved there around 1622, the place, known as New G. and considerably enriched with lands by Susənyos (BecRASO XII, 274f.), expanded into a complex of habitations and facilities (water-cistern, walls, castle). An imposing church of lime and stone, lavishly decorated, was erected between 1627–29 under the guidance of the Jesuit brother João Martins (BecRASO VIII, 190; XII, 270f.; PerChron 78). Its ruins, still visible today, bear the peculiar imprint of Jesuit overseas architecture: single-storey nave, fine floral and geometrical designs. At New G. the Jesuits officiated stunning celebrations and plays, bringing for some years to Ethiopia the typical elements of their – worldwide – missionary culture (s. BecRASO XII, 271).

After the restauration of Orthodoxy, New G. was the first residence to be abandoned by the missionaries. Its buildings and images were destroyed and in 1665 *aṣe* ↗Fasilidäs ordered the burning of the "books of the Franks", probably the remains of what might have been an important Catholic library (LudHist, lib. III, ch. XIII, 4; BegChron 53). Before the expulsion, because of unhealthy climate, the Christian court had progressively transferred northwards, in search of more elevated sites, such as Dəkana, Dänqaz and ↗Gondär (s. PerChron ch. 52).

Later, an Orthodox church under the local name of ↗Maryam Gəmb was erected on the site of the Jesuit church; it was active until Mənilək II's time (Berry 2004:19–22; s. also *Guida* 367). Whilst nothing remains of the buildings in Old G. the important ruins at New G., which reveal the use of lime mortar, have not been the object of serious archeological investigation. The Missione di studio al Lago Tana, directed by Giotto ↗Dainelli, visited them in 1937, later followed by other expeditions.

Andreu Martínez

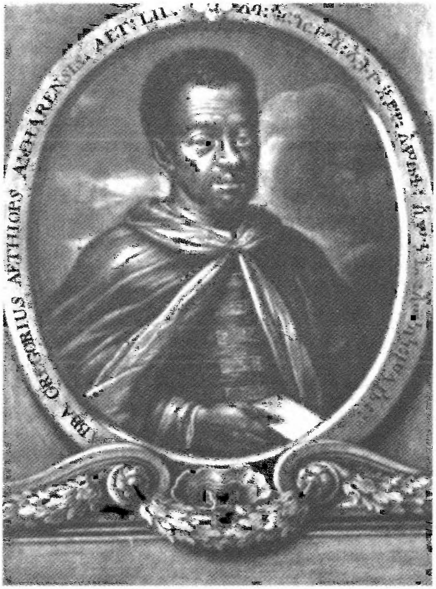
Gorgoryos

Abba G. (**ጎርጎርዮስ**, also known as Gregory, Gregorius, d. 1658) was a traditional Ethiopian scholar and the main informant of Hiob ↗Ludolf. G. claimed to be a descendant of a famous Amhara lineage (*nägädä kəburan*) from ↗Mäkanä Śəllase – a lineage of *mäkʷanənt* (↗Aristocracy) and of numerous advisers to the emperors – and once wrote: "I often spoke with the Emperor [*aṣe* ↗Susənyos], the *mäkʷanənt* and the mighty ones" (s. his letter to Ludolf of 6 October 1650; Ludolf 1681:11, 17f.; 1691:35ff.). In his *Theologia Aethiopica* Ludolf describes G. as "Ephor of the noble courtiers at the court of the king of the Ethiopians" (Uhlig 1983:85, 210), pointing to G.'s elevated education and teaching functions, as well as to his influence on the Emperor.

When G. converted to the Roman Catholic faith, the Jesuit Patriarch Alfonso ↗Mendez appointed him as his secretary. After the abdication of Susənyos in 1632 and the restauration of the traditional Ethiopian faith, G., together with the Jesuits, was persecuted and had to flee to India (Ludolf 1691:29). During a new trip to Ethiopia another persecution in 1634 forced him into exile again, this time he fled via Egypt to Rome, where, together with other Ethiopians, he found shelter in the *Collegium Aethiopicum* of ↗Santo Stefano dei Mori.

In Rome G. met Ludolf, who was there on a diplomatic mission. Between March and May 1649, they met very often. G. helped Ludolf learn Gəʿəz and later Amharic and gain many insights into Christian Ethiopian culture (Haberland in *PICES* 3, vol. 1, 133). The encounter with G. became a turning-point for Ludolf, as from this moment on he assiduously devoted himself to ↗Ethiopian studies.

On 10 June 1652, following an invitation from Duke Ernst von Sachsen-Gotha-Altenburg, G. arrived in Gotha (central Germany). G. greatly impressed his host and the latter's entourage. He stayed at Duke's court till September, involved in extensive discussions on Ethiopian history, culture and religion, prepared on the basis of the then-available literature on Ethiopia (Uhlig 1983:34–37, 42–47). G.'s answers were briefly jotted down in German (ibid. 48–75); their Ethiopian version was edited by Ludolf in his *Theologia Aethiopica*.



Abba Gorgoryos; engraving by Elias Ch. Heiss, Wien 1691; from Ludolf 1691, frontispiece

In 1658, on his way from Rome back to Ethiopia, G. drowned in the Mediterranean Sea. Ludolf reports: "The fate of this man is only to be lamented, as he, back on his way to Ethiopia at the expenses of the Duke ... had to be surprised by a death so cruel as drowning near Alexandrette [near Aleppo, Syria]" (Uhlig 1983:38f.).

When calling Ludolf the "Father of Ethiopian studies", one has to remember that his works on Ethiopian culture would not have been possible without G., to whom Ludolf devoted several grateful lines. It was due to the fortunate encounter with G. and his knowledge of the Orbis Aethiopicus that Ludolf 350 years ago laid the foundation of Ethiopian studies as a scholarly discipline. Later critical remarks by Jeronimo

↗Lobo (1789:188), who characterized G. as a "very bad guide" to Ludolf and "very ignorant in his own religion", are neither just nor justified.

Siegbert Uhlig

Gorgoryos

Abunä G. (ጎርጎርዮስ, b. 1947, Däse, Wällo; d. 29 July 1990, Meki) was a bishop of Šäwa and a prominent ecclesiastic. Son of *ato* Gäbäyyähu Ǝssayye and *wäyzäro* Asälläfäčč Kaśa, G. began traditional church ↗education at the age of six in the *nəbab bet* of his parish of Däbrä Mädḫanit Mädḫane ᶜAläm. After completing the first stage, he went to a ↗*qəne bet* in Kutabär, 20 km away from Däse. For his sharp mind his teachers are reported to have nicknamed him Mäzgäbä Śəllase ('treasure of the Trinity'). Ordained ↗*diyaqon* by *abunä* Yəsḥaq, the then Archbishop of Wällo, G. joined the monastic community of ↗Däbrä Libanos in Šäwa, where he stayed for two years. Thereafter, G. continued his *qəne* studies with *mäggabe məśṭir* Afä Wärq Mängäšä in Addis ᶜAläm and, later, went to Däbrä Ṣəge Maryam to learn ↗*andəmta*, ↗*zema* and ↗*qəddase*.

G. was ordained priest together with *abunä* Basəlyos, the first Patriarch of the ↗Ethiopian Orthodox Täwaḥədo Church, and appointed preacher in the parish of Harär Mädḫane ᶜAläm. During his stay in ↗Harär G. completed his secondary education; besides, G. was assigned as Chief Administrator of ↗Qulləbi Gäbrəʾel Church.

Abunä ↗Tewoflos, the future Patriarch and then Archbishop of Harärge, had a high regard of G. and sent him to ↗Greece for further education. G. got a diploma from the Theological School of Patmos and obtained his Master of Divinity on 15 June 1976 from the University of Athens. G. went to ↗Jerusalem and started his service at Däbrä Gännät Kidanä Məḥrät. During his stay there, he was certified by the Greek Theological College in Jerusalem.

In 1978, *abunä* ↗Täklä Haymanot, the third Patriarch, offered G. a position in the Patriarchate. In February 1979, G. was appointed Bishop of the Diocese of Šäwa. He became the Secretary of the Holy Synod, and Private Assistant to the Patriarch. In the latter function G. drafted a new church regulation which was then approved by the Holy Synod.

Later G. chose to concentrate on his diocese duties; he resigned from the additional positions and moved his office from Addis Abäba to Lake ↗Z^{w}ay where he soon established the Z^{w}ay Ḥamärä Bərhan Qəddus Gäbrəʾel Monastery and Clergy Training Centre. There G. provided orphans with shelter and education. He developed a curriculum and invited clergymen from other regions to his diocese. He also attracted university and college students for the time of summer vacations (many of them later formed the religious youth association Maḫbärä Qəddusan). Besides, G. was evangelizing people within and beyond his diocese. He even offered scholarships to foreigners who were interested in learning about the Ethiopian Church and becoming Orthodox Christians.

Paulos Mar Grigorious, an Archbishop of Indian Orthodox Church and the previous General Secretary of World Council of Churches, highly evaluated G.'s missionary activities (Märša Aläḵäññ 2004:31).

Since G. could speak at least five foreign languages, he actively participated in a number of international Church councils. G. also contributed to the Church by writing three books which are still highly demanded. *Abunä* G. died on his way to Qəddus Giyorgis and Qəddus Mikaʾel churches in Meki (East Šäwa) for preaching, and was buried in the Ḥamärä Bərhan Qəddus Gäbrəʾel.

Mersha Alehegne

Gorgoryos, apocalypse of

The G. (**ጎርጎርዮስ**) is a ↗Betä Ǝsraʾel work concerned with the fate of the soul after death. Although thematically similar to such Ethiopic works as the Apocalypse of ↗Mary, the Apocalypse of ↗Paul, the Apocalypse of ↗Baruch and the *Mäṣḥafä ↗mäläʾəkt*, it does not appear to be dependent upon any of these works. No Ethiopian Christian version of the G. has been found; portions exist in a 15th cent. manuscript. Doresse (1970) suggested that the text originated in Christian-Arabic literature.

The book begins with G.'s request that the archangel Michael reveal the mysteries of death and the fate of the soul. The angel shows him a good man's bright soul being received by a host of angels and welcomed into the presence of God. He then shows him the soul of a bad king being denied Divine grace. Michael then takes G. to Paradise, where he sees the temple and the ark and to Hell where the souls of the evil are being punished. G. is then returned to earth, where he records what he has seen. Rather surprisingly, two further speeches of the angel and the preaching of G. follow.

According to Betä Ǝsraʾel tradition, G. was a 14th-cent. monk. Christian sources identify G. as a Persian hermit who lived in both Syria and Cyprus, while there is a mention in the ↗*Täʾammərä Maryam* of a G. "who saw hidden things". The ↗*Sənkəssar* commemorates G. on 2 *Mäggabit* (cf. Getatchew Haile in PICES 11, vol. 1, 627).

Gorrose ↗Dullay

Gosa

G. (Oromo, 'ethnic group, tribe' [GraggDic 183], also used in Amh.) has a wide range of meanings. It can simply mean type, group, kind, breed, genus, variety or species when used of things, activities and creatures which appear to share distinctive characteristics, as for example, *gosa biyee*, 'soil type', *gosa diigaa*, 'blood group', *gosa hoǧii*, 'type of work' (Tamene Bitima 2000: 129) or *gosa saʾaa*, 'breed of cow' (TilDic 272). G. is used similarly, but with added complexity and moral intensity, of groupings of humans who are perceived as having common characteristics, especially shared patrilineal descent (whether real or by adoption, ↗*moggaasa*), such as nation, people, tribe, clan or patrilineage. The extent of the socio-political grouping referred to is determined by the context in which the word is used, so its range of meanings does not cause confusions in conversation. G. is commonly used between people who are seeking to establish the social distance between them, as in *Ati gosa tam?*, 'What G. are you?'.

Every Oromo belongs to a descending order of G., so it is essential to the understanding of Oromo social relationships. G. in the sense of nation which shares distinctive characteristics, may even be used to distinguish the G., Oromo from the other G. or nations, of Ethiopia. G. is also used of each of the numerous peoples which make up the Oromo nation, such as the ↗Arsi, ↗Boorana, Karrayyuu, ↗Ittuu, ↗Anniyya, ↗Gabra, ↗Guǧǧi, ↗Ṭəmmugaa, ↗Mäččä or ↗Tuulama. Indeed, in a pan-Oromo context, the Oromo nation can be viewed as an association of related G. Similarly, G. can be used as the generic name for the innumerable clans of which each of the Oromo major subgroups is composed; the Arsi, for example, consist of at least two hundred clans. Traditionally such clans were exogamous, mainly patrilocal, and were the units within which, or between which, local disputes were settled; but these local limits are being eroded by urbanization and changes in land tenure and the administration-system. Members of the same G. share undeniable obligations to render each other mutual assistance and support which, as in most clan and lineage systems, become stronger and more binding the closer the connections. G. is not normally used of those lower levels of descent group, such as lineages *balbala* and families *warra*, within which patrilineal kinship can be traced and in which mutual obligations are specific rather than generalized.

A G. cannot exist on its own or as a part of a duality, but only as part of a complex of similar groupings. G. is not used of Boorana or ↗Baarentuu, the two major Oromo divisions at the beginning of the 17th cent. which are mentioned by Baḥrəy (BeckHuntAlm 112); nor of the Sabbo and Goona moieties of the contemporary ↗Boorana (Bassi 1990:45) or the Siko and Mando moieties of the contemporary Arsi.

Paul T.W. Baxter

Gospel(s)

Manuscripts with Ethiopic (↗Gəᶜəz) G. (sg. ወንጌል, *Wängel*) normally include the Four Gospels. There exist a number of manuscript containing only the G. of John. Apart from that, manuscripts with one single G. are rare. In a complete Ethiopic *Tetraevangelium* the order is always Matthew – Mark – Luke – John, with the exception of ms. London, BritLib, Add. 16,190 (DillmLond 7f., no. 8) where Mark is moved to the end. The total number of Ethiopic G. manuscripts presently known is close to 500, about 250 of which have been investigated (Zuurmond 1989, vol. 1, 240–55). They usually contain several "Introductions", among them the ግጸዌ፡ ሥርዓት (*Gəṣṣawe śərᶜat*, 'Synopsis of classes'), the Letter of ↗Eusebius to Carpianus, the Ten Eusebian Canons (↗Canon tables), a list of Tituli/Kephalaia and the Stichometry (Zuurmond 1989, vol. 1, 6–31).

Ethiopic G. manuscripts are among the earliest extant documents in Gəᶜəz. Three manuscripts from ↗Ǝnda Abba Gärima (Abba Gärima I–III), notable for early palaeography and orthography (UhPal), were probably written as early as the 11th or 12th cent. Ms. EMML 1832 from ↗Däbrä Ḥayq Ǝsṭifanos (EMML vol. 5, 293–301) is the earliest dated manuscript (1280/81 A.D.).

The Ethiopic G. was for the first time translated from a Greek original not later than the 5th or early 6th cent. (BrakKirche 146). When, 500 years later, the earliest manuscript evidence emerged, the G. of Matthew appeared to exist in two distinct versions, "A-text" (mss. Abba Gärima I and III) and "B-text" (ms. Däbrä Maryam 1), the A-text obviously being the earlier one. In the other G., although it may differ slightly from manuscript to manuscript, the early texts are basically of one type, close to Matthew's A-text.

The main characteristics of the G. text in the earliest retrievable form are: a strong harmonization, both synoptic and contextual, the addition of explicit subjects and objects to verbal forms, preference for parataxis, the rendering of passive forms by means of the third person plural of the active form and the addition of emphasizing words like "all" and "much" (↗Bible). The B-text (the G. of Matthew), almost from verse to verse, removes many of these translation liberties and renders much more literally in accordance with the Greek. If there is any influence of a Syriac version (UllBibl 53), it is in the B- rather than in the A-text.

Ethiopian scribes and theologians must have been very hesitant to omit any part of the sacred text as received in their manuscripts. In the 13th cent. a process of continuing conflation begins. At first only the A-text and the B-text were skilfully conflated (e.g. in ms. EMML 1832), but later, from the 15th cent. onward, elements from other sources, notably Arabic, have been added. Conflations of four or five readings are no exception. Correction of these hybrid texts begins in the 16th/17th cent. on the basis of Arabic texts. Manuscripts from the 18th cent. and later are usually eclectic. Ethiopic G. manuscripts in general, unlike, e.g., the Syriac G., exhibit an immense variety of textual readings.

Since there is a gap of half a millennium at least between the original translation and the earliest manuscript evidence and in view of conspicuous inconsistencies in the tradition of the text (e.g., many dual readings even within one paragraph), one should be extremely careful in assuming that any text, either from an early manuscript or reconstructed, would necessarily be identical with the earliest translation(s). Consequently, it is rather hazardous to establish which type of Greek text underlies the Ethiopic Version(s). Readings in the earliest retrievable texts usually correspond to the Greek "Majority text", but there are also many independent readings. The value of the Ethiopic version for textual criticism of the Greek N.T. may differ from book to book and is subject for further research.

The earliest edition of the G., as part of the N.T., was published in Rome by "Petrus Æthiops" (↗Täsfa Ṣəyon) in 1548 from ms. Vat. Aeth. 25 (13th/14th cent.). It contains a huge number of printing errors and was reprinted in Walton's Polyglot (1657) with most of these errors. The text of Matthew is of the B-type. The most commonly used edition was prepared by Thomas Pell Platt for the ↗British and Foreign Bible Society in London (1826). The text is eclectic to a high degree. Zuurmond (1989) published a text-critical edition of the G. of Mark on the basis of the Abba Gärima manuscripts, followed in 2001 by the G. of Matthew in four versions. There exist at least ten more printed editions of the G. and/or ↗New Testament in Gəʿəz (Zuurmond 1989, vol. 1, 224–39).

Editions of the G. in other Ethiopian languages have since the 19th cent. been published by the British and Foreign Bible Society and more recently by the United Bible Societies.

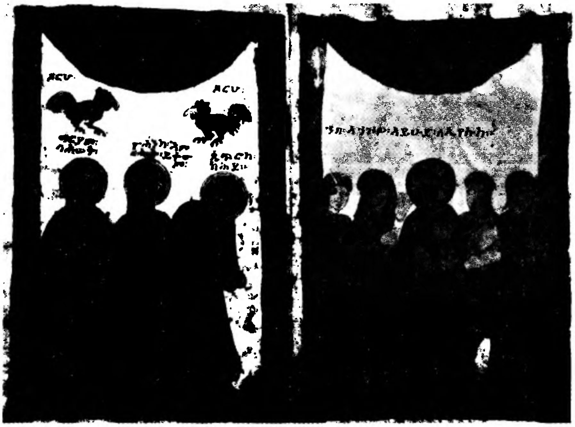
Gospel illustration

The oldest evidence for illustrated G. Book is provided by the manuscripts known as the Abba Gärima G. I–III (from ↗Ǝnda Abba Gärima), possibly of the 11th/12th cent. (with a most incertain dating proposal to the 7th/8th cent.) Decorated with the Canon tables of Eusebius and the portraits of the ↗Evangelists, they include elements allowing us to connect them with the late antique or early Byzantine tradition also evident in Coptic, Syriac and Armenian books of the early Middle Ages (Byzantine Empire).

The large group of Ethiopian illuminated G. that appears at the end of the 13th cent. and during the first half of the 14th cent. adds a Christological cycle to the Canons and the prefatory portraits of the Evangelists. It was transmitted in two recensions. The first one introduces only three scenes: the ↗Crucifixion, the Holy Sepulchre and the Ascension (rendered as the ↗*Maiestas Domini*), a "short cycle" comparable with the decoration of the *eulogia* from the Holy Land (e.g. in the ↗Däbrä Māʿar G. Book, dated to 1341). The second recension includes a sequence of episodes of the life of Christ that are of liturgical significance (e.g., in the G. Book of ↗Žir Ganela, with 18 scenes). The miniatures are always displayed full-page and grouped before the text, being thus placed immediately after the



Peter's Denial and Seizure of Christ; miniatures from the Gospel Book of Krəstos Täsfanä, 1280/81; Däbrä Ḥayq Ǝsṭifanos; fols. 21v-22r; photo 2000, courtesy of Michael Gerves

Canons – an arrangement ultimately deriving from the 5th/6th-cent. illuminated Mediterranean G. lectionary. In Ethiopia, the first type of G. illustration seems to vanish at the turn of the 14th/ beginning of the 15th cent., while the second one lasts for some hundred years or more.

The G. Books produced from the end of the 15th cent. in scriptoria of the ↗Stephanites, centred at ↗Gundä Gunde, show a gradually reduced and finally abandoned Christological cycle. Instead, the ancient type of illustration limited to the lavishly decorated Canons and the portraits of the Evangelist reappears.That cycle is usually enriched with the image of St. Mary with Child flanked by two archangels – which probably reflects the increasing importance of the Marian cult within the Ethiopian liturgical year (↗Calendar).

Outside the Stephanite milieu, in the 16th cent., the ornamented Canon tables also withdraw, only the full-page portraits of the Evangelists being left at the beginning of their respective G. This scheme was widely applied in the 17th cent. (seeming exception is ms. London, BritLib Or. 481, in fact a copy of a 15th cent. book from Amba Gəšän with 21 christological scenes).

The luxury G. books produced in the so-called First Gondär Style (ca. 1620–1700), with the text of each G. extensively illustrated in spite of the obvious repetition of scenes, find their models in engravings from European printed books (chiefly, the *Evangelium Arabicum*, Rome 1591, and the *Evangelicae historiae imagines*, Anvers ca. 1593). The same models seem to have inspired the painters who produced the rare, but extensively illuminated G. in the so-called Second Gondär Style of the 18th cent. From the 19th cent. onwards, the selection of miniatures, however haphazard is no longer limited to G. subjects.

Goššu

G. (ጎሹ; d. ca. 1786) was a prominent political figure in the second half of the 18th cent. An Ethiopian aristocrat of royal descent, grandson of *ras* ↗Yämanä Krəstos, great-grandson of *aṣe* Susənyos, his father *ras* ↗Wädağğe became a hereditary ruler of the Amhara province, where G. had a strong local power base. Both *aṣe* ↗Iyoʾas I and *ətege* Məntəwwab (↗Bərhan Mogäsa) had to take this into account and a successful career at the ↗Gondärine court was guaranteed for G.

On 26 September 1758, the then *däğğazmač* G. was appointed ↗*liqä mäkʷas*. In October 1762 he became governor of Goğğam and on 18 October 1763 was granted the title of ↗*bašša*, together with the office of ↗*käntiba*. To promote G. was in the best interests of Məntəwwab, the actual ruler of the ↗Gondärine kingdom, for both she and her grandson Iyoʾas badly needed his services. On 16 September 1764, G. was appointed governor of Amhara province and six years later he received the title of *ras* ↗*bitwäddäd*, the highest rank in the empire, next only to the sovereign himself.

G. served *aṣe* Iyoʾas loyally and almost every year took the field on his orders. Thus, on 16 January 1769 he captured a pretender to the throne (an associate of ↗Yämaryam Barya), who was later executed. However, when *ras* ↗Mikaʾel Səḥul, dissatisfied with the growth of influence of the Oromo relatives of *aṣe* Iyoʾas, ordered that he be strangled on 14 May 1769, G. became a supporter of the mighty new ruler. In Ethiopia a new era began, the so-called ↗*Zämänä mäsafənt* ('Era of the Princes'), when morals lost their value, vows were no longer kept and neither emperors nor high officials held office for long (Tekle-Tsadik Mekouria in PICES 8, vol. 2, 205).

In 1771 G. was one of the commanders at the battle of ↗Sarbakusa. G. and ↗Wänd Bäwäsän defeated *ras* Mikaʾel, but decided to keep Täklä

Haymanot II on the throne; G. retained his rank of *ras bitwäddäd*.

Sevir Chernetsov

Goššu Zäwde

Däǧǧazmač G.Z. (ጎሹ፡ ዘውዴ, also Gʷäššu, horse name Abba Kanno; b. ca. 1780s/90s, d. 27 November 1852) was governor of ↗Goǧǧam and Damot during the first half of the 19th cent. A member of the ruling Goǧǧam dynasty, he was one of the major lords during the last decades of the ↗*Zämänä mäsafənt*. His father, Zäwde Səlṭan (Zäwde Tullu in RubActa I, no. 31; however, *däǧǧazmač* Tullu was most possibly Zäwde's maternal grandfather) was a descendant of the ↗*balabbats* of Damot. Nicknamed Kästi Zäwde (s. Girma Getahun 1991:87), he married Dənqənäš, daughter of *ras* ↗Ḫaylu Yosedeq and sister of ↗Märəd Ḫaylu. G.Z. was therefore a great grandson of *ətege* Məntəwwab (↗Bərhan Mogäsa) and *grazmač* Iyasu, a member of the ↗Solomonic dynasty. G.Z. married *wäyzäro* Sahlitu Ǝnqu, a distant descendant of Ləbna Dəngəl's daughter Tadra from Ṭäläzämo, and had two sons by her, Yälemtu (Ǝlemtu) Goššu and Täsämma Goššu.

Among G.Z.'s first military campaigns was an expedition against the Kutay/Gändabarat Oromo. In the early 1820s, G.Z. defeated the army of *ras* ↗Gugsa Märsa, headed by his appointee *däǧǧazmač* Gubäna. In 1827, in the battle of Kosso Bärr, the combined army of G.Z. and *däǧǧazmač* ↗Maru of Dämbəya was defeated by *däǧǧazmač* ↗Wəbe Ḫaylä Maryam of Səmen and *ras* Yəmam Gugsa. Maru was killed in battle and his possessions were given to Yəmam's brother, *ras* ↗Marəye Gugsa. G.Z. escaped and fled into the mountain fortress of Ǧəbäla. Next year, G.Z. attempted a military campaign against *däǧǧazmač* Maʿəṭäntu, an appointee of *ras* Marəye, but failed, and was imprisoned in Qʷami Č̣ärq cave (Moṭa). According to the *Chronicle of Goǧǧam* by *aläqa* Täklä Iyäsus (Girma Getahun 1991:92f.), G.Z.'s (illegitimate) son ↗Bərru Goššu freed his father and defeated Marəye shortly thereafter in the battle of Sägädit. In any case, the forces of G.Z. fought aside Wəbe and Marəye in the latter's campaign against ↗Säbagadis Wäldu in 1831. During the 1830s and early 1840s, G.Z. waged numerous successful campaigns against the Mäč̣č̣a Oromo as far as the borders of ↗Ǝnnarya. Later, however, the Oromo achieved a sort of peace with the Goǧǧam ruler, who even exchanged presents with ↗Abbaa Bagiboo I.

After G.Z. had arranged marriage between Bərru Goššu and the sister of *ras* ↗Ali Alula, the latter decided to disinherit the sons of the recently deceased *däǧǧazmač* ↗Kənfu Ḫaylu in favour of G.Z. and his son Bərru. Kənfu's children objected, so G.Z. claimed his right in the battle of Qʷənzəla (Dəngəl Bärr) on 4 October 1839. G.Z. was victorious. Soon, however, Ali transferred Kənfu's land possessions to his mother ↗Mänän. Displeased by G.Z.'s lack of ambition, Bərru Goššu rebelled against his father and allied with Wəbe Ḫaylä Maryam who was seeking to overthrow Ali.

In 1847, G.Z. invaded Bägemdər and looted Gondär, annoyed with the treatment *abunä* ↗Sälama received from the inhabitants of the city and above all from *əč̣č̣äge* Maḥśäntä Mikaʾel, who was arrested and taken to Goǧǧam in chains. Towards the end of the campaign, in 1848, G.Z. obtained the rank of *ras* from ↗Śahlä Dəngəl who was in Gondär at that time.

G.Z. was on friendly terms with foreigners who came to his court. Arnauld d'↗Abbadie, a close friend, spent the whole of 1839 at G.Z.'s court, and remained in regular contact with G.Z. until at least 1848. The Belgian consul ↗Blondeel van Coelebroeck was also a frequent visitor in Goǧǧam. In 1841, G.Z. asked him, among other things, for missionaries to be sent to Goǧǧam (RubInd 100, cp. RubActa I, no. 40).

Ləǧ Kaśa Ḫaylu (later ↗Tewodros II) was early in his career in the service of G.Z., who as already at that time an ally of *ras* Ali Alula. Probably this happened shortly after Kənfu's death. Kaśa was successful as a soldier; after one of the first military actions he took part in G.Z. awarded him with a horse and a ↗*lämd*. It was through Kaśa's service in G.Z.'s army that he obtained access into Ali's house and family.

When *ləǧ* Kaśa turned against his father-in-law and became a *šəfta*, G.Z. remained loyal to *ras* Ali. In January 1852, G.Z., together with his son Bərru Goššu, attempted to conquer Gondär, at that time already under *ləǧ* Kaśa's control, but retreated without offering a fight after looting Fogära and destroying the monastery of Qʷäraṭa. Later the same year Ali sent G.Z. at the head of his army against Kaśa. The campaign ended with the battle at ↗Gur Amba, Dämbəya, in November 1852; G.Z. was defeated and killed. A famous poem was rhymed by a mourner (MonVidTheod 2 [text], cp. BTafA 444 [text], Girma Getahun 1991:111):

Gʷäššu əndä Oryo Ali əndä Dawit
Yätənt aydällämoy tälko mämot
G. like Uriah, Ali like David
Is it not like in old times to be sent to die?

Mondon-Vidailhet suggests that the poem might allude to an amorous connection between Ali Alula and G.Z.'s wife (MonVidTheod 3 [tr.]).

Of G.Z.'s sons, Bərru Goššu played the most important role in the political theatre of that time, being a political and military rival both to his father and to Kaśa Ḫaylu. Another son, *fitawrari* Täsämma, governed ↗Ǧawe in Damot and had his capital in Ç̣ago, birth place of his ancestors. He fathered the future *nəguś* ↗Täklä Haymanot. Soon upon the death of G.Z., Täsämma was captured by Tewodros and died in the prison of Arba Amba ca. 1860 (RubActa II, no. 109). There is no further record of Yälemtu Goššu.

Evgenia Sokolinskaia

Götz, Hermann

G. (b. 21 August 1878, Schwäbisch Gmünd, d. 2 September 1970, Adaamii Tulluu) was a German entrepreneur. The son of a lower-class craftsman, G., together with his friend Hans Jannasch, entered Ethiopia via Djibouti in 1902. After a stay in Harär, in 1904 they reached Addis Abäba, where they offered their skills as craftsmen to the nobles. Jannasch was even employed as military instructor by *aṣe* ↗Mənilək II (Bairu Tafla 1981:172). Later, following a grant of land from *aṣe* Mənilək, both set up a farm to domesticate ostriches and built a house in Adaamii Tulluu (lit. 'cactus hill') on a hill to the south of Lake ↗Zʷay, near the ↗Bulbula. Their first ostriches were probably also provided by the Emperor (ibid.). G. married an Amhara wife and had a daughter. His two sons died at an early age.

Hermann Götz's farm in Arsi, photo courtesy of the Frobenius-Institut, Frankfurt am Main (13-KB006-12)

When after World War I ostrich feathers fell out of fashion, G. and Jannasch began raising cattle. This aroused conflicts on grazing land with the neighbouring Oromo and, after a trial in Addis Abäba that found them guilty of mistreating Oromo peasants, Jannasch was obliged to leave the country. G., however, returned to Adaamii Tulluu and associated with Walter Zahn ("*hakim* Zahn") – a German pharmacist from Addis Abäba and his son-in-law-to-be – in the production of butter on a commercial scale. To transport their products to Addis Abäba they cleared a road to Moǧo railway station, which later became the highway from the capital to Šašämänne. In 1927, due to various reasons G. and Zahn parted.

At the beginning of the Italian occupation the conflict between G. and the Oromo increased. The Oromo attacked his farm and G. had to escape to Gälila, an island in Lake Zʷay, finding shelter among the ↗Zay. Adaamii Tulluu then became an Italian fortress and, after the occupation, G. again took refuge on Gälila, fearing to be accused of collaboration with the Fascist Italians. Between 1946–55 he worked as a veterinarian on the state farm near Adaamii Tulluu and, thanks to the Emperor's permission, continued raising cattle.

G. – also known as "Papa Götz", "Opa Götz" or "Muse Götz" – appears in many travel descriptions of that region (s. VSAe II, 651; Zahn 1951; Jannasch 1930) and is today still remembered by the Zay.

Ronny Meyer

Government

In traditional Ethiopia, which has a historical trajectory significantly different from those in the West, no distinction was made between a G. and a political system. The term **መንግሥት** (*mängəśt*, lit. 'kingship') and the "political system" revolved around the **ግቢ** (↗*Gəbbi*, '[imperial] court') with the **ንጉሠ፡ ነገሥት** (*nəguśä nägäśt*; ↗*nəguś*, ↗*aṣe*) at the centre and the ruling gentry comprising of the landholders, the *gʷəltäñña* (↗*Gʷəlt*) and the *rəstäñña* (↗*Rəst*), the ↗*č̣əqa šum* ('village headmen') and the ↗*məsläne* ('district prefects') scattered throughout his realm (↗Titles, ranks and functions; ↗Aristocracy). The institutions of the state and the head of G. were also fused. At the root of imperial authority lay the claimed Solomonic descent of the royal dynasty (↗Solomonic dynasty) and the legitimizing authority of the ↗Ethiopian Orthodox Täwaḥədo Church as elaborated upon in the ↗*Fətḥa nägäśt*. The church taught its flock that the *nəguśä nägäśt*, chosen by God, is a supreme authority in all matters, secular and spiritual, and the people agreed with the premise without fail (cp. ↗Kingship, divine). In this capacity, the *nəguśä nägäśt* was perceived as the guarantor of peace and security, symbol of national sovereignty and unity, conferrer of material benefits and lifelong honorific titles, head of state and government, source of law and judicial authority (↗Law and judiciary), supreme military commander and guardian of the state religion (↗Christianity).

History prior to 1855

The early rulers in the northern highland areas of E. derived their power from a combination of control over ↗trade with the ability to tax a relatively densely settled peasantry. In other areas, systems of governance ranged from small-scale and highly egalitarian societies through to centralized states that differed only in scale from the empire that progressively extended its rule over the highland areas north of the Rift Valley.

The extent to which this empire could be described as "feudal" has been disputed by scholars (↗Feudalism). Certainly, it possessed a ↗monarchy and an aristocratic class who derived their power from a complex set of obligations based on control over land and the peasants who worked it, and legitimated by the Christian religion. As in feudal Europe, even though the emperor was in principle supreme, regional or provincial rulers were able to exercise a significant level of autonomy. These rulers in turn depended on subordinate noblemen, who likewise enjoyed a measure of autonomy that derived from the obedience of local peasantries. A hereditary aristocracy was, however, far less evident than in Europe: even though the sons of great lords were better placed than anyone else to assume their fathers' dignities, they had to establish their own personal authority if they were to succeed; otherwise, they were liable to be displaced by rivals who might come from the lesser nobility, or indeed from still further down the social scale. Graded titles of nobility, these were not inherited but had to be bestowed on each individual.

The nobility who commanded a peasant army, and the church, which bestowed or disallowed religious legitimacy by *qəbʾa mängəśt* (anointing) or by *gəzzət* (excommunication), could both challenge the emperors. Throughout long periods of the history of the Christian state, the absolute power of the *nəguśä nägäśt* stayed rather theoretical. He had to rely on the support of often highly autonomous regional lords. All this notwithstanding, no permanent administrative structure had ever evolved.
